Our Field Engineering Operations Center functions as a centralized service, communications and dispatching facility. The Center is staffed by highly trained, qualified personnel and operates 24 hours a day, every day of the year. Its data base includes your entire equipment service history. The Center uses the latest computer and telecommunications technology to help get the right Field Engineer to the right place with the right parts and equipment. We maintain over 175 field service locations throughout North America.

We make further major investments in our level of excellent service ...sonnel. Every ye... them undergo rigorous re... ogy training at our Education Center in Dallas, Texas. More proof that we provide the kind of service you'd expect for a business computer system.

Yes, very few offer this kind of 'round-the-clock, quality service. But fortunately for you, with Motorola and Four-Phase Systems together, you can be sure of two things—quality products and quality service. Together, they make selecting a computer company a lot easier. For more information, just call us at 1-800-528-6050. Or write to 10700 North De Anza Blvd., Cupertino, CA 95014. M/S 52-10A7.

MICROCOMPUTERS

Packard.

The HP 150 is available now with Computer Tutor 150, according to the company spokesman.

Suggested retail price of the HP-150 is $3,995.

Micro Courseware, 4444 Geary Blvd., San Francisco, Calif. 94118.

COMPU-DRAW SOFTWARE HOUSE .Rel/m

Compu-Draw Software House has introduced .Rel/m, a package of programs for maintaining and organizing user-generated, relocatable object code libraries that use the .Rel file format.

The programs, comprised of Library Cross Reference (LX) and Library Sequencer (LS), run under the Digital Research, Inc. CP/M operating system with 32K bytes or more memory and one or more disk drives. LX is priced at $59; LS is $99. Both programs may be purchased for $129.

Compu-Draw Software House, 1227 Goler House, Rochester, N.Y. 14620.

MANAGEMENT INFORMATION SYSTEMS Tempus-Link

Management Information Systems has announced Tempus-Link, a mainframe and personal computer package that allows the user to format IBM's Vsam files onto virtual floppy diskettes.

According to the vendor, the IBM Personal Computer can store up to 15M bytes of data per file and access that data as if it had real diskette drives.

Tempus-Link runs under IBM PC-DOS 1.1 and 2.0 as well as Microsoft, Inc.'s MS-DOS on the IBM Personal Computer and Personal Computer XT. Controlling the software are MVS, VSE and CICS/VS 1.5 and 1.6. Most Personal Computer-to-mainframe communications are supported, the vendor said.

An entry-level system retails for $995.

Management Information Systems, 376 Moody St., Waltham, Mass. 02154.

HAYDEN SOFTWARE CO. Writer; Speller; Producer; Calendar

Hayden Software Co. has introduced its productivity line of professional software, the Writer, the Speller, the Producer and the Calendar.

The Writer, a word processor, and the Producer, a computer slide show producer, are currently available for the Apple Computer, Inc. Apple. The Calendar, an appointment calendar, and the Speller, a spelling checker, are for the IBM Personal Computer.

Prices are as follows: Writer, Apple II, II+, IIe, $59.95; Speller, IBM Personal Computer or compatible, with 64K bytes of memory, $49.95; Calendar, IBM Personal Computer or compatible, with 128K bytes of memory, $49.95; and Producer, Apple II, II+, IIe, $99.95.

Hayden Software, 600 Suffolk St., Lowell, Mass. 01853.

MARK OF THE UNICORN, INC. PC/Intercomm on Z100

Mark of the Unicorn, Inc. has announced that its PC/Intercomm now operates on the Zenith Data Systems Corp. Z100 microcomputer.

PC/Intercomm lets the Z100 emulate Digital Equipment Corp.'s VT100. With PC/Intercomm, Z100 users can talk to DEC host minicomputers and run full screen applications programs.

PC/Intercomm has 30 programmable function keys and operates under 128K bytes of memory with one disk drive and an RS-232 Ascii communications port. The product is priced at $99.

Mark of the Unicorn, 222 Third St., Cambridge, Mass. 02142.

MEGAHAUS CORP. Megawriter version

Megahaus Corp. has released an updated version of Megawriter, a word processor with mail merge, for the Apple Computer, Inc. Apple II and IIe microcomputers.

According to the vendor, the Megawriter comes complete on a single disk. Improvements include a faster boot time, adjustable tabs and the ability to read and write both Apple DOS files and Pascal files. Megawriter costs $99.

Megahaus, 5703 Oberlin Drive, San Diego, Calif. 92121.

See SOFTWARE page 126

It's time the technology of data collection caught up to the technology of data processing.

The speed of your data processing is limited by the speed of your data collection and input. Unfortunately, for a lot of people, data collection technology stopped with the development of the clipboard.

But MSI has changed all that.

Because MSI portable data collection systems are microprocessor-based answers to multipart forms. They actually extend the power of your central computer by allowing data to be keyed in right in the field. And then transmitted over ordinary phone lines to a host computer or data processing center.

MSI systems eliminate paper shuffling, keypunching, and errors by collecting data at its source. At the same time, we return control to the data processing department, eliminate costly time delays, and match the sophistication of your central system with our equally sophisticated remote system.

Our family of hand-held terminals can be used anywhere there's data to be collected. For salesman order entry, inventory control, financial reporting, manufacturing control, and field data collection tasks of all kinds.

Learn how MSI data collection products can bring your system to the peak of its capabilities. Just return the coupon.

You'll find the technology of data collection is right where you want it.

O'HANLON COMPUTER SYSTEMS, INC.
Sensible Solution 2.0

O'Hanlon Computer Systems, Inc. has announced Version 2.0 of the Sensible Solution, a data base management system and procedural programming language.

The vendor said Version 2.0 is 50 times faster than the original version in calculations and string handling. The speed is now comparable to other major languages, such as C, and is faster than Cobol or Pascal.

Sensible Solution 2.0 costs $695.

O'Hanlon Computer Systems, 11053 Main St., Bellevue, Wash. 98004.

NEC INFORMATION SYSTEMS, INC.
Packages for NEC Advanced Personal Computer

NEC Information Systems, Inc. has announced agreements with Microsoft, Inc. to market its Microsoft Pascal Compiler and with Context Management Systems, Inc. to use the Context MBA integrated software package, both for use with the NEC Advanced Personal Computer, according to NEC.

The price for the Context MBA software package is $695.

The Microsoft Pascal Compiler is priced at $495, a NEC spokesman said.

NEC Information Systems, 1414 Massachusetts Ave., Boxborough, Mass. 01719.

NEC INFORMATION SYSTEMS, INC.
Software for Advanced Personal Computer

NEC Information Systems, Inc. has announced an expanded range of software packages that run under Microsoft, Inc.'s MS-DOS operating system for its Advanced Personal Computer.

Applications and their prices include the following: Metasoft Corp.'s Benchmark Word Processor, $495, Benchmark Telecommunicator, $95, and Benchmark Mailing List Manager, $195; Chang Laboratories, Inc.'s Business Planner, $495, Spreadsheet/Planner Upgrade, $350, Consolidator, $295, and Spreadsheet, $195; Ashton-Tate's Dbase II, $695, Binynch-86/3780 and 3270 emulators, $950.

NEC Information Systems, 1414 Massachusetts Ave., Boxborough, Mass. 01719.

"Best seminar I attended on payroll/personnel systems!"

Free seminars. Intel has been giving free seminars to payroll, personnel, and data processing professionals since 1968. Just three years after we developed the first human resource system ever. And we've been getting more sophisticated ever since.

Come to a free seminar and learn how Infinite Payroll/Personnel System can dramatically improve the productivity of your human resource functions.

Run software even on IBM and IBM-compatible mainframes, and operates under the DOS/VS-1, ADABAS, and IDMS database management systems, as well as non-database environments.

To register, call Christine Hanover at (201) 391-1900.

Intel

AMDEK CORP.
Driver for Amplot II

Amdek Corp. has announced a driver for the Amplot II, a six-color X-Y coordinate plotter.

According to the vendor, the driver is currently available free to users of either Lotus Development Corp.'s Lotus 1-2-3 or Amplot II, a microprocessor-intelligent plotter that accepts Ascii commands. Amplot II has built-in software for arc and circle generation, windowing and other functions. It has RS-232C and 8-bit parallel interfaces.

The Lotus 1-2-3 was developed specifically for Amdek's plotter. The 10-in. by 14-in. plotting range, automatic pen selection and pen speed make it applicable for business graphics or engineering applications, the vendor said.

The suggested retail price of the Amplot II is $1,099.

Amdek, 2201 Lively Blvd., Elk Grove Village, Ill. 60007.

VOICE OPERATED COMPUTER SYSTEMS
Mopi

A software development package that is said to allow each user to define his own set of instructions has been developed by Voice Operated Computer Systems (Voca).

Called Mopi, the assembler/compiler contains the basic elements from which assembly language-type instructions can be defined. Designed as a universal cross-assembler, Mopi is capable of generating the machine code for any 8-bit microprocessor, the company said.

Currently available for use with Digital Research, Inc.'s CP/M 80 operating system, Mopi can be modified for use with other systems as well. The software is supplied under a license agreement for $150.

Voca, P.O. Box 3705, Minneapolis, Minn. 55406.

OMTOOL CORP.
Softbol release

Omtool Corp. has announced a release of its business language, Softbol, that is said to allow users of the IBM Personal Computer, as well as computers that support Microsoft, Inc.'s MS-DOS and IBM's PC-DOS, to run all of the business applications written for Digital Equipment Corp.'s commercial language Dibol.

"Softbol is a business language that includes a compiler, interpretive runtime system, symbolic debugger, indexed key file system and sort utility.

Softbol, priced at $400, is also available for other operating systems, including Unix, Microsoft's Xenix, Digital Research, Inc.'s CP/M 80 and CP/M 86.

Omtool, P.O. Box 477, Tewksbury, Mass. 01876.

COURSEWARE, INC.
PC Master

Courseware, Inc. has announced that its self-learning software package for the IBM Personal Computer and Personal Computer XT has been enhanced to include sections for

IBM's PCjr home computer.

PC Master includes three dialects of computer instruction, including computer graphics.

The product is available under PC-DOS 2.1 for the IBM PCjr and under PC-DOS 1.1 and/or 2.0 for the Personal Computer and XT.

The enhanced version of the PC Master is priced at $79.50.

Courseware, 10075 Carroll Canyon Road, San Diego, Calif. 92131.

SOFTWARE MANUFACTURERS, INC.
S-Tran; Spectrum

Software Manufacturers, Inc. (SMI) has announced two products designed for software development under the Unix operating system.

S-Tran is a translator that produces source C language statements from popular versions of Basic. Spectrum is a set of application modules available in C.

With S-Tran, Basic programs are transferred into a file on a Unix-based system and then translated as a group by using a single command. S-Tran's runtime package, required to run all translated programs, also reportedly serves as a development tool.

The products are available for 8-, 16- and 32-bit machines from Altos Computer Systems, Inc.; Codata Systems Corp.; Plexus Computers, Inc.; NCR Corp.; and Zilog, Inc.

The S-Tran translator is available for a one-time license fee of $1,500, and the runtime package costs $300 per machine. Spectrum modules are priced at $595 for general ledger; $795 for accounts receivable; $595 for accounts payable; $595 for payroll; $895 for wholesale distribution; and $995 for manufacturing.

SMI, 4009 Pacific Coast Highway, Torrance, Calif. 90505.

SAMNA CORP.
Samna Word II Version 1.1

Samna Corp. has introduced an updated version of Samna Word II, its word processing software package for the IBM Personal Computer, Personal Computer XT and compatible processors.

According to the vendor, Version 1.1 includes mail/merge and free-form line drawing and offers support for more character and matrix printers.

Samna Word II is compatible with software packages such as Lotus Development Corp.'s Lotus 1-2-3 and Ashton-Tate's Dbase II. It runs under Microsoft, Inc.'s MS-DOS Versions 1.1 and 2.0.

Version 1.1 costs $450.

Samna, Suite C-1200, 3700 N.E. Expwy., Atlanta, Ga. 30345.

UNIQ COMPUTER CORP.
Unicalq

Uniq Computer Corp. has announced that its Unicalq virtual memory spreadsheet package is now available for use with AT&T Technologies, Inc.'s 3B20 32-bit microcomputer under the Unix System V operating system.

The Unicalq system was previously available on Digital Equipment Corp.'s VAX-11 and PDP-11 series processors, according to Uniq.

A vendor spokesman said the spreadsheet system offers a user-transparent virtual memory mode in which more than 32,000 rows and columns can be used.

The spokesman said that individual spreadsheets can be linked to share data and that Unicalq includes a file encryption feature employing passwords for access to sensitive files. The Unicalq package is priced at $2,500 for the AT&T Technologies 3B20 micro under Unix System V.

Uniq Computer, 26 S. Water St., Batavia, Ill. 60510.

PERSONAL CAD SYSTEMS, INC.
Cadplan

Personal CAD Systems, Inc. has introduced a software package that gives computer-aided design capabilities to IBM Personal Computers and compatible systems.

Cadplan features menu-driven commands, including zoom, pan, copy, move, rotate, delete and undo. It is suited for two-dimensional design applications, a spokesman said.

Cadplan costs $1,200; an optional data base extraction sells for $350.

Personal CAD Systems, 15425 Los Gatos Blvd., Los Gatos, Calif. 95030.

Our graphics you to your

ISSCO graphics software supports more than 200 output devices from nearly 50 manufacturers.

That's right. Over 200 different terminals, plotters, printers and film recorders. And the number keeps growing as important new ones are introduced.

Only ISSCO lets you choose from such a wide range. You can mix and match computers and output devices for the best fit. And you'll protect your software investment from becoming obsolete when new items appear.

What's more, ISSCO gives you Layout Intelligence that automatically formats your graphics to fit the device used. Plus Device Intelligence that automatically takes advantage of each device's special features.

But device freedom isn't all. ISSCO software also works with many different mainframe and 32-bit minicomputers from Apollo, Burroughs, CDC, Cray, DEC, Honeywell, HP, IBM, Perkin-Elmer, Prime and Sperry.

Once you've seen ISSCO software in action, you won't want to use anything else.

TELL-A-GRAF® MAKES QUALITY GRAPHICS EASY.

ISSCO's TELL-A-GRAF software allows users to quickly make professional-quality charts and graphs themselves. Since it uses conventional English commands, it's easy to learn. In no time you'll be making beautiful line, bar, pie and word charts. Adding CUECHART™ lets completely untrained people generate high-quality TELL-A-GRAF plots.

DRIVES from page 107

Jonos Ltd. plans to use 3½-in. drives in its portable computer. Several Japanese companies, including Mitsubishi Corp., began designing 3-in. drives in Japan and 3½-in. in the U.S., indicating that they don't expect 3-in. drives to be successful in the U.S.

What will happen to the non-3½-in. drives? "There is really no hope for the other formats. The 3½-in. drives will be the standard," Christiansen said.

But other analysts disagree with his assessment. "Non-3½-in. drive manufacturers are stubbornly promoting their drives," Porter said. "There is a possibility that more than one size could be adopted."

Apple's primary microcomputer rival may help provide additional sizes. "While the 3½-in. drive is clearly gaining momentum, the question remains, 'What will IBM do?' " Porter said.

Analysts linked IBM's 4-in. drive to the PCjr. Since that drive was slower, had less capacity and was more expensive than other drives, IBM dropped production plans. "IBM's 4-in. drive was a dinosaur," Christiansen said.

"I think IBM will use a micro floppy drive with its portable computer," Porter said. "I think it will be a 3½-in. drive, but I don't expect to see [it] until next year."

For users, the smaller drives bring the problem of transferring data between 3½-in. and 5¼-in. disks. "The easiest way to transfer data is with communications software," Porter said. This is easy only if one has communications software for both the computer with the 3½-in. drive and the microcomputer using a 5¼-in. drive and the knowledge, desire and time to transfer data.

Gavilan offers a $595 software and cable option that transforms 3½-in. data files to 5¼-in. files. "It is designed for the user who gathers data in the field, but uses it with a desktop computer at home or in the office," Daniel said.

Micro floppy drives will not replace 5¼-in. drives overnight, observers say. It wasn't until 1981 that more 5¼-in. drives were shipped than 8-in. drives.

PICK from page 107

the comparison ends there. Unix has built a dedicated following among programmers who appreciate its multitasking and dictionary facilities. However, Unix is not generally considered to be a "user-friendly" operating system.

Pick, on the other hand, is dictionary-driven with a relational data base manager and a query language that users say is quite appropriately titled "English."

"It's a true user-friendly system," said Dan Rothstein, senior vice-president of Addept Systems Corp., a Santa Clara, Calif.-based vendor of Pick-based applications. "Pick's executable language is mostly Basic. The user has almost no restriction on what he can access in the data base. It's a variable-length record, field and file system, and it has a very good virtual memory system. It places practically no restrictions on the size of the CPU."

Large CPUs

But that doesn't mean Pick isn't appropriate on large CPUs. The Ultimate machine, which is basically a Honeywell, Inc. DPS 6 minicomputer, contains up to 2M bytes of main memory and 1G byte of mass storage. Systems Management, Inc. (SMI) of Rosemont, Ill., also offers Pick on IBM's 4321 and 4331 processors as well as on IBM's CS 9000 multiuser workstation supporting over 21 users and up to 4M bytes of main memory.

Robert Milligan, SMI's vice-president of sales, said Pick enjoys a body of about 15,000 users and is now offered by a dozen vendors. However, he doesn't see IBM releasing its own version of Pick.

"I think they would like to promote a number of operating systems but wouldn't want to do it themselves," he said.

No matter how IBM makes the system available, Milligan believes the endorsement would be a marketing coup. "The beauty of Pick is that it's got an incredible amount of software written for it," he said. "It would be a good weapon against [Apple Computer, Inc.] because so much good software runs on Pick, and Apple doesn't run Pick."

software leaves own devices.

THE DATA CONNECTION™ GETS ALL THE DATA.

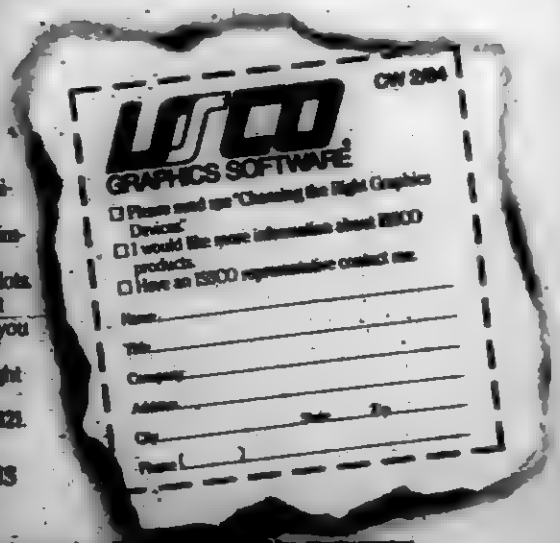
By combining TELL-A-GRAF and THE DATA CONNECTION, users can access data directly from their computers for conversion to graphics. THE DATA CONNECTION can summarize, tabulate, edit and perform mathematical manipulation to put data into the best form for graphing.

DISSPLA® CAN DO IT ALL.

"With DISSPLA software, almost anything is possible. This high-powered product is a library of over 400 subroutines that facilitate data plotting. Business and scientific programmers use DISSPLA to produce everything from simple pie, bar and line charts to sophisticated 3-D diagrams, maps and contour plots.

Shouldn't you be using software that gives you great graphics, but still leaves you to your own devices? For a free copy of our 40-page manual, "Choosing the Right Graphics Devices," write ISSCO, 10505 Sorrento Valley Road, San Diego, CA 92121. Or call (619) 452-0170.

DRAW FASTER CONCLUSIONS WITH ISSCO.



DSS from page 107

the analytical staff, due to automation of time-consuming tasks, such as report and graphics production.

The opportunity for more consistent analyses, because the analyst can exercise models for virtually an infinite variation of conditions without incurring large processing charges.

The opportunity for more efficient use of computer resources by distributing the work load between the organization's main computer and the micro workstation.

The ability to maintain data and models in a more controllable environment.

The last point is important from the standpoints of both operations and security. In the planning and forecasting areas, the ability to duplicate the results of an earlier analysis' results is very desirable, if not vital.

Further, micros can afford an additional level of security for proprietary models and data, especially when maintained in a secure office and when they lack the ability to be accessed via telephone. Sensitive data and programs can be kept on floppy disks, which can be locked up when not in use.

Despite the many capabilities of the micro, there remain several limiting factors to its use. In a decision support environment, there are four major disadvantages to using micros:

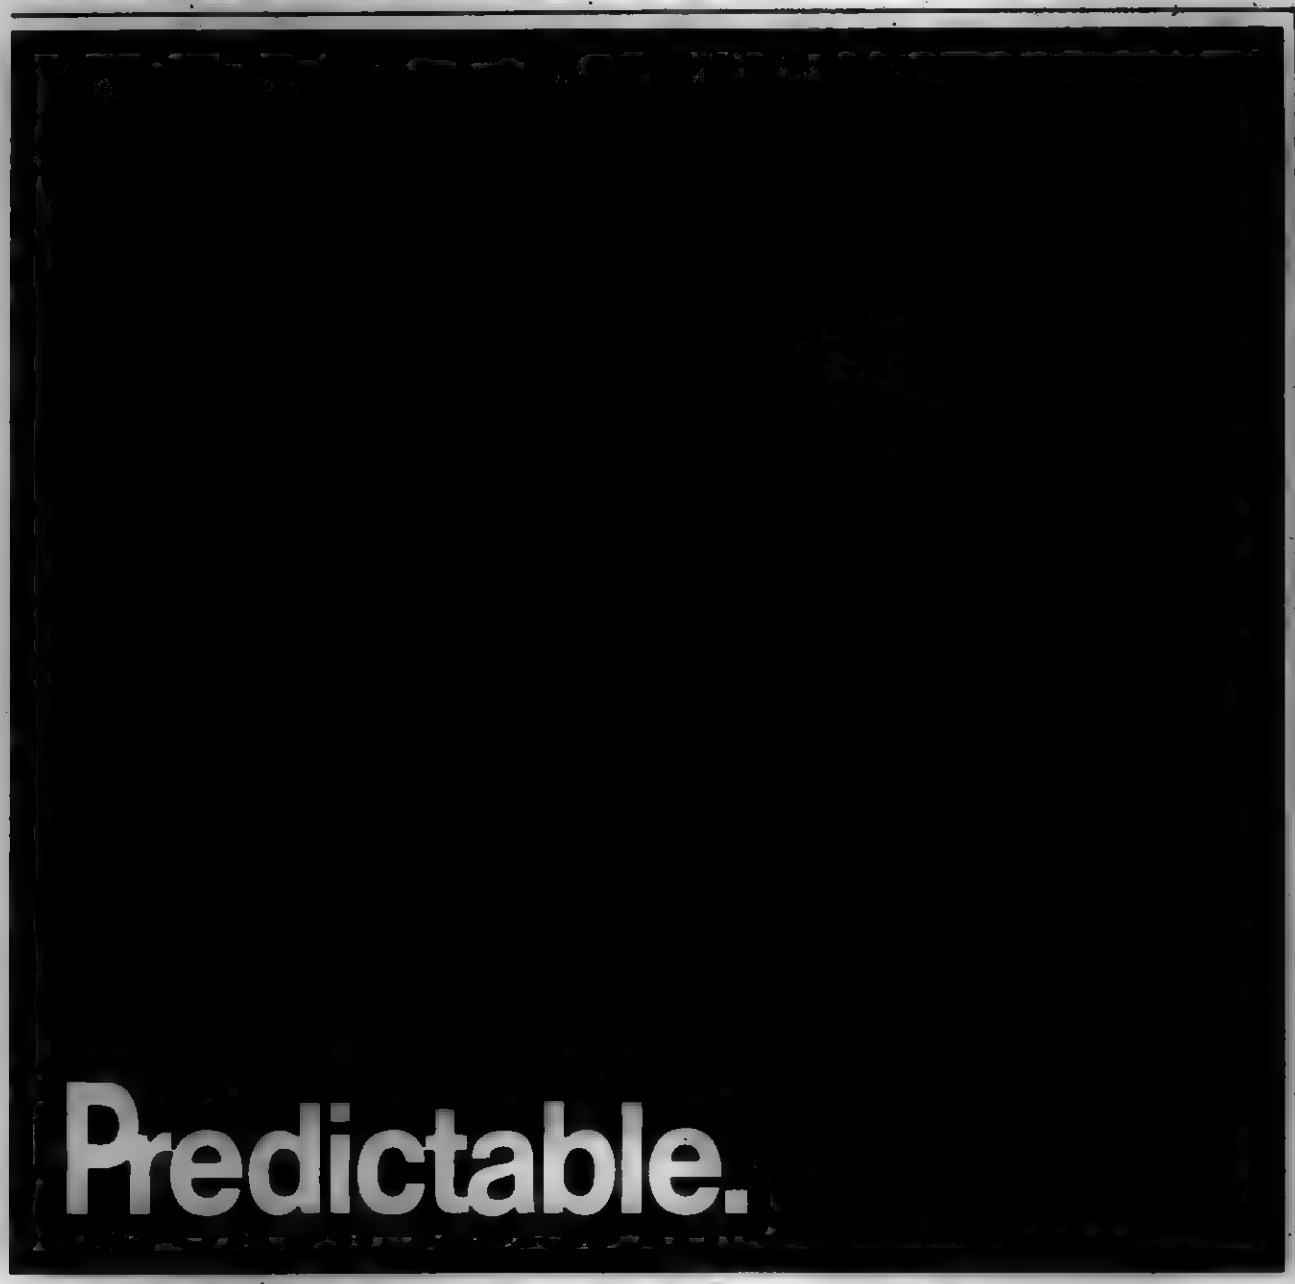
- The availability of DSS software is limited, so more sophisticated analyses must be programmed. Business analysts often develop their models in terms of a system of equations and may have difficulty translating their conceptual models to a spreadsheet program.
- Even in hard disk configurations, micros have limited disk storage capabilities, so manipulation of source data or maintenance of data bases may not be practical.
- Integration of functions is generally lacking in current micro software offerings. It is often difficult, for example, to use a word processing package and a graphics package together, due to differing file formats and/or data representation.
- The perennial problem: Users may fear, dislike or distrust computers. There are additional factors which must be taken into account when developing DSS software for micros. For example, routines that are I/O-intensive are generally slow on micros due to the lack of intelligent I/O channels.

The amount of usable memory, and thus the size of an executable module, is limited and requires the developer of large programs to use partitioning or overlay strategies.

Microcomputers offer the business analyst and decision maker a level of capability and flexibility today that was in the realm of science fiction only a few decades ago. The micro workstation affords its user a viable alternative for DSS over some mainframe processing; however, it does not come without concessions.

The utilization of mainframes for sophisticated processing, data bases, data reduction and analysis is — and will continue to be — an economical DSS solution.

Regan is a technical sales representative at Boeing Computer Services Co.



A flawless future is in sight with 3M diskettes.

When it comes to keeping track of precious data, predictable means reliable. Being able to count on every diskette, every time. At 3M, reliability is built into every diskette. We've been in the computer media business for over 30 years. And we've never settled in. We're constantly improving and perfecting our product line, from computer tape and data cartridges to floppy disks.

3M diskettes are made at 3M. That way, we have complete control over the entire manufacturing process. And you can have complete confidence in the reliability of every 3M diskette you buy.

Look in the Yellow Pages under Computer Supplies and Parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M diskettes.

3M hears you...

'Parlez-vous Fortran?'

COMPUTER INDUSTRY

IBM system news may erupt soon

INDUSTRY INSIGHT

BILL LABERIS
CW Senior Editor

Interesting rumblings are emanating from deep within the IBM chasm, all pointing to an unexpected announcement, perhaps in the next few weeks.

Asked about the rumblings, Charles Greco, who keeps his ear close to the ground at International Data Corp. (IDC) in Framingham, Mass., said Feb. 28 or 29 will bring a 3083 announcement, one that will put a bit more distance between the 3083 series and the 4381, announced last September but not shipped in volume yet.

Greco speculated that Big Blue will unveil one to three processors in a so-called "prime" series, namely 3083 E', B' and J', each offering 10%-plus more horsepower than the previous high-end 3083s.

Why the speculation? Greco said IBM had shut down part of its 3080 series production line in the fourth quarter, prompting two things: a slowdown in 3080 shipments and speculation that the Sierra series mainframe — the successor to the 3080 series — would be announced earlier than expected.

However, Greco said, the hounds were thrown off the true scent by this alleged action, as the 3083 enhancements are what IBM really had in mind. Growing that series at the high end would also make it possible for IBM to enlarge its 4381, upgrading to a Model 3 capable of operating in the 4 million instructions per second range, Greco said.

IDC and Greco are also calling for a February announcement of a 3420 tape drive successor, a stackable model with individual units coming in boxes much smaller than the 3420. This will be good news to Storage Technology Corp., which is believed to have its 3420 successor waiting in the wings. It will remain there until an IBM announcement so that STC can ensure that its box will have all the necessary guts to be truly compatible with the IBM version.

See IBM page 144

Recovery challenges vendors

By Robert Batt
CW West Coast Bureau

MENLO PARK, Calif. — The increasingly strong demand for data processing products and peripherals is bringing in its wake a new set of management problems for the leading computer manufacturers and users.

As with all economic recoveries, those problems have been made manifest particularly in the labor area, with companies which only a few months ago were cutting back on recruitment and hiring now facing an acute shortage of people.

"There is a kind of desperation in the marketplace. A short while ago, departments were hiring only one or two people in special categories. Now they are faced with hiring 10 or more people in many areas at the same time," commented Rod Asher, a DP headhunter based in Los Angeles.

A case in point is Santa Clara, Calif.-based National Semiconductor Corp. The company, which two quarters ago was reporting weighty operating losses and laying off workers, is now looking to employ 1,100 new people in its facility.

In Silicon Valley, 8,200 jobs have been added in the electronics and computer field since last April, according to state labor figures. In December alone, 1,300 people were added to the industry's employment total. Santa Clara County, which forms the heart of Silicon Valley, now has almost 175,000 — one out of four employed people — working in computer-related industries.

According to the California State Employment Development Department in San Jose, employment in the electronics area began declining in September 1982 and continued dropping for about six months. However, by the end of 1983, employment in this sector had grown by almost 4% for the year as a whole, and the department said it expects it to grow even more quickly in 1984.

Advertising is another indicator of the upswing that is taking place. The recent "Jubilee Edition" of the *Los Angeles Times*, for example, contained 450 columns of advertisements for software development engineers, IBM Cobol programmers and DP personnel, including computer operators. This was 10 times bigger than any other industry advertisement

Reorganization seen way of life for micro makers

By Patricia Keefe
CW Staff

A rocky 1983, which saw at least two bankruptcy filings and heavy financial losses among a number of microcomputer vendors, has prompted a series of actions designed to right the corporate ships, including personnel overhauls at the executive level, a refocusing of marketing efforts and a search for the financial aid necessary to sustain the companies until they get back on course.

In several cases, a lack of professional management and financial accounting skills initiated the woes of the founding

section in the newspaper.

"It has become a seller's market once again. There is a keen competitiveness for people, particularly in sectors that are automating quickly, such as the banking industry, and salary increases are once more averaging 10% to 12%. As a result, employees are gung ho and on the lookout for new employment opportunities," Asher said.

"It doesn't appear as though we have yet reached the panic hiring of four to five years ago, but it will not come as a surprise if we reach that same situation in the not-too-distant future," added Don Modie, employment manager at California Computer Products, Inc., an Orange County, Calif.-based subsidiary of Sanders Associates, Inc. and manufacturer of computer plotters, interactive graphics and digitizers.

With job opportunities increasing at a time when companies need to hold onto their people to meet the demand for their products and services, many firms are emphasizing job training and other incentives.

"The task is not only to hire good people, but to keep them here," remarked Susan Peterson, National Semiconductor's employment manager.

In a forward-looking move, the chip manufacturer has set up an employee assistance program, including the use of a resident psychologist to deal with employee relations and handle problems resulting from work stress.

Tandem Computers, Inc., the Cupertino, Calif.-based manufacturer of Nonstop computers, is well versed in the art of managing the employee problems that result from high growth. The firm, which expects to see growth this year in excess of 50%, places high emphasis on its participative management program, designed to involve employees in company decision making.

It has become a seller's market once again. There is a keen competitiveness for people . . . and salary increases are once more averaging 10% to 12%.

"We do a lot of training with our existing work force. If you want to be flexible and put a high rate of change through your organization, you had better make sure you have your act together as far as your employees are concerned," stated Lary Evans, Tandem's vice-president of manufacturing.

Seagate Technology, Inc., a Scotts Valley, Calif.-based manufacturer of Winchester disk drives, is struggling with managing the impact on its work force of high growth. In fiscal year 1982, the company totaled $40 million in sales. In the second quarter of this year alone, it expects to reap sales of $92 million.

In the last 18 months, the number of computer engineers in the company has risen from 75 to over 200. The company did this chiefly by promoting employees who successfully completed a six-month management training course set up by Seagate to improve employee skills.

As Elliott Sopkin, vice-president at Advanced Micro Devices, Inc., put it: "Firms need to provide their people with incentives. Companies have to be extremely careful that in times of high demand they do not work their people so hard that quality suffers. Ultimately, that is a management judgment."

Backlog spurring rethinking of strategy

MENLO PARK, Calif. — The strength of the U.S. economic recovery has forced many computer vendors to rethink strategies for meeting customer needs and responding to exceptionally strong order backlogs.

In several companies, this has resulted in a restructuring of internal procedures and organization to a greater or lesser degree. The companies that are now reaping the best rewards are often those that used the recent recession to make changes that would allow them to take advantage of the upturn when it came.

Advanced Micro Devices, Inc., (AMD) for example, recently entered the top-10 list of semiconductor manufacturers, with sales in the year ended March 31 expected to be around $560 million, compared with $368 million in fiscal '82.

Anticipating annual revenues of $1 billion within the next two years, AMD can attribute its success in no small part to a far-reaching employee relations policy designed to involve its work force more at a time of exceptional growth.

In 1982, AMD carried out a major restructuring of its operations with an emphasis on decentralization. The company was split into five major operating divisions and 13 major production lines, called directorates. "Our concept was to keep the manufacturing groups small so that we could keep the entrepreneurial spirit alive and have each directorate run its own business," explained Elliott Sopkin, AMD vice-president.

A similar approach was followed by Seagate Technology, Inc., a manufacturer of Winchester disks based near Santa Cruz, Calif. The company, which employs around 3,000 people, split itself into different modules with each module having its own plant and production control manager as well as group leaders and supervisors.

Seagate also developed offshore facilities for the labor-intensive part of its operations, such as the testing and repairing of integrated circuit boards. In July 1982, the company opened up a plant in Singapore to be followed one year later by a fa-

INTEGRATED FINANCIAL MANAGEMENT SOFTWARE

ROSS INTEGRATES KEY FINANCIAL FUNCTIONS
MAPS is a new generation of software merging decision support tools and financial accounting applications into a powerful, flexible financial management capability. And all Ross products are fully on-line, interactive and bring you multi-user access.

MAPS/MODEL—Powerful financial modeling
MAPS/GRAPH—Quality business graphics
MAPS/DB—Flexible database management
MAPS/Pro—Micro modeling and graphics
MAPS/GL—Comprehensive general ledger
MAPS/AP—Full featured accounts payable

OUR SERVICE AND SUPPORT MAKE THE DIFFERENCE
We bring a commitment to our customers and products that reflects our 12 years of consulting experience. Our staff of experienced professionals can work closely with you to install our products, and to provide the ongoing training and support that make them true financial solutions.

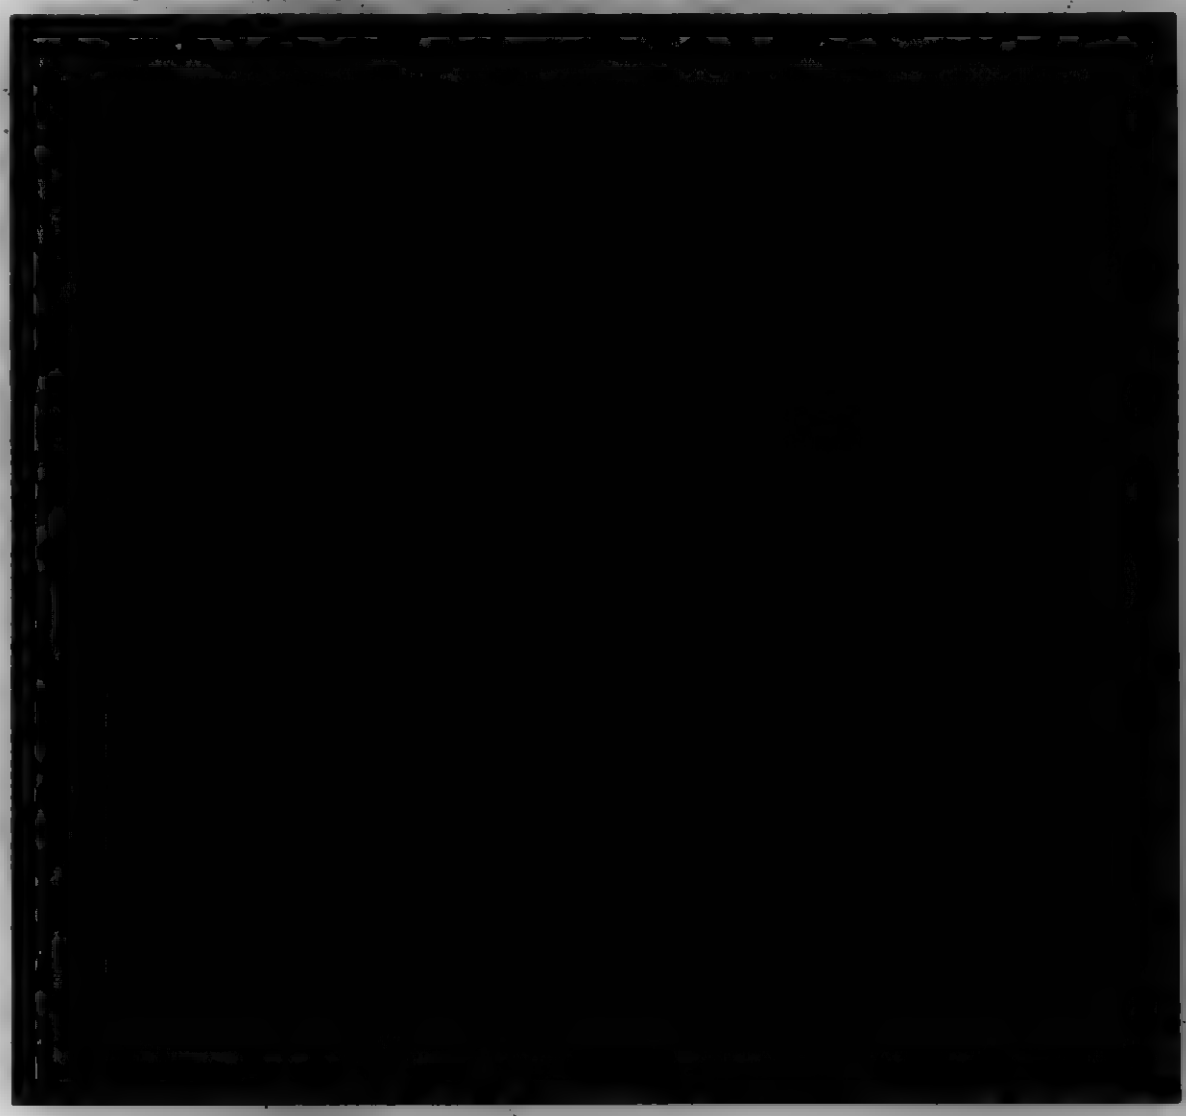
PCOX™

YOUR PC-TO-HOST CONNECTION NOW ONLY $1145

FEATURES:

- Connects by coaxial cable to any channel-attached IBM 3274, remote BSC or SNA/SDLC 3274 or 3276, or 4321/4331/4361 Display/Printer Adapter
- Exact emulation of 3278 Models 2, 3 or 4 or 3279 Models 2A or 3A,
- Screen print and screen save to disk
- Screen-control application program interface
- U.S., foreign and RPQ Keyboard support (including Entry Assist)
- Menu-driven installation
- Compatible with IBM PC, PC-XT or any IBM-compatible personal computer
- DMA-attached for high performance
- Proprietary microprocessor architecture
- Menu-selected high-speed file transfers between PC and host
- Binary and compressed text options



PCOX, the Personal Computer Coaxial Interface from CXI, is the best, most economical way to connect your IBM* or IBM-compatible personal computer to your IBM host-based network, and it's available *now*! For $1145, CXI combines the PCOX Personal Computer Coaxial Interface, Control Unit Terminal Program and Professional Workstation Facility. PCOX lets you enjoy many of the functions of the IBM 3270-PC and offers extra features available only from CXI.

*Trademark of IBM Corporation

CXI is not simply another PC-compatible board company. We understand the IBM 3270 and its marketplace, and we are introducing a family of products to allow your PC to grow with your needs.

For immediate delivery and a list of PCOX distributors, call CXI today at toll-free (800) 221-6402. In California call:

CXI Announces Bundled Pricing

For $1145, CXI combines the PCOX Personal Computer Coaxial Interface, Control Unit Terminal Program and Professional Workstation Facility. PCOX supports the operation of IBM or IBM-compatible personal computers as IBM 3278s or 3279s. In addition to the support of 1920-character (Model 2) screens, PCOX offers support of 2560 and 3440-character (Model 3 and 4) screens. PCOX also provides the ability to save screens to disk, to print screen contents and, via the Professional Workstation Facility, to transfer files between the PC and TSO or CMS host. For existing PCOX users, the Professional Workstation Facility is available, as an upgrade, for $195.

CXI, Inc., 3606 West Bayshore Road, Palo Alto, CA 94303.

CXI Offers PCOX/m3278/SPF

For $1895, CXI's PCOX/m3278/SPF combines the PCOX Personal Computer Coaxial Interface, the Control Unit Terminal Program and the Professional Workstation Facility with m3278/SPF.* For the programmer, systems analyst or any other user of IBM's TSO/SPF (System Productivity Facility), this package provides SPF functions without the usual host connect time and usage charges. Current PCOX users may buy an upgrade package for $845. The m3278/SPF utility menu accesses a number of utilities, including the file transfer capability of the Professional Workstation Facility. PC files may be treated as members of partitioned data sets.

FORECASTS AND FINDINGS

Micro software decline

Overall declines in the unit shipment and dollar volume growth rates of the microcomputer software market are likely as vendors integrate existing package functions into more comprehensive functions and develop increasingly user-friendly operating systems, according to a report by International Resource Development, Inc. (IRD).

"Microcomputer Software Packages" predicts that more comprehensive packages, such as the increasing availability of multiple window screens and mouse cursors, will reduce unit shipments and average software expenditures per micro. It also predicts that improved operating systems will allow users to perform a wide range of processing tasks for which they previously would have had to make additional software purchases. Even with a slowdown in growth relative to the expansion of hardware sales, the software market is expected to increase from $1.6 billion in 1983 to $14.7 billion in 1988, an annual growth rate of 25%, IRD claimed.

Other changes predicted by the report include more distinctive usage patterns and distribution structures to serve business, home and educational markets; software increasingly supplied in bulk lots by systems vendors and by distribution organizations; and a shift in the home market away from specialized stores to more general types of retail outlets.

The 272-page report is priced at $1,650 from IRD at 30 High St., Norwalk, Conn. 06851.

Micro graphics strong

The growth rate for microcomputer-based graphics products will grow at a 28% compounded annual rate through the first half of this decade to, a 1985 shipment value in the U.S. of over $6 billion, but the market also faces a number of hindrances in that development, according to a recently released report from Strategic, Inc.

The research study, "Microcomputer Graphics: Impact and Opportunities," predicted that severe price erosion by 1985 will paralyze many micro graphics vendors and that business applications will surpass computer-aided design (CAD) as the leading market segment, with mechanical CAD applications maintaining a 32% annual growth rate, but with electronic CAD applications growth slipping from its 73% rate through 1980 to 25% per year between 1981 and 1985.

Hindering the growth of the market, according to the report, is the lack of software and skilled development programmers, the lack of sophisticated data base management systems and the lack of business user understanding about what computer graphics can do.

The report is available for $950 from Strategic through P.O. Box 9747, San Jose, Calif. 95157.

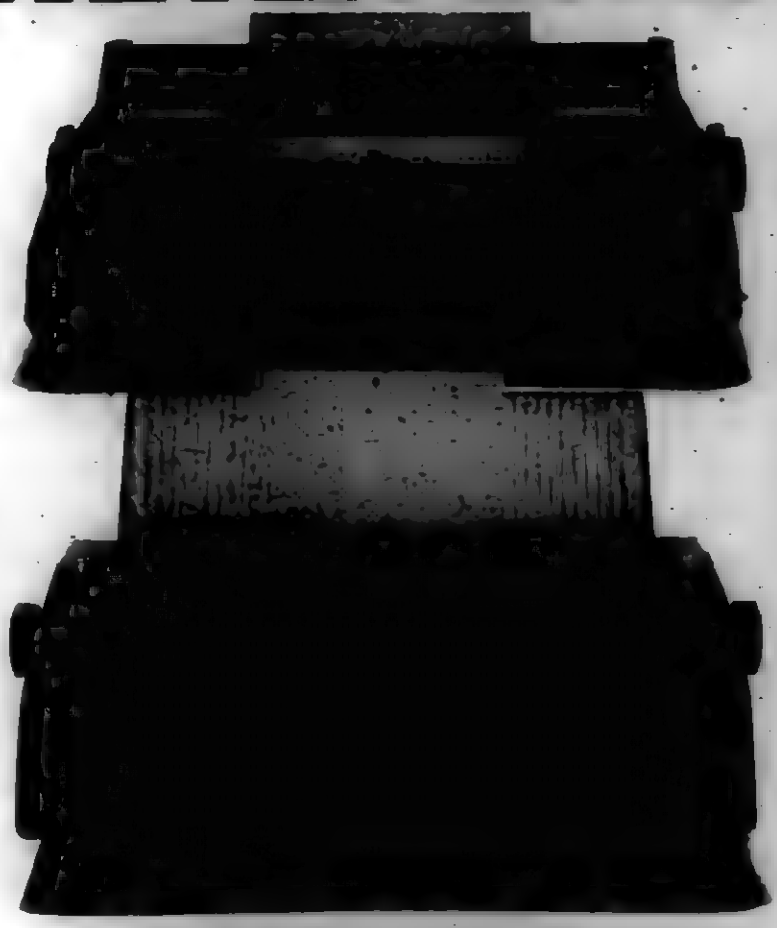
Shipments to perk up

Growth of worldwide computer system shipments by U.S. vendors will increase in dollar value by only 11.5% in 1983, down from 15.1% in 1981-1982 and 19.1% in 1980-1981, but will perk up in 1984 to 13.3% as total shipment values grow from the $30.2 billion posted in 1980 to $52.5 billion in 1984, according to a recent study by Venture Development Corp.

"The U.S. Computer Industry," second edition, forecasts shipments of virtually all major computer products and predicts that general-purpose mainframe shipments, which represented nearly two-thirds of total computer system sales in 1980, will only represent half of total shipments in 1984. Superminicomputer shipments will grow from $857 million in 1980 to $2.9 billion in 1984 with new vendors entering the fray, existing vendors expanding product lines and prices falling dramatically; however, minicomputer shipments, while

SPINWRITER INTR

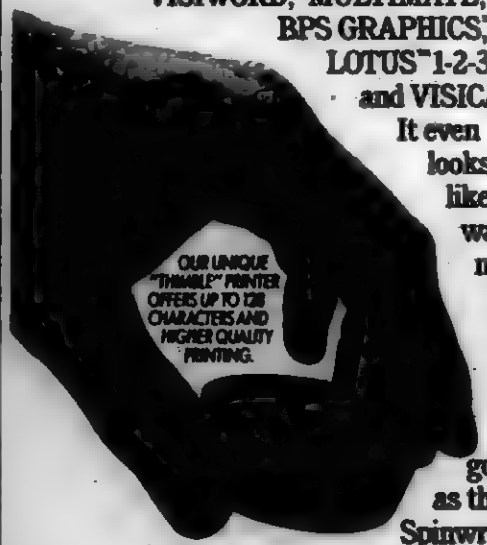
Now you have a choice of fully compatible Spinwriters for your IBM PC and XT.



NEC MODELS OFFER SPEEDS OF 200 AND 350 WORDS PER MINUTE.

First, a few words about the original, the Spinwriter 3550.

It was the first and only totally compatible letter-quality printer for the IBM PC. It plugs directly into the IBM PC and works with every piece of IBM PC software, as well as all popular third-party application packages, such as WORDSTAR,™ WORDPLUS,™ VOLKSWRITER,™ VISIWORD,™ MULTIMATE,™ BPS GRAPHICS,™ LOTUS™ 1-2-3,™ and VISICALC.™

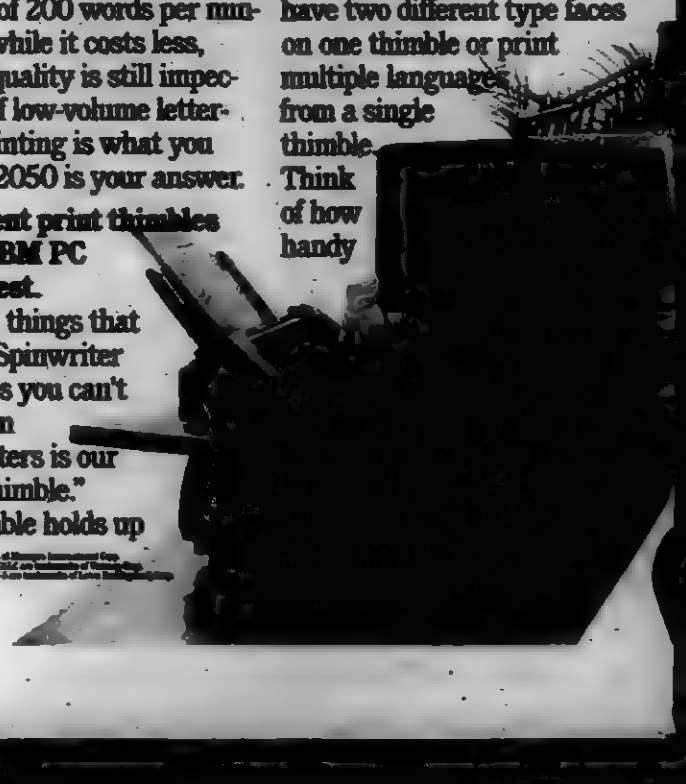


It even looks like it was made for the IBM. Now, as good as the Spinwriter 3550 is, we recognize that a single printer can't take care of every business or professional office need. So we've added another IBM PC compatible Spinwriter: The 2050.

The new 2050 has a printing speed of 200 words per minute. And while it costs less, the print quality is still impeccable. So if low-volume letter-quality printing is what you need, the 2050 is your answer.

60 different print thimbles let your IBM PC look its best.

One of the things that gives our Spinwriter capabilities you can't even get on other printers is our unique "thimble." Each thimble holds up to 128 characters. You can even have two different type faces on one thimble or print multiple languages from a single thimble. Think of how handy



growing at a larger rate in 1983 than 1982, are in a permanent slowdown, according to the report.

Single-user personal computers priced under $10,000 will see business segment shipments grow at an annual rate of 10% to a value of $700 million in 1984, and shipments of portable computers will grow at a "phenomenal" rate to double in 1983 and almost to double again in 1984 to reach nearly $1 billion.

The 200-page study is available for $1,050 from Venture Development at One Washington St., Wellesley, Mass. 02181.

Power balance shift

Distribution strategies spawned by the microcomputer revolution will echo throughout the office products industry in this decade and result in a shift in the balance of marketing power from the manufacturers toward the new distribution establishment, according to a recent study by Frost & Sullivan, Inc.

More intense competition for new markets, created by improving performance/price product ratios, has forced vendors to seek indirect distribution channels to supplement or even to replace their traditional sales forces, the study said. Leading the way have been microcomputers for office use as vendors try to reduce marketing costs while reaching a broader base with cheaper products. OEMs and systems-house sellers are emerging as a major third force, powered by expertise and customer support commitment.

The sales of stand-alone micro sales through dealers should increase from 15% of the total in 1982 to 25% in 1987, and nondirect channels will increase their combined share of workstation micro sales from 20% to 45% over the same time span, the report declared. The report forecast equipment distribution in the areas of word processors, copiers, dictating equipment and communications equipment.

"New Marketing Strategies for Office Equipment" is priced at $1,325 and is available from Frost & Sullivan at 106 Fulton St., New York, N.Y. 10038.

Productivity climbing

Two studies on the computer industry indicate that the number of employees in the industry is growing at an annual rate of 3%, and productivity over a three-year period has increased by 7%, while total corporate operating costs and expenses have grown at a lesser rate than gross income.

"Productivity Trends in the U.S. Computer Industry," based on analyses of 86 companies over a three-year period, and "Computer Industry Comparative Costs Analysis," covering the years 1980 through 1982, are contained in the October 1983 update of "Corporate Strategies for the U.S. Computer Industry."

The studies, completed by Newton-Evans Research Co. (Nerc), in addition to information on productivity, profits and expenses, also analyze cost of goods sold, marketing costs, R&D costs, total working capital, sales revenue and gross income. The second report indicates that total operating costs and expenses rose an average of 7.5%, while gross income grew an average of 9%. Also, growth in investment for R&D remains high and just about matches computer industry sales growth for both 1981 and 1982.

Priced at $850, the 1983-1984 edition of the corporate strategies publication analyzes the 100 leading computer industry firms and is available from Nerc at Suite 204, Bethany Forty Center, 10176 Baltimore National Pike, Ellicott, Md. 21043.

ODUCES A SPINOFF.

that would be if your business is international.

On the other hand if you have special printing needs, you can opt for a full alphabet plus numbers, sub- and superscripting and scientific and arithmetic symbols.

Incidentally, for all their versatility, our inexpensive thimbles last for over 30 million impressions.

So it won't end up costing you a fortune to look like a million.

SPINWRITER OFFERS OVER 60 DIFFERENT TYPE FACES.

No matter what form your business takes, Spinwriter can handle it.

A Spinwriter can actually help you put your communications in better shape. It can use any of our nine interchangeable forms handling options. And they can all be easily installed and changed by the operator.

Want to dash off a few hundred original letters to your customers? Our sheet-feeder is just the ticket. It will print on your letterhead and second sheet or envelope.

Standard features include continuous forms handlers that take paper up to 16 inches wide, variable size forms, and multi-part forms.

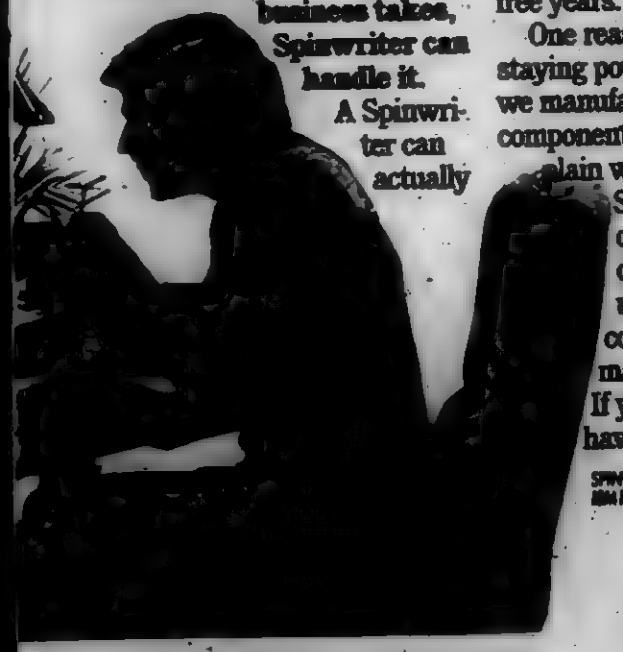
Spinwriters have a hard-earned reputation for reliability.

Spinwriters hold the industry record for mean-time-between-failure. Over 3,000 hours. Which, in terms of average personal computer usage, adds up to more than two trouble-free years.

One reason for Spinwriters' staying power is the fact that we manufacture every major component. It also helps explain why NEC Information Systems is the number one supplier of letter-quality printers to PC users in America. Of course, someday you may need a little service. If you do, it's nearby. We have a large group of NEC-trained professionals all around the country. It's also quick. Because of our modular design, normal repairs take less than 20 minutes.

9 DIFFERENT NEC-BUILT FORMS HANDLERS AUTOMATICALLY FEED ANY OFFICE FORM YOU HAVE.

You'll find Spinwriters at participating ComputerLand stores, Sears Business Systems Centers, IBM Product Centers nationwide, Entré Computer Centers and authorized NEC Spinwriter distributors. Or call 800-343-4418 for more information. And find out why more and more IBM PC users are saying, "NEC and me."



SPINWRITER CAN OPTIMIZE YOUR IBM PC CAPABILITIES.

DP boom means overtime, more shifts, facilities

MENLO PARK, Calif. — More overtime, extra shifts and new manufacturing facilities characterize the computer industry enjoying boom times, which it is now.

Intel Corp., Advanced Micro Devices, Inc. (AMD) and California Computer Products, Inc., a subsidiary of Sanders Associates, Inc., are examples of companies that are attempting to meet the demand for their products through expanded production facilities.

Intel, for example, will open up two new plants this year, one in Albuquerque, N.M., and another in Jerusalem. The company is presently operating multiple shifts six and seven days a week.

Intel, which overestimated the semiconductor market in the spring of 1982 and hired many more people than it needed, retained the loyalty of its work force by keeping its people on its employee rolls when the market slowed. It did so by cutting salaries across the board. But when the economy picked up steam, Intel did not have to scramble for new hires, as did virtually all of its competitors, which experienced extensive layoffs during the recession.

Rival chip manufacturer AMD has instituted a "job for life" policy, similar to the Japanese lifetime employment system. With a guaranteed no layoffs system, the rapidly expanding company has been able to win employee approval for a production strategy based on more capital equipment and higher yields.

The company recently brought on-line a new factory in San Antonio, Texas, specializing in the manufacture of bipolar devices and a new Cmos fabrication plant in nearby Austin, Texas.

Among the semiconductor manufacturers in particular, booming demand has resulted in an increasing amount of overtime for company employees.

"Many companies are paying out a lot in overtime payments. During the recession, firms were generally running just two shifts and stretching out deliveries. Now most of them are running three shift patterns, seven days a week," commented Bill Strauss, vice-president of Integrated Circuit Engineering Corp., a Scottsdale, Ariz.-based market research firm.

According to Tom Mitchell, president of Seagate Technology, Inc., such a fast work pace can often lead to problems. "You cannot work people seven days a week for a long period of time. Overtime has to be a short-term phenomenon; otherwise, quality will drop off," he warned.

National Semiconductor Corp. has attempted to get around this problem by changing shift patterns and giving employees more flexible work hours.

NEED from page 132

cility in Bangkok, Thailand.

At Tandem Computers, Inc., the approach was not so much one of organizational restructuring as an attempt to improve already existing procedures.

Emphasis was placed on gaining better control of materials supply, achieving a $15 million reduction in inventories and a $69 million increase in the year-end cash balance in 1983.

At Hewlett-Packard Co., a fundamental change in the firm's business, emphasizing more software development and relatively less manufacturing, has increased the need for high productivity levels.

At its data systems division in Cupertino, Calif., and at its Boise, Idaho, plant, HP has installed automated warehouses to increase productivity and replace jobs HP considered dangerous or dirty for humans.

IBM MAKES WORK STATIONS FOR THE SYSTEMS 34, 36 AND 38. WE MAKE THEM BETTER.

Nobody makes better computers than IBM. But work stations aren't computers. And the simple truth is that the best work stations for your IBM System 34, 36 or 38 don't come from IBM. They come from Decision Data.

Decision Data work stations for the Systems 34, 36 and 38 offer improved productivity, efficiency and operator comfort. The tiltable, non-glare screens provide cursor-position and error-message displays plus automatic dimming for longer screen life. Keyboards are movable and offer built-in palm rests.

Decision Data also produces a cluster controller to enhance the productivity of your system. It includes 4 ports, a single cluster feature, an EIA interface and an expansion feature which doubles the number of ports. All standard from Decision Data, all extra from IBM:

Decision Data is your primary source for work stations, letter-quality printers, matrix and band line printers, serial printers, communications controllers and other computer peripherals which raise the productivity of IBM computers. Decision Data equipment does more work, more quickly, more easily, for less money. And it's reliable—backed by our nationwide and international service.

When people think of computers, they think of IBM. But when they think of the best family of peripherals, they come to Decision Data.

And that's a very smart Decision.

WE MAKE THE RIGHT DECISIONS

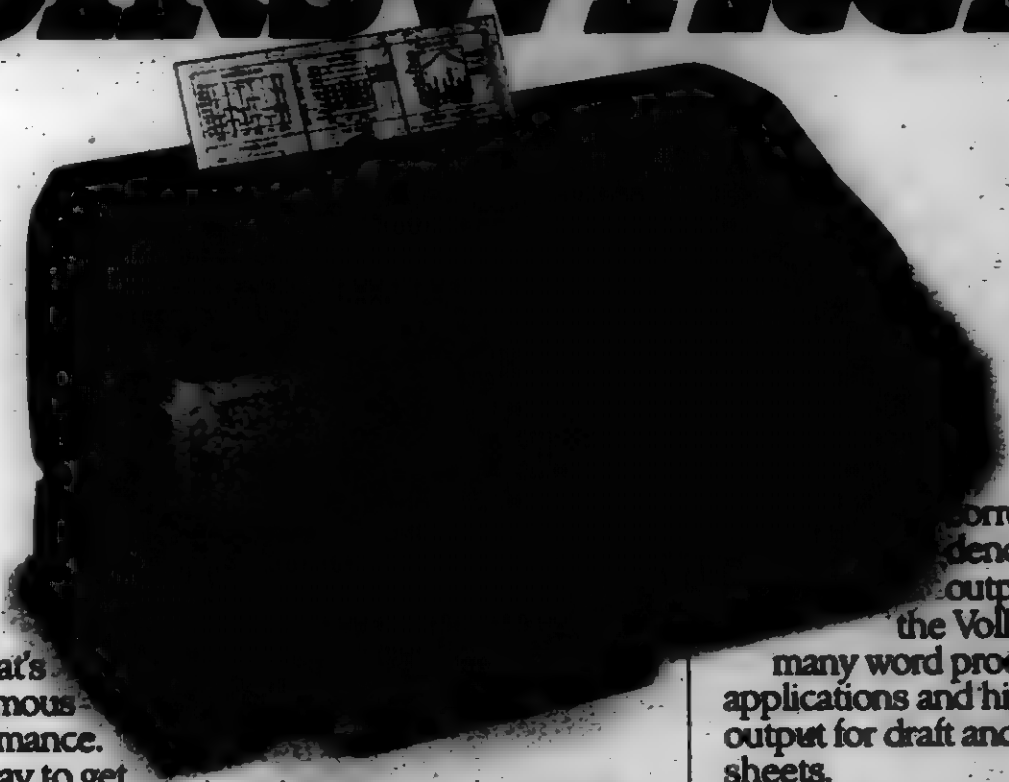
Soup up your Volkswriter.



Everybody knows Volkswriter, the word processing software package that's become synonymous with high performance. Now, there's a way to get even higher mileage out of your Volkswriter. Hook it up to a Dataproducts P Series dot matrix color printer.

The versatile P Series translates the executive class, word processing capabilities of the Volkswriter into brilliant full color charts, graphs and text. It delivers a full page of text quality print in nothing flat while its sheet feeder automatically prevents loading hassles. And the P Series uses pin feed or plain paper and has the brains to fill every appropriate line with crisp, sharp copy, even if it has to justify to do it. And the P Series color printer has dual speed capability for

correspondence quality output for the Volkswriter's many word processing applications and high speed output for draft and spreadsheets.

The Dataproducts P Series color printer. Think of us as a supercharger for your Volkswriter.

For more information go to your nearest computer store and ask about the Dataproducts P Series color printer, or call Dataproducts, 1-800-258-1386.

Comshare's Kevin Kalkhoven and Richard Crandall hold graphics showing System W's integration into a typical information center.

Comshare changes strategy
And wins IBM support

By Paul [illegible]
CW Staff

ANN ARBOR, Mich. — For Comshare, Inc., the Big Blue blessing it received last month in the form of a "complementary marketing agreement" with IBM could not have come at a more opportune time.

The agreement provides for IBM salesmen to recommend Comshare's System W as the primary decision support system (DSS) for IBM mainframes [CW, Jan. 9]. The deal is an important lift for Comshare, which has experienced more troubles than most of its peers in the time-sharing industry recently. Its revenues, which reached almost $80 million in 1981, slipped to $76 million in 1983. Between 1981 and 1983 its income per share from continuing operations plunged a precipitous 85%.

However, the company now stands to be counted with the top DSS vendors in the industry, a turnaround which is attributable to a refocusing act Comshare performed in 1979. Prior to that, the firm offered a variety of statistical, data management and modeling packages on time-sharing, but nothing called DSS.

"Toward the end of the 1970s, we found the products we were delivering were not allowing users to keep pace with the productivity benefits they had achieved during the mid-70s," said Richard Crandall, Comshare president. "It turned out that the kinds of requests we were getting were broadening. People were asking more from decision support."

The decision to become a DSS vendor was the result of three primary observations, Crandall said. "We saw that buying software was becoming the accepted thing to do," he said. "We saw Apple [Computer, Inc.] was in the home market and was going to have a significant impact in the corporate area. We also saw that software for decision support and financial management was getting old."

Comshare outlined a two-part strategy to develop a new set of integrated DSS software and a delivery mechanism that emphasized time-sharing as well as packaged sales.

Built from scratch

System W was built from scratch, with an initial investment of $10 million. The company continues to invest about $5 million per year in enhancements and new features like Micro W, a microcomputer version of the mainframe product, released in early 1983.

Comshare also saw a three-tiered delivery strategy as central to System W's success. The product is offered on time-sharing, as a package available on the mainframe and as Micro W. Several of Comshare's largest accounts are using all three delivery methods, Crandall said.

Interestingly, System W's success has marked a rebirth of Comshare's time-sharing business, Crandall said. "Our time-sharing business associated with System W has never been better. Companies are buying the idea of triple delivery."

What has changed is Comshare's image of itself. The company bills itself as a DSS vendor, but has expanded the definition of DSS to include "basically everything that's in the information center," Crandall said.

Comshare also refuses to be pinned down on the future of the time-sharing part of its business, preferring to focus on the product rather than the medium of delivery. In fact, Crandall regards time-sharing as elemental to the three-tiered delivery strategy. More products that are available as a remote service now will be packaged in the future.

"We have set ourselves up so that we are indifferent to whether a customer decides to go with a software sale or time-share. We literally don't care," he said.

THE COLUMBIA IBM-PC COMPATIBLES. THEY REWARD TWO BUSINESS VIRTUES: FORESIGHT AND CUNNING.

Trust your instincts.
While others rushed out to buy an IBM-PC, you waited and watched. You knew prices would come down and software would get better.
Now we have a reward for your patience: the Columbia family of IBM-PC compatible computers. It's a choice of systems and software no one else can match.
The Columbia line includes the VP Portable which lets you work anyplace, any time. There's also the MPC, our desktop model, available in dual floppy disk or 10MB hard disk drive. Compatible with each other and the IBM-PC, as well.

Foresight led you to our IBM-PC compatibility.
We start you with more operating systems than IBM, even more than other IBM-PC compatibles (MS-DOS* and CP/M*-86). Which means you have immediate access to all the latest business and financial software.

Free software that's a steal.
Thousands of dollars worth of free software come with every Columbia computer. Columbia Tutor gives you a fast, comfortable start. Perfect Software* covers your word processing, spreadsheeting, and filing needs. Fast Graphs* turns facts and figures into graphs and charts. And asynchronous communications lets you share information with other computers.
For your sense of self, we give you Home Accountant Plus,* games, and two programming languages so you'll feel like an eleven year old genius.

Responsive service. Above and beyond.
175 local Bell & Howell service centers stand ready to maintain your Columbia computer at a moment's notice.

Prices start at $2995. The phone call is free.
Now, while you're feeling shrewd, call toll free for the Columbia dealer nearest you. Then, see for yourself how the Columbia Compatibles can reward your business virtues.

COMPUTER INDUSTRY

MAI goes to court to prevent stock takeover

By David Myers
CW New York Bureau

NEW YORK — Management Assistance, Inc. (MAI) has struck back against dissident shareholder Asher B. Edelman, suing to keep him from using his 7.5% stake to wrest control of the company.

MAI, maker of the Basic Four line of minicomputers, filed suit against Edelman and six codefendants in U.S. District Court here late last month.

MAI has asked the court to award it an unspecified amount of damages and to prevent Edelman and what the firm called "his group" from adding to their 7.5% stake; voting at the March 14 shareholders' meeting here; selling the stock; using it to attempt to control company management; or "taking any other steps in furtherance of their unlawful scheme to gain control of MAI," according to court papers.

Plans to nominate directors

Edelman has said he will present a slate of nominees for the computer maker's board of directors at the March shareholders' meeting, seeking to get MAI to drop out of manufacturing and to concentrate instead on its more profitable service business.

Named along with Edelman in the complaint were Arbitrage Securities Co., Plaza Securities Co., Minor Associates, R. Raymond French, Charles P. Stevenson Jr. and Clark R. Mandigo.

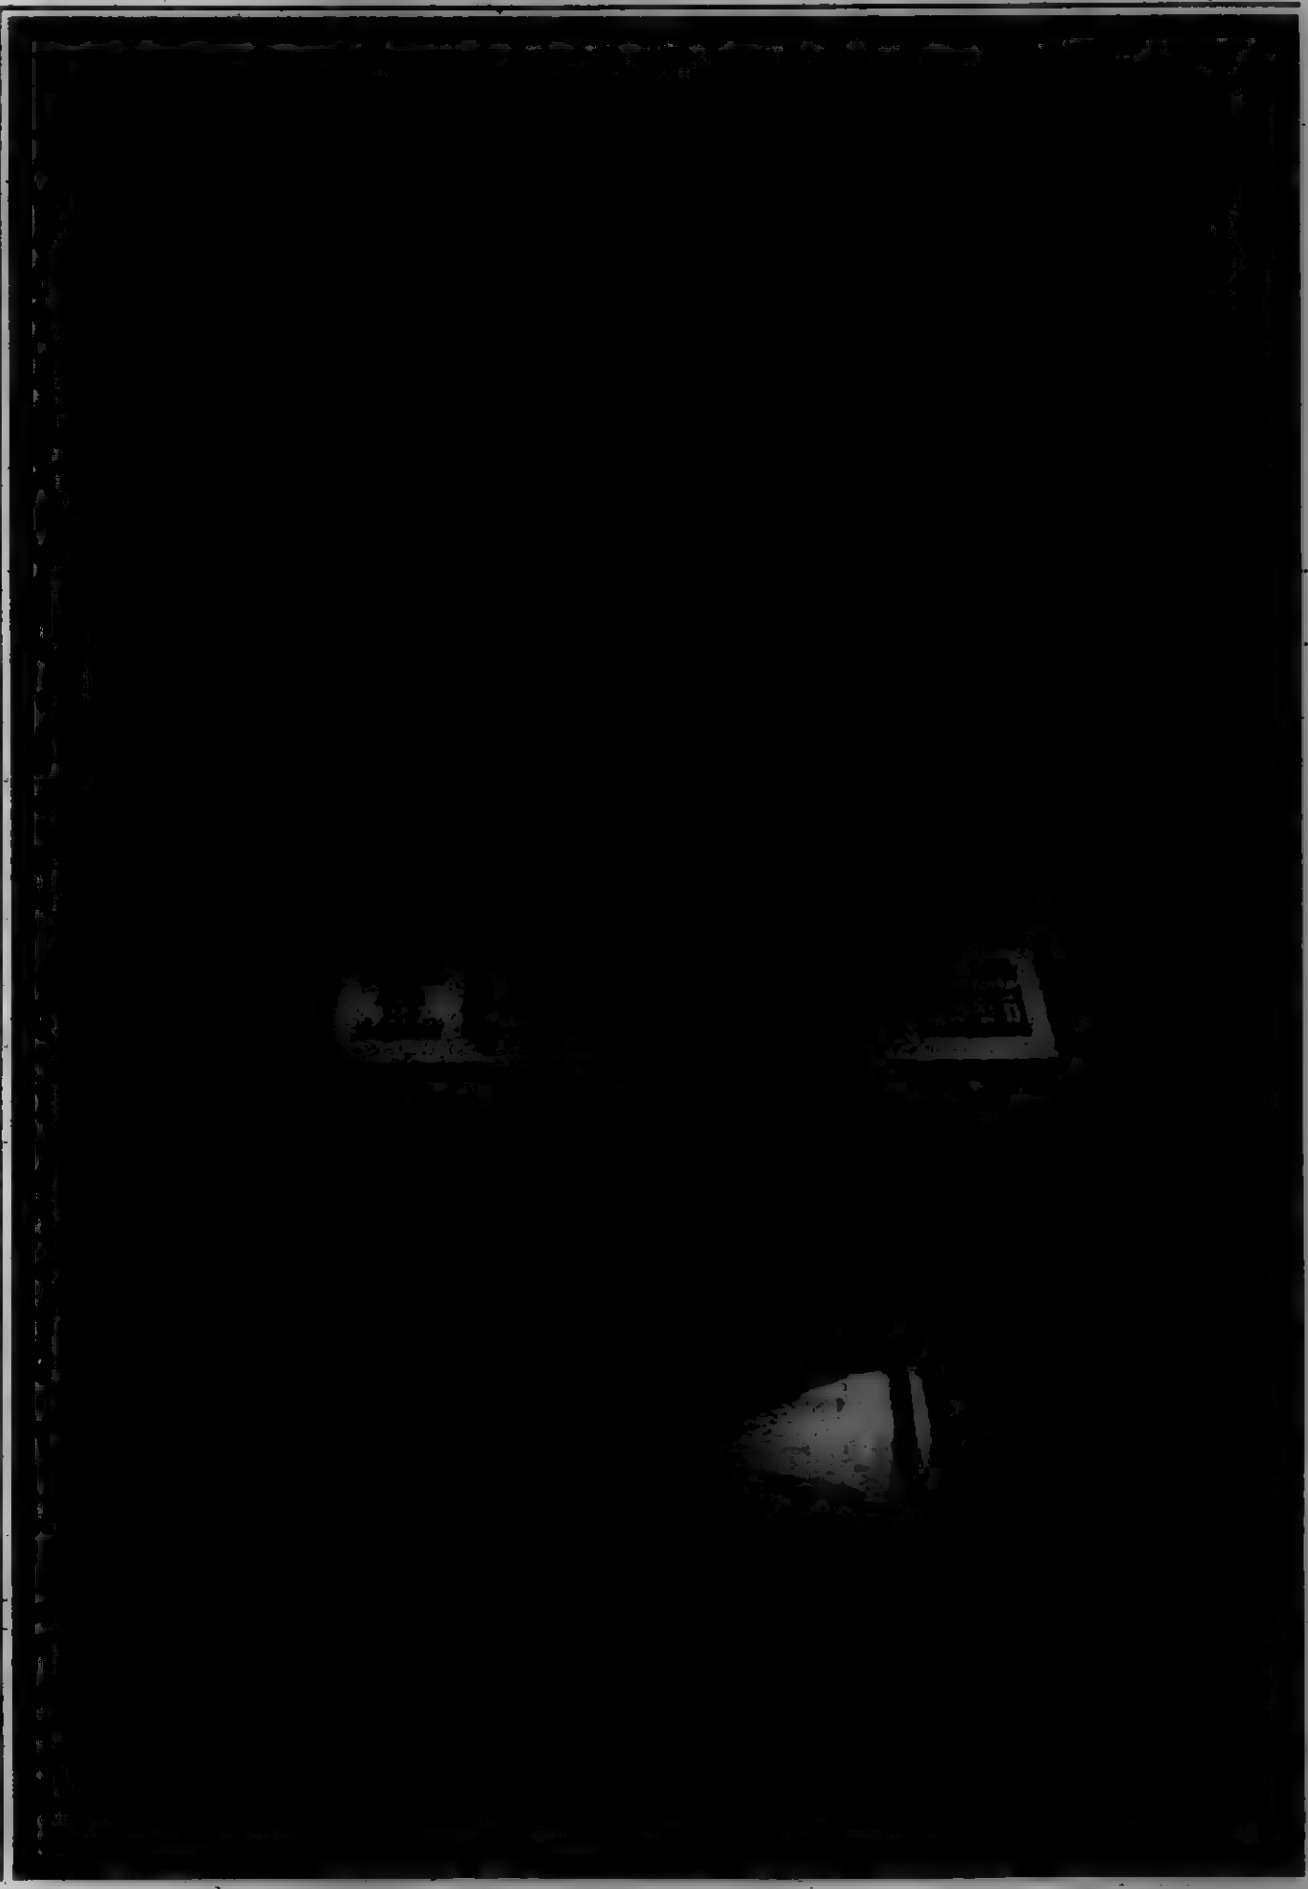
French, Stevenson and Mandigo are on the slate of board nominees put forward by Edelman.

In its complaint, MAI charges Edelman and the six codefendants with stock price manipulation, racketeering and breaking securities laws.

MAI said in a prepared statement that it was accusing Edelman and the six others of obtaining funds for MAI stock purchases by misleading investors into believing that the sale of an Edelman-controlled commercial real estate firm was imminent, driving up the price of that company's stock and providing Edelman with financial leverage to borrow money for his stock purchases.

Reached at his offices here, Edelman said the MAI lawsuit was "totally without merit and totally without truth." He said the case would not tie his hands. "They have to win before they can tie my hands," he noted.

Even if its case were a success, MAI would be unlikely to win an injunction against his buying more stock or selling the stake he has, Edelman added.



Corona, IBM settle on law suit

LOS ANGELES — Corona Data Systems, Inc. announced it has settled a copyright infringement suit brought by IBM by agreeing to a court-entered stipulation order and judgment in which it is enjoined from infringing upon IBM copyrights and ordered to return to IBM or destroy any existing copies of the computer program in question.

Corona Data agreed to the settlement without admitting liability, and IBM agreed not to seek enforcement of the judgment with regard to microcomputers shipped by Corona Data prior to Feb. 18.

Corona officials said they are confident their engineering staff will be able to develop an IBM-compatible program that does not infringe upon IBM copyrights.

Apple reorganization reflects new product strategy

CUPERTINO, Calif. — Apple Computer, Inc. recently announced the reorganization of its product line families and executive sales management to reflect newly implemented product strategies and priorities heralded with the recent announcements of a line of 32-bit microcomputers.

President and Chief Executive Officer John Sculley said Jan. 30 that the reorganization was effective immediately and resulted in three product divisions: the Apple II division, the Apple 32 division and the Accessory Products division.

The Apple 32 division will include product development and marketing for the Macintosh, the Lisa 2 series and all 32-bit systems. Steve Jobs, company chairman, was named executive vice-president responsible for the division, which includes the automated Macintosh manufacturing facility in Fremont, Calif.

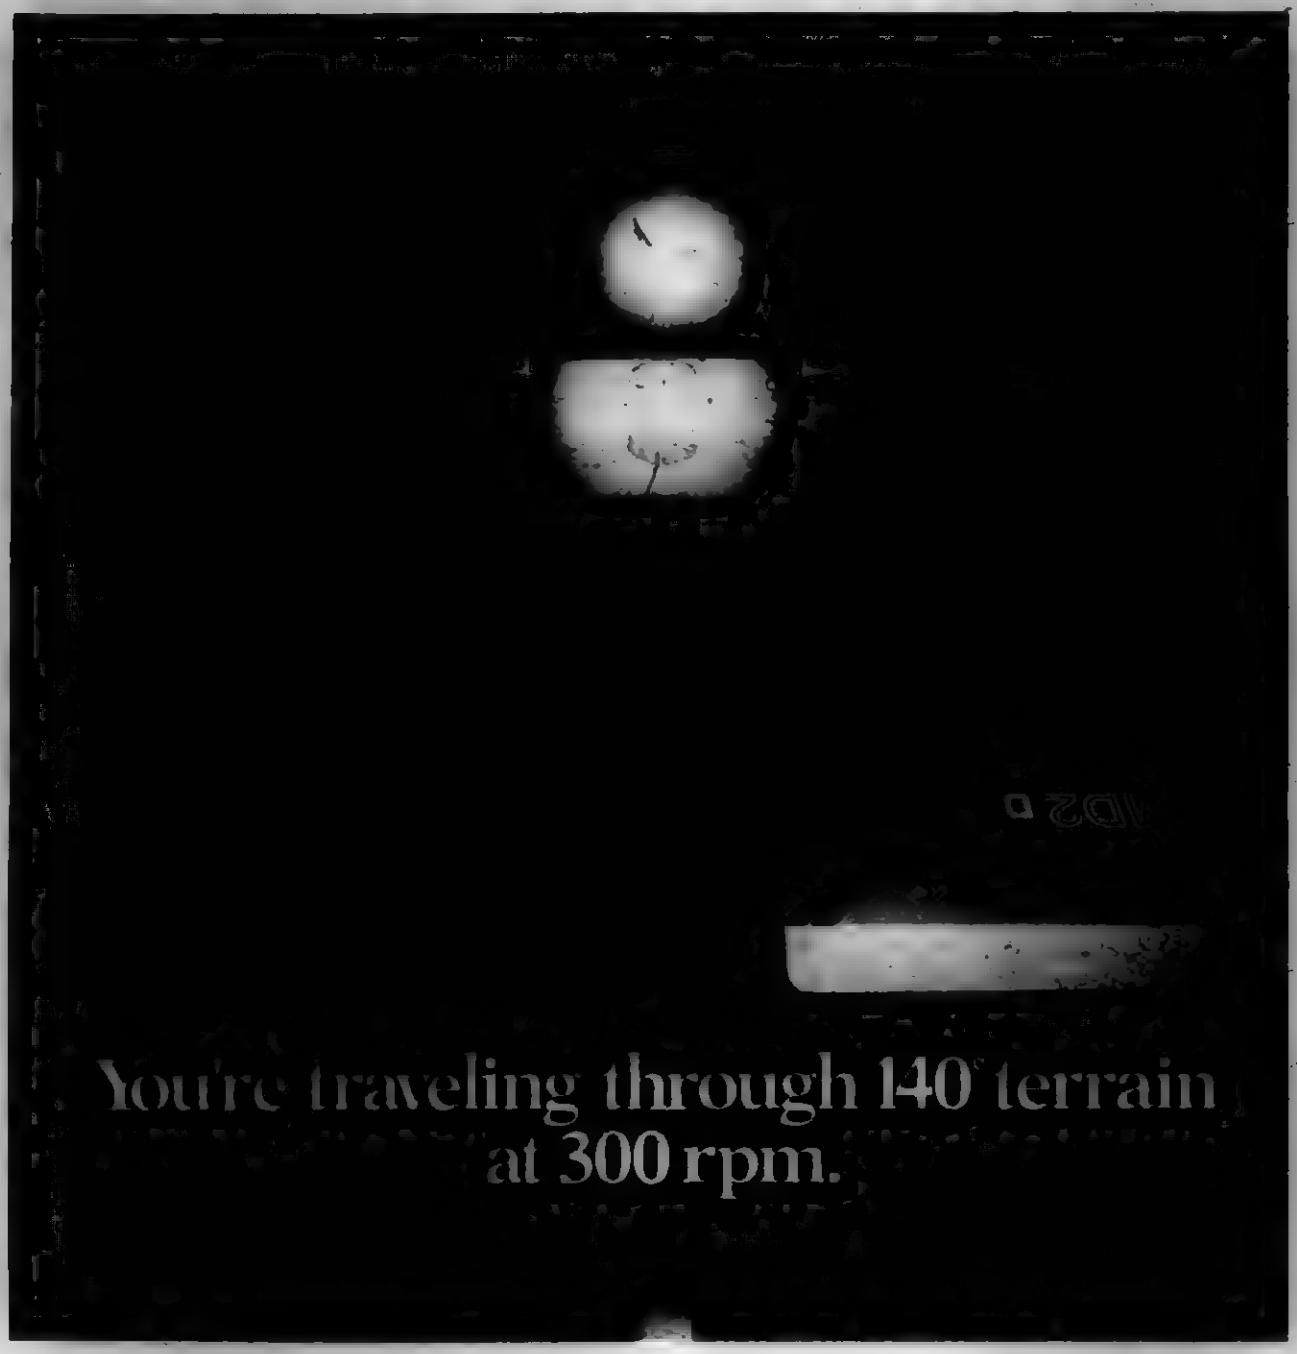
Named to head the Apple II division, with responsibility for all present and future Apple II and Apple III products, was Delbert Yocam, formerly vice-president and general manager of operations.

The Accessory Products division retained Michael Muller as vice-president and general manager of the division, which designs, produces and procures products such as printers, modems and keyboards.

Each product family will include manufacturing operations for that product group, Sculley said.

"Future products will be designed in cooperation with manufacturing, assuring high-quality products that are easily and economically produced," he said.

E. Floyd Kvamme, executive vice-president for worldwide marketing and sales, announced three changes in the company's executive sales management: John Cavalier, formerly head of the personal computer division, was named vice-president of the Americas, Far East and Africa group; Michael Spindler, former European general manager of Apple, was named vice-president of the European group; and William Campbell, formerly vice-president of marketing, was named vice-president of U.S. sales.



Only one disk guarantees safe passage through the torrid zone of drive heat. Maxell.

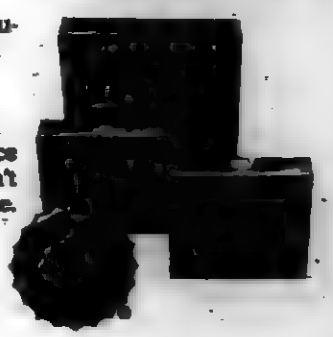
A lifetime warranty. And manufacturing standards that make it almost unnecessary.

Consider this: Every time you take your disk for a little spin, you expose it to drive heat that can sidetrack data. Worse, take it to the point of no return. Maxell's unique jacket construction defies heat of 140°F. And keeps your information on track.

And Maxell runs clean. A unique process impregnates lubricants throughout the oxide layer. Extending media and head life. How good is Gold?

Maxell's the disk that many drive manufacturers trust to put new equipment through its paces. It's that bug-free.

So you can drive a bargain. But in accelerated tests, Maxell floppys lead the industry in error-free performance and durability. Proving that if you can't stand the heat you don't stand a chance.



maxell.

IT'S WORTH IT.

Maxell Corporation of America, 60 Oxford Drive, Moonachie, N.J. 07074 201-440-8020

Interconnect seminar set for March 22

ORLANDO, Fla. — "Interconnect Japan," a seminar for the discussion of successful strategies for penetrating the interconnect market in Japan, has been scheduled here for March 22-23 by Technology Analysis Group, Inc.

The seminar will bring together U.S. telephone equipment manufacturers and top Japanese and U.S. telecommunication and trade experts and will cover topics such as the structure of the market, projected demand for different types of equipment, export financing, legal aspects of exporting to Japan and others.

Speakers will include Clyde Pretowitz, counselor to the U.S. Secretary of Commerce; Hideaki Toda, director general of the New York office of Nippon Telegraph and Telephone Public Corp.; Masaru Kawajiri of the U.S. Embassy, Japan; Kan-Ichiro Aritomi, first secretary, Embassy of Japan; and Robert D. Westfall, vice-president of the Security Pacific National Bank Trade Finance Group.

The registration fee is $900 for the first person from a company and $450 for each additional person. More information is available from Technology Analysis Group, Suite 101, 1424 16th St. N.W., Washington, D.C. 20036.

ADDS STACKS UP BEST

Designed for Operator Enjoyment.

The leader in quality and reliability now offers the Viewpoint family with all the most user-requested features:

- Earth-tone colors and small size to complement any office environment.
- Tilt and swivel display for operator comfort.
- Low profile keyboard with adjustable height for easier data entry.

VIEWPOINT®/Color.
The first truly low-cost color terminal.

Industry reps back bill for overseas tax treatment

By John Gallant
CW Washington Bureau

WASHINGTON, D.C. — Computer and electronics industry representatives have endorsed legislation to restructure the U.S. program offering favorable tax treatment to American export sales.

The bill would replace the existing Domestic International Sales Corporation (Disc) program, set up to allow tax deferrals on export revenues, with foreign sales corporations (FSC). Members of the General Agreement on Tariffs and Trade have complained that Disc violates that treaty, to which the U.S. is a signatory.

Several spokesmen for various segments of the U.S. high-technology community testified on the bill Feb. 3 before the Senate Finance Committee.

Although they insisted the Disc program has been beneficial to industry and that some sort of tax relief is necessary if American exporters are to remain competitive with foreign firms that receive tax benefits from their governments, the industry representatives offered a number of recommendations for amending the legislation, now under consideration in the U.S. Senate and House of Representatives.

Intel Corp. Vice-President Robert Reed, representing a newly formed High-Technology FSC Coalition, told the Senate committee the FSC act should clarify the current ambiguity regarding eligibility of software sales to receive tax treatment as "export property."

Sperry Corp. Vice-President Gerald K. Howard explained to the committee that under Disc rules software that is bundled with hardware is eligible for the tax benefits, but the eligibility is unclear if the software sold under a separate price is in a separate transaction.

In general, Howard said, "The current Disc provisions have been a most effective incentive for small as well as large electronics companies to begin and expand their export activities."

Appearing for the American Electronics Association, the Computer and Business Equipment Manufacturers Association, the Scientific Apparatus Makers Association and the Semiconductor Industry Association, Howard said the groups support the FSC bill even though it might mean reduced tax benefits for electronics companies on exports.

Howard offered a number of recommendations for the legislation that, he said, would make the overall package attractive to high-technology companies.

Amdahl reports earnings climb to $43.2 million

SUNNYVALE, Calif. — Amdahl Corp. announced recently that earnings for the fiscal year ended Dec. 31 climbed almost tenfold to $43.2 million, or 96 cents per share, from the $4.8 million, or 12 cents per share, reported a year earlier.

The company experienced record fourth-quarter revenues of $225 million, compared with $145.5 million for the corresponding period a year earlier, and net income of $15.6 million, compared with the year-earlier figure of $774,000 before application of a $1.9 million extraordinary credit.

The quarter report reflected continued improvement in product shipment volume and reduction in product costs, despite the impact of foreign currency exchange rates and processor price reductions reported in the third quarter of 1983, according to Amdahl President John C. Lewis.

Total profit for the year, after the credits realized from subsidiaries' prior years' accounting losses and tax credits, was $46.4 million, or $1.03 per share, compared with $6.7 million, or 16 cents per share, for the previous year.

Nippon invites U.S. to forum

TOKYO — Nippon Telegraph & Telephone Public Corp. (NTT) is inviting participants from the U.S. to the International Symposium on Optical Communication Technology to be held here April 12-13.

The symposium is in accordance with a U.S.-Japan trade agreement regarding NTT's procurement procedures.

The symposium costs approximately $190. Simultaneous translation between English and Japanese will be provided.

More information is available from Kanmori Yoneno, NTT, Room 2906, 200 Park Ave., New York, N.Y. 10166.

GET THE WORD ABOUT TRANSACTION PROCESSING. IT'S IN THE BOOK.

In our free 82-page book, "SYNAPSE TRANSACTION PROCESSING: SYSTEM OVERVIEW." And it's a revelation. To non-technical management, technical management, and staff alike.

It spells out how to accelerate development and minimize maintenance of high-performance, fault-tolerant, online transaction-processing systems.

It also discusses miracles: how to get dazzling performance from a Relational DBMS and how to expand a transaction-processing system online under power.

It reveals how to provide fault tolerance without redundant hardware and without programming. How to use a system-wide dictionary to standardize and control all definitions and relationships. How to completely automate database integrity, concurrency and recovery.

It's all there. Chapter and verse. Even a comprehensive index. To get your copy, simply mail the coupon or give us a call at (408) 946-3191. And let there be enlightenment.

Study hails 1983 as banner year for buy-outs

But consultant reports more conservative numbers

By David Myers
CW New York Bureau

NEW YORK — Acquisitions involving software and computer services firms topped the $1 billion mark for the first time last year and soared 132% over the 1982 total, according to the year-end index of the Association of Data Processing Service Organizations, Inc. (Adapso).

A record 146 mergers and buy-outs valued at $1.01 billion took place in 1983, according to the index prepared for Adapso by Fort Lee, N.J.-based Broadview Associates, an acquisitions marriage maker.

George Grodahl, a Broadview partner, hailed 1983 as "a banner year" for buy-outs in the software and remote processing segments of the computer industry. The dollar value of the deals rose for the fourth straight year, "a trend we expect to continue in 1984. There may be a 15% increase this year," Grodahl said.

However, more conservative numbers and forecasts were handed in by the Cerberus Group, an independent consultant based in Frenchtown, N.J. The firm's year-end report found that acquisitions and mergers in 1983 added up to $956 million, a gain of 45% from the $660 million total of 1982. A "slight improvement" was predicted by the Cerberus Group for 1984.

The largest single deal of last year was IBM's increase of its stake in Intel Corp. to the tune of $155 million, according to the Cerberus Group. But the Adapso/Broadview index, restricted to the nonhardware marketplaces in the computer industry, located the largest deal in Comdata Network's $91 million purchase of rival electronic funds transfer firm Instacom.

"The most active acquirers were companies that were already in the industry," Grodahl said. "Almost every major computer company has made acquisition a major part of [its] growth strategy."

However, Broadview expected to see an increasing number of noncomputer companies enter the market via acquisition in 1984. Consumer goods makers, insurance firms, publishing houses, distributors and financial institutions were named by Grodahl as likely computer entrants this year.

Software deals outstripped processing company deals in 1983, according to the Adapso/Broadview index. Sixty percent of the companies acquired last year were software developers, compared to "well under" 50% in 1982, Grodahl said.

"This is a clear indication of the importance placed on the software sector and of the shift in emphasis away from the processing sector," Grodahl said, adding that Broadview expected to see software deals dominate computer industry acquisition activity again this year.

> *'The most active acquirers were companies that were already in the industry. Almost every major computer company has made acquisition a major part of [its] growth strategy.'* — George Grodahl, Broadview Associates partner.

Of the software firms acquired by larger companies in 1983, 27% were developers of mainframe programs, up from 8% the year before. Microcomputer software houses accounted for 17% of the deals, a jump from 6% of the acquisitions in 1982.

Grodahl said the smallness of the micro software percentage of deals masked their relative importance last year. "That industry is still quite young and evolving. We expect that trend will become even more important in the future. This is probably one of the fastest growing of all industries," he said.

Buy-outs involving micro software houses will become increasingly common because of what he called "the Lotus syndrome," Grodahl said. "[Lotus Development Corp.] changed the ground rules when [it] entered the market.

"It spent between $3 [million] and $5 million in advertising and almost immediately established brand name identity."

But the Broadview partners do not expect computer hardware manufacturers to be among the bidders for software houses. While hardware makers might be expected to view software development as a way of keeping their machinery from becoming a mere commodity item, they might also fear that acquiring a software house would scare off independent program developers, the Broadview partners suggested.

IBM from page 131

One look at the figures posted last week by Compaq Computer Corp., maker of the most successful IBM Personal Computer lookalike, will erase all doubt that the fully compatible route is a safe one, for the time being. Compaq earned $4.7 million in its first year of operations on $111 million in sales, but sold $52 million and earned $5.2 million in the fourth quarter.

Compaq's Plus computers are about as IBM-compatible as computers can be. From the commencement of shipping its systems, the Houston-based manufacturer has hitched its cart to the insatiable appetite for IBM Personal Computers and IBM's corresponding inability to meet the demand.

But will Compaq's fortunes be short-lived? If they are not to be, the company will have to develop a solid follow-on, because IBM will not sit by idly when there's more business to be had.

The flip side of the microcomputer fortunes coin was shown by Vector Graphic, Inc. this month, when the company posted its fourth consecutive losing quarter.

This time the figures look almost pathetic — $1.9 million in losses on just $3.3 million in sales, compared with sales of almost $12 million for the same period a year ago.

Exactly what the new management group at Vector intends to do to restore the company to financial viability is not clear yet.

Wage exemption upheld

By John Gallagher
CW Washington Bureau

WASHINGTON, D.C. — The U.S. District Court here last month ruled against organized labor and supported a U.S. Labor Department decision exempting federal computer and other high-technology equipment maintenance contracts from government-set minimum wage rules.

The AFL-CIO and eight other unions challenged the Labor Department Service Contract Act (SCA) exemption in December. The department had finalized the exemption the month before, saying the act, designed to stop wage busting by government services vendors, should not apply to electronics industry workers, who are relatively well paid and whose skills are in such demand that they can command fair compensation without government protection [CW, Nov. 14, 1983 and Jan. 16].

The electronics industry had sought the exemption, arguing the law would ruin its merit pay scales and force it out of government service work. Federal purchasing and auditing agencies also backed the exemption, saying that bringing this type of work under the SCA could make it hard for federal offices to obtain high-tech maintenance services.

In his decision favoring the Labor Department, Federal District Court Judge Oliver Gasch supported the electronics industry contentions: "A number of facts led to the conclusion that this class of employees did not need the protection of the SCA and were not, in fact, subject to the kinds of difficulties Congress sought to protect against in the SCA."

The order said the industry is "not conducive to wage busting" and noted wages in this sector had not declined during the four years prior to the final Labor Department ruling in November, during which time an interim exemption was in effect.

The judge also pointed out that the final regulations provide that workers on government contracts must receive pay equal to that of workers in private organizations.

To the labor unions' complaint that the exempting regulations were "capricious and arbitrary," the court found that "the scope and content of deliberations preceding the promulgation of the final regulations . . . indicate that the regulations were the product of reasoned consideration of available alternatives."

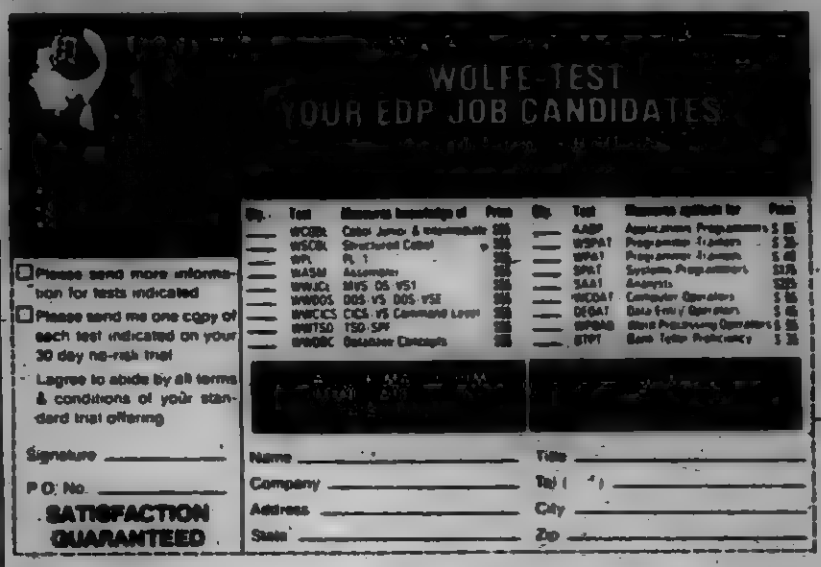
The unions are expected to appeal the court's decision.

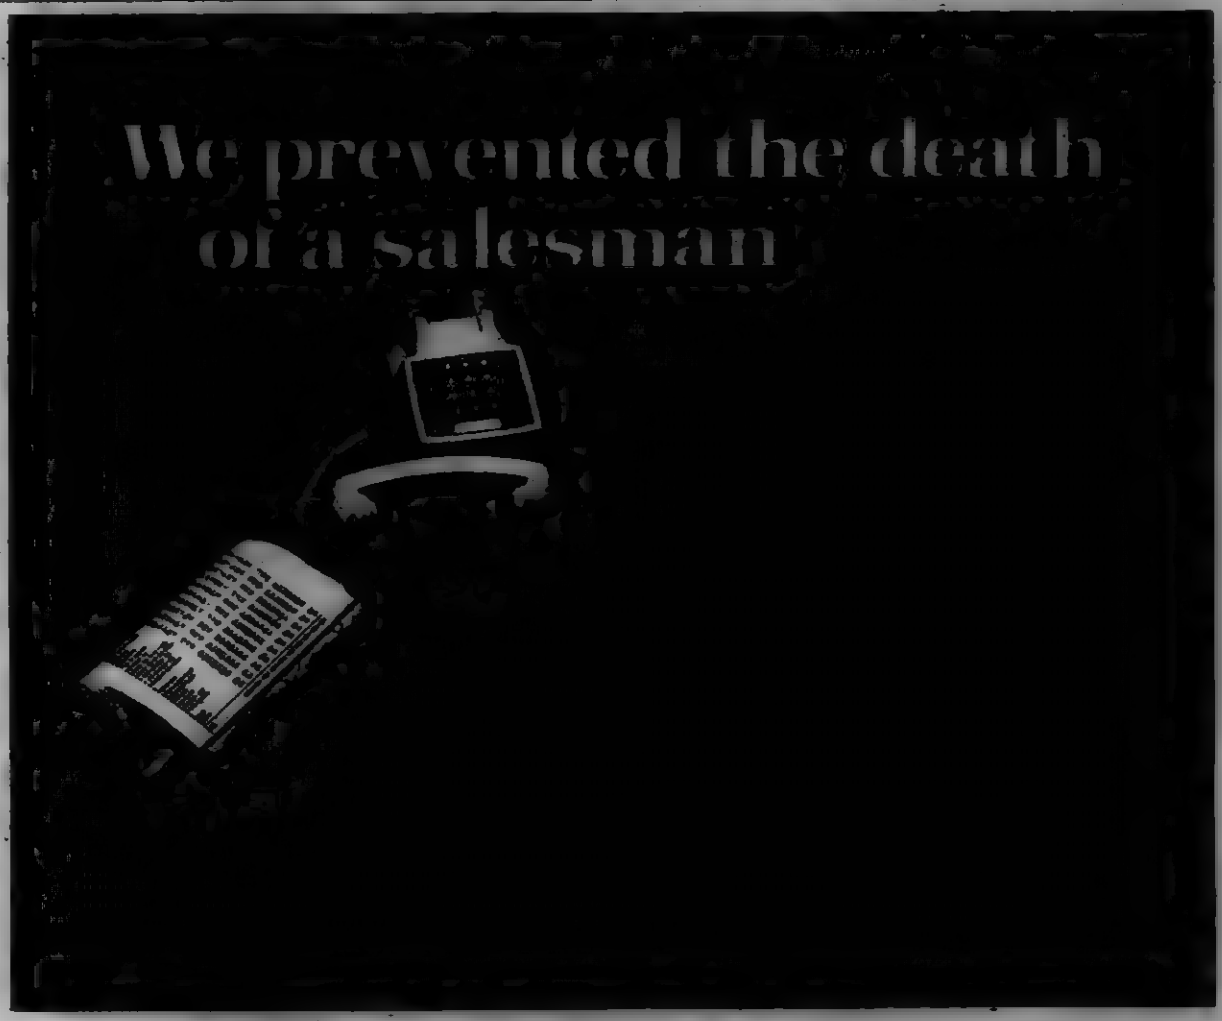
Pactel to offer DG's CEO in Nev., Calif.

WESTBORO, Mass. — Data General Corp.'s integrated office automation system will be marketed in California and Nevada by Pactel Communications Systems, a subsidiary of one of the regional holding companies created with the breakup of the Bell System, it was announced last week.

A subsidiary of the Pacific Telesis Group, Pactel Communications will market DG's Comprehensive Electronic Office (CEO) systems on the Desktop Generation microcomputers and Eclipse MV series of superminicomputers, according to a joint announcement. Pactel currently provides telephone terminal devices and other communications equipment for Pacific Telesis customers and serves an area with more than one million businesses.

The companies said the CEO systems may be linked through Northern Telecom, Inc.'s SL-1 private branch exchange, which is also offered by Pactel, and will provide a means to connect workstations to host computers.





My sale would be shot at sunrise.
My best customer shook his head. "How could a company so on the ball in the past be so off this time?" he growled. I was stunned. The home office and I had worked long and hard on what could be our biggest order. "What's the problem?" I gulped. "Your figures. They're out of whack—way out," he replied. "And so are you—unless you get your proposal in shape by morning."

The main man was 2,000 miles away—but the mainframe was as close as my hotel room.
Because of the time differential my boss was long gone from the office and our work sheets. But with the Execuport 440 Portable Terminal I could work directly with our mainframe and rework what had to be a goof-up that could cost us plenty.

"Let's refigure," said the Execuport. "Anytime," said the mainframe.
So out of its soft case (for added lightness) came my (truly) portable 12 pound Execuport 440 with its internal modem. I jacked in the phone...automatically dialed the mainframe at headquarters... and started the whole process of refiguring. What we had done (wrong) in a week had to be done right by sunup. It took less than that: ten minutes of communicating with the mainframe through my easy-to-use Execuport...and then the mainframe communicating back like all get out.

If the Execuport weren't a plain paper terminal with efficient editing capabilities, I could never have massaged the data the way I should have originally. Or illustrated our product and cost advantages with graphics. Or presented my customer with high-quality multi-copies. The Execuport did everything to get me to that morning meeting but shower and shave me!

The sale got a new lease on life. So did I.
Was my customer impressed? As much by the overnight performance and the look of the presentation as by the revised figures. A happy ending—that began when we first looked into Execuport Portable Terminals. For features, functions and available models...for getting your money's worth...get with the Execuport people. Phone toll free (1-800) 526-9088. In N.J. (201) 261-8800. Or mail the coupon.

entrepreneurs, many of whom had sound products to market, but either failed to recognize the impact of IBM announcements on their market or simply mismarketed the products, according to analysts.

■ Osborne Computer Corp. was the first of several micro makers to encounter serious problems, taking refuge under Chapter 11 of the Federal Bankruptcy Act in September 1983. Prior to filing for protection, company founder Adam Osborne attempted to reverse his misfortunes by hiring Robert Jaunich II, former president of Consolidated Foods Corp., as company president and then laying off all but 80 employees.

Under a reorganization plan, Osborne Computer said it will focus on international sales, which reportedly have been consistently high. If the plan is approved, Jaunich would be replaced by Ronald J. Brown as president and chief executive officer (CEO) of the firm. Brown was general manager of Osborne's International Division. Jaunich would remain on the board of directors, as would Osborne. The company lists 27 employees, where it once had 1,000 and reportedly has enough computers to sell through the end of 1984.

■ Computer Devices, Inc. (CDI) was the second portable micro vendor to run for protection under the federal bankruptcy code last year. A major portion of the blame for CDI's problems lay with its decision to equip its non-IBM-compatible micro with non-industry-standard 3½-in. disk drives, analysts have said. Resulting financial troubles forced the company to hire a financial services firm to help locate a merger partner. When that failed, it too filed for bankruptcy.

It introduced an IBM-compatible version of its DOT portable, the DOT II, at Comdex but lacked the funds to manufacture and distribute it. Currently, CDI President Robert Moore is trying to negotiate large orders from dealers, major retail chains and large end users. Moore has said he will consider a private-label deal as well. Also, CDI announced in January that it has sold nonexclusive rights to this version of the DOT to Prime Computer, Inc. for $200,000.

A possible boost to CDI's pioneering efforts with the 3½-in. disk drive may come from Hewlett-Packard Co. and Apple Computer, Inc., which have announced personal computers using the mini-size drives that store twice the density of standard 5¼-in. disks. CDI will submit a business reorganization plan in March.

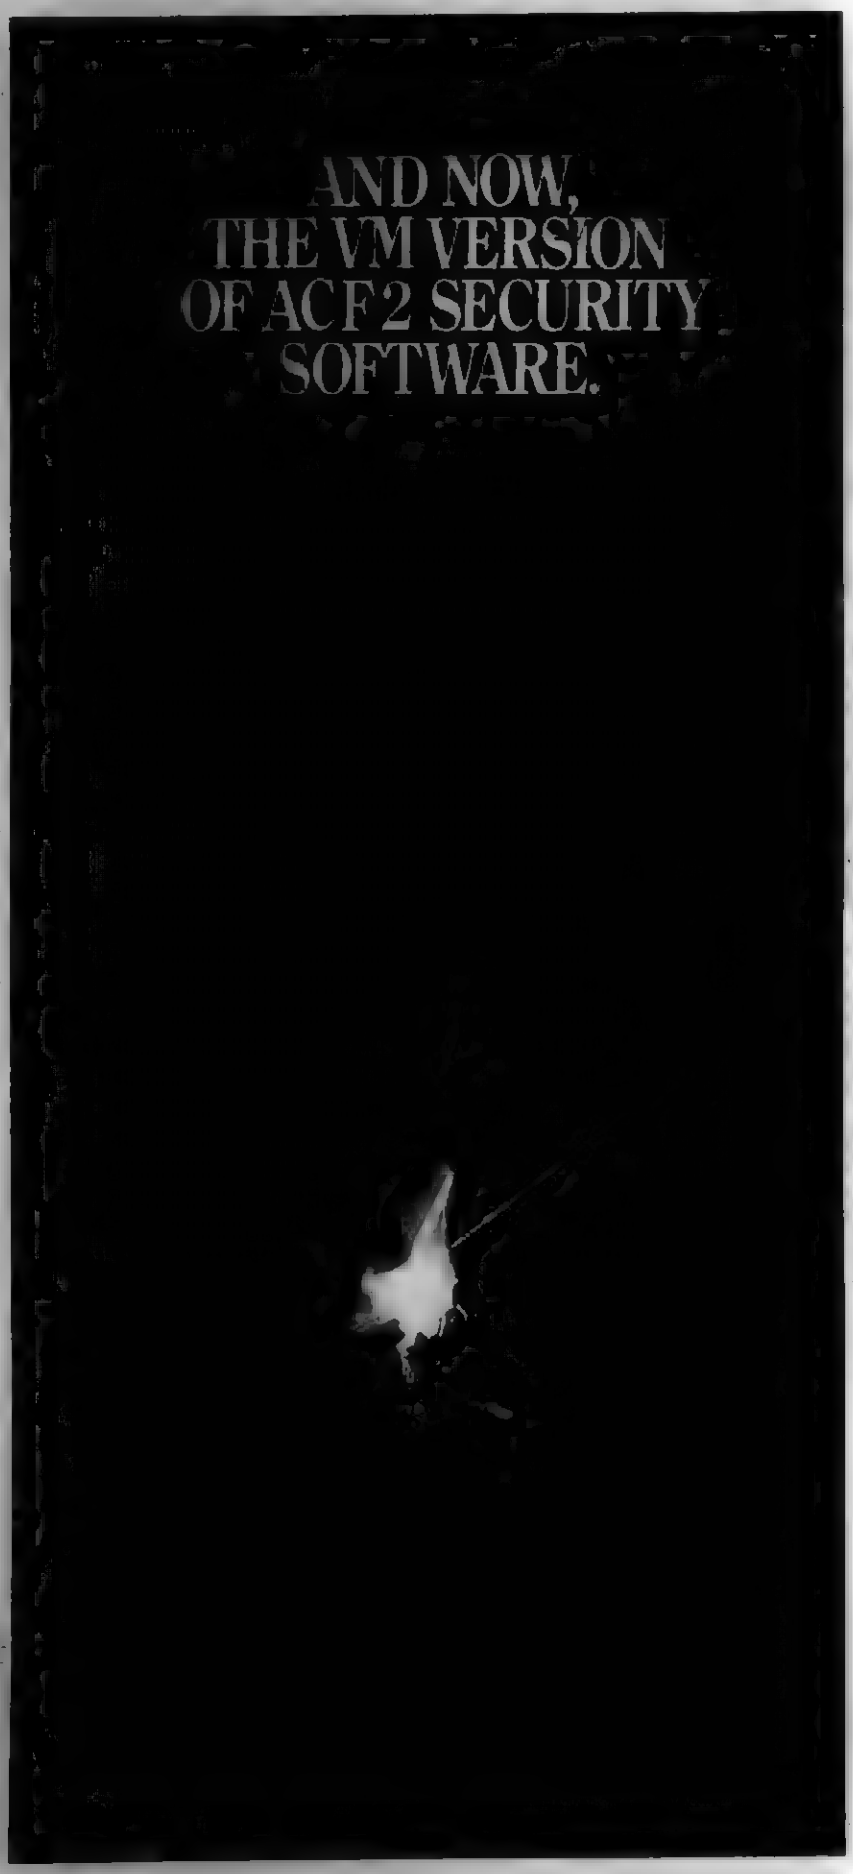
■ Vector Graphic, Inc., vendor of small business computers, has undergone several management changes in the last year, shifting founder Lore Harp in and out of the president's office. Most recently Harp bowed to pressure from a group of investors which insisted on new management in return for $2 million in financial backing.

Recently reported second-quarter losses totaled $1.8 million on sales of $3.3 million — less than one-third of sales during the same period a year ago.

Harp has been replaced by one of the investors, Jean Deleage, who has also become acting chief financial officer. Harp reportedly will concentrate on sales and other operational activities.

■ Victor Technologies, Inc. also saw some some traffic in the president's office, as President and CEO Charles Peddle stepped aside in November and was replaced by Richard Couch, former vice-president. Victor closed down the majority of its U.S. sales offices by November 1983, prompting speculation that the financially troubled micro maker had given up on the U.S. market. Analysts have blamed its troubles on too rapid expansion, poor management and a poor showing of the Victor 9000 in the IBM-dominated U.S. market.

■ Fortune Systems Corp., maker of Unix-based multiuser microcomputers, lost $1.9 million in its third quarter. Its problems have been attributed to delays in development and shipment of revised versions of its software. President Gary Friedman resigned in October, and senior vice-president of operations David Caplan was tapped as acting CEO until James Campbell was appointed president and CEO.



With *innovative* and *non-traditional* Access Control Facility software, ACF2, VM users can sleep a lot better.

Because with ACF2/VM, all data is protected by default. We call this Implicit Security.

Implicit Security means you have unparalleled protection against unauthorized disclosure, modification and destruction of data.

It means you have control of the data residing in your system.

It means you have the ability to control access to other user-defined system resources.

It means you decide exactly what is to be made available and to whom, assuring you that liability and responsibility reside specifically with those in charge of data.

And there's more.

Combining ACF2/VM with ACF2/MVS or ACF2/VS1 provides the unique capability of one common access control discipline across VM, MVS, and VS1 systems.

We knew you'd like that.

You'll also like the initial controls: User Logon to both VM and CMS, user links to mini-disks, CP Attach and OS data set controls, and CMS file security controls over facilities which create, erase, read, write, rename and copy those files.

Naturally enough, there's more to the intelligence of ACF2/VM. So for further information, please write or telephone Mr. Shawn McLaren, direct: (415) 941-4558.

He'll be glad to tell you about a security software system that offers you a very bright future, indeed.

The Cambridge Systems Group

POSITION ANNOUNCEMENTS

Systems Analysts and Communications Analysts

New products. New marketing groups support. A new department. Exciting new ISS teams at NCR.

NCR, celebrating its 100th anniversary as a developer of business solutions, is determined to have the best possible MIS organization.

ISS—Information Systems and Services—the internal NCR organization that supports marketing and field service—is expanding to keep pace with an expanding marketing organization driven by new product releases and record profits.

Not only are we further strengthening our EDP staff that is now over 100 strong, but we have a new mission: the development and implementation of a country-wide field engineering dispatching system. The undertaking includes building and installing two computer centers with 6,000 hand held terminals as the input device.

This is in addition to NCR's largest internal hardware installation which now supports a nationwide communications network with over 900 terminals in some 150 NCR field offices.

You'll find a budget exceeding $12 million... and many new openings at various levels for professionals with experience in designing, developing and implementing state-of-the-art MIS systems. Specific areas include:

Applications Programmers

With COBOL, Data Base (TOTAL preferred) and On-line (Transpro) experience.

Systems Programmers

With Network experience and background in teleprocessing software, operating systems software, and database software. Experience in NCR's TOTAL, Transpro, VRX preferred.

Communications Analysts

With experience in network development; voice and data. Will be teamed with Systems Programmers on dispatching project and current network development and upgrades.

This is your opportunity to join an organization that recognizes and rewards outstanding contributions. Investigate salaries, benefits and career prospects in an aggressive $3.7 billion computer company by sending confidential resume and salary history to: Mr. Randy Nelsen, Dept. C56, NCR Corporation, USDPG, USG-1, Dayton, Ohio 45479.

NCR

1884-1984
Celebrating the future

An equal opportunity employer

Engineers & Software Designers

BE A PART OF A LIVING AMERICAN SUCCESS STORY!

Since 1981, we have grown from 11 to over 750 employees. As of third quarter, 1983, sales have grown from market entry to over $87 million and order backlog to over $144 million. The reason? Customer oriented design, marketing and servicing of advanced digital switching systems that meet the needs of today...and tomorrow. If you would like to be part of a group that is writing a new chapter in telecommunications history, consider the following areas:

HELP WRITE A NEW CHAPTER IN TELECOMMUNICATIONS HISTORY

CALL PROCESSING
Design and development of real time telephone, attendant, trunk control and call processing software.

MAINTENANCE/DIAGNOSTICS
Design and development of configuration, control and diagnostic software for distributed processing systems.

OPERATING SYSTEM
Design and development of real time operating systems software for distributed microprocessor based systems.

SWITCH ADMINISTRATION
Design and development of administration, data base and message accounting software.

SYSTEM INTEGRATION AND SUPPORT
Hardware and software test and integration on system level interface with customer and field operations.

HARDWARE DESIGN ENGINEER
Design experience should include microprocessor communication interfaces, peripheral controllers and memory systems. Familiarity with Z80, 68000 or other microprocessors, as well as dynamic Ram components is a must.

All positions require a BS/MS CS, EE, Math or related discipline. Experience with assembly language and/or "C" highly desirable.

We can offer competitive salaries, extensive company-paid benefits, and excellent potential for professional recognition and advancement. For prompt consideration, please send your resume to:

Staffing Manager
Dept. CW 213 R
Digital Switch Corporation
P.O. Box 830911
Richardson, Texas 75083-0911

Software Sales Staff Expansion

Join the exciting national expansion of our sales staff which is chartered to double in the coming months creating openings in 20 major metropolitan areas. Our revenue and staff has increased over 70% in recent years and one-third of our sales representatives are earning in the 6 figures.

We have only 2 key requirements:

- You must be one of the top performers in your company.
- A minimum of 2 years' experience selling software to IBM or compatible mainframe environments.

Software AG develops, markets, and supports an integrated line of "off the shelf" systems software packages. Our extremely successful product line includes the following:

- ADABAS—award winning DBMS which manages the storage, retrieval, and manipulation of data contained in computer storage devices.
- NATURAL—a leading 4th generation on-line programming language.
- COM-PLETE—TP software package which manages the flow of data without complexity.

We've developed an unsurpassed line of products which meet today's information center/development center needs—while providing flexible tools to anticipate tomorrow's demands as well.

If you sincerely seek a challenging opportunity which gives unique experience, greater rewards, and satisfaction in selling state-of-the-art software packages, then this is **THE opportunity** to pursue.

We want to speak with achievers who are meeting, or exceeding, quota. **CALL us now at**
(800) 336-3761, ext. 600,
(703) 860-5050, ext. 600
or send resume to
11800 Sunrise Valley Drive,
Dept. 1500
Reston, Virginia, 22091.

Make the most of your career on the West Coast

To explore new West Coast opportunities, call Dan Cooper at 800-821-7700, extension 6008

If you've ever thought seriously about living on the West Coast, Source Edp now offers you a golden opportunity to explore the possibility.

Hundreds of new positions

As the world's largest recruitment firm that specializes exclusively in the computer field, Source Edp has access to more opportunities in more locations.

On the West Coast, we represent organizations in all parts of California, Oregon and Washington. The firms are diverse in size and industry concentration and offer a broad range of career opportunities. Among them are the most progressive and sophisticated users, manufacturers and service firms in the world.

You may rest assured that our West Coast clients will assume all expenses involved in interviewing and subsequent relocation. Also, you are under no obligation since our fees are assumed by our client organizations.

Call our toll free number

If you want to set your career on a successful course in a cultural, educational and environmental atmosphere many people find more appealing than any other part of the country, call today. Our line, 1-800-821-7700, extension 6008, is open 24 hours every day.

Once we hear from you, one of our professional staff will get back to you with specific information about any of the opportunities that follow, or about others not listed. If you're unable to call, write: Dan Cooper, Source Edp, Dept. C1, P.O. Box 7100, Mountain View, CA 94039. (When writing, please indicate your position title.)

$26,000–$80,000 +

Washington, Alaska

Data Base Analyst — Ground Floor Position. Well-established international software vendor is expanding its staff to include the company's first data base analyst. Successful candidate will possess expertise in a major data base management system such as IMS, TOTAL or IDMS. To $35,000.

IBM Programmer/Analyst — $$$ Training. Leading Seattle-based Fortune 500 financial organization offers the best in-house training in Seattle and a pleasant, modern working environment. Position requires OS COBOL experience. Relocation assistance provided. To $$$,$$$.

Micro Systems Software — Industry Leader. Rapidly growing Seattle-based software development organization has several openings for micro systems software specialists. Position involves design and development of leading edge products such as compilers and operating systems for major microcomputers. To $34,000.

Consultant — Systems. Seattle office of a Big 8 CPA firm seeks a professional capable of directing its systems consulting activities. Exposure to a broad variety of commercial applications desired. Degree required. To $40,000.

Software Engineers — Many Opportunities. Highly-regarded Pacific Northwest organization has several real-time ASSEMBLER and FORTRAN software development projects to staff. Graphics, SCADA, VAX, SEL, CDC and/or microcomputer skills are preferred. Bachelor's degree required. To $40,000.

Programmer/Analyst — Management & CICS Training. Rapidly expanding Western Washington data processing organization seeks a professional having at least two years of IBM OS/COBOL and VSAM experience to work on information systems. Continued expansion provides excellent opportunities for upward mobility. To $30,000.

Systems Programmer — Alaska. Expanding Alaska firm offers state-of-the-art exposure to an experienced IBM OS Systems Programmer. The successful candidate will join the state industry leader while enjoying the unique advantages of our 49th State. CICS, MVS/JES systems, internals desirable. To $45,000.

Data Processing Manager-Ground Floor Opportunity. Join a "Big 8" firm and expand their rapidly growing Pacific Northwest client base. CPA with 10 years experience in Data Processing sought. Professional can become a partner in one to three years. To $75,000.

Mark IV Programmer/Analyst. An outstanding opportunity to work with users. The ideal candidate will know marketing systems, MARK-IV, and COBOL. Two years experience sought to become a part of this exciting environment. To $30,000.

Data Base Analyst. Expanding Seattle firm offers state-of-the-art exposure to an experienced IBM Data Base Analyst. A track record in successful IMS Data Base design is sought. Relocation benefits are excellent. To $40,000.

Address Programmer/Analyst — Rural Environment. Enjoy small town living in a superb recreational area with a low cost-of-living. Solid organization needs ADABASE hands on experience to lead team. Outstanding relocation benefits. To $30,000.

Northern California

Systems Programmer — Superb Location. National company is looking for an experienced OS/MVS Systems Programmer to support their growing IBM 3033 facility. To $30,000.

Telecommunications Specialist. Join a rapidly expanding national computer network using Tandem front end processors and IBM hosts. Experience required with IBM SDLC and Tandem TAL. To $40,000.

Manager of Network Architecture. Nationally-known San Francisco Bay area based firm with extensive TP network. Responsible for network planning, installation, and support from controllers out. Must have large IBM experience. To $50,000.

Systems Programmer. Leading San Francisco based firm seeks a proven OS/MVS Systems Programmer experienced with MVS Internals, Tuning, and Capacity Planning. To $40,000.

Internal Consultant — IDMS. Progressive Bay Area firm located in a highly desirable suburb seeks a proven Systems Analyst with an extensive background in Systems Development using IDMS. To $32,000.

Project Leader — New Development. Major San Francisco financial institution seeks a proven Programmer/Analyst to lead the development of an Electronic Funds Transfer System in an IBM/OS environment using CICS. To $40,000.

Data Base Administrator — Prestigious Firm. Silicon Valley manufacturer offers an excellent opportunity for an experienced IMS Data Base Administrator familiar with the Data Communication facility. To $40,000.

Systems Analyst — Large System Environment. National consumer electronics firm seeks a proven Systems Analyst with strong manufacturing and accounting experience in a large IBM/OS environment. To $30,000.

National Sales Director. International firm located in San Francisco seeks proven Software salesperson to introduce new relational data base package and establish national accounts. Compensation will be structured to the individual. To $60,000.

Software Manager — Major Responsibility. San Francisco area division of Fortune 500 Corporation seeks shirtsleeves leader of real-time interactive Software group. Technical degree and at least 10 years of progressive development responsibility sought. To $60,000.

Project Leader — Southern Peninsula. Senior Level software engineer to lead mini/micro operating systems development team for new 32 bit processor. Requires 5 years software development with specific operating systems experience. Salary to $50,000 and equity potential.

Software Engineer — East Bench. Leading San Jose-area growth company seeks Microprocessor software professional to develop systems for the Communications industry. Experience with Assembler and PASCAL. To $40,000.

Southern California

New Corporate Data Center — Suburban Location. Fortune 500 organization, undergoing a major expansion, is in the process of centralizing all systems planning, programming, software and computer operations into a new corporate data center. The center, which is located in a highly desirable suburban location, will house the latest in computer hardware and software technology. Openings for Programmer/Analysts, Systems Analysts, Project Managers, EDP Auditors, System Programmers and Hardware/Software Planners. To $40,000.

Consultants - Big "8" Prestige. Los Angeles practice of a major Big 8 firm is committed to significant expansion in 1984. Excellent opportunities for senior level professionals with background in manufacturing, financial or administrative systems. To $50,000.

FORTRAN Programmer — Business Systems. Fast-growing Los Angeles suburban financial firm seeks professional with FORTRAN experience. Company is installing dual computers for on-line transaction-driven systems. To $32,000.

Programmer/Analysts — San Fernando Valley. Major institution located in a desirable suburban setting north of Los Angeles needs both mini and large systems Programmer/Analysts. Organization provides excellent benefits including exceptional benefits. To $34,000.

COBOL Programmer — Newport Beach. Well-known, diversified financial services firm seeks professional with a minimum one year COBOL programming experience. Outstanding work environment. CICS, MVS training provided. To $30,000.

Programmer/Analysts — Learn Data Base. Growing Los Angeles financial company seeks OS/COBOL Programmers who want to learn IMS. Presently developing new IMS systems for all financial applications. To $30,000.

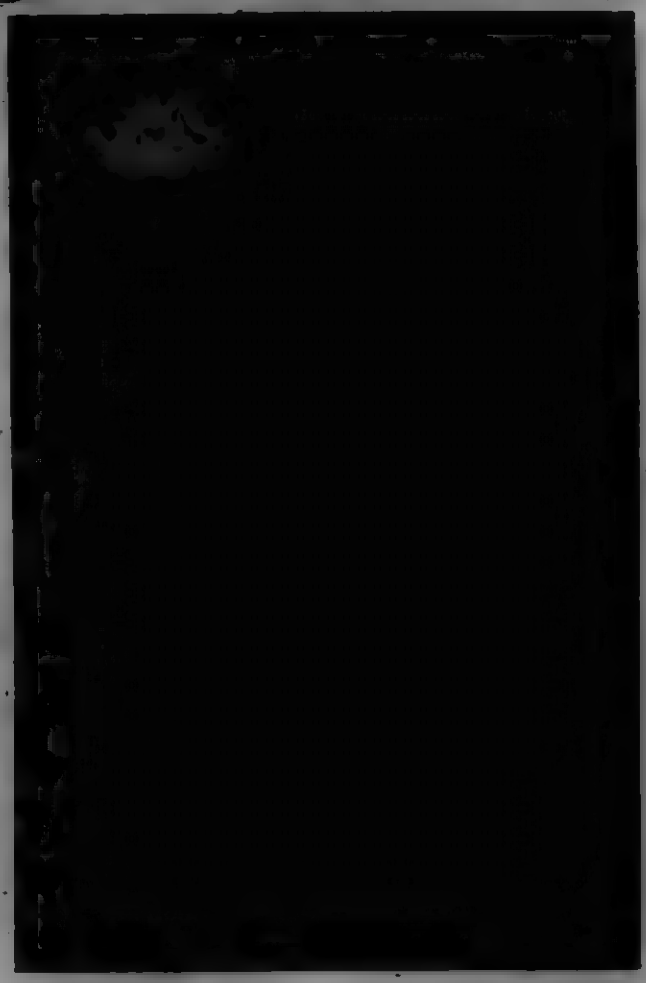
Software Development—Minicomputers. Successful Orange County minicomputer manufacturer seeks professionals with operating system computer data communications, data base or microprogramming experience. Company is committed to developing and marketing a complete line of state-of-the-art systems software products. To $40,000.

Sales Representatives — High Income. Orange County office of a leading computer OEM is seeking a Marketing Representative with a proven track record of selling business systems. Average income of sales force last year was over $60,000.

EDP Audit Specialist — Extensive In-House Training. Fortune 500 organization headquartered in Southern California seeks an EDP Audit Specialist experienced in designing accounting applications in an IBM OS environment. Training in auditing techniques and advanced computing provided. To $40,000.

MI Director — New Data Center. Progressive firm seeks a proven Manager capable of building a data processing organization from ground floor. Will select equipment, hire staff and set direction for successful and growing firm. Suburban Los Angeles community. To $50,000.

Communications Specialist — Multiple Openings. San Diego office of national consulting firm needs experienced software people to work on secure communications systems. To $40,000.



On-Line Programmers — OS Environment. Major San Diego based organization has several openings for On-Line Programmers to participate in a system utilizing a large network of terminals tied to one of IBM's largest computers. Selected candidates will work in an OS/MVS CICS, IMS environment. To $30,000.

Senior Minicomputer Systems Programmer. Manufacturing company headquartered in San Diego has a requirement for an experienced PDP-11 Programmer who has worked on RSX-11M. Will be involved in a major effort to develop a state-of-the-art real-time system. To $32,000.

Graphics Programmer/Analysts. One of San Diego's premier graphics software firms has several positions available for individuals with a background in FORTRAN. To $30,000.

MVS Systems Programmer. Large San Diego based organization seeks a professional to assist in the upgrade to MVS utilizing multi-CPU's and a large network of terminals. The company is one of the most stable organizations in the San Diego area, yet one of the most progressive in keeping up with state-of-the-art technology. To $40,000.

IBM Systems Programmer — Customer Support. A national computer manufacturer is seeking several additional Systems Programmers to staff their growing San Diego facility. Individuals with experience in IBM DOS or OS operating systems preferred. To $30,000.

Product Sales/Marketing. Exciting chance to work for leader. San Diego software firm seeks person with 5 years marketing and strategic planning experience. Prefer exposure to micro and system software industry. To $40,000.

Oregon

Programmer Analyst — Minicomputers. New development group has recently created positions for Programmer Analysts with solid background in BASIC language and the PICK operating system. Will develop new on-line applications for Order Entry, Financial and Inventory on mini-computers and then support field installation. Very creative environment in Portland. To $32,000.

Systems Programmer — Unix. Design and Develop next generation of hardware/software for expanding hi-tech firm in Portland. Will lead design effort using the Unix operating system for a product that supports graphics, databases and multiple peripheral devices. To $35,000.

Programmer/Analyst — New Development. Work on the development of new on-line applications for a solid and well established Portland manufacturing and distribution firm. Two–three years COBOL and one year CICS helpful. To $24,000.

Software Engineers — New Product Development. Newly formed division of a solid, Portland-based, high tech electronics firm engaged in design and development of Engineering Work Stations, has current positions for software engineers. Positions exist in graphics applications, data base applications, I/O interfaces, and diagnostics. Software Engineer with Unix 'C' in particular demand. To $40,000.

Senior Programmer/Analyst — New Development. Portland financial institution has new expansion position for person with four years or more COBOL and one year experience with IMS data base. First project in this very progressive and state-of-the-art environment is as team member to implement a new Deposit System. Any exposure to on-line helpful. To $30,000.

Senior Network Systems Programmer — Management Potential. Growth opportunity in state-of-the-art Portland shop for individual to be integral part of team responsible for total corporate network (includes international). Solid background with IBM SNA Networks, systems software experience with VTAM, NCP, NCCF, NPDA, needed. Exposure to other protocols a plus. Opportunity for management. To $30,000.

Programmer / Analyst — DEC Assembler. Excellent career opportunity for an individual with skills (two or more years) in DEC Assembler language. Will work on development of new business applications as well as support existing applications in a nationwide network. Creative environment in an expanding Portland-based firm. To $30,000.

Marketing Representatives — Systems Sales. Start-up position in Portland to market line of microprocessor and mini-computer systems to OEM's and user accounts. Highly-successful company provides high quality design and technical support. Seek self-starter with track record of successful hardware and/or software sales. First year potential $45,000 - $60,000.

Senior Programmer/Analyst — Learn IMS. Excellent opportunity to work in a team environment on the analysis, design and implementation of a Commercial Checking system for a growing Portland bank. Company will train in IMS. Position provides growth potential to Team Leader. Seek an individual with several years COBOL on large scale IBM, with a background in commercial checking systems. To $30,000.

A MEMBER OF THE AVCO CORPORATION FAMILY

LOCKHEED IS PROGRAMMING CAREERS.

With your future in mind, Lockheed Missiles & Space Company is programming special careers in advanced technology. We've got all the right components to make this the opportunity of a lifetime. All we need now is for you to accept the challenge. Look over the descriptions listed below. One of them may be just what you've been waiting for.

ADVANCED COMPUTER/DIGITAL SYSTEM ARCHITECTS

R&D positions at various levels are available for individuals with a PhD and MS in Electrical Engineering/Computer Science with several years of experience, to study and create new systems based on non-von Neumann architecture utilizing highly distributed and parallel multi-processors (supercomputers). Work involves all aspects of computer and digital systems, including system software/firmware design, processor networking, fault tolerance, multi-processor hardware architecture and implementation, and VLSI chip design. Experience with microcomputer and microprocessor systems and architecture is essential.

DIGITAL IMAGE PROCESSING SCIENTISTS

We're seeking PhD or MS level graduates in Electrical Engineering or Computer Science with specialization in digital image processing and familiarity with computer programming. Your experience should also include algorithm development, computer simulation, pattern recognition and digital image enhancement. Positions are available in the following areas:

- Image Correlation
- Artificial Intelligence
- Automated Industrial Inspection
- Target Classification Based on 3-D Imagery

DATA COMMUNICATIONS NETWORK SYSTEMS SPECIALISTS

Specialists are needed to perform network design, planning, coordination, installation and troubleshooting system with knowledge of network configuration, circuit testing, modem strapping. A BS CS/EE and 6 - 8 years of experience desired.

SENIOR SYSTEMS SOFTWARE ANALYST

Strong analytic skills are required for this position which entails the analysis, enhancement, and maintenance of the EXEC 1100 operating system on a large scale Sperry Univac system in a scientific computing environment. Six years experience in programming including at least two years in operating systems, preferably EXEC 1100, is desired. A BS degree in Computer Science or technical field is required.

APL DATA SYSTEMS PROGRAMMERS

We're currently searching for a programmer to create and enhance user friendly APL data systems to status contractor and subcontractor performance. To qualify your background should include experience with IBM systems such as VM/CMS and use of Auxiliary Processors and IBM 3270 series video terminals. A BS in Computer Science, Mathematics or the equivalent is preferred.

MICROCOMPUTER BASED CONTROL SYSTEMS DESIGNERS

Experience with microprocessors and microprocessor based development systems with a BSEE or BSCS desired.

SOFTWARE ENGINEERS

We have openings in all areas for individuals with a minimum of a BS and three years experience in scientific data systems.

SR. DATA SYSTEMS ANALYST

Design and develop programming systems for processing management and central data. BS in Computer Science or Math and 6 - 8 years of experience desired.

COMMUNICATIONS NETWORKS ANALYST

In this position, you will use your knowledge of communications protocols and network configurations to participate in the design, installation, and management of communications networks which link Sperry Univac, DEC and CRAY systems. Familiarity with Sperry TELCOM and CMS 1100, DECnet, Ethernet, and communications hardware is highly desirable. A BS degree in a technical field, preferably Computer Science or Electrical Engineering, and 1 - 3 years experience in the communications or operating systems area is required.

SYSTEMS PROGRAMMERS

We are currently seeking both entry level and experienced systems programmers. The entry-level individuals should have a BSCS and knowledge of FORTRAN and Assembly languages. In this position, you'll design, develop, install and maintain systems software on a large scale Sperry Univac system. The positions available for more experienced individuals require expertise in either operating systems programming using EXEC 1100 internals or Meta-Assembler experience with IBM MVS, OS/MVS internals in software systems design and development activities. A BS in Computer Science and 4-or more years experience desired.

EXPERIENCE WITH SPECIAL ACCESS PROGRAMS AND CURRENT SBI REQUIRED.

For immediate consideration, please forward your resume to Lockheed Missiles & Space Company, Professional Employment, Dept. 653-0213, P.O. Box 504, Sunnyvale, CA 94086. We are an equal opportunity, affirmative action employer. U.S. citizenship is required.

The Network of Tomorrow... Today at UNINET

While other companies are anticipating and planning for tomorrow, we are already there.

UNINET, a UNITED TELECOM company, is offering true state-of-the-art opportunities in the further development of our Fourth Generation Public Data Network. This network employs a fully distributed microprocessor architecture based upon 80186 and 80286 processor modules in a four-level bus hierarchy.

We offer the unique opportunity to apply your expertise in support of the design and development of a Public Data Network that achieves sophistication in high-level protocols and data switching rates unattainable under previously available technologies. We see this as a major breakthrough in providing a practical solution to today's business communications problems.

NETWORK SCIENTISTS

Immediate opportunities for applied research exist in the areas of:

- Packet and message switching strategies
- High-level network protocols including routing and congestion
- Incorporation of satellite facilities into backbone services
- Evaluation of theoretical topologies
- Analysis of algorithms
- Network management and control
- Protocol translation schems

UNINET offers an environment which encourages creative applied research and development addressing the most current opportunities in data networking. Candidates possessing advanced degree in Computer Science and Mathematics with significant experience in network architecture and network design are encouraged to apply.

DATA NETWORK SOFTWARE ENGINEERS

Immediate opportunities exist for the development of:

- Network Configuration and Control Systems (VMS)
- Network and Access Control Systems (RMX)

Candidates should have a strong background in the implementation of CCITT packet network protocols or network management and control protocol. Applicants desiring positions in network access engineering should posses detailed knowledge of X.3, X.28, X.29 and X.25 as well as synchronous DTE protocols. SNA experience is considered desirable. Degreed computer scientists with formal software engineering experience are encouraged to apply.

If you feel that your expertise can assist us in the further development of our future network, we invite your inquiry into the positions available. UNINET offers an excellent environment for career advancement and rewards.

For immediate consideration, forward your statement of qualifications in confidence to:

Network and Communications Manager
The University of Alaska Computer Network

The UACN provides the statewide University of Alaska system of academic and administrative computing and data communications services. The Network and Communications Manager is responsible for evaluating current facilities and the requirements and forecasting the facilities needed to meet those requirements. Also, this post is responsible for installing, coordinating and supervising the operation, maintenance, enhancement, and planning of the communications network and its facilities. The successful applicant must possess knowledge of communications network architecture, engineering, local area networks, and data communications. In addition, skill in the management and development of large data communications networks are required.

The position is based in Fairbanks, Alaska and will report to the Director of Network and Operations. The salary range begins at $48,756 DOE.

Application letters, together with a resume and at least 3 professional references must be postmarked by March 30, 1984 and sent to:

Statewide Office of Human Resource Development
University of Alaska
368 Tanana Drive
Room 1 Bunnell Building
Fairbanks, Alaska 99701

Your application for employment with the University of Alaska may be subject to public disclosure should you be selected for the position.

The University of Alaska is an Equal Employment/Affirmative Action Employer and Educational Institution.

INFORMATION SERVICES

Software Solutions Through Technology Integration

Today's GE Information Services

Today, General Electric Information Services is pioneering the integration of application software, data processing and communications technology to provide the software solutions that are the heart of today's information services industry. We deliver software solutions and computer power to clients around the world.

Technology Integration
Rockville, MD

We're integrating the personal computer with our remote computing services...continuing to develop our IBM VM MVS 3081/3033/4300 environment for large business users...refining our IBM and Honeywell based telecommunications systems...expanding our library of over 2,000 proven software packages...exploring new applications in the value added private, local and distributed networks and in office communications... developing new international financial and transportation services...and supporting these efforts with state-of-the-art quality assurance, client service and training, and administrative support. Contact: Rockville, MD.

Software Consulting
throughout the U.S.

We're expanding our Professional Services software consulting organization and making significant increases to our permanent staff of programmers, analysts and software engineers. Our Fortune 200 clients afford us the opportunity to consult in a number of commercial, scientific and military environments with a wide variety of equipment, languages, operating systems and database systems (IDMS, IMS DB/DC, ADABAS, and others) with distributed data processing using CICS or ADS/O. If you want to broaden your experience, be involved in interesting assignments, and still enjoy the advantages of working for a recognized leader, contact our San Francisco, CA; Oak Brook, IL; or Paramus, NJ locations.

The Rewards

A highly competitive salary, an opportunity to advance, and a comprehensive employee benefits program, which includes 100% tuition reimbursement and in-house training to keep your skills state-of-the-art, are some of the rewards of being a GE Information Services employee. Send your resume and salary requirements, in confidence, to:

Professional Staffing (C-6291), GENERAL ELECTRIC INFORMATION SERVICES COMPANY, 401 N. Washington Street, Rockville, MD 20850 / Two Embarcadero, Suite 1750, San Francisco, CA 94111 / 614 Commerce Drive, Oak Brook, IL 60521 / 140 East Ridgewood Avenue, MACK Center III, Paramus, NJ 07652.

You've Heard The News —
AT&T Is Reaching Out In New Directions.

NOW, YOU CAN HELP TAKE UNIX* SYSTEM V TO NEW HEIGHTS

Unix System V represents the level of quality that AT&T Technologies has produced in the past... will produce in the future.

Unix System V is one of the most talked about software systems in the industry. It's fast becoming the standard and we're taking it even further.

Now, AT&T Technologies' Computer Systems Division invites you to consider joining us as we staff our marketing and product development areas for major projects in 1984.

SOFTWARE DEVELOPMENT ENGINEERS

Extensive development experience with Unix operating systems or related software will be essential. Understanding of C language or other high level languages also required. Familiarity with 32-bit microprocessor technology preferred.

HARDWARE DESIGN ENGINEERS

BSEE coupled with strong 32-bit microprocessor design experience will be essential for these positions involving state-of-the-art processor development. Knowledge of Unix operating or other multi-tasking systems essential.

PRODUCT PLANNERS

We're looking for individuals with at least 3 years of product development and marketing experience in the mini/microcomputer field. Knowledge of product strategies and life cycles essential. Familiarity with Unix operating system or related software required. An MBA is preferred.

THREE LOCATIONS — ONE GREAT CONCLUSION

We have opportunities available at our facilities in suburban Chicago, New Jersey and North Carolina. In addition to a competitive salary and benefits package, these opportunities offer you a historic development environment. This is the future of AT&T and Unix operating systems.

Send your resume with salary history in strictest confidence to:

Computer Professionals

program your future with

anatec

There's spirit and energy at Anatec. It's generating excitement that's expanding as fast as our data processing business.

We're involved in developing some of the world's most sophisticated computer networks for our Fortune 500 clients. Our success in this area has opened new career opportunities for competent, qualified computer professionals with 2 or more years' experience in the following areas:

Programmer/Analysts — will develop manufacturing software and data base requirements using IMS with COBOL or PL/1.

Mini Computer Engineering Analysts — will design and be responsible for implementing and engineering shop floor system using Fortran. HP-1000 experience a plus.

Systems Analysts — using IBM Series I, will design and implement a shipping system using EDL/EDX.

Programmer/Analysts — using TANDEM, will develop quality control and broadcasting applications with COBOL. Knowledge of SCOBOL is a plus.

Systems Programmers — will technically support TANDEM Network. Knowledge of TANDEM operating system internals a must.

Telecommunications Specialists — will design and implement state-of-the-art networking configuration. Network includes IBM mainframes, minis, micros.

Information Center Specialists — will develop information center concept using high level languages, APL, and ADRS and act as a liaison between the data processing staff and user community. Good communication skills are important.

Some of our positions will allow you to work at our remote Birmingham, MI site with flexible work hour schedules, either on a full or part time basis.

At Anatec, we recognize knowledge and talent, and compensate accordingly. Your salary is coupled with generous fringes such as paid relocation, major medical, dental, optical, life and disability insurance, overtime pay, paid vacation, tuition reimbursement and more.

Find out more by writing us in confidence or calling collect (313) 540-4440. ANATEC, Analytical Technologies, Inc., 30300 Telegraph Rd., Suite 184CW Birmingham, MI 48010.

Software Design Engineers

If you like technology, you'll love Texas Instruments in Dallas or Lewisville.

Join the Equipment Group of Texas Instruments in the design and production of state-of-the-art electronics systems and subsystems such as radar, missile guidance, electro-optics, communications, navigation and intelligence systems. Our continued innovation in every realm of the government electronics business has made Texas Instruments a leader.

As a result, we're creating new career opportunities for qualified software design engineers. You'll work with a team that works on complete systems — not just components. You'll have the chance to broaden your technological capabilities and be recognized and rewarded for your accomplishments.

Right now, we have immediate openings for experienced software design engineers in the following areas:

- Real-time electro-optics projects (mid-level positions)
- Tool and language development (ADA and Pascal experience preferred; mid-level positions)
- Artificial intelligence software design
- Systems analysts for VAX/VMS operating systems
- CAD/CAM programmers
- Speech recognition applications designers

All positions require U.S. citizenship, a four-year technical degree and at least two years of related experience.

Now is your chance to make your career move to the dynamic Sunbelt and enjoy the Texas environment and lifestyle. Dallas and Lewisville (just outside of Dallas) have year-round recreational activities, lakes, major league sports, museums and theatre. The Dallas area boasts one of the lowest costs of living of any major metropolitan area in the nation and Texas has no state or city income taxes.

For immediate consideration, send your resume in confidence to: Ed Haynes/ Texas Instruments/P.O. Box 226015, M.S. 3186/Dallas, Texas 75266.

U.S. citizenship is a firm requirement for all Equipment Group positions.

THE LEADER IN ARRAY PROCESSING TECHNOLOGY

FLOATING POINT SYSTEMS, INC. offers opportunities in the leading edge of professional achievement. As the world leader in the design and manufacture of array processors, we are setting the pace for high-speed algorithm execution with the parallel architecture of our products. We are seeking applicants for immediate openings as:

• Design Automation Group Leader

Manage a design automation group providing and supporting CAE tools for logic design and simulation. BSCS or equivalent, and related leadership experience required.

• CAE System Administrator

Administer an APOLLO operating system devoted to CAE design. Some systems software and tools development also involved. Requires BSCS or equivalent, and operating systems experience.

• Applications Software Engineers

Will design and implement scientific and engineering applications software. Requires BSCS in Math or equivalent, and familiarity with assembly language coding and microcomputer architectures; a background in numerical analysis and/or signal processing is desirable.

• Senior Diagnostic Designer

Will coordinate and provide technical leadership for new product diagnostics development. Requires BSCS/BSEE or equivalent, and previous diagnostics design and development from conception to manufacturing integration.

• Diagnostic Designers

Will design, code, and document software diagnostics for new product development. Requires BSCS/BSEE or equivalent; experience in hardware testing and/or Motorola 68000 or 6809 is desirable.

• Computer Scientists

Will perform PDS support. Requires BSCS or equivalent, and experience in PDS development. VAX, APOLLO, or IBM experience preferred.

Will perform operating system support. Requires BSCS or equivalent. APOLLO, VAX/VMS, IBM/CMS, or IBM/MVS experience preferred.

Will design and develop software for new product development. Requires BSCS or equivalent, PASCAL or MODULA-2; compiler construction or graphics experience preferred.

• Senior Software Development Engineers

Will develop and enhance system communications between array processors and host operating systems. Requires BSCS or equivalent; operating systems internals and I/O device driver experience preferred.

• Electrical Design Engineer

Will participate in new product systems design. Requires BSEE or equivalent, and experience in analog and digital design of data processing power distribution and control systems.

• Senior Component Engineer

Qualify and document electrical components for data processing equipment. Requires BSEE or equivalent, and experience with engineering of passive electrical parts.

• Technical Support Software Engineer

Provide software technical support to field engineers and customers. Work with engineering and other customer service groups to enhance and maintain product performance and serviceability. Requires knowledge of computer operations, FORTRAN, and some assembly languages; prior customer service experience or related experience desirable.

• Senior Service Support Planning Engineers (Hardware and Software)

Develop new product service support planning. Requires BSCS/BSEE or equivalent, plus strong computer customer service planning, technical support, or field experience.

• Senior Electronics Design Liaison Engineers

Coordinate test and manufacture of new products. Requires BSEE or equivalent, and familiarity with mainframe computer architectures, manufacturing/engineering concepts, and ATE procedures.

Besides an excellent compensation and benefits package, your opportunity to work within a creative company is further enhanced by our location in metropolitan Portland, Oregon. ASSISTANT DIRECTOR OF ACADEMIC SERVICES
UNIVERSITY OF NEVADA SYSTEM COMPUTING CENTER
Position located on the University of Nevada Las Vegas campus

This professional position supervises 3-5 data processing employees in daily computer operations, scheduling and operation support functions, and classroom training for the UNSCC's academic site. The successful candidate supervises, plans for and assists in short- and long-range planning for the academic site. The Academic site presently supports a Cyber 170, 2 Honeywell 66/60's, and a DEC VAX 11/780.

The successful candidate will have at least a Master's Degree (with PhD preferred) and significant computer experience in an area of educational delivery. Experience in software support, communication systems, and the exploitation of drivers will also be considered.

Application deadline: March 9, 1984.
Position to be filled on or before July 1, 1984.
Send resume and salary requirements to:

Mark Reed, Acting Director
University of Nevada
System Computing Center
Academic Research Facilities
4505 Maryland Parkway
Las Vegas, NV 89154

Copies of transcripts and three letters of recommendation will also be required for a complete application.

The University of Nevada System is an equal opportunity/affirmative action employer, and does not discriminate on the basis of race, creed, color, sex, age, national origin, handicap, or veteran status in any program or activity it operates.

Professional Master's Degree
Computer and Information Science

Advance your career in information systems through Dartmouth's distinctive professional program. Our two-year program is designed to equip you to take a leading role in planning, designing, and developing effective business solutions to business problems.

In the CIS Program, you will study current methodologies for planning, analysis, and design; strategies and issues in the management of information systems; business organization; project management; database systems; networks and distributed processing; professional communication. Learn from guest lectures by practicing managers of information systems, case studies, and professionals-in-residence. An internship is required of each student.

If you have previous experience in the computing field but want to be equipped to assume more responsibility and leadership, consider joining us next year. For more information, write: Program in Computer and Information Science, Dept. C, Nathan Smith Building, Hanover, NH 03755.

Dartmouth College

Software engineers. This is the place.

At Kodak, computers play a vital and ever-increasing role in every step of production. And we need skilled professionals who want to share in the challenges and rewards of technological leadership.

We're looking for talented software and computer engineers with a BS or MS and technical experience in minicomputer and microprocessor systems used in the development of software for real-time equipment control. Assignments may involve design of software systems for products or manufacturing control; programming mini- and/or microcomputers; integrating computer software and hardware into complex electromechanical systems; and quality assurance of computer programs.

Kodak also has opportunities for electrical engineers in the areas of design and development, video, test, systems and optical engineering.

We offer competitive salaries, liberal benefits, and opportunities for individual contribution and growth. Positions are available now. If you have the necessary skills and drive to meet the challenge of working for a corporation in the forefront of technology, send your resume today.

SOFTWARE DEVELOPMENT OPPORTUNITIES IN FORT WORTH.

We are a high technology company that performs wireline and other well evaluation services for the oil and gas industry. As we move into an exciting recovery period for our industry we are looking for top individuals who can build on our tradition of excellence.

We have openings for degreed Software Development professionals in two areas of our business.

SOFTWARE ENGINEERING (Scientific/Technical)

Opportunities exist in our Surface Systems Software Development groups with exposure to "state-of-the-art" data acquisition technology. Must have B.S. in Computer Science, E.E. ,Math or Physics, and at least 2 years experience. Will consider MS degree in lieu of work experience.

- Real-time software development for our fleet of truck-mounted Direct Digital Logging (DDL) systems. Assignments will involve the addition of new technology tool functions to these systems. Requires Assembler and FORTRAN experience. Motorola 68000, or well logging experience would be a plus.
- Real-time Software Engineer for our Measurement While Drilling (MWD) project. Requires mini or microprocessor experience.
- Software Engineer for bit graphics programming on an HP 1000. Requires strong Assembler and FORTRAN background.
- Software Engineer for our Dipmeter tool. Will program in FORTRAN, Assembler or C. Experience with HP 1000 is desirable.

BUSINESS DATA PROCESSING

Our system is an IBM 3081 with IMS/DB and CICS.

- Project Leader for our manufacturing systems group. Should have 4-5 years with on-line manufacturing systems in a MVS environment, project management skills and experience in managing Programmer/Analysts. Knowledge of AMAPS is desirable.
- Programmer/Analyst to work with manufacturing systems (AMAPS) or field service administrative systems. Requires 2-3 years experience and proven technical skills in COBOL, TSO/SPF and OS/JCL. Knowledge of IMS/DB and CICS desirable.
- Data Communications Analyst. Requires 3-5 years experience in an SNA/SDLC environment, including the design of moderately complex systems, standards and procedure writing.

We offer an excellent benefits program and competitive salaries.

Send your resume and salary history to:

IDEAS: We Make Them Happen.

Software Systems Laboratory...the Software House for Raytheon's Equipment Development Laboratories. We bring life — and intelligence — to a wide range of real-world systems: air traffic control, weapons direction, fire control, communications, missile guidance, tracking and data gathering, space surveillance, range instrumentation, plus an emerging set of laser applications.

We're looking for software engineers who want to explore their full potential developing a wide range of applications in a highly-charged, up-to-date environment. Join our outstanding team of software professionals, and you'll be creating the state of the art, not following it.

Software Systems Engineers

You'll be involved in front-end activities that translate system requirements into software performance specifications in the following areas:

- Requirements Analysis
- Software/Hardware Trade-offs
- Modeling of Critical Performance Characteristics
- Interface Definition
- Data Processing Architecture Definition
- Software Test Selection
- Performance Specification Preparation

These tasks are directly applicable to all of the following application areas listed.

Air Traffic Control Software Engineers

Several Air Traffic Control Program areas include existing and planned enroute and terminal ATC Systems, for both domestic and international applications: aircraft/controller digital communications and dynamic simulation/training.

- Radar Data Processing/Track File Management
- Flight Plan Processing
- Channel Management
- Intercomputer Communications
- Mosaicking

Assignments in the Washington, DC area also available.

Communications Systems Software Engineers

Focus here is on the development of advanced satellite communications terminals employing sophisticated microprocessor technology for processing and system control in the following areas:

- Antenna Pointing Systems
- Ephemeris Data Processing
- Multi-Access Algorithms
- Built-in Test and Diagnostics

Computer Diagnostics Software Engineers

You will design and develop advanced militarized computers employing the latest in technology for fault tolerant techniques and high speed architectural concepts. And also develop several general purpose militarized super minicomputers employing sophisticated built-in test circuitry and high speed parallel pipelined architectures.

- Micro and Macro Diagnostics for fault detection and isolation
- Automatic Test Systems
- Intelligent Control Panel System Development

Graphic Software Engineers

Develop real-time, interactive display software that will comprise the next generation of "user friendly" man/machine interfaces in radar, sonar, communications, air traffic control and image processing.

Radar Systems Software Engineers

Major software challenges exist in these areas:

- Radar Data Processing
- Object Classification and Discrimination
- Real-Time Control Systems
- Embedded Computer Systems
- System and Unit-Level Diagnostics

System Programmers

Major expansion of our System Software Department requires applicants in the following areas:

- Operating Systems, especially VMS, UNIX, and RSX11
- Languages, including "C," PASCAL, FORTRAN, JOVIAL/J73, and Ada
- Performance Measurement and Prediction Tools
- Real-Time Operating Systems Development
- Configuration Management Tools
- Networks and Communication Protocols

Positions require a degree in Engineering or Computer Science and at least 3 years of directly related experience. We are located in the Boston suburbs, an area that many consider to be the finest in the country in which to live and work. U.S. Citizenship not required for all positions.

Please direct your resume, including current salary, in strictest confidence to: Ann Doyle, Dept. CW, Raytheon Equipment Development Laboratories, 528 Boston Post Road, Sudbury, MA 01776.

DIRECTOR OF THE OFFICE OF COMPUTER SERVICES

Rensselaer is seeking a Director of Computer Services who will provide innovative leadership in University computing and enhance the capabilities of our widely respected central computing service organization. Qualifications for this position include an understanding of and a strong commitment to research and academic computing; excellent interpersonal communications skills; extensive background in computer operating systems and hardware; a thorough understanding of data communications networking; demonstrated experience and ability in planning and budgeting; and a record of managerial accomplishments in the full service computing environment.

The director is responsible for strategic planning to insure that Rensselaer continues to provide advanced, high quality computing for research, instruction and computation. Leading the development and implementation of a university data network involving distributed computing, microcomputers and workstations, and coordinating the operations of central computing services are important facets of this challenging opportunity. Candidates should have a minimum of 8 years of relevant experience either in directing a university computing facility or having demonstrated leadership in academic computing or systems development. Applicants must have a Master's degree; a Doctorate is preferred.

The Office of Computer Services is comprised of an experienced and talented staff of 50. They support research, instruction, and a group of administrative and external users on an IBM 3081D with over 500 terminals connected.

Rensselaer is recognized for its strong commitment to computing excellence for faculty and students. RPI offers degree programs in Engineering, Science, Humanities and Social Sciences, Management and Architecture. These five schools enroll 4,700 undergraduates, 1,500 full-time and 500 part-time graduate students. The director will receive highly competitive remuneration and attractive benefits. Applicants are to forward a complete resume and include the names of three references. Confidentiality requirements of applicants will be strictly observed. Applications and supporting materials postmarked by March 15 will receive full consideration.

Candidates should send resumes and supporting materials to Dr. Gary Judd, Vice Provost, Rensselaer Polytechnic Institute, 110 8th St., Troy, NY 12181.

CAREER OPPORTUNITIES AT DBMS, INC.

DBMS, Inc. is a highly regarded software product and professional services firm. We staff database experts in the areas of consulting, education, application systems, software development and technical support. We currently have openings in our Field Operations, Product Development and Technology groups.

SOFTWARE PRODUCT SALES

The Field Operations group has several openings for Sales Professionals with software or similar high technology product sales experience. These openings will be based in our regional offices.

DATABASE CONSULTANTS

We must also fill several openings in our Field Operations group for professionals with database expertise (IDMS experience preferred but not mandatory with ADS/O a plus). We have an established nationwide network of regional offices and immediate openings in most major North American cities. Some travel is required.

SOFTWARE ENGINEER

The Technology group has an opening for a software engineer to join in the research and development of a major software product. The product will provide an automated, interactive environment for the specification, generation and implementation of information systems. The position requires knowledge of multiple high level languages (FASCAL, PL/1, C, COBOL, etc.) and some Assembler. Other requirements include an exposure to database concepts with IDMS, IMS or a relational product and the ability to work well with peers in a team environment. Experience with formal software design techniques, microcomputers (Intel 8088/IBM-PC preferred), building system software in a product oriented environment and exposure to language translation techniques is highly desirable. MS or BS in Computer Science or a related discipline is also desirable.

Candidates for all positions should have proven ability to meet deadlines and a willingness to work independently in a demanding, dynamic environment. DBMS, Inc. offers an excellent salary and benefit package and will assist in relocation. If you have the ambition, flexibility, and qualifications, please send your resume today in complete confidence to:

VAX/VMS SOFTWARE PROFESSIONALS

JOIN DIGITALS CUSTOMER SUPPORT CENTER IN COLORADO SPRINGS.

At our Customer Support Center in Colorado Springs, you'll work in a team environment where problem solvers like yourself help customers and other Digital's software professionals work more successfully with our computers.

You'll talk over the phone with users all across the country, using computer systems ranging from micro-computers to multiprocessor VAX clusters to multioperating-system wide-area networks.

And while you're helping others, you'll be helping yourself as well. Because you'll be expanding your technical expertise in industry leading software like VMS, DECnet, and DBMS and you'll be eligible for the advancement opportunities that Digital, the world's second largest computer company, can provide. And you'll live in Colorado Springs, a beautiful community located at the foot of Pikes Peak, where climate, recreation, and quality of life are at their best.

Right now, we have a wide range of openings at several levels of experience. To qualify, you must have at least 3 years of systems programming or systems support experience. Beyond that, a degree in C.S. or equivalent, VAX/VMS experience, and customer relations exposure are all desirable and will help ensure your success.

Interested? Qualified? If so, please send your resume and salary history to: Susan Chamberlain, Digital Equipment Corporation, Customer Support Center, Dept. 0212 3804, 4405 North Chestnut Street, Colorado Springs, Colorado 80907.

We are an affirmative action employer.

Data Processing Consulting

FULFILLMENT! From the Ground Up!

SEI's role and reputation continue to grow as one of the nation's leading builders of high technology applications systems. SEI has five offices across the country and an unsurpassed staff of more than 100 consultants.

SEI is now forming the development team to build a complete online Customer Service and Subscription Fulfillment System for Great American Magazines, Inc., in the Hampton/Newport News, Virginia area. Requirements Analysis is now beginning.

This is your opportunity to work from the ground up alongside senior SEI consultants in the development of this innovative CICS-based system with a multi-billion byte data base. At project end, team members can elect to stay with SEI and move to new locations and other demanding assignments, or to stay with the client as part of the ongoing support team.

SEI is seeking:

- **Design Analysts — $35,000 - $50,000**
  Minimum 5 years of solid application and data base design and construction experience for large-scale online systems, especially using Command Level CICS.
- **Programmer/Analysts — $28,000 - $40,000**
  Minimum 3 years of COBOL application development experience. Online, large-scale system experience a plus.
- **Technical Writer — $28,000 - $40,000**
  Minimum 3 years of solid programming and design experience, plus outstanding writing credentials.

SEI offers top salaries, an imaginative personalized benefits package, and unlimited opportunity for growth. For confidential consideration, send detailed resume to:

Ad paided for by an equal opportunity employer.

$80,000/YR.—CICS PROGRAMMING

Allegedly one of the most demanded & rewarding programming skills in months instead of years. A complete & practical guide to CICS Command Level Programming. It's based on CICS latest release 1.6, written in COBOL, with special emphasis on VS/AM. Brand-new 2nd edition, contents printed in two colors, handsome mylar-coating cover. 150 examples illustrate use of CICS commands, 15 sample CICS programs address all major applications. Sample programs include Menu, Add, Update, Delete, Browse, Multi-record display/update, Print 24x80, 66x132, any-size report, Message Routing, Screen Refreshing, VS/AM alternate index design, setup and handling, Dynamic table manipulation, Audit Trail initiation and more.

50% time saving—and more

It's hard to believe the learning can be so easy until you try it. In hours you can start creating BMS maps. In days, you can start writing Pseudo Conversational CICS programs. You'll cut your learning curve at least in half, many programmers report even greater saving. Some CICS techniques are especially hard. When you're stuck for the technical problems, you'll be thankful you have this book. All CICS techniques and problem areas are thoroughly covered. You'll find the topics on Production abend handling, Task system debugging, Dump reading, Trace table usage, CEDF monitor, CSMT, CSMT commands, CICS internal tables setup & effects on application programs, Terminal Paging commands, complete procedures to install a CICS transaction and more. Why spend hours searching for the right technique — when this book gives them to you already written.

Tips on moonlighting on CICS projects

Consulting will be the trend of the 80's for CICS due to great shortage of experienced CICS programmers. An average CICS contract programmer makes $30-$45/hr. Some CICS consultants even make $1000/day (1983 Datamation). Moonlighting on CICS projects is very rewarding. A typical 10-screen system can mean $15,000-$25,000 cash. This book contains 11 pages of tips on moonlighting into how to market your service, locate the contracts, write a proposal, make a presentation, quote the right price to beat consulting firms and draw a contract agreement without a lawyer. Written proposal & sample contract agreement are included for your convenience.

Try this book at no risk

How much is this book worth to you? It's hard to say until you try it. That's why we want you to use it for 10 days. If you're not completely satisfied, simply return it at our expense for a prompt full refund. Fair enough? Thousands of copies have been sold. Over 98% of programmers who bought this book are satisfied with it. See how much time it saves you. How it leads you to the gold mine of programming. That's how sure we are that once you use it, nothing could make you part with it. This book will pay for itself over and over, year after year. But act now. Send $34.95 for 1, $29.95 ea. for 2, $27.95 ea. for 3, $25.95 ea. for 4 & over (plus $2.00/copy for P&H) in check or M.O. to: CCD Online Systems, P.O. Box 795796, Dallas, TX 75379. Allow 1 to 2 weeks for delivery.

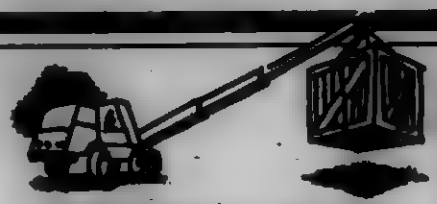
RANDOLPH'S APPROACH TO COMPUTER LEASING... AND WHY IT WORKS.

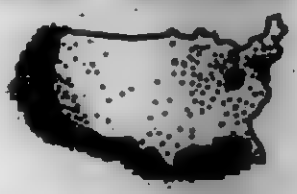
Started in 1964, Randolph has been saving its customers 30% to 70% of their DP hardware dollars . . .

And we *know* leasing is still the most financially attractive method of acquiring computer equipment at low cost without draining working capital.

But we learned early that the dollar-and-cents approach to computer leasing is only part of a company's concern. Equally important are: prompt installation . . . dependable servicing . . . flexible upgrade capabilities. . . and full support services. Our commitment to *this* approach is the key to satisfied customers . . . and our success.



EQUIPMENT ON THE MOVE
We have under management IBM computers with an original cost of over one-half billion dollars. . . . and we're adding to this investment to meet the changing needs of our customers. Whether it's an IBM 3081 or 4300 system, additional tape drives, disk storage, printers or other peripherals, our equipment inventory is available to meet your company's requirements. Even hard-to-get machines are sought out and acquired for Randolph customers.



RANDOLPH . . .
COAST TO COAST
We presently serve customers in over 300 cities and towns from Maine to Hawaii.

BUT . . . SERVICE MAKES THE DIFFERENCE
The real story behind Randolph's success is our approach to customer support services. To keep computer operations running smoothly and efficiently, these support services have proven to be valuable assets to our customers' D.P. operations.

Continuous IBM Maintenance Program
Manufacturer's service is available day or night, seven days a week, to insure optimal use of your system.

On-Going Technical Support
Randolph's technical staff is on call to help you reconfigure your system to meet changing data processing requirements.

Active Remarketing Division
We assure maximum return on your investment in computer equipment which you no longer use.

MEMBER OF THE FIRST NATIONAL BOSTON FAMILY
In 1972, The First National Bank of Boston purchased our S/360 leasing business, and we became a wholly-owned subsidiary.

With the Bank's financial capabilities behind us, Randolph customers benefit even more from the combined efforts of the best computer-leasing and financing people in the United States.

HOW ABOUT YOU?
If your company is not presently leasing computer equipment from Randolph, you'll be interested in our new brochure outlining our special customer support services, and important facts on how we can reduce your computer costs. Call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5307.

MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY

Sealed proposals will be received by the CDPA, 508 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services:

Request for Proposal No. 882, due 3:30 p.m., Wednesday, February 15, 1984, for the acquisition of a software package capable of producing maps from descriptive data for Mississippi State University.

Request for Proposal No. 883, due 3:30 p.m., Friday, February 17, 1984, for the acquisition of Univac compatible disk drives and controller for Mississippi Gulf Coast Jr. College.

Request for Proposal No. 884, due 3:30 p.m., Friday, February 17, 1984, for the sale or swap of a Univac 1100/80 computer system and the acquisition of a replacement system including terminals, controller and a DCP/40 upgrade for Mississippi State University.

Request for Proposal No. 885, due 3:30 p.m., Tuesday, February 28, 1984, for the acquisition of a software package with the capability of testing and debugging CICS programs for the Mississippi State Computer Center.

Request for Proposal No. 886, due 3:30 p.m., Thursday, February 23, 1984, for the acquisition of a document processing system for the Department of Wildlife Conservation.

Detailed specifications may be obtained from the CDPA office. The CDPA reserves the right to reject any and all bids and proposals and to waive informalities.

15 pointed questions to ask MSA or any software supplier

These questions will help you when you sit down with individual software companies.

They're tough questions. Relevant ones. And any supplier who is worth his salt should be able to answer them without backpedaling.

Ask MSA

We'll answer all these questions to your satisfaction—plus any others you may have.

In fact, we're probably the best equipped to answer them. Because MSA is the software company. We offer the most complete line of totally integrated systems in the software industry, including financial, human resource and manufacturing.

So you avoid the headache of trying to tie together individual systems. (And the even bigger headache of adding to them.)

With MSA's integrated systems, there's no unnecessary duplication of data or effort. Reports faster. All your company's information more timely and accurate—and in the right form.

Our technical edge comes from experience

Staying ahead is easier for a company that's steeped in software technology. MSA has spent years developing, refining, testing and enhancing our systems.

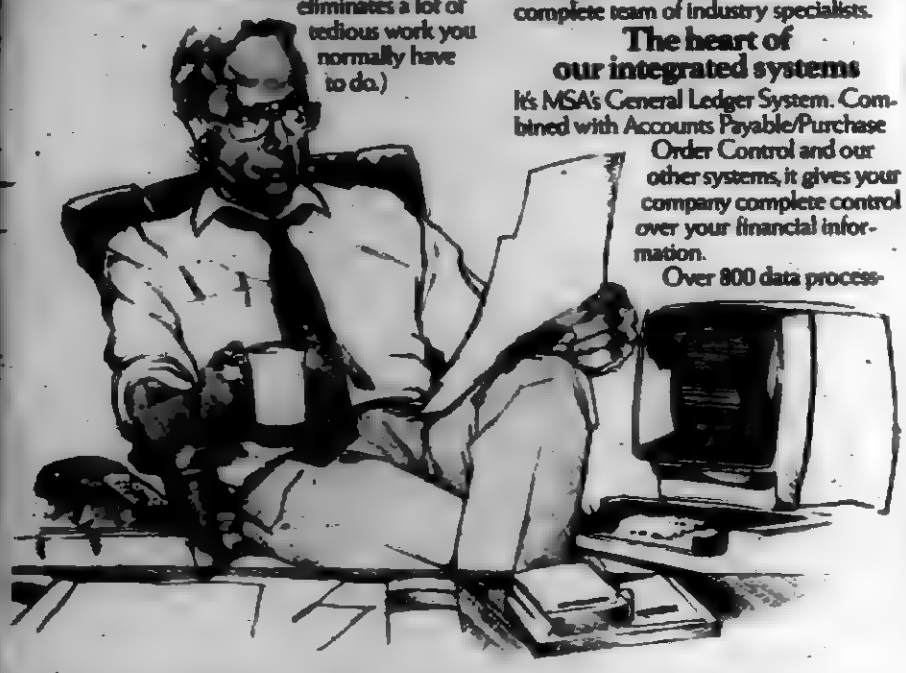
This year alone, we'll invest $25 million to make sure all our systems are technologically razor sharp. That gives us a decided advantage over flash-in-the-pan technology that may not have the bug-free logic of a more experienced system.

It also gives you a decided advantage over "custom" systems you have to update yourself.

MSA relieves you of that time-consuming burden. We update and enhance your software for a full year. Then we continue this service for a surprisingly low annual fee.

Maintenance includes keeping your system up-to-date technologically. Enhancing it with new features that make it work even harder for you.

And making sure it reflects changes in accounting procedures and government regulations, including 401(k), TEFRA, and FAS52. (That eliminates a lot of tedious work you normally have to do.)



Save this box. It can help you make an intelligent software decision.

1. Can you offer us a complete range of software systems designed to work together?
Or will we have to piece together a patchwork of systems?

2. Are your systems just record keepers, or can they really help us make decisions?
Can we pull together information from any of our integrated systems? In exactly the form we want it?

3. Can you provide business software for both mainframe and microcomputers?
Do you develop this software yourself or do you simply market it for another company?

4. Are your systems truly online so all of our information is current?
How many of your systems are online? How secure are they?

5. Will my company have to be the one that discovers the bugs in your brand new system?
Just how long have your systems actually been used, and how have they been tested?

6. Will you update your systems as technology advances and regulations change?
What are some of your most recent updates? Will you keep us current on regulatory changes?

7. Do your systems really do everything you say they will?
Or will we have to change them or add to them to get the features we want?

8. How long have you been in business?
What are your revenues? What is your growth record? Where will your company be five years from now?

9. How many systems has your company installed?
How many of these were installed in the past six months? How many of your earlier customers are still using —and liking—your systems?

10. Do your financial systems handle unlimited foreign currencies?
Do your financial systems use a common set of currency exchange rates?

11. Can you link our executives' computers directly to the mainframe—so they can get their own information?
Is that software available right now?

12. How will you make sure our own people thoroughly understand your system?
Do you have educational centers near us, or will we have to travel all the way across the country to find one? Will you be there to help during installation and after?

13. How many of your people specialize in software for my industry?
How many accountants work for you? Human resource specialists? Manufacturing experts?

14. Do your systems have built-in features that make them easier to use?
What happens if someone needs help figuring out a feature? Do you have online documentation that's easy to understand?

15. As my business changes will your system be flexible enough to change with it?
Or will we have to pay a lot to revamp it? Or even regenerate it?

35,000 days of training

At MSA, we make sure your people have a firm grasp of our systems. Last year alone, we conducted more than 35,000 student days of customer training for over 1,800 companies. At education centers all over the world, as well as at our headquarters.

From training sessions to cassettes to complete, easy-to-understand documentation, MSA provides the most extensive Customer Education Programs in the industry.

And MSA systems are just as friendly as our people. Our online HELP feature actually guides users through our systems, and EASY-SCREEN™ lets them design their own screens without creating data processing nightmares.

If there's ever a question or problem with our systems, MSA customers are always close to service.

Our Account Managers are knowledgeable, responsive, and backed by a complete team of industry specialists.

The heart of our integrated systems

It's MSA's General Ledger System. Combined with Accounts Payable/Purchase Order Control and our other systems, it gives your company complete control over your financial information.

Over 800 data processing specialists, accountants, and financial experts work together to make MSA's financial systems the most advanced and most highly integrated in the industry.

MSA has the answers

Whatever your size—whatever your business—MSA has a total software solution.

We'll provide the highest quality integrated online software.

We'll tie your business and manufacturing software systems together, using our exclusive Extended Closed Loop™ manufacturing system.

We'll provide business software for your microcomputers, through our Peachtree Software Company.

We'll even link your microcomputers to your company's mainframe—with MSA's Executive Peachpak™ application software. A revolutionary concept that lets executives get the mainframe information they need through their personal computers.

MSA ready-to-install application software

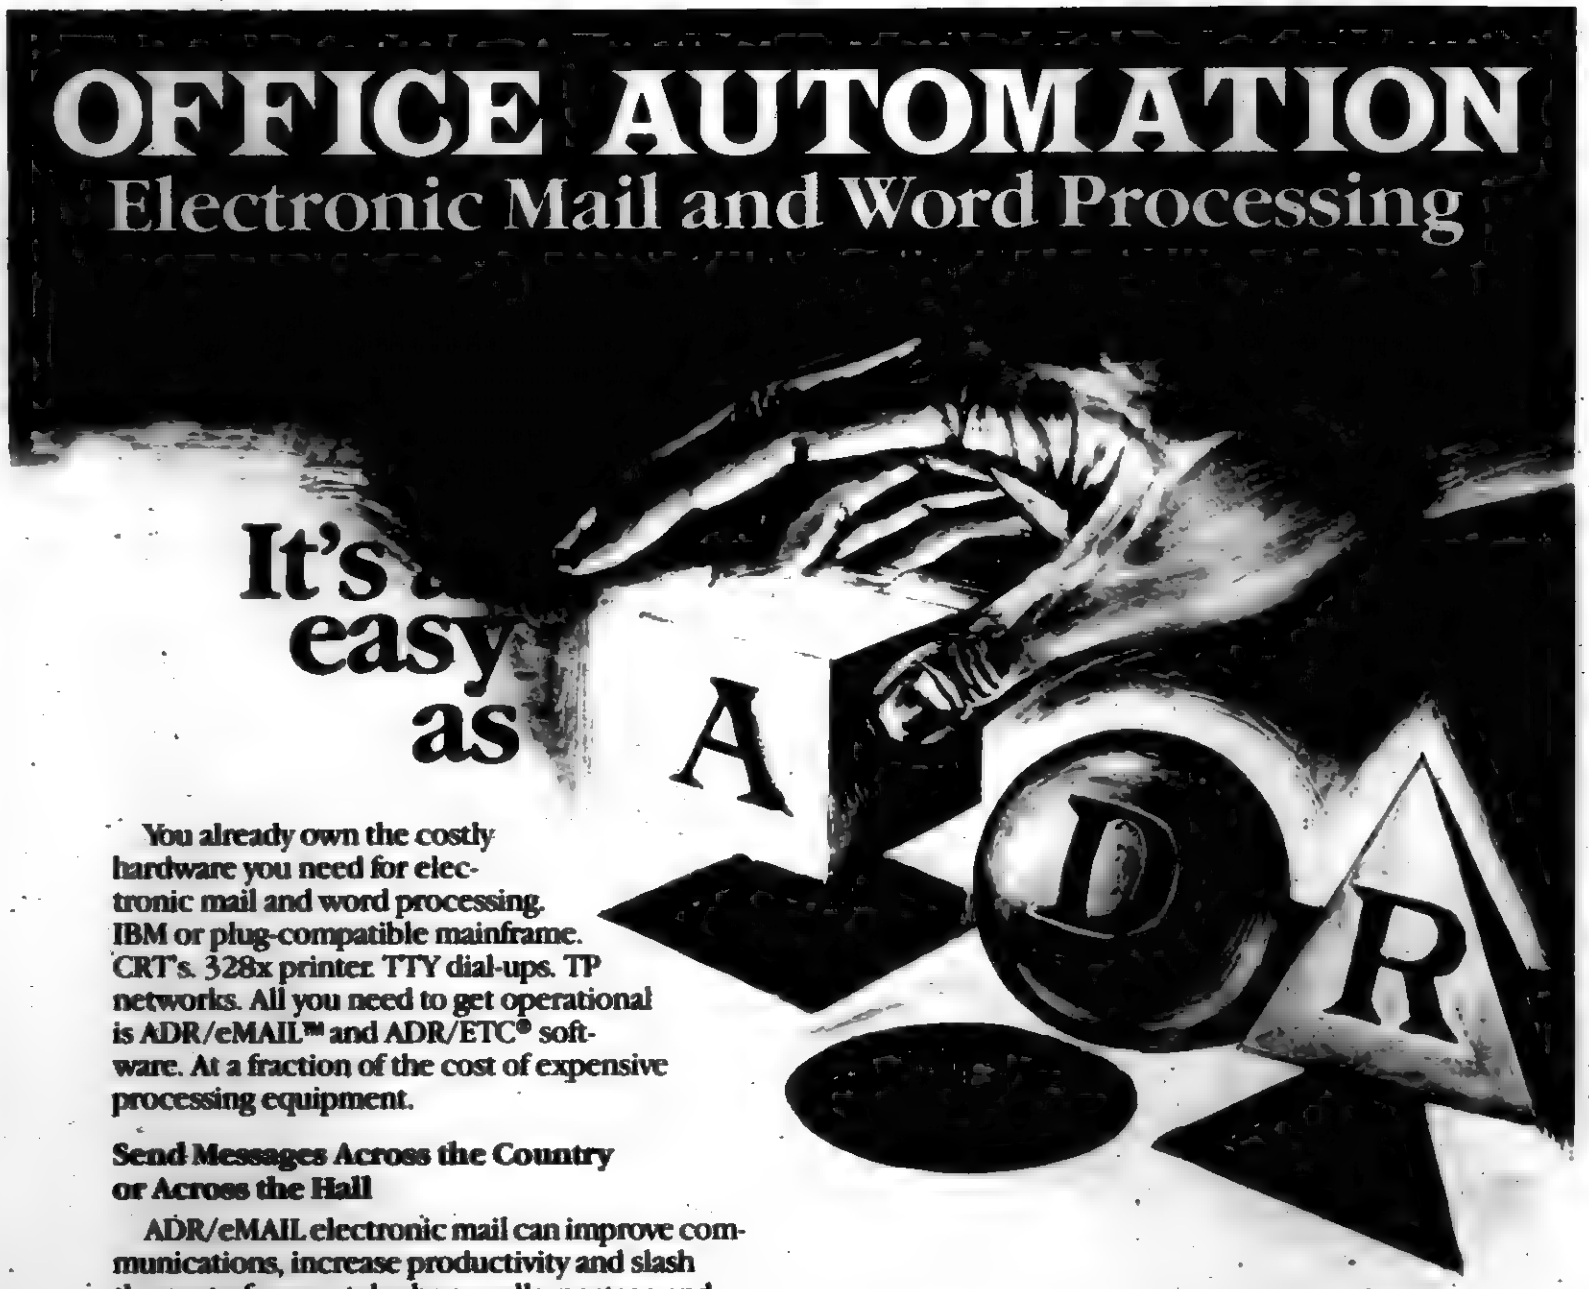
GETTING STARTED

OFFICE AUTOMATION

Electronic Mail and Word Processing



You already own the costly hardware you need for electronic mail and word processing. IBM or plug-compatible mainframe. CRT's. 328x printer. TTY dial-ups. TP networks. All you need to get operational is ADR/eMAIL™ and ADR/ETC® software. At a fraction of the cost of expensive processing equipment.

Send Messages Across the Country or Across the Hall

ADR/eMAIL electronic mail can improve communications, increase productivity and slash the cost of paper, telephone calls, postage and equipment. You can use eMAIL to write letters and memos. Read a message and pass it on with comments. Keep copies permanently. Send a message to a person, group or department. eMAIL can be accessed from any location in its terminal network – not just from your regular office. With eMAIL, you can't misplace, forget about, or spill coffee on, your mail. You can actually handle all your mail in only 15 or 20 minutes a day. Best of all, ADR/eMAIL is simple to learn – anyone can use it.

ADR/eMAIL is Integrated With ADR/ETC Word Processing

eMAIL includes an interface to the ADR/ETC word processor for sending and receiving large or highly-formatted documents. Today's most versatile and powerful word processor, ETC lets you generate simple memos, extensive proposals, catalogs, manuals and one or 100,000 personalized letters. It even allows you to link your word processing activities to your data processing systems. ETC also interfaces with typewriter terminals and hardcopy printers for boardroom quality documents.

ADR® is Ready When You Are

Call or write for more information on how you can increase office productivity, boost employee morale and cut costs substantially. It's as easy as A D R.

HAMMERING IT OUT

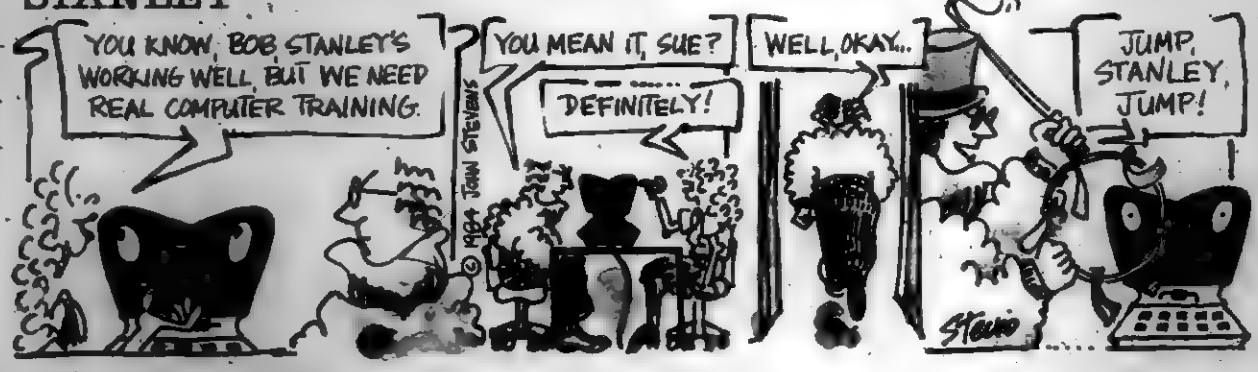
By Michael Hammer

"Hammering It Out" will be a regular feature in Computerworld OA *and will attempt to give readers a look at the lighter side of the developing world of office automation.*

The latest outrage being perpetrated on the English language is the practice of turning nouns into verbs ("finalize," "prioritize" and so on). Regrettably, the office automation field is not immune from this lamentable phenomenon. ("messaging," "windowing" and "interfacing" are three favorites). It is time to counterattack. A good place to begin is with the neologism, "calendaring," and its referent, the electronic calendar.

The electronic calendar is truly a triumph of modern technology. A user can actually enter appointments for specific dates and times, inspect the calendar for a particular date or even have his day's schedule printed out. It is safe to say that an electronic calendar is almost as useful as the *Economist* diary I carry in my jacket. I say "almost" because no electronic calendar fits in my pocket, and when someone stops me in the hall (or on the road) to see if I am free on the 18th of next month, I do not want to start looking for a terminal. Using an electronic calendar for personal scheduling appeals to the same people who balance their checkbooks on a home PC.

But, you say, I am being unfair. The virtue of a calendar is as a group scheduling tool. In theory, everyone in the organization will keep his calendar on-line; then, anyone who needs to schedule a meeting will need only to inspect the attendees' calendars to find a mutually convenient time slot. (Perhaps in the interest of public



Do You Like OA?

If so, write and tell us. If not, tell us about that, too. Send comments to The Editor, *Computerworld OA*, Box 880, 375 Cochituate Road, Framingham, Mass. 01701.

You can also subscribe to OA for $12 a year by calling CW Circulation, 800-343-6474. CW subscribers will continue to receive issues as part of their subscriptions.

decency, censored versions of their schedules will be shown, indicating only what time is free and what is available.)

However, the reality is somewhat different. Although all are invited to put their schedules into the system, the intended users quickly begin to have second thoughts: "You mean my boss will be able to look at my calendar? He's going to see that I don't have anything scheduled for Thursday? Maybe he'll think I'm not doing anything on Thursday. Maybe he's going to find something for me to do." Or, "Harry is going to see I'm available on Friday from 3 to 5? I hate Harry and his idiotic meetings! I want to tell Harry I'll be in Peru on Friday."

Within 30 microseconds of system installation, all calendars are blocked out until the year 2146.

As a result, hardly anyone uses electronic calendars, even the vendors that tout them so highly. One manager I know recently visited a major OA vendor's headquarters, where he was treated to a demonstration of the latest integrated product offering. George, the demonstrator, extolled the virtues of the calendar facility and claimed that his entire organization used it to schedule all their meetings. Just then George's boss stuck his head in to say, "George, I'd like a staff meeting tomorrow. Are you free at 10?"

The sad truth is most electronic calendars provide very little value to their users and the overhead associated with using them dwarfs their putative benefits. Conventional electronic calendars violate the first rule of OA system design: An electronic system must be better than the paper system it is intended to displace. Simply simulating paper with electronics is pointless.

The originator of the electronic calendar ranks up there with the genius who thought it would be clever to employ a large, bit-mapped screen to represent a paper-covered desk — right down to stacks of documents piled on top of each other.

This is not to say that electronic calendar systems are entirely useless. A number of organizations have found on-line calendars very useful for managing the schedules of inanimate objects — conference rooms, corporate aircraft and boards of directors. But for personal calendars, a pocket diary does very well and an electronic mail system can go a long way toward solving group scheduling problems.

A really useful calendar system would allow users to describe the priorities of their existing engagements and the urgency of meetings they are trying to arrange. Individual calendars would remain entirely private; only a scheduling process could inspect them, not other users. The scheduler would exercise intelligence to propose overriding an existing meeting. ("A two-hour meeting with all seven attendees is not possible until July; however, a two-hour meeting with six of them can be scheduled next week and a one-hour meeting with all of them tomorrow.")

Unfortunately, such capabilities are not yet available. Until they are, we may be better off without electronic calendars; we will certainly be better off without "calendaring"! OA

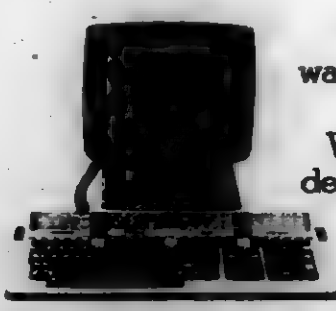
WITH DATA GENERAL, YOU WON'T BE A PRISONER OF YOUR IN-BOX.



DATA GENERAL INTEGRATED OFFICE AUTOMATION

Burying information under a ton of mail at the bottom of your in-box is not the best way to get it when it's critical to a decision.

ELECTRONIC MAIL

With Data General's CEO® Comprehensive Electronic Office, information is delivered electronically. Instantly. Unerringly.

But that's only the beginning.

TOTAL OFFICE AUTOMATION

The CEO system automates just about everything in your office. CEO electronic filing files the way you do. Its electronic calendar keeps tabs on trips, appointments, and meetings—even confirming them all.

Of course, CEO includes easy-to-use word processing. And all this is integrated with data processing for total decision support.

DON'T DUMP YOUR EXISTING EQUIPMENT

Best of all, instead of having to dump your existing equipment to automate your office, you can build the CEO system around it.

Because it not only ties in with other Data General computers, but it also ties in with the most widely-used mainframe and word processor.

Instead of just a series of personal computers, each CEO workstation becomes part of a global network, with access to data from IBM mainframes.

AS LITTLE AS $5,000 A WORKSTATION

And with the CEO system, the cost per workstation can be as low as $5,000, depending on application.

CALL NOW

For more information on office automation that's a generation ahead, call: **1-800-554-4343, Operator 05A** or write Data General, M.S. CEO 05A, 4400 Computer Drive, Westboro, MA 01580.

OA NEWS

AT&T Moves In

No sooner had the bell rung on divestiture than AT&T was out of the gates. The newly liberated AT&T Information Systems, with an eye on the lucrative office automation market, has already announced several agreements with computer manufacturers, and many more are expected in 1984.

Within days of the official divestiture date, AT&T bought 25% of Olivetti Co., Europe's second leading information processing company. The deal raised eyebrows in Europe because it positions AT&T and Olivetti to take on IBM on the Continent. AT&T and Olivetti have indicated they will begin exchanging products for sale in their respective markets by mid-1984. AT&T will reportedly import Olivetti workstations for incorporation into its OA strategy.

The ink on that deal had hardly dried when AT&T announced an agreement with Convergent Technologies, Inc. in Santa Clara, Calif. Convergent, the agreement stated, will design and produce new workstations exclusively for AT&T Information Systems. Although neither company would discuss the agreement, analysts predicted that the resulting product would be a state-of-the-art workstation combined with a vast array of telephony features that would allow access to all tools needed in an average office.

Mike Dunmire, an analyst with the Seattle investment banking firm of Cable, Howse & Ragen, said it is quite possible the product will be integrated with Convergent's Megaframe product line. "The options AT&T has with Convergent are limitless," he added.

Dunmire pointed out that AT&T wanted a state-of-the-art product and, though they could have developed it in-house, the question was when? "The management of AT&T deserves a lot of credit for being so enlightened. They saw that Convergent's products were innovative and not 'me-too' technology. It took a lot of guts for AT&T to bite the bullet and look outside." As AT&T broadens its office scope, analysts predicted as many as 30 product announcements this year.

FCC Delays Charges

WASHINGTON, D.C. — The Federal Communications Commission (FCC) bowed to public and congressional pressure and delayed until next year the proposed long-distance access charges that AT&T had hoped to institute in April. The access charges, which were to be imposed on both residential and small-business telephone customers, have been a political football for several months as Congress, the White House and the FCC have gotten into the fray.

The charges, which were slated to be $2 per month, will instead be phased in gradually until 1990 and will go no higher than $4 per month. The FCC did allow $6-per-line charges for big business customers to go into effect as scheduled in April. Both the House of Representatives and the Senate have opposed the access charges. The House bill, H.R. 4102, passed last November blocked the FCC plan by exempting residential and small-business customers from the fees. A similar bill was awaiting approval in the Senate. The Reagan administration had opposed both of those measures, but expressed agreement with the FCC's decision to delay the charges. Analysts felt the White House was happy to have the decision delayed until after the election.

The commission's ruling means that charges that would have been paid to local phone companies could be delayed until spring or summer of 1985. The ruling also means that there will be no reduction in interstate long-distance rates as originally promised by AT&T. The company, after its Jan. 1 divestiture, had planned to reduce its long-distance rates by 10.5% and was counting on the access charges to help defray the costs of that reduction.

If You Knew Unix . . .

The major office vendors had taken a hard line against it, but Unix, Bell Laboratories ever-present operating system, appears to have overcome even its most stubborn opponents. Taking an "If you can't beat 'em, join 'em" approach, IBM, Digital Equipment Corp., and Wang Laboratories, Inc. have all announced Unix-like operating systems for different parts of their respective product lines. AT&T, meanwhile, made it clear through a series of January announcements that it intends to make Unix an industry standard.

Whether Unix becomes the de facto operating system for the office remains to be seen; one thing is clear, however: it is no longer possible for any serious office vendor to ignore Unix altogether.

Among the first to come over was Wang, which in October announced its UVS, an operating system environment integrating Unix System V software with the Wang VS operating system. IBM recently unveiled its Personal Computer Interactive Executive (PC/IX) Unix-like product for its Personal Computer. The IBM offering, developed by Interactive Systems Corp. for IBM and scheduled for April, reportedly will be used for program development, text processing or running a wide variety of existing Unix-system application programs.

Last month, DEC announced Ultrix-32, a new native-mode implementation of Unix for its mid-range and high-end VAX computers. The product is based on the University of California at Berkeley's Fourth Berkeley Software Distribution and is scheduled for delivery in late spring.

Within days of the DEC announcement, AT&T, Unix' creator, unveiled an enhanced version of Unix System V as well as three new software packages designed to run under Unix for a broad range of applications. AT&T also announced a cooperative relationship with Digital Research, Inc., creators of the CP/M operating system, to expand the number of industrywide applications software offerings supported by Unix.

Apple's New Crop

CUPERTINO, Calif. — Whatever the computer industry thinks of Apple Computer, Inc., one thing is certain: it sure is a tough company to ignore. A year ago, the industry was abuzz with the introduction of Lisa, Apple's innovative 32-bit desktop computer. This year, the Macintosh has generated enough ink to start a printing company.

The early reviews on Macintosh, a smaller, less-expensive, scaled-down version of Lisa, have been almost unanimously favorable. But Lisa herself was also the object of lavish praise, and when the final numbers were in for 1983, Lisa had been a major disappointment for Apple.

The Macintosh costs $2,495 and is available now; it should avoid the pitfalls that plagued Lisa. Industry analysts feel it could give IBM a run for the money; one predicted first-year sales of more than 350,000 units.

Apple is reportedly betting the company on the success of Macintosh and spending a reported $50 million on advertising for the product in 1984. John Sculley, Apple's energetic president, has said the Macintosh is "the key to our office products line for the rest of the decade," which brings up the question of just how viable it is as an office product.

The Macintosh, based on a 32-bit 68000 microprocessor, comes with 128K bytes of random-access memory, 64K bytes of read-only memory, a black-and white 9-in. monitor and a single 3½-in. Sony microfloppy-disk drive with 400K-byte storage capacity. Mac features Lisa's user-friendly interface with mouse, so end users can reportedly be up and running in two to three hours. At just 10 inches of desktop space and a weight of just 17 pounds, it is portable in its manufacturer's eyes.

Apple has indicated it is working on AppleBus, an interconnect product that will allow Macs to be hooked to each other as well as to other Apple products. The Macintosh also has two RS-232 serial ports for connecting a modem.

Aaron Goldberg, an analyst with the International Data Corp. (IDC) in Santa Clara, Calif. said, "The office will be the toughest market for the Macintosh because of IBM's presence. At the same time, however, it should do quite well because it's so easy to use and it doesn't take up much room."

Tom Willmott, IDC's director of user research, added that though communications is still a question mark, the Macintosh is positioned for the office better than the Apple IIe or the Lisa. Depending on the amount of application software developed, he foresees the Macintosh as a far better alternative as a low-end workstation than the IBM PCjr. "Apple has blown IBM out of the water on this one," Willmott stated.

Amy Wohl, president of Advanced Office Concepts, pointed out that since Macintosh is not based on the MS-DOS operating system, software availability could become a problem. Large companies that are committed to an MS-DOS environment might shy away from the product.

Apple, even with the Macintosh, does not yet offer a system solution and that could hinder office sales, especially to large corporations. Wohl questioned whether large companies would now be willing to accept Apple. "There are some real doubts about that; they haven't sold well in that environment," she said.

The Apple Macintosh

OA

BRIEFS

MAYNARD, Mass. — It was shaping up to be the winter of its discontent until Digital Equipment Corp., which had announced sharply lower first-quarter earnings, bounced back with stunning quickness. DEC, whose stock plunged more than 30 points after the October announcement, shocked Wall Street analysts in January when it reported a 31% increase in second-quarter earnings to nearly $80.5 million, or $1.41 per share. Revenues for the quarter ended Dec. 31 rose 40% to $1.4 billion compared with $1 billion for the same period a year earlier. Analysts had not expected DEC to recover from its financial woes so fast and had predicted second-quarter earnings of about 65 cents per share. The surprise announcement sent DEC stock soaring nearly as quickly as it had fallen in October. Within three days of the announcement, the stock had risen 17 points to more than $90 per share.

BOSTON — Microcomputer managers in Fortune 1000 corporations now have a place to turn to find out how their contemporaries are confronting the changes that microcomputers are bringing to their respective organizations. Beginning last month, a network of microcomputer managers was made available by the Microcomputer Manager's Association (MMA) of Boston. The network reportedly allows an "exchange of information to the benefit of all subscribers," according to Marty Butler, president of the MMA.

The membership fee for the network is $150. MMA said from 80 Boylston St., Boston, Mass. 02116.

WELLESLEY, Mass. — Workstation shipments to executive and middle management markets are expected to increase from 46,000 in 1983 to more than half a million in 1990, an annual growth rate of more than 40%, according to a survey done by Venture Development Corp. (VDC).

The VDC report, "U.S. Executive Workstation Markets 1983-1990," points out that when first introduced in the late 1970s, executive workstations were unable to generate broad interest, but that the tide has turned. Growth in annual shipments is starting to increase dramatically. The report breaks the market segment into four categories and predicts the most noticeable growth in sales of data-only workstations for middle managers. The study is available for $2,950.

In a separate study, VDC also predicted that worldwide shipments of printers and plotters by U.S.-based manufacturers will reach $8.5 billion in 1984. "The U.S. Computer Industry" forecasts shipments of every major computer product including printers.

It is available for $1,050 from VDC, One Washington St., Wellesley, Mass. 02181.

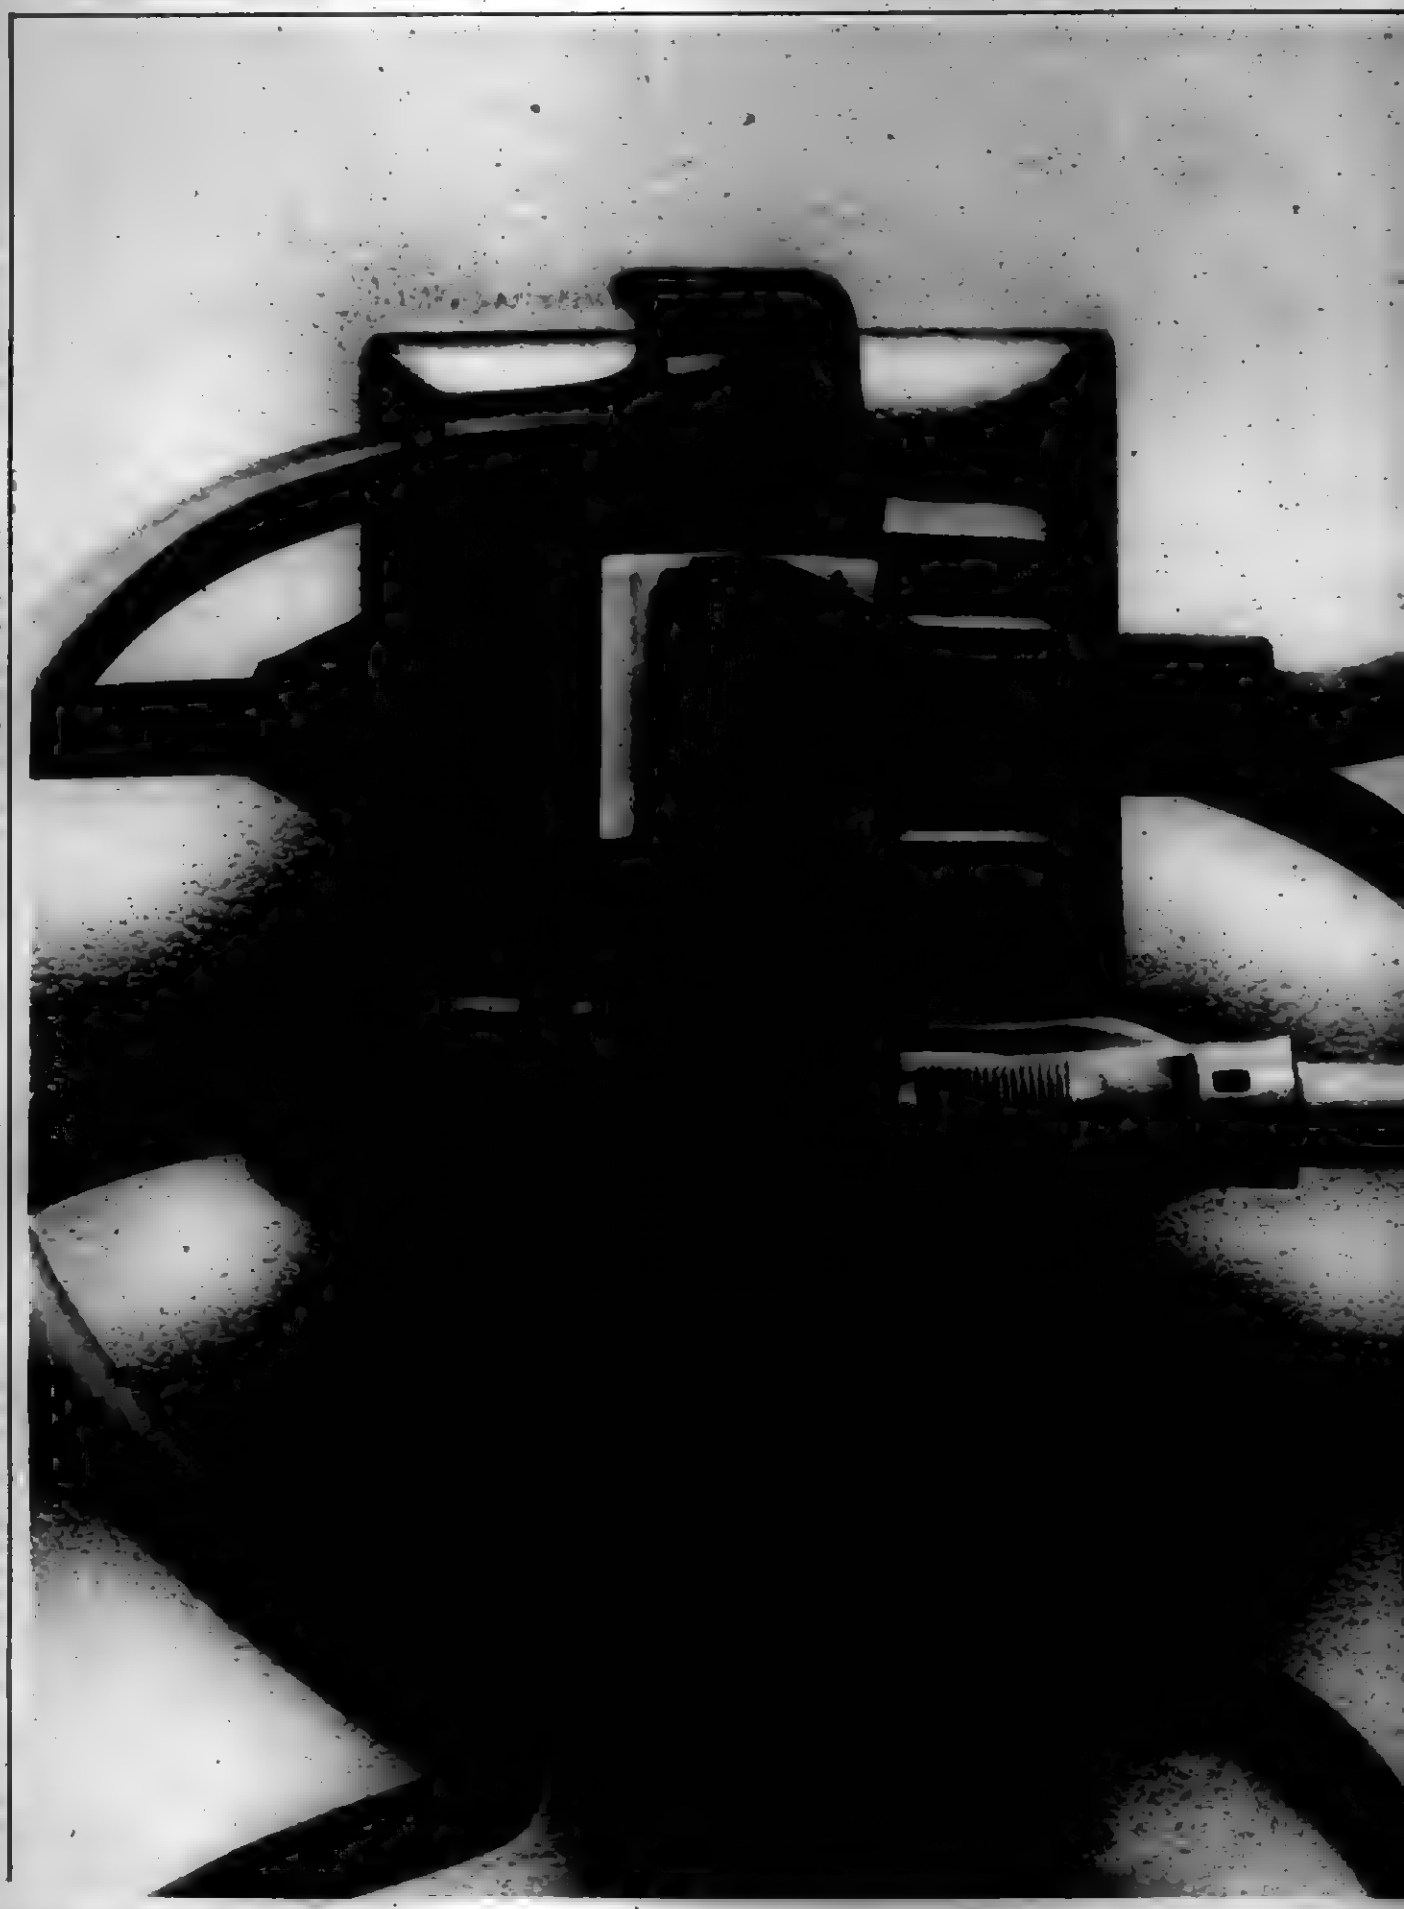
NEW YORK — Franklin Computer Corp., the Cherry Hill, N.J.-based computer manufacturer, agreed to pay Apple Computer, Inc. $2.5 million in lieu of continuing its court battle over the use of Apple's operating systems and computer programs.

In dropping the legal fight, Franklin agreed to accept the validity of Apple's copyright claim on its operating system software and to stop copying Apple programs for its Apple-compatible computers.

As part of the settlement, Franklin was given until April 1 to stop manufacturing computers with software reportedly copied from Apple.

BETHESDA, Md. — "Our economy has entered an era in which information and knowledge have immense value in and of themselves. For managers, this information age will create profound changes in the way they make business decisions. It will also mean new kinds of decisions — on computers, telecommunications, word processing, micrographics, electronic mail and teleconferencing."

With this in mind, the International Information Management Congress (IMC) is



BRIEFS

distributing a new book, entitled *The Executive's Guide to Information Technology: How to Increase Your Competitive Edge*. According to the IMC, the book looks at the "big picture" in information technology. It addresses the question of how today's technology can help managers do their jobs better and increase their company's competitive position. The 314-page book is available for $30 from the vendor, IMC Publication Sales, P.O. Box 34404, Bethesda, Md. 20817.

NORWALK, Conn. — Micro-to-mainframe communications products and services have entered a period of "explosive growth," according to a research report from International Resource Development, Inc. (IRD). The report predicts users will spend more than $500 million on micro-to-mainframe communications in 1984 compared with $220 million in 1983.

The report, "Micro-to-Mainframe Communications — Hardware and Software Markets," is available for $1,850 from IRD, 30 High St., Norwalk, Conn. 06851.

NEW YORK — "VDT News," the first newsletter to report exclusively on video display terminal operator health and safety began publication last month.

The bimonthly newsletter will be available for an annual rate of $18 for individuals and $35 for institutions from VDT News, P.O. Box 1799, Grand Central Station, New York, N.Y. 10163.

WASHINGTON, D.C. — A federal advisory committee for the airline industry has begun studying the potential problems caused by high-technology devices such as portable computers on board airplanes. The report, "Potential Interference to Aircraft Electronics Equipment from Devices Carried on Board," is the result of the first meeting of the Radio Technical Commission for Aeronautics (RTCA) held last November.

The RTCA was approached by Eastern Airlines to investigate the situation and plans to look first into how the passenger-operated devices affect the aircraft antennas.

NEW YORK — Huttonline, an electronic information service that will enable clients to access the firm's computers for personal account data, investment information and electronic mail, was introduced by E.F. Hutton & Co.

Huttonline reportedly gives clients instant access to account information, such as portfolio positions and market values, cash and margin balances and open orders. It also shows the client's transaction activity and makes available research information, market comments, and other investment information.

According to the company, any E.F. Hutton client is eligible to subscribe to Huttonline and the service will initially be available between the hours of 6 a.m. to 12:30 a.m. EST, seven days a week. The service will be available for a sign-up fee of $25 and a monthly service fee of $17.

Hutton also announced that it is getting into the computer business by offering selected personal computer equipment to its clients in conjunction with Huttonline.

ANN ARBOR, Mich. — Comshare, Inc., the Michigan-based software maker, has signed a two-year agreement with IBM which will pair the two in selling decision support system software for use in IBM information centers. It is the first time IBM has signed such an agreement with a DSS vendor.

According to the agreement, IBM and Comshare field representatives will work together in situations where a DSS is needed, and IBM will recommend Comshare's System W and Micro W DSS software. The agreement also called for the two companies to work together on future improvements of System W to support new relevant hardware and operating software releases. OA

LEAVE ROOM FOR MICROGRAPHICS IN YOUR OFFICE AUTOMATION PLANS.

When most companies move into office automation, the first thing they do is plug in a computer and some peripheral equipment.

That's smart. But unfortunately that's also where they stop, leaving some unfilled opportunities for improving their office procedures.

Take filing for instance. While computers are good for storing data, they can't store the documents you must keep for evidentiary purposes.

That's where the 3M micrographic concept of file management can help. Micrographics is the use of microfilm instead of paper to store and retrieve important documents.

With one of our computer-assisted retrieval systems, for example, you can bring your filing system up to speed with the rest of your automated office. By making files easier to retrieve and virtually eliminating lost documents. All while reducing the space you now devote to document storage.

3M even offers a wide range of software programs to link its micrographic equipment to the computer system you may already have.

The result is a system that not only improves the efficiency of workers, but saves your company time, space and money.

Find out how micrographics can fit into your office automation plans and give you more control of your files. Call 1-800-328-1684 (1-800-792-1072 in Minnesota or 1-800-268-9055, Operator 13 in Canada) or return the coupon for a free booklet.

GET CONTROL. GET FILE MANAGEMENT.

OA

Q&A

Steven M. Abraham, conference chairman for the Office Automation Conference (in Los Angeles, Feb. 20-22) is senior manager for Price Waterhouse & Co.'s Management Advisory Services and responsible for its office systems consulting practice. He discussed some major questions facing the OA community in '84.

What are the key issues in OA as we go into 1984?

We're on the verge of embracing this technology on a very large scale. The PC trend will continue and expand beyond just those stand-alone desktop devices. It will expand because senior management is now touching and feeling the technology and getting direct experience with it. That wasn't true two to three years ago.

What will the key technology trends be?

One of the biggest areas of advancement in 1984 will be in decision support. These packages are becoming more sophisticated, integrating with mainframe-based data base systems and with data base packages, text-processing and graphics.

People are crying to get at the masses of data corporations have built in these odd file structures over the last 20 years. They are eager to get at the information in a format and time frame of their choice and to be able to portray it in the style of their choice.

Who will be the key vendors this year?

AT&T and IBM. What's really clear is that AT&T intends to get into all the businesses IBM is in, except for mainframes. And IBM intends to get into the PBX business. It will be be fascinating to watch over the next two years. Most Fortune 500-type corporations have a major investment in both these companies, and that makes the situation very different from saying, "Who should we pick for our OA vendor?" They already have those two companies as major vendors, so major decisions about OA could involve either one.

How far has OA really come?

It's still in its infancy in most organizations I've seen. I have a client right now, a multibillion-dollar company, with virtually no decentralized OA. It's just now getting around to figuring its strategy and making an investment. Most companies that size have done more, but I don't have a client right now that I'd consider sophisticated or advanced. We're not talking yet about fully integrated systems and strong integration with the mainframe environment. That is still mostly in the talking and planning stages.

Will we see dramatic movement in '84?

Not dramatic; I see a gradual buildup. The ideal environment won't develop for several years. The only ones who've really attacked this thing are vendors and a few leading-edge users. The magnitude of the issue has grown so that most if not all organizations of any size are doing something about it now. That process will lead them to making strong advances over the next few years. But the planning process has been going on only a year, if that long.

Is the resistance coming from the clerical level or from management?

Resistance at the clerical level is a nonissue. And at the upper levels, it's not resistance so much as a lack of awareness, a lack of education, a lack of impetus, a lack of involvement by senior management, a lack of risk-taking on the part of OA managers and a lack of involvement of DP organizations. These are all changing over time, and that's where you'll get the critical mass to make things really happen.

What will come out of all this in five to 10 years? What will the office of the future look like?

I don't pretend to know all the answers. The only thing constant in this industry is dramatic change. Anything I say is going to be wrong; the rate of change is just too great. But from what I know today, by 1990, you'll see the workstation become ubiquitous, not to the extent the telephone is, but tending toward that. We'll see the communications equipment integrated with workstations and that in itself will bring the devices to the desktops of executives and managers. OA

THE STATE OF OA

BY STEVEN R. DZUBOW

One way OA planners can come to grips with the ever-elusive office of the future is to find out how other users are approaching OA. Five hundred users of office technology recently participated in a survey designed to profile the state of OA in the U.S. today. These responses, presented in summary form here, are indications of what other managers are doing.

The most visible indication of the integration of office information systems into the work place is the inventory of hardware. Figure 1 on Page 10 gives a brief view of the OA products in use today. At first glance, the data seems to imply a relatively high usage rate of OIS in the companies surveyed; for example, 82% indicated the presence of dictation equipment within their offices. However, the data can be

misleading; it is important to remember that other studies have pointed out that fewer than 10% of office workers use their available dictation equipment on a regular basis.

Again, although 88% of our respondents indicated a presence of word processing stations, most companies with word processors state the equipment is significantly underutilized. Similar patterns of equipment usage also apply to the other categories of office equipment.

With Equipment	Office Equipment Type
88%	Word Processing Stations
83%	Copiers
82%	Dictation Units
53%	DP Computer Terminals (exclusive of WP)
46%	Microfilm/Fiche Readers
39%	Message/Teletype Stations
36%	Facsimile
31%	Small Business Computers (exclusive of WP)
19%	Phototypesetters
16%	OCR Equipment

Figure 1. Office Equipment Integration

This ever-widening gap between equipment and utilization is to some extent a result of business' preoccupation with and enamourment of state-of-the-art technology at the expense of the worker. Although the technology is available today to make significant increases in workers' productivity, the deemphasis of "people problems" has prevented workers from achieving these benefits.

We have been through this before. Initially, computers were placed into glass-walled showplaces and used as expensive calculators. It has taken almost three decades for business to realize the computer's real potential. The evolution from DP, to management information systems and finally to decision support systems has been a slow process.

This problem is much greater in the OA environment than it was with general-purpose computers. A larger number of employees are directly affected. The gap between equipment and utilization also severely hampers firms that want to experience the full extent of benefits associated with the technology.

Most OA systems are maintained independently rather than as part of a distributed network; they are owned, not leased or rented. A strong tendency exists to separate DP from other OIS functions, such as WP. This tendency is apparent in the maintenance of separate personnel — one group supports DP, others support OA functions.

A balance also exists between:

- Customized and off-the-shelf systems.
- Decentralized and centralized systems.
- Single-vendor and multiple-vendor systems.

Most organizations are still in the evaluation stages of OIS; they are experimenting with various prototype configurations to determine the best alternatives for their business environments.

Based upon the survey data, three distinct stages exist:

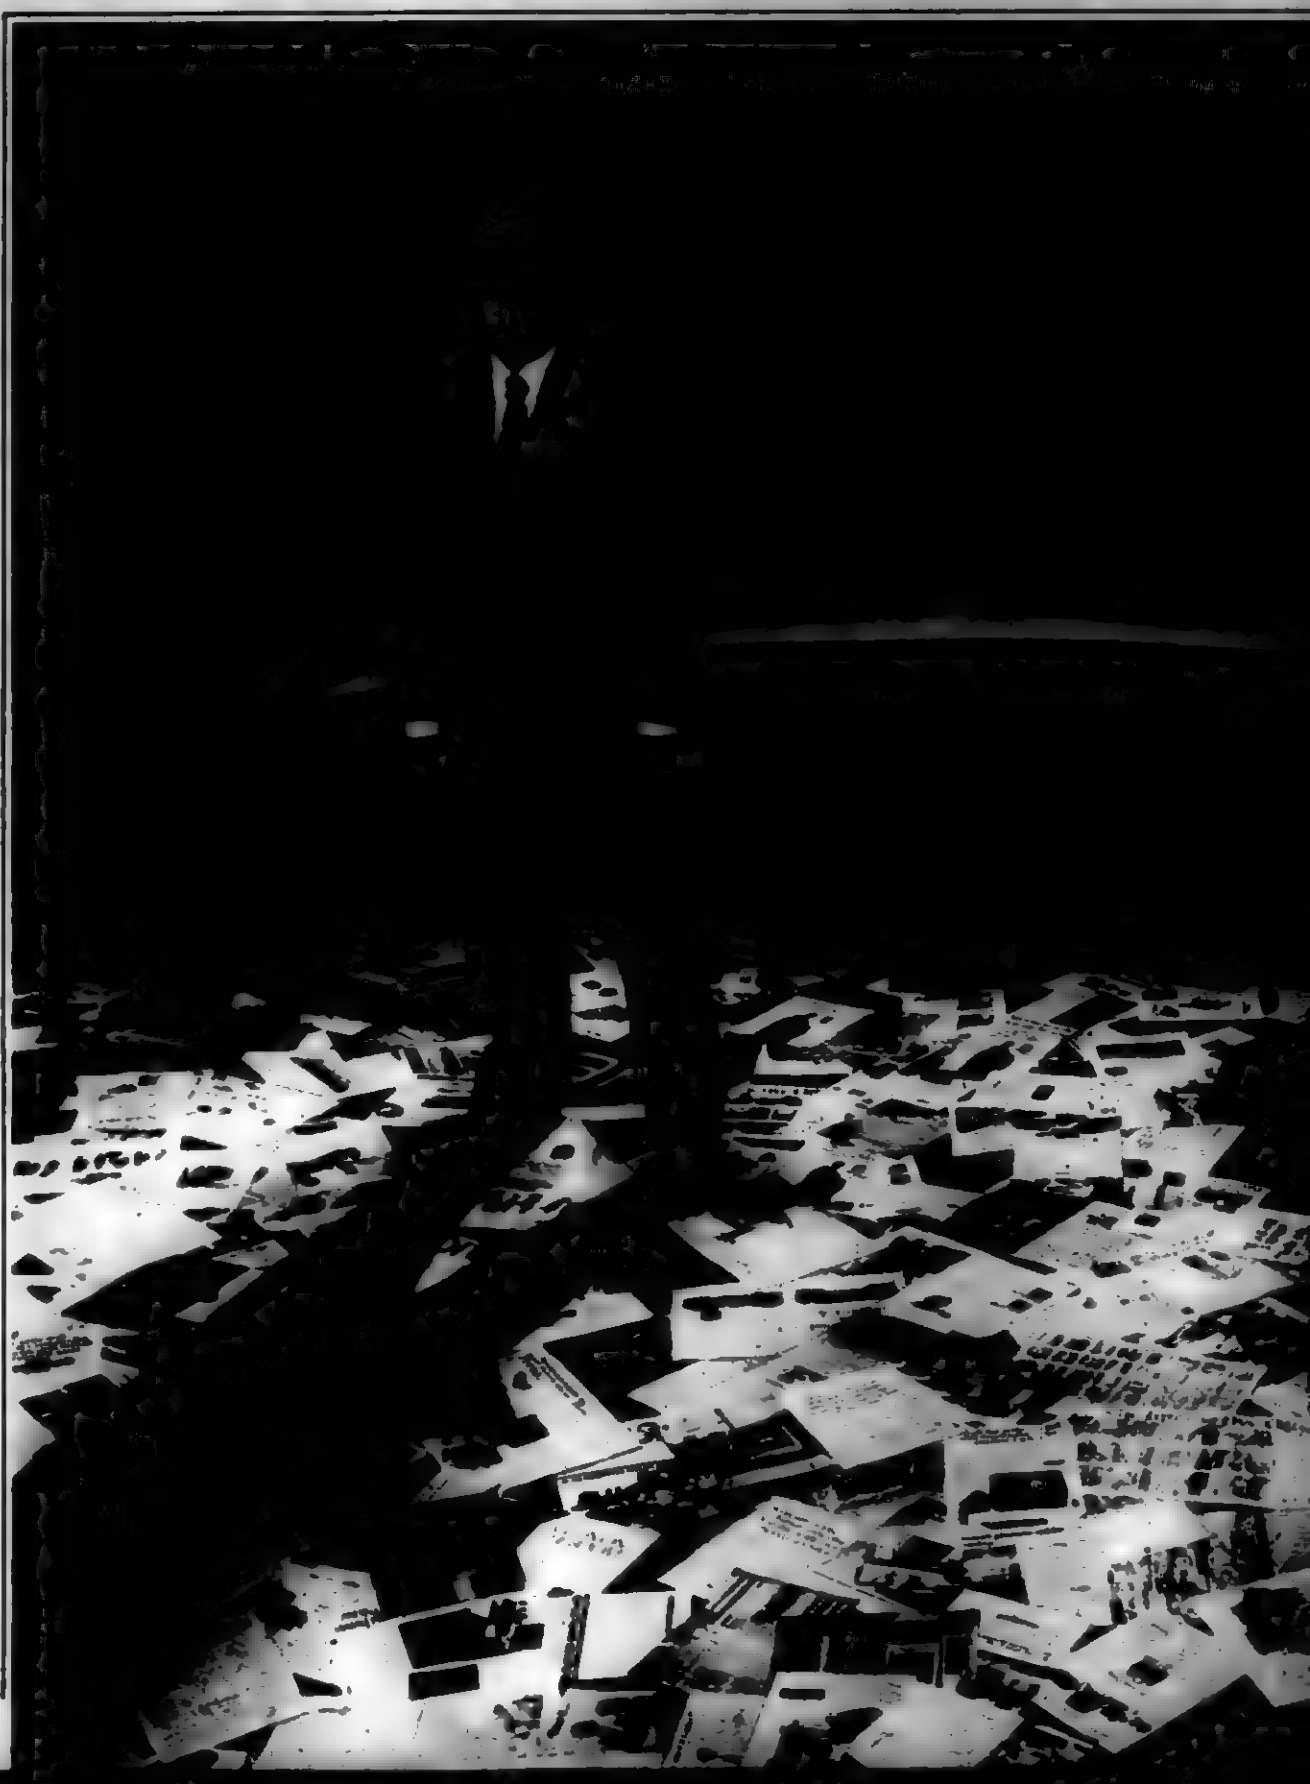
Stage I. This is the earliest stage of OIS development. It encompasses the basic technologies of WP, dictation and microfilm, which are usually the first to be integrated into the automated office.

Stage II. The middle stage of OIS development. Stage II encompasses more sophisticated electronic technologies such as electronic mail, electronic filing and teleconferencing. An organization usually builds upon its Stage I experiences before moving into Stage II.

Stage III. In the advanced stage of OIS development, Stage III technologies are those required for direct augmentation of the manager. Although stages I and II directly support the manager to some degree, most technological interfacing can be accomplished by secretarial and administrative personnel. Stage III requires the integration of DP and OIS as well as the automation of management support functions.

Figure 2 on page 12 indicates the degree to which respondents have progressed into the various stages, and Figure 3 presents the extent of operating experience respondents have achieved in the various stages of development.

More than half the respondents (56%) have actually achieved op-



erating experience with Stage I office technologies. Fewer than 15% have had operating experience with Stage II and Stage III technologies. Of those respondents having operating experience, fewer than 5% have more than three years' experience in the first and second stages. Considering that the technology within these stages has been in existence for more than 15 years, its relatively slow integration into the office is surprising. The delay can be blamed in part on the previously mentioned equipment-utilization gap.

Figure 4 on Page 12 indicates the primary motivators for OIS, as well as the degree to which benefits were achieved using office systems. One interesting response was the last-place ranking of revenue generation, the benefit that would seem to have the greatest potential for the organization.

Respondents at all levels had a moderately positive attitude toward OIS. This attitude held when the accomplishment of OA objectives was compared with organizational expectations. On the average, all levels believed the accomplishments were slightly better than they had expected.

The ranking order is analogous to that associated with the early developmental stages of computers. It was no surprise that increased productivity and improved quality of work were both the primary motivators and the primary benefits of OIS. A further analysis of these two categories by personnel job position shows that the major gains in productivity and quality of work were achieved at the secretarial-clerical level, followed next by professional-staff (nonmanagement), middle and line management and, last, upper and executive management.

A positive correlation existed between degree of benefit achievement for these categories and the existence of quantitative

The Survey

This article is a summary of a study based on a survey sent to 5,000 users of office information systems. From that population, 500 usable returns were obtained.

The largest number of respondents, 41%, represented firms whose revenues totaled $5 million or less. The next largest group, 20%, came from firms with revenues between $5 million and $50 million.

The third largest group, 18%, represented firms with revenues between $50 million and $500 million. The remaining 15% were from firms with revenues in excess of $500 million.

The respondents represented a diverse group of interests and a representative sample of U.S. organizations.

The majority, 27%, were from the financial, legal and insurance industries; the next largest group, 25%, represented education, government and research and development; another 24% were in advertising, engineering, medicine, general business services, transportation and utilities; 17% were in manufacturing; and the remaining 7% represented wholesaling and retailing.

In terms of organizational hierarchy, more than 17% of the respondents were upper or executive management; 36% were middle or line management; 23% were professional and staff, but not management; and fewer than 5% were administrative or secretarial personnel.

Almost 70% of the respondents participated in the establishment of office information systems, guidelines or standards; approximately 63% were involved in the selection process of equipment or equipment upgrades; 59% were able to make decisions or file requests for new equipment.

Most respondents were familiar with the types of equipment being used and given the percentage of users that had equipment in each data-

Table 1 on Page 14 shows the kinds of equipment being used

measurements for the various job positions. Most organizations (78%) had quantitative measurements related to productivity and quality of work at the secretarial and clerical levels. At the professional and staff level, however, only 50% had developed quantitative measurements. This figure fell to 42% at the middle and line management level and even lower, to 30%, at the upper and executive management levels. This perhaps is because the job position becomes increasingly intangible as one moves into the organizational hierarchy. Nevertheless, it should be possible, even at the upper levels, to measure performance so that progress could also be measured. In fact, some type of quantitative measurement must be developed at all levels of the organization to establish goals and objectives and to reduce the subjectivity that exists at the higher levels.

In terms of benefit achievement, the most successful organizational function was administrative services, followed by accounting, marketing, finance, legal, personnel, R&D, planning, engineering, purchasing and medical. It is not surprising that these functions, which typically have the largest composition of administrative and secretarial staff, ranked highest. Most organizations are in Stage I of OIS development, where most of the technology is targeted toward direct support of administrative and secretarial staff.

Responsibility for overall OA planning and operations resides in a centralized group in 69% of firms responding. Figure 5 breaks down these responses by group.

The distribution of OIS responsibility reflects the predominant OIS stage of development. As organizations move into stages II and III, DP and MIS, followed by autonomous OA groups, will increasingly be responsible for OIS planning and development. Administrative services will probably continue to play a strong role, particularly in operational management. The existence of a centralized coordinating OIS group also seems to increase the likelihood of OA success. This finding seems to be due primarily to better standardization policies and the existence of a corporatewide information clearinghouse to reduce problem duplication.

A second organizational factor related to OIS success is the existence of formalized policies, guidelines and standards. Fewer than half (46%) of the respondents indicated the existence of formalized OIS policies. Only a third indicated the existence of formalized OIS guidelines (34%) and standards (31%). No wonder OIS success has been somewhat limited! Until formalized policies, standards and guidelines are the norm, OIS development and implementation will continue in an ad hoc, uncoordinated fashion. Serious problems, particularly in the area of hardware and software compatibility, could occur in stages II and III when organizations move toward OIS integration.

A third factor related to OIS success is the degree of commitment by upper and executive management. Only 38% of the upper and executive managers and 34% of the middle and line managers participated to any significant degree in the establishment of OIS objectives. In addition, only 18% of executive management and 24% of line management participated to any significant degree in the evaluation and design processes associated with OIS. The limited commitment of management in the early stages of OA planning and development is definitely reflected in the benefit levels respondents attained.

Only 7% of the respondents believed current OA products totally met their organizations' needs. The majority of the respondents (55%) indicated that the office systems mostly met existing needs. The remaining 38% stated that their needs were being only partially satisfied.

Primary reasons cited for this attitude were that the products were beyond present needs (36% of respondents); products were lagging behind present needs (32% of the respondents); equipment costs were too high (33% of the respondents); equipment was not sufficiently reliable (16% of the respondents); and the equipment was too complex (11% of the respondents).

The above statistics again point to the presence of the equipment-utilization gap. Except for the above problems, respondents at all organizational levels had a moderately positive attitude toward OIS. This unanimous positive attitude held when the accomplishment of OA objectives was compared with organizational expectations. On the average, all levels of personnel believed the actual accomplishments were slightly better than the expectations each had for OIS.

Respondents identified five factors as most important in the selection of OIS vendors. In order of importance, they were equipment reliability, equipment quality, quick response to customer needs, field service support and technical support services. All factors involve maintaining the equipment in an operational mode. Of the 20 factors identified, vendor reputation and equipment price ranked respectively 10 and 15 in order of importance. In addition, completeness of office equipment product line ranked 16.

The data seems to indicate that OIS buyers are becoming more sophisticated. They are no longer dependent upon a single vendor for product support, and they are willing to pay additional premiums for equipment so long as such payment can be cost-justified. By far the greatest influence on the equipment purchase decision is exerted by discussions with experienced colleagues. Industry publications and professional magazines rank second; vendor publications, educational institutions and the general media influence the purchase decision only to a limited degree.

In a similar finding, experienced OA users provided the most benefit to respondent organizations in terms of achieving OIS objectives. Vendors and manufacturers ranked second in terms of providing positive assistance, followed by courses and seminars, professional OA associations and independent consulting groups. About 50% of the respondents said independent consultants either were not helpful or actually caused problems for a firm trying to achieve its OA objectives.

More than 85% of the respondents planned either to upgrade or to add new Stage I equipment within the next fiscal year. Over 40% are planning to implement some aspects of the Stage II and Stage III technologies into their organizations over the next two- to three-year time frame. Almost one-third (31%) expected their cumulative investment in OIS to increase significantly over the next three years. Approximately 48% of the companies believed a moderate increase in OIS expenditures would occur, and only 7% anticipated a decrease in their OIS budgets in the near future.

In spite of the limited success experienced by users, respondents were generally optimistic about the future of office systems. The data indicates that most organizations are spending considerably more time today than they did in the past in the planning and requirements phases of OIS development. This initial emphasis upon the critical aspects of OIS will have a positive effect upon the attainment of goals and objectives in the office of the future. OA

CW-138

DSS & DP: POWERFUL PARTNERS

BY PETER G.W. KEEN

The central issue for DP is information resource management. At present, information resource management is yet another of the buzz words and cliches that emerge in the management information systems field at random intervals. Cliches are unfortunate — they often disguise the intellectual core behind a phrase. This has happened to decision support systems and may well spell DSS' demise.

The question "What is the definition of DSS?" is asked, but the more important one may well be "Why is the term DSS used in such silly ways without even being defined?"

For information resource management to move beyond cliche, it needs a core of intellectual toughness. To some extent, a clear concept of information resource management constitutes the organizational infrastructure not just for DP, but also for DSS and office technology.

Until recently, information has not been a real resource in most companies. Rather, it has been only a fragmented collection of operational files and special-purpose data bases. For information resource management to be meaningful in both concept and practice, it needs to provide the same level of coordination, planning and methods used to manage the financial resource. In fact, information resource management translates to the creation of an equivalent to the financial planning and control function, headed by a chief information officer comparable to the chief financial officer.

The chief financial officer is responsible for guaranteeing the integrity of the financial accounting system, including planning and reporting. He also supervises the methodologies and frameworks for capital investment. The chief financial officer does not decide how managers should spend money. Rather, this person decides how the processes of financial planning, justification and decision making should be handled. The chief financial officer is responsible, too, for ensuring that the operations are consistent and based on proper assumptions.

Viewed from this perspective, information resource management is not about control of information. It is about certification, justification of procedures, creation of methodologies and data definitions equivalent to those of the financial accounting system. In effect, the chief financial officer has an architecture for handling the financial resource: a systematic blueprint of terms, procedures and structures. Information resource management is a parallel architecture. The chief financial officer does not control how people spend money. Similarly, it would be a dreadful mistake if information resource management were confused with control over the use of information.

The need for DSS to tackle the issue of organizational decision-making processes rather than just individual ones has become increasingly apparent. In addition, it must create the systems that contribute to ongoing planning, control and operations, rather than those that contribute only to specialized or ad hoc needs. DSS has built its identity largely by its deliberate contrast with and independence from DP. For the first time, it needs DP and has every reason to want information resource management to become a reality, not just a buzz word.

DSS offers DP an understanding of how to operate in a user-controlled world. DP offers authority and expertise in defining architectures. It is hard to see how either can really progress without integration of these assets and skills.

Refocusing DP's role really amounts to meshing authority and accountability, a process that has two parts. The first is providing the needed authority to implement the greatly expanded range of applications that information technology has stimulated. The second is to exercise a mandate to spread that technology across departments.

Until recently, DP reported to a staff executive several levels below the key authority figure in the organization. It had a narrow charter, and senior management played a limited role in planning. DP had certain territorial authority as a result of its monopoly over a resource that was not of central interest to the mainstream of the business. Its interpretation of its job focused on preventing disruption rather than on fostering innovation. Applications were handled on a project-by-project basis and largely affected only single departments.

The accountability needed by the information function is broadened by the cross-organizational applications of office technology and the use of terminals by customers, managers, secretaries and professionals to access services and products. DP is too narrow a term for this newer responsibility and set of skills.

Accountability must be backed by adequate authority. There has to be a clearer conception not of what to decide in the use of information technology, but rather of who decides. Planning, coordination and liaison become key, as do formal mechanisms for setting priorities and allocating resources. Pushing electronic mail capabilities, integrated communications or data management across, up and down the organization is impossible without authority.

DP now has the opportunity to use the concepts of information resource management and office technology to clarify the issue of the authority needed to manage such a resource. DP should look to become more of a staff function and should spend much less time being concerned about owning data centers and hardware. It should focus more on getting influence instead of on budgets. The model for this is again the chief financial planning officer, who certainly does not fight to control the tab machines. Too many DP managers are competing to build an empire that largely consists of carbon paper and tape reels. The aim of DP should be to get the kind of staff influence that financial planning officers have.

In essence, information resource management is a set of architectures for data and communications. The applications are a portfolio of opportunities. Because we now have disjunctive technologies, one group sells DSS, another runs office technology and each justifies applications from its technical perspective. With information resource management, one has a corporate resource and a set of business opportunities, defined in terms of investment, competitive impact, internal efficiency and effectiveness. Then and only then can one decide which part of the technology it would be best to use. We should not make the case for DSS in terms of DSS, but in terms of a productivity opportunity or improvement in the operations of the organization and then choose whatever piece of technology makes sense.

The meaning of all this is that the planning process is key. The bottom-up, project-by-project approach of DP needs to be meshed into a process of top-down integration. This again highlights the issue of authority, because doing this needs clear directions from the top. The difficulty is in putting priorities on, for example, electronic mail for increased horizontal communications instead of on financial planning languages for DSS. This is a business issue, not a technical one.

Decisions on applications have been made by DP mostly because they were never very important. If technology becomes a key contributor to effectiveness and efficiency, there have to be mandates from the top.

Top management has to play a more direct role. Does it prefer that information technology mainly be used to leverage the cost side of the business to make it more efficient? Or would it rather see it used to focus on support aspects of business activities more relevant to the revenue side? In some industries — banking and related financial services especially — competitive advantage increasingly depends on information technology, especially on data communications. In that case, the priority is to select applications that contribute to product innovation, service and marketing positioning. This priority may also provide a stimulus for DSS: improving the productivity of people whose productivity matters — senior managers, planners and financial analysts, for example. In a manufacturing company, where margins are squeezed by bad business conditions, the business priority might be very different; there, the answer might be to hold down costs, reduce head count and improve internal efficiency.

The same technical base leads to obviously different uses in these extreme examples. The choice cannot be made on the basis of "Here is one component of information technology; what can we do with it?" In DP, technology has too often pushed applications and not vice versa. DSS, perhaps luckily, has not really had a special technology to push.

Decisions on applications have been made by DP mostly because they were never very important. If technology becomes a key contributor to effectiveness and efficiency, there have to be mandates from the top. One of the biggest challenges for DP is to educate top management to understand how to provide much more precise criteria for selecting a portfolio of applications.

This means that the main question is how to redefine the management structure for DP. This is not something that can be done unilaterally. DP needs an increase in authority, with much more focus — not on being a plant manager, but on building an information company. It will have a corporate planning arm, a technical services and marketing.

The role of the business-oriented systems analyst is clearly much more that of an industrial salesman bringing services and products to a growing range of customers and vice versa. DSS builders are first-rate industrial salesmen. They bring technology to the marketplace and the marketplace to the technology. If we solve the problem of the management structure of DP, then we have integrated office technology, DSS and DP and provided a base for creating real business value from them.

There is no technical fix to evade the issue of a management structure that will lead to that integration. A prime need for research in the MIS field is to address authority and accountability and to help relieve the

The Norwegian computer market wants to hear from you.

The Norwegian computer market is expected to grow at an annual rate of 30%. The Scandinavian countries (Norway, Sweden and Denmark) constitute the fourth largest regional market in Western Europe, and according to International Data Corporation, it is a highly developed market.

Reach your potential buyers in this important marketplace with *Computerworld/Norway*. A tabloid newspaper published twice a month, *Computerworld/Norway* reports on the most timely news concerning new products, new software applications, market trends and opportunities. Editorial coverage includes trade shows, foreign markets, education, government, major industries and the implications of computers. *Computerworld/Norway* is circulated to 7,000 DP professionals in end-user related environments.

CW International Marketing Services gives you one-stop advertising service in countries around the computer world. For more information on *Computerworld/Norway* or any of our other foreign publications, just fill out and return the coupon below.

strains on an organizational process designed 20 years ago with no expectation that information technology would really matter for the fundamental activities of the business.

Traditional DP must accept a subordinate role. It is one aspect of a meaningful management career path in a broad field. The computing resource has many facets. There will be many career trajectories. DSS is one entry level; it starts toward the marketing side. Many people will still choose to start on the manufacturing side in DP.

DP must also recognize that the DSS intrusion was necessary. When the DSS movement began to build momentum, the main opposition to the very idea of DSS came largely from DP. Only four years ago, if one talked about DSS at a conference of DP managers, the response was disdain or abuse. It is important now to stop the fight. Nothing will be gained in the DSS field by trying anymore to highlight the separation from DP, but much can be gained by trying to blur it.

DSS managers may be the next leaders of DP. Too many old-line DP professionals are temperamentally and intellectually unlikely to accommodate to what is happening around them.

To sum up the contribution of DP to DSS is to provide the necessary infrastructure for leveraging DSS from a small-scale concept to a large-scale one. DP provides the strategic technical base and, in the end, it can provide the organizational base. DSS will have organizational influence via executive support systems, but the organizational strength needed to evolve DSS will rest on information resource management's being embodied in high accountability and high authority.

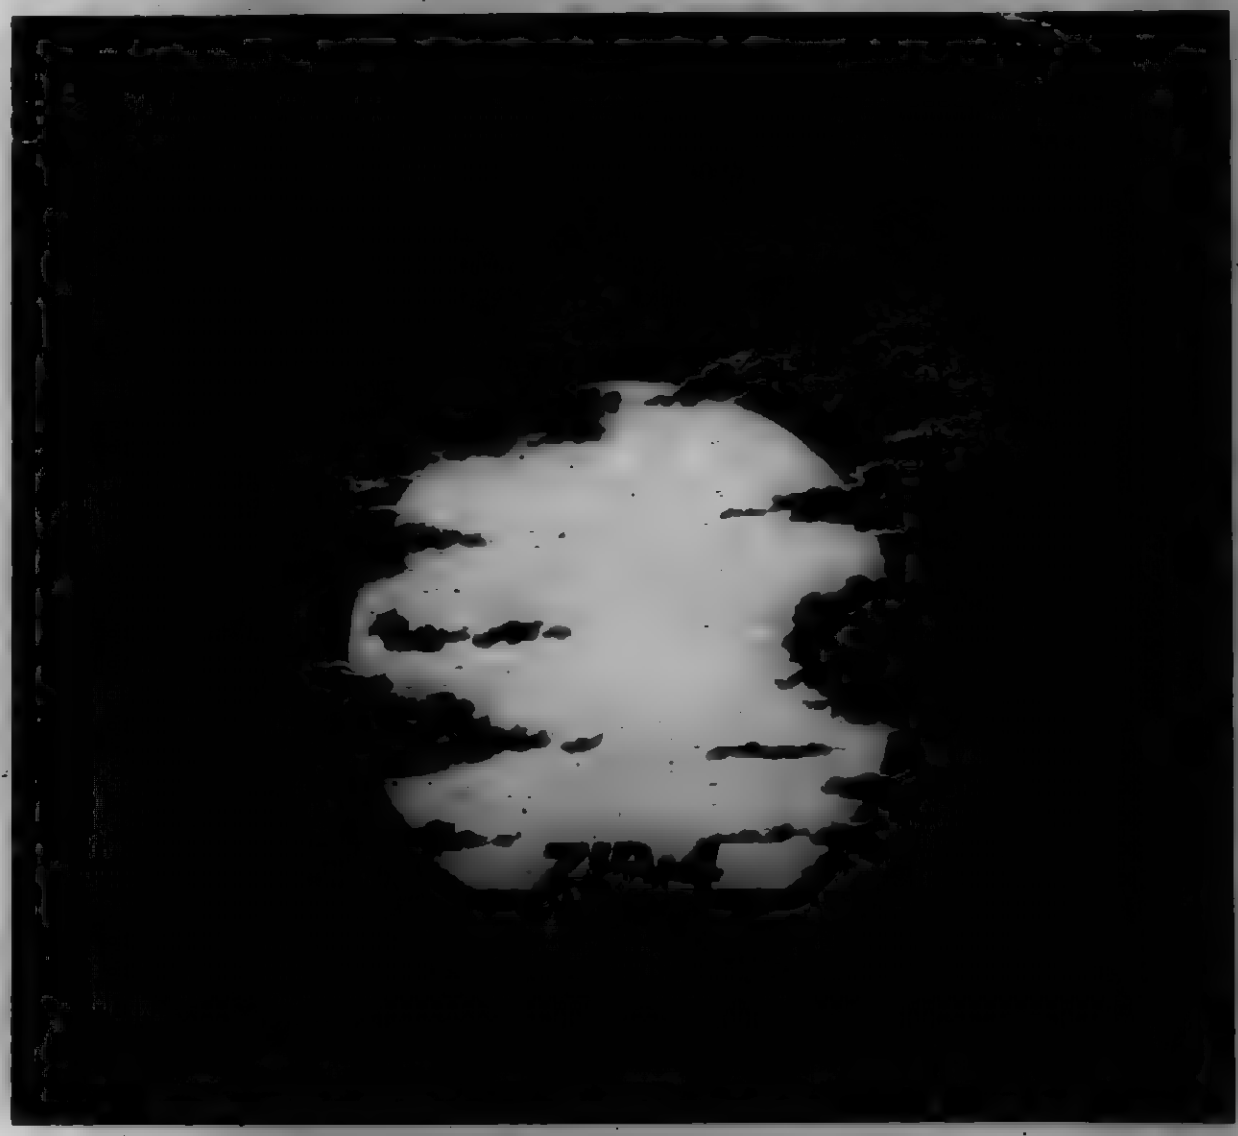
It may be that many DSS managers will be the next leaders of DP. It has become fairly obvious that too many old-line DP professionals are temperamentally and intellectually unlikely to accommodate to what is happening around them. The DSS builder who has worked with complex systems that go beyond dataless models is qualified on both counts to help move DP forward.

DSS people usually understand the business better than DP. One cannot be an isolated DSS designer 20 miles away from the client and take some functional specifications and come back in six months. It is unfortunate that in the 1960s many companies decided one of the safest places to put their money was in buildings. One of the buildings they needed was a new data center. As a result, large numbers of DP organizations have never seen their users because they are 25 traffic jams and 15 miles away. DSS is more embedded in the ongoing activities of the organization. That is why every DP manager really would benefit from an immediate infusion of such people who simply know how the organization works.

DSS people also know the new development technologies. The tools DP is relying on to solve the software productivity bottleneck are the ones DSS grew up with. Any scenario for successful exploitation of information technology over the next five years or more assumes end-user development. We will push applications further into the organizational culture and will rely on highly flexible systems that evolve over time. DSS builders will be key in helping reeducate many programmers and analysts about the craft of information systems development.

The tools DP grew up with — clumsy software languages like Fortran and Cobol — were inadequate in their inception. DP professionals have relied on the notion that systems will always be built from the center out to the users by a technical manufacturing arm now out of date. There are many reasons for infusing the DSS philosophy, even at the bottom level of the organization, to make it easier for DP to fulfill its traditional role. OA

Keen is chairman of Micro Mainframe, Inc. in Cambridge, Mass. He is the conference chairman of the conference, "Microcomputers: High Performance/High Payoff," sponsored by Micro Mainframe and scheduled for March 1 in New York. He is also speaking at the conference, "Software Tools for Distributed Decision Support Systems," Feb. 27-28 in Boston, sponsored by Suffolk University.



ADDRESSING TOMORROW TODAY.

Imagine.

A remarkable new ZIP Code system for business mailers. So precise it can actually pinpoint specific streets, specific buildings. Even specific building floors.

That's the ZIP + 4 code.

Now imagine a computerized sorting system so advanced that it automatically reads the last line of the address off your envelope. Reducing sorting time while increasing sorting efficiency.

That's the Optical Character Reader (OCR).

EFFICIENCY.

Perhaps most amazing is the fact that both the ZIP + 4 program and our OCR's are already in place. Ready to bring technological efficiency to the mountainous task of moving 100 billion pieces of business mail per year.

But to deliver the future, we need your help.

Begin by being sure that the entire address on all your business mail is totally visible, legible and located properly. Your local post office can give you all the information you need.

ECONOMY.

Use of ZIP + 4 codes is voluntary. But by adopting them, you'll be rewarded in the form of more stable postal rates. In fact, when you meet the eligibility requirements, you can start saving postage right away.

If you're a First-Class mailer of 500 pieces or more who already presorts, you can save a half-cent per piece when you use ZIP + 4 codes. And that's on top of the three-cent discount for presorting.

If you're a First-Class mailer who doesn't presort but mails 250 pieces at a time, you can save nine-tenths of a cent per letter.

And no matter how many, or how few, pieces you mail, using ZIP + 4 codes can give you a cleaner, more efficient mailing list. Plus more consistent delivery.

COOPERATION.

Let us show you how you can put more zip in your mail service. Contact your local Postmaster or Customer Service Representative. And send yourself into the future.

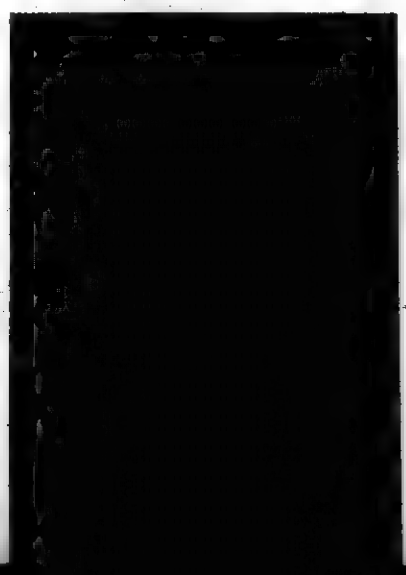
JOHN NAISBITT LOOKS AT THE WORLD OF OA

John Naisbitt gained international recognition with his megahit, *Megatrends: Ten New Directions Transforming Our Lives*, which has been at or near the top of the bestseller list for over a year. Naisbitt's staff did more than 12 years of content analysis on 6,000 local newspapers, and the book is a result of that research. This thorough examination of the major news trends around the country led to Naisbitt's identification of "critical restructurings" of our lives. Among his megatrends:

- Although we continue to think we live in an industrial society, we have in fact changed to an economy based on the creation



and distribution of information.

• We are moving in the dual directions of high tech/high touch, matching each new technology with a compensatory human response.

• We are giving up our dependence on hierarchical structures in favor of informal networks. This will be especially important to the business community.

Naisbitt, who also publishes the quarterly *Trend Report*, has served as senior vice-president of the research firm of Yankelovich, Skelly and White and as chairman of the board of the Center for Policy Process in Washington, D.C. He was a special assistant to President Lyndon Johnson and served as special assistant when John W. Gardner was secretary of health, education and welfare.

Glenn Rifkin, *Computerworld OA*'s senior writer, met with Naisbitt in his Washington office to discuss the impact these megatrends will have on office automation.

In *Megatrends* you said, "We're living in a time of parentheses, a time in between." How does the office of the future relate to that?

We're on the edge of rethinking the social institution we call the

corporation. We're going to rethink social contracts, arrangements between people, responsibilities and so on. And we're just beginning that process. The rethinking will influence the technology and vice versa.

Do you see the computer as a liberating rather than a constricting or monitoring device?

On balance, technology is going to liberate rather than harness the worker. What's happened for generations is that in companies with 1,000 workers, people have been treated pretty much the same because that's how you keep track of them. With the computer to keep track, you can have a unique arrangement with each of 200 or 200,000 employees. We have to see the computer as a tool that manages complexity.

"The computer can help us by threading through and selecting what we need for one task or another. The task of the age is to convert that incredible amount of data we're drowning in into knowledge, into intelligence."

Assuming that it will harness the worker is to expect the new technology to do things we did in the old structure of the company. The new structure is going to be very different from that.

If I had to describe that new structure today — and I'm a bit hesitant because it's just unfolding — I'd say we're going to be very decentralized in responsibilities and the way those responsibilities are executed. Anyone who thinks he's going to be competitive using the old structure and the old ways of monitoring employees is mistaken. What's liberating and where you get incredible productivity is when you give people more control over their own lives.

Can that work?

One of the best-kept secrets in America is that people are really dying to make a commitment, but they're not given the space and the freedom to make it. In Japan, one thing that really impressed me was that the employees I dealt with everywhere acted as if they had taken personal responsibility for the success of the company. When you have a company full of people who take personal responsibility for it, you've got a dynamite company.

You said in Megatrends that "we are drowning in information, but starved for knowledge and intelligence." Could you explain that statement?

The information din is incredibly high. It's gone from supply, which we have an overabundance of, to selection. That's how the computer can help us, by threading through and selecting what we need for one task or another. The task of the age is to convert that incredible amount of data we're drowning in into knowledge, into intelligence.

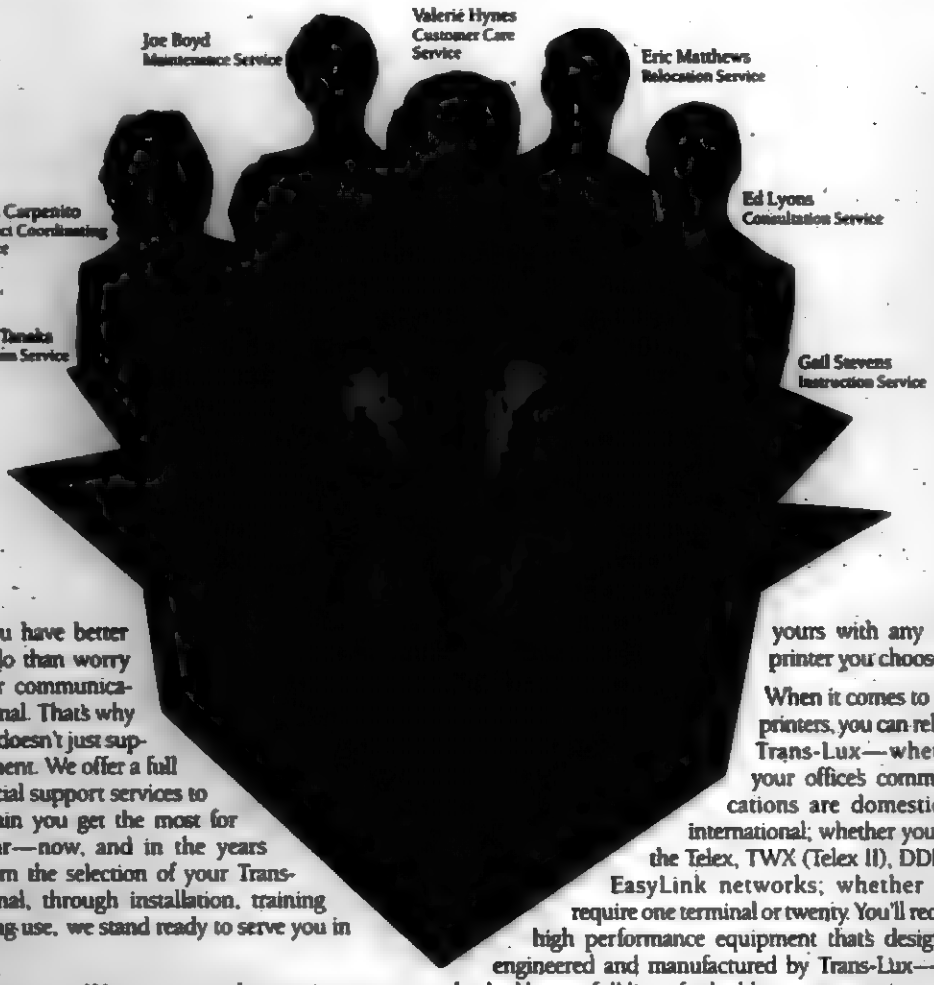
You discuss the information float. With the new technologies, can the information float be conquered or controlled?

What we're doing is foreshortening the float. We're sending information around at the speed of light. If I send a letter to you, it takes four days to get there and a week to answer. Then it takes a few days to get your answer back to me. In a couple of weeks, we've negotiated some transaction.

If I send it to you electronically and in that context you respond within a couple of hours and get your answer back to me instantaneously, we have negotiated the same transaction in a couple of hours rather than a couple of weeks. That's what collapsing the information float is all about. But it must be done with strategic vision. Strategic planning is worthless unless you have strategic vision.

Do you have some sense that what is being done — this rush to hook up the office electronically — is being done without strategic vision?

LOOK AT HOW MUCH MORE YOU GET WHEN THE NAME ON THE BOX IS TRANS-LUX.



Face it. You have better things to do than worry about your communications terminal. That's why Trans-Lux doesn't just supply equipment. We offer a full line of special support services to make certain you get the most for your dollar—now, and in the years ahead. From the selection of your Trans-Lux terminal, through installation, training and ongoing use, we stand ready to serve you in every way.

We pay as much attention to you *after* you lease or buy a Trans-Lux teleprinter as we do before. All of the valuable services shown above are yours with any teleprinter you choose.

When it comes to teleprinters, you can rely on Trans-Lux—whether your offices communications are domestic or international; whether you use the Telex, TWX (Telex II), DDD or EasyLink networks; whether you require one terminal or twenty. You'll receive high performance equipment that's designed, engineered and manufactured by Trans-Lux—and backed by our full line of valuable support services.

FREE CONSULTATION

Without charge or obligation, we'll evaluate your needs to make sure you're getting the most out of your current teleprinter. Call TOLL-FREE now:

In many regards it's being done for its own sake — because it's the thing to do. In some cases, we're accelerating the rate at which we send dumb messages ricocheting around. We're getting more and more efficient at sending dumb messages and dumb ideas among installations or institutions.

We've got to be more thoughtful about what it is we're accelerating. That's why I say all this strategic planning or accelerated messaging is worthless unless we have a good sense of what it's contributing to and where it's taking us.

You wrote that we're now in the second stage of innovation — improving on old technologies — and that the third stage is new uses and discoveries for the technologies. Wouldn't the office seem to fit better in the third stage?

We're very much in the second stage of the office. We're sort of sticking the technology onto the office, but notice that we're not doing anything any differently. Essentially, an office is a telephone, an in-basket, an out-basket and a waste basket. We're just doing those things more efficiently.

In the third stage are the things that grow out of the invention itself — things suggested by the computer itself. And we're not even on the edge of that yet. We're still very much in the second stage and will be for a long, long time.

Do you have some view of what the office of the future will evolve to be?

The office of the future will be very decentralized. Part of that process is a change in what a manager or leader does — a move from order-giver to facilitator. I think the really successful manager of the '80s and '90s will be the manager who creates a really nourishing environment for personal growth.

In an environment where you're experiencing personal growth, it might not be conducive to have a bunch of little cubbyholes. I think it will be a much more open, decentralized place. Those considerations, in the short term, are probably more important than making everything electronic.

Making everything electronic is not the important thing — it just makes us more efficient at what we're doing. What really is important is to notice what we're doing and to decide whether we're losing ground by becoming more efficient.

It's like productivity. Had Chrysler, a few years ago, used the same workers to produce twice the number of big dinosaur cars, would that have been productivity growth? The meaning of these words really turns on what we're doing. What is the end we are working toward when we attempt all this efficiency?

Do you see any answer to that?

Yes. An institution has to develop a shared strategic vision of where it is going. The Koran says, "If you don't know where you are going, any path will take you there." Most companies don't know where they're going, especially in this time of very basic change.

They do things because they seem like a good idea or are momentum-driven or whatever. But to what end? There are a lot of people who don't know what business they're in. And whatever business they were in, they're not in it anymore and they often don't even know it.

There are certainly examples of that among the computer vendors.

That's right. The U.S. is not in a recovery, and we have not been in a recession. What we're in is much more profound than that. We're changing economies. We haven't changed economies in 150 years.

Now we're going through a long shakeout period. It's been going on for about three decades now, with companies shrinking, companies merging and companies going out of business. The important thing in the new economy is that during the long shakeout period, thousands of companies will go under — thousands of computer companies and thousands of software companies. That's the good news, because we're creating a whole new economy just the way we did when we left the agricultural economy and moved into the industrial economy. And we have a similar incredible entrepreneurial explosion.

The character and the nature of this new electronics information economy is such that we will end up with thousands of companies, but to get there, we will go through thousands and thousands of other companies.

Do you think the electronic office environment will be affected by the concept of high tech/high touch that you mention in the book?

With more and more technology, we're softening the environment to create a balance, and that's beginning to happen in our offices. Our offices are going to have a softer, more compensatory kind of look. At the same time, those environments will have to be more and more conducive to personal growth.

Is there much that can be done in an office setting that is like a rabbit warren?

No, and that's why we have to change that image. Those organizations that change that first, understand that first and deal with that first will be way ahead of

Did your computer pull the old "disappearing data" trick again?

Humidity or "dirty" electrical power can cause all kinds of costly, annoying disruptions to your work flow and productivity. Liebert offers low cost solutions to small system environmental and power problems. Stop wasting work and "missing messages." Call 614/888-0246.
We help make your computer investment pay off!

Liebert
World leader in computer support systems.

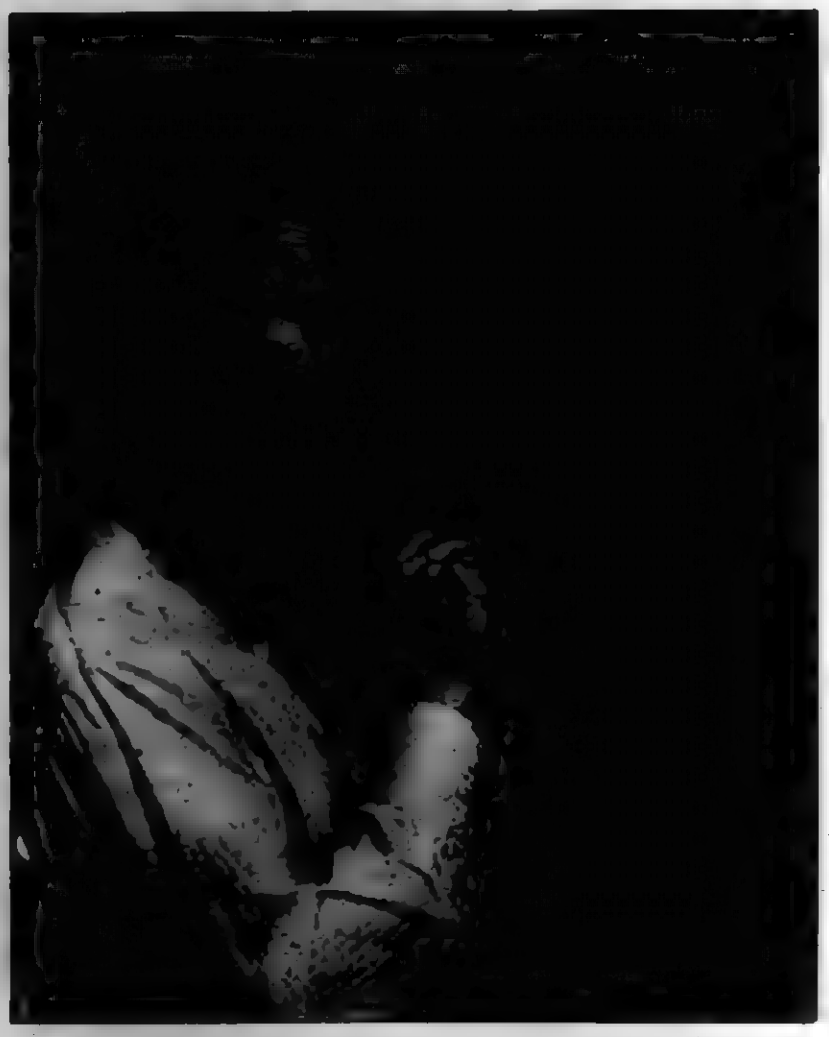
614/888-0246 Telex: 246520 LIEBERT WOUH



competitors that don't. Because those changes will contribute to people's willingness to make a commitment instead of just putting in their time.

You also said that in an information economy, rigid hierarchical structures slow down the information flow just when greater speed and flexibility are needed. Do you see OA as a means to change that?

The computer is going to smash the pyramid. Hundreds of years ago, we created this hierarchical managerial pyramid. It served us extremely well, but it has also been incredibly antiproductive. We needed it to keep track of people and things they did. But that was mostly just handing information up and handing it back down.

When we reconstitute our organizations along much more horizontal lines — smaller and smaller units, more entrepreneurial units and more participatory units — what occurs is an incredible whittling away of middle management. You really squash the pyramid.

You wrote, "Teleconferencing is so rational, it will never succeed." Would you comment on that?

People say they're going to do teleconferencing to save all this money on traveling and expenses. Teleconferencing works only when it's not important. It works only for one-way communication; we're moving to a period where one-way, top-down communication doesn't work at all. Because if it's of any importance at all, then people have to get together. There's no end to meetings; people really have a need to get together.

That's why I said the electronic cottage is not going to go very far. Very few of us are willing to stay at home and tap out messages. Most people want to go to the office. Most people want to be with people. And the more technology you put into a society, the more people want to be with people.

Alvin Toffler seems to think that, although not everyone will work at home, it is more of a possibility than you give it credit for.

I think it's great for emergencies . . . like Mondays. It's terrific for some things. It's another option. But it won't be for everyone.

We'll increasingly have satellite offices. You will be able to go to the office, but it will be in the same suburb where you live. That satellite can be connected to all the other offices because we have the technology to do that.

The office worker has expressed concern over issues like job displacement and job deskilling, as well as health hazards. What trends do you see developing regarding these allegations?

I don't know very much about it. Some studies say the use of computer terminals is not injurious to health. I myself don't need any studies to tell me it can be incredibly boring. But it's important to remember that the computer terminals we have today are not the computer terminals we will have tomorrow. In people's minds, when they think about 10 years from now, the image continues to be the CRT screen and the keyboard, as if that is the state of the art and it will never change.

That is absurd. It is going to be much more like Ms. Pac Man. It's so primitive now. We're about at the stage where we were when we had steam-driven automobiles. I think those computer stations will be quite different from those we now have.

You mentioned quality circles, which have flourished in Japan. Are they an option for office workers in this country?

It's a very viable option in this country, but it's also a manifestation of something larger. It's a manifestation of people who are more involved in their work and more responsible for what they are doing. It has to do with the idea of participatory democracy, in which people whose lives are affected by a decision are part of the process of arriving at that decision.

It used to be that decisions would be made by someone on the 26th floor who would send the word down and everyone would salute it. It just doesn't work anymore. People are saying, "If my life is involved with something, I've got to be part of the process of arriving at those judgments." That's how to run a company, too.

Quality circles are just a manifestation of that idea of participatory democracy; the people most involved in what's being done are the ones who decide how to do it best. It's very straightforward.

Can an OA system expedite that participation or will it hinder it?

Let's stop on the term "OA system." Often a company will spend $40 million on a new computerized system, but not a penny on the "high-touch" or human side. The installations that work really well are those in which the people who work on the system — who run the system — are part of the process of deciding which system to bring in. Not only are their lives affected, but also they know more about what that system has to do than anyone else. It just makes wonderfully good sense to get people involved.

You pointed out that there possibly won't be enough managers with enough high-tech knowledge to install the systems along with the kind of worker participation you spoke of.

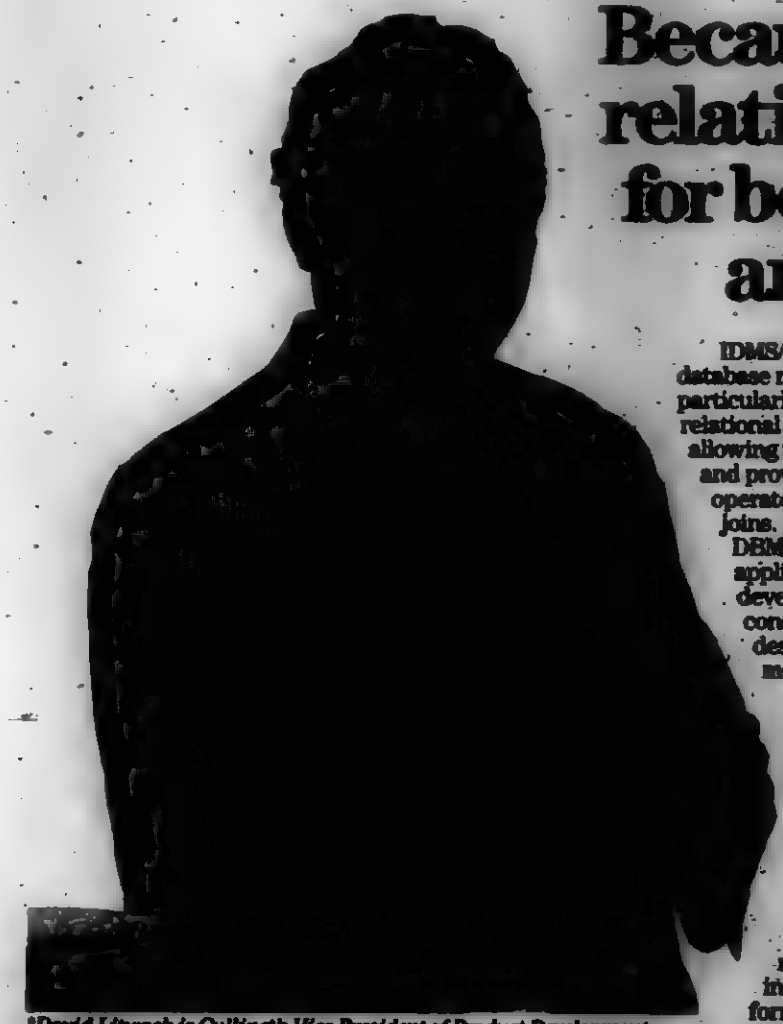
It's the opposite of that. I said that the new manager is not someone who has all the answers. It's someone who knows how to create a process to get the answers. There's no stigma attached to not having the answer. The necessary quality is a willingness to trust people and to utilize human resources.

The real competitive edge, as we move into this new economy, will be our human resources. Those of us who get the most out of our human resources are going to have the competitive edge. This is in a different sense from the old productivity ethic, where you get the people to turn out one more widget.

The goal here is getting more and more creativity and commitment out of people. OA

"IDMS/R represents a major advance in database technology."

Dave Litwack*



Because IDMS/R is the first relational DBMS designed for both the DP professional and the end user.

IDMS/R is not only a relational database management system, but a particularly powerful one. IDMS was made relational by removing all pointers and allowing the user to define data as tables and providing the traditional relational operators such as selects, projects and joins. The major benefit of a relational DBMS is the capacity to develop applications faster because the developer does not have to be concerned with the database design. IDMS/R provides this and much more.

For example, the Automatic System Facility (ASF) of IDMS/R is a major advance over fourth generation languages. The ASF is so comprehensive and easy to use that all a user need do, to develop an application, is define a relational record. The Automatic System Facility dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. So, the developer can witness the application being produced, literally, in seconds. This capability makes IDMS/R the perfect system for the end user.

Data processing professionals can use the ASF to help develop production applications. The ASF can be used to build a prototype that can be enhanced, using Cullinet's fourth generation language, ADS/OnLine, into a complex production application. But, when they build a complex high volume application using IDMS/R, DP professionals require outstanding performance. Typically, 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R, they can simply change these relationships to predefined joins and benefit from a dramatic boost in performance. We call it Relational Fastpath. Relational Fastpath makes IDMS/R a unique DBMS and a perfect system for DP professional's system development needs.

In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, full integration with personal computers and is also integrated with Cullinet's complete line of financial and manufacturing applications.

In summary, IDMS/R was designed to satisfy the requirements of those who want to develop applications faster and those who have the responsibility of processing them.

For further information, attend a Cullinet Seminar. Mail the attached coupon or call the Cullinet Seminar Center at 1-800-225-9930 (in Massachusetts, 617-329-7700).

David Litwack is Cullinet's Vice President of Product Development. Mr. Litwack has contributed significantly to the many technical advances Cullinet has achieved in database software products, including IDMS/R. Mr. Litwack joined Cullinet in 1976. He is a Cum Laude graduate of Brandeis University and holds a Masters in Computer Science from Boston University.

IBM FLEXES ITS OFFICE MUSCLE

By Glenn Rifkin

Despite its massive presence in the office, IBM has only recently begun to get its act together in office automation. Even with its Personal Computers, Selectrics, Displaywriters, 3270 terminals and so on, the Big Blue machine has yet to offer a cohesive OA strategy and OA system to its customers.

Whatever the reasons have been for this apparent faux pas, as 1984 unfolds, it will become increasingly apparent that IBM intends to correct the omission. And as the computing universe well knows, when IBM decides to attack, it's time to head for the shelters.

In late 1983, IBM went on the offensive and made it known that it was pulling out all stops to establish control of this explosive market. At a New York OA conference in November, IBM's J.T. Boyle, director of quality and general development in the Communications Products Division, summarized IBM's strategy in the office: "We will provide optimized solutions for the diverse environments and — with architectures and network functions — will integrate those solutions into a single system for all users."

In its office arsenal, IBM has a varied and growing array of weapons. Though industry analysts offer praise for some products and scorn for others, all agree IBM is a formidable figure in the OA market — if for no other reason than it is IBM. Boyle pointed out that by 1989, expenditures on office systems are expected to be $70 billion and IBM will "actively pursue that business." As one consultant put it, "IBM intends to dominate any market it enters."

Although it undoubtedly will get what it wants in the long run, IBM must face a stiff challenge in the office arena. Aside from such staunch competitors as Wang Laboratories, Inc., Data General Corp., Digital Equipment Corp. and Hewlett-Packard Co., IBM's sternest test will come from the recently unleashed AT&T, which has made clear its intent to garner a major share of the office market.

Analysts nevertheless tend to agree that AT&T's challenge is still on the horizon. For IBM, the current mandate is to answer the many internal questions it faces in the office. For example: Does Big Blue have a workable OA strategy? If so, can that strategy incorporate its varied and often incompatible product line into a useful and reasonably priced integrated office system? Are end users now sophisticated enough to look beyond IBM's reputation and ask for more than IBM can currently provide? What will IBM do to solve the communications needs for the office?

Even without an integrated office strategy or a single system offering, IBM had an enviable year in the office in 1983. The phenomenal sales of its PC continued (they owned an estimated 28% of the market) and among the PC, the Displaywriter and earlier word processors, IBM had an installed base of more than half a million desktop workstations, according to International Data Corp., (IDC) a Framingham, Mass.,consulting firm.

Sales of stand-alone products, however impressive, don't answer the OA questions, however. One of IBM's first responses to these questions was the creation of the Entry Systems Division within the Information Systems Group at IBM. The new division, established in August, has responsibility for all low-cost high-volume office workstations.

According to Bob King, director of IBM's Information Systems Group, "It just makes sense to put as much as we can in a common management and common development system." King added that IBM has also expanded its marketing and distribution operations to utilize new and varied channels such as mail order, retail stores, and value-added resellers and dealers.

With the new division in place, IBM began its attempt at a smooth integration of its own diverse product line. Last fall, the company delivered the first in a salvo of major announcements which it believed fulfilled its June 1980 statement of direction of providing full interchange and access capability for office products.

The announcements included the following:

- Systems Network Architecture (SNA)'s newest feature: distribution services. Snads reportedly contains the mechanics for transferring information from one system to another.
- Enhancements to IBM's Distributed Office Support System (Disoss). The new release, when coupled with Snads, reportedly will provide multihost document distribution.
- Enhancements to the 8100/Distributed Office Support Facility (Dosf), to the 5520 Administrative System programming, and to IBM's Professional Office System (Profs). Among the enhancements is the ability of the 8100/Dosf to exchange revisable documents with Displaywriter and 5520 systems. The intent to provide document exchange between Profs and Disoss was also announced.
- Disoss Professional Support Services (Disoss PS), which reportedly provides professional support applications to 3270 terminal users on MVS and VSE systems.

In addition, IBM stepped up support of its Document Interchange Architecture and Document Content Architecture (DIA-DCA), which reportedly will permit the transfer of documents between dissimilar (and even non-IBM) devices. King acknowledged that IBM is extremely interested in standardizing DIA-DCA in the marketplace.

The announcements flowed on. The unveiling of the XT/370 PC and the 3270 PC, along with clear indications that both a local-area network and a Unix-like product were on the way, continued to rock the office world. As 1983 drew to a close, shaken competitors and over-zealous analysts wondered whether there would be any office market left when the blue dust finally settled.

Despite the barrage, however, not everyone was convinced that IBM's dominance of the office market was a fait accompli. As all vendors know

(and users are quickly learning), the bridge between announcement and delivery is a wide one: even IBM can run into trouble traversing it. Although consultants agree the proposed solutions look good on paper, they are adopting a "wait and see" attitude for many of the announcements.

In fact, according to IDC analyst Tom Elliott, IBM's multiple workstation offerings may be more of a burden than a blessing. "As users discover they have real business requirements for interdesk electronic communications, they also discover there is still a long way to go before the diverse range of IBM devices is capable of genuinely unrestricted communications," Elliott stated. "Furthermore, user interfaces differ from machine to machine, so a person cannot necessarily sit down at any workstation and use familiar commands.

"IBM has gone too far along too many different paths to offer a uniform and relatively consistent set of office products," he added.

Christine Hughes, vice-president of the office information systems program for the Gartner Group in Norwalk, Conn., said although the enhancement to Disoss (Version 3.2) might help solve the distribution capabilities, it won't be available until October and will be quite costly.

Even more critical is the analysis offered by Tom Billadeau, president of the Office System Consulting Group, Inc. in Cambridge, Mass. He said the confusion over IBM's office strategy is because "they simply don't have one." Outside of the PC, Billadeau stated, IBM's office products are unimpressive: "If you tie together mediocre products, all you get is a mediocre system."

Such systems as the 8100/Doef or the 5520 are cumbersome and confusing and, according to Billadeau, the reason Profs is not more successful is that people aren't willing to buy a mainframe with the VM operating system just to run Profs. Billadeau said he believes the Displaywriter is outmoded and overpriced and IBM may well stop manufacturing the product in the first quarter of this year. "They may have enough inventory to keep selling it for two years, but I suspect we will see a new Displaywriter based on the PC chip." He noted that when price cuts on a product are announced — as they recently were for the Displaywriter — it is often a signal that IBM intends to phase out that product.

Calling the 5520, IBM's Administrative System, "a real dog," Billadeau offered the opinion that the system was not ergonomically designed and had very poor word processing. The 8100, he added, has not sold well for OA purposes and its strength is in computer-assisted mailing tasks. "It was not really meant to be a desktop solution."

IBM's anticipated local-area network, reportedly a token-passing baseband product, was scheduled for announcement in early 1984, but according to analyst Hughes, it has been delayed for six to nine months. Hughes said that IBM is rumored to be working with both Sytek, Inc. and Ungermann-Bass, Inc. to develop an Ethernet-like local-area network as an interim solution.

Although IBM traditionally remains mum on its plans, King acknowledged that some changes are in the wind. While calling the Displaywriter "a damn good product," he admitted a new version was in the works. He also said IBM is well aware of the PC's potential to undercut sales of the Displaywriter. "I'm not sure a general-purpose word processing package can ever replace a package tailored for a specific task. But nothing prohibits people from putting a super good printer and Wordstar on a PC and using that to displace the Displaywriter." The 8100 will continue "to play a role because the notion of distributed data processing is still very much with us." King said and added that IBM is very interested in improving its hardware and communications in every area. "The technology moves so fast that whether or not we've got our hands full, we've got to move on or we'll get hopelessly outdated."

King admitted IBM has lagged behind in offering its customers an integrated office solution. He would only speculate as to the cause of that dilemma, stating that "it's been very, very difficult to detect any huge, significant trends that leaped out and said 'that's what we'll base our plans on.'"

The introduction and success of the PC helped clarify the situation to IBM because it made possible tremendous price performance improvement. King denied that the shackles of the 13-year federal antitrust suit played a part in the problem. "I think we were just trying to figure out what was going on like many other people."

Because IBM's current offerings are so diverse and new products are still in development, the company's software offerings and open architectures are crucial to tying the workstations together. Though Disoss offers a solution, it is not simple or cheap to implement. It is more likely, consultants agreed, that DIA-DCA will offer a preferable, more elegant solution to the problem.

"The strategic importance of DCA and DIA cannot be overrated," IDC's Elliott stated. "Regardless of whether or not IBM gets into the local-area network market in a major way or develops and markets a voice/data PBX, the transmission medium is secondary to a set of architectural specifications that will allow dissimilar devices to interchange editable documents.

"By publishing its DCA and DIA specifications as it has done with SNA, IBM is once again opening up the IBM world — but on IBM's terms. This is a recognition that even IBM cannot be all things to all offices, and in order to preserve its market leadership it must make its information networks available to suppliers of specialized products," Elliott said.

"By publishing its DCA and DIA specifications as it has done with SNA, IBM is once again opening up the IBM world — but on IBM's terms. This is a recognition that even IBM cannot be all things to all offices."

Hughes pointed out that DIA-DCA has the potential to become the de facto standard in the office, giving IBM a chance to overcome the challenge of a Wang or DEC, both of whom integrated their office products as they were developed.

For IBM, the Scanmaster I image processor was the first product to be developed with the DIA-DCA protocols in mind. It was designed, Elliott pointed out, with multiple data types in mind and for communications within a Disoss network containing different terminal types. Elliott regards it as clear evidence that IBM is planning its newer products in that direction.

IBM also sparked wide interest when it purchased significant blocks of both Rolm Corp. and Intel, Inc., an indication that it will look outside its own environs for needed office technologies. King stated that IBM will leave the building of a PBX to others. Consultants view that as proof positive that Rolm will produce an IBM-endorsed PBX.

IBM has also been forced to look outside for another essential office offering: the Unix operating system. Ironically, Unix was developed by its fiercest rival, AT&T. King acknowledged Unix as a "valid requirement" for its OA push, and IBM last month announced its own version of Unix for the IBM PC. The system, called Personal Computer Interactive Executive (PC/IX), was developed for IBM by Interactive Systems Corp. and will run on both the PC and the PC XT. It will be available in April.

Also available in early 1984 will be the enhanced IBM PCs: the 3270 PC and the XT/370, both of which sent shock waves through the industry when announced. Addressing the micro-to-mainframe link question, both the XT/370 and the 3270 PC have been designated as key office products.

The 3270 with its windowing capabilities offers vast potential for users doing multiple-task-type work. According to Boyle, the combination of document distribution, library services and professional applications found in both Disoss and Profs, together with the PC and 3270 applications give IBM "an offering I believe is unmatched in our industry."

Ironically, though analysts are high on the XT/370's potential as an OA offering, King is not convinced the XT/370 is crucial as an office tool. "The XT/370 will be useful to VM users, but I don't know how many will download Cobol H and run a compiler at the local level. There is a class of users that will find it very useful, but I'm not sure they are general-purpose office employees."

"I really like the XT/370," Billadeau said, "but from an OA perspective, there is little to access from the host level that would be useful for OA applications. It's more of a development tool."

IBM will not designate any single product as its most significant OA offering. "I don't think there is one. For every guy who says the XT/370 is the best thing he ever saw, there is a 3270 advocate who says 'you're nuts.' I don't think the office is a monolithic thing," King said.

As IBM gears up this year, the industry will soon learn whether it will become the monolithic vendor in OA. IBM has traditionally sold to DP managers, and a lot of MIS people "owe their careers to IBM," Billadeau said. That, however, doesn't hold true in the office, where IBM created very few careers, he added.

"You don't hear commitments to IBM in the office as you do in other areas," Billadeau explained. "When you hear about those $40 million OA contracts with E.F. Hutton or the U.S. Forestry Service, you hear about Data General or Wang or Digital. For a systems solution, people aren't looking to IBM."

At IBM, the perception is of very heavy competition from domestic and Japanese vendors. Though acknowledging AT&T as a formidable opponent, IBM denies any specific plan of action to face the communications giant. King said IBM will continue to follow its current course of introducing new products and open architectures.

"I don't know of one of our products that doesn't have heavy competition from one place or another. We are aligning ourselves to be the low-cost producer of information systems and to be competitive, effective and responsive. We're doing it because we perceive it is and will continue to be very, very competitive out there," King stated. OA

Rifkin is Computerworld OA's senior writer.

Supermini Moves Into the Office

By Charles W. Newton

Superminicomputers are increasingly being used for office automation applications. This is especially true when large numbers of terminals or workstations are required, either centrally or in dispersed locations, whether working individually or in clusters.

An informal telephone survey of data processing and management information systems (MIS) executives from 16 U.S. superminicomputer sites illustrates this trend. Eight of these sites reported supermini-based OA applications either in use or on the drawing board.

The vice-president of information systems at one large Wang Laboratories, Inc. VS installation indicated that the organization's supermini is being put to work in two main office-related functions: the preparation of correspondence and the development of an evaluation and planning system. At Dunkin' Donuts, another Wang VS site, R. Thomas Burger, vice-president of information services, indicated extensive use of that system for word processing, including point-to-point document trans-

mission. A federal government agency MIS officer said his agency used its Harris Corp. H-500 supermini as "... an MIS tool for data base management and electronic mail."

The MIS director of one of Prime Computer, Inc.'s largest multisystem installations cited text preparation as a primary application. At another Prime site, Suffolk University, Paul Ladd, director of MIS, said the university's Prime supermini is used for WP and electronic mail applications. Suffolk also provides financial planning applications and is discussing plans for developing an office-oriented spreadsheet graphics capability.

In yet another example, the DP director at a large consulting services organization in the Northeast said its organization used its Digital Equipment Corp. VAX 11/780 in WP and in office-oriented customer support applications.

Seven of the eight organizations that indicated use of superminis for OA applications provided direct support to end users via on-line terminals.

The 32-bit processor segment of the overall OA systems equipment market will continue to grow in terms of total dollar volume. In 1982, U.S. manufacturers shipped an estimated 7,150 32-bit superminicomputers above board level. These units represent a total installed systems value of about $700 million.

Approximately $200 million of that amount has been applied directly to the procurement of superminicomputers for use in commercial office environments. Although these systems are not all performing what we have come to call OA functions, they are nevertheless widely utilized as multifunctional processors. As a result, OA functions are indeed being transferred to these systems (see Figure 1).

In the last three years, the growth rate of superminicomputer shipments has outpaced rates for several other segments of the computer industry. Figure 2 lists the total information processing revenue growth for all superminicomputer manufacturers.

The trend for superminicomputers to move into the office appears warranted for the large office environment because of two architectural design capabilities. First, the strong communications capabilities of these machines allow extensive workstation support. Second, the very fast internal bus structures offers support for graphics — a need in high-tech segments as well as in the office.

Other conditions that point up the supermini's potential in the office environment include favorable price/performance characteristics; increasingly powerful systems are available for lower prices. In addition, the large array of program languages and applications software available to end-user departments means that commercial users are less self-reliant than their high-tech counterparts; as a result, applications software availability is vital.

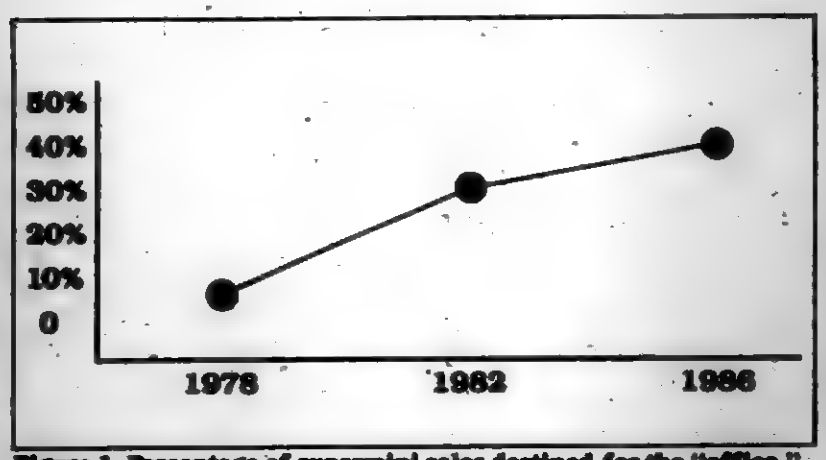

Figure 1. Percentage of supermini sales destined for the "office."

Superminis are typically designed for multiple concurrent users performing multiple activities and doing so interactively or on-line. Superminis, like their smaller mini counterparts, can successfully be installed outside the computer-room environment.

Completely incompatible superminis will be relegated to a specialized dedicated applications environment where the system is independent from the organization's other internal computing resources. Almost every superminicomputer supplier even thinking about participating in the commercial and office markets has already developed at least one IBM-compatible protocol as well as an X.25 interface.

The availability of cost-effective superminicomputers has en-

Believe it or not, you've already prepared your office for OMNI even before we invented it.

abled suppliers to appeal to a broad new market comprised of users with quite sophisticated computer requirements, but less than mainframe budgets. Price is one area in which the commercial market-oriented supermini suppliers have a comparative advantage over the new and relatively expensive IBM 4361 and IBM 4381.

From 1980 to 1983, the supermini became the vehicle by which a significant amount of DDP activity was accomplished. The use of superminis is becoming prevalent in dedicated, geographically dispersed applications in which data communications — local and remote — is a key element. In fact, it may well be that the superminicomputer, and not the microcomputer, will be responsible for the erosion of some hitherto untouchable remote computing services industry processing revenues.

The impact of the recently announced IBM 4361 and 4381 processors will place additional downward pressure on superminicomputer suppliers, at least on those with an eye to gaining a share of the commercial and office marketplace.

Although not directly compatible with VAX and other superminis, IBM's 4361 and 4381 are indeed competitive with superminis in several characteristics, including memory size, instructional set size, processing speed and workstation support. If we include the 4361 and the 4381 as superminis, we could safely predict that superminis will successfully continue their penetration into additional commercial and office markets. These new IBM processors will cause the growth rates of superminis used in nontechnical environments to abate over the coming year as IBM begins volume production of 4361s and 4381s.

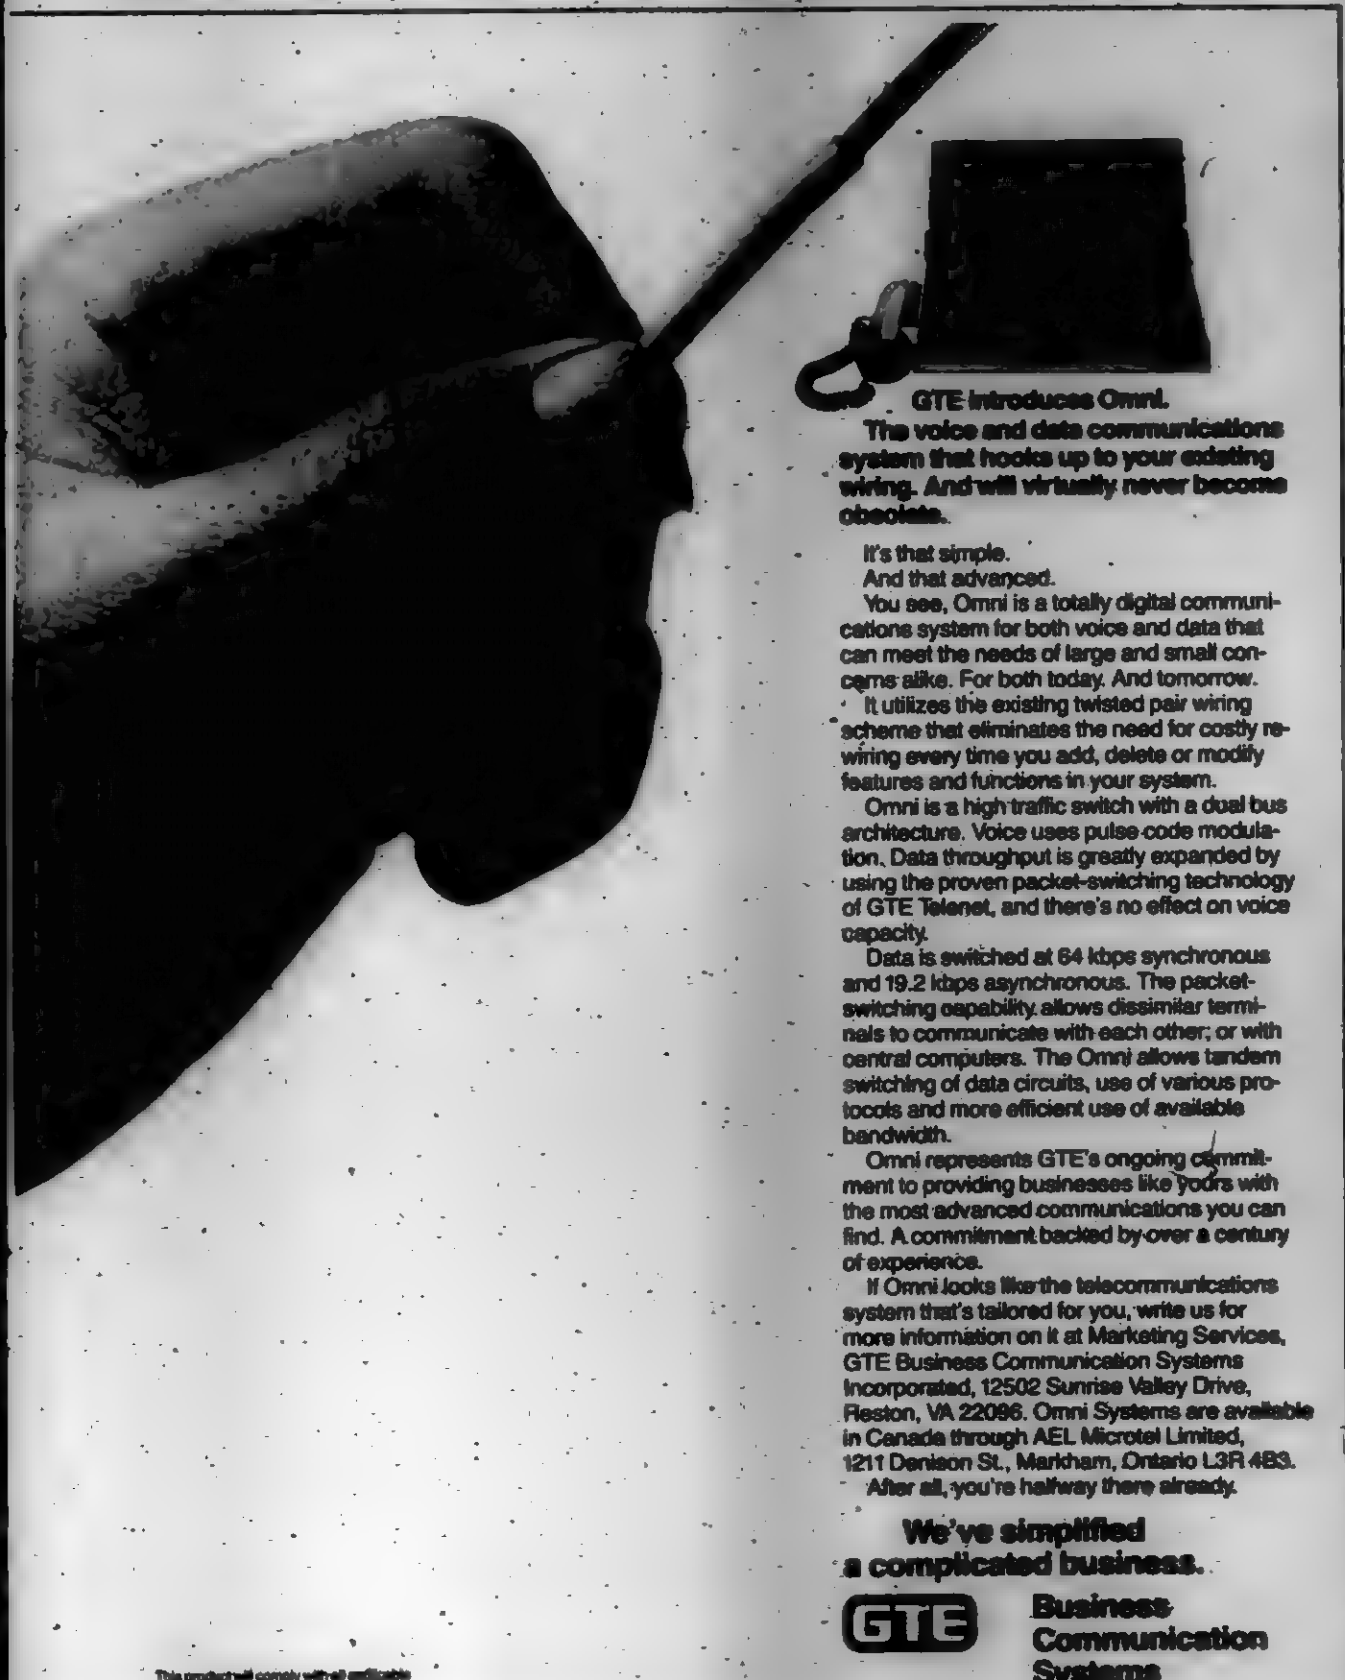
The comparatively high price range of the new 4300 series products may place them at some disadvantage in direct competition with other than top-of-the-line superminicomputers from leading suppliers.

Four of the dozen or so companies manufacturing 32-bit processors specifically positioned as superminicomputers seem especially well-prepared to participate in the office environment. These four are DEC, Data General Corp., Prime and Wang.

Some of the other superminicomputer suppliers with products positioned at medium-tech markets may also eventually become interested in the office market. Hewlett-Packard Co. would be more likely to make such a move than would Gould, Inc. or Perkin-Elmer Corp., if we base our review on the traditional sources of strength for these suppliers.

The following is a closer look at the offerings of the four key suppliers positioning their supermini offerings in the office environment.

Digital Equipment Corp: The VAX family was extended into the commercial market, if not by virtue of the VAX-11/750, then certainly by the introduction of the VAX-11/730.



GTE introduces Omni.
The voice and data communications system that hooks up to your existing wiring. And will virtually never become obsolete.

It's that simple.
And that advanced.

You see, Omni is a totally digital communications system for both voice and data that can meet the needs of large and small concerns alike. For both today. And tomorrow.

It utilizes the existing twisted pair wiring scheme that eliminates the need for costly rewiring every time you add, delete or modify features and functions in your system.

Omni is a high traffic switch with a dual bus architecture. Voice uses pulse code modulation. Data throughput is greatly expanded by using the proven packet-switching technology of GTE Telenet, and there's no effect on voice capacity.

Data is switched at 64 kbps synchronous and 19.2 kbps asynchronous. The packet-switching capability allows dissimilar terminals to communicate with each other; or with central computers. The Omni allows tandem switching of data circuits, use of various protocols and more efficient use of available bandwidth.

Omni represents GTE's ongoing commitment to providing businesses like yours with the most advanced communications you can find. A commitment backed by over a century of experience.

If Omni looks like the telecommunications system that's tailored for you, write us for more information on it at Marketing Services, GTE Business Communication Systems Incorporated, 12502 Sunrise Valley Drive, Reston, VA 22096. Omni Systems are available in Canada through AEL Microtel Limited, 1211 Denison St., Markham, Ontario L3R 4B3.

After all, you're halfway there already.

We've simplified a complicated business.

GTE Business Communication Systems

This product will comply with all applicable FCC rules prior to final delivery.

DEC's VAX-11/730 is a compact and relatively low-cost system geared to businesses (small and medium-size) as well as to the OEM community.

DEC's VAX line is an integral part of their entire OA strategy as well. The company's Office-Plus program, a mid-1980 interpretation of distributed data processing, allows personal computer users in an organization access to different data bases residing on VAX systems dispersed throughout the organization.

According to DEC, one factor inhibiting the growth of officewide or departmentwide computing was the need for small computers with large program capabilities. DEC has positioned the 11/730 as a product response to this market requirement.

Data General Corp.: DG has been an important participant in the superminicomputer marketplace since its introduction of the MV/8000 in 1980. DG's installed base (as of September 1983) of 32-bit Eclipse MV family was estimated at 1,200 units.

The Eclipse MV Series has been responsible in large part for increasing DG's presence in end-user markets. The downward extension of the Eclipse MV family in the form of the Eclipse MV/6000 and Eclipse MV/4000 has brought with it a greater level of interest in the commercial marketplace in using these 32-bit systems in commercial and office applications.

DG has stated that "The demand for 32-bit systems for administrative applications is growing rapidly and Data General has expanded and enhanced its 32-bit Eclipse MV family . . . to meet these growing needs." The company's newest 32-bit system, the Eclipse MV 4000, brings improved performance, larger memory price and cost advantages to customers. Its compact size and style are suited for office environments, according to its vendor.

DG's 1982 and 1983 advertising campaigns have used the Eclipse MV series' broad software program library to its advantage.

Prime Computer, Inc.: Prime has been the industry leader in applying 32-bit superminicomputers to the commercial and office environment since 1979.

The Prime 50 Series systems are used primarily in the business DP and computational processing markets in a wide variety of applications, including time sharing, scientific and engineering calculations, statistical analysis, computer-aided design, financial measurement and control, production and materials control, information retrieval, applications program development, OA and transaction processing.

The company has tended to picture itself as a distributed data processing market leader rather than a superminicomputer supplier. In fact, Prime has adopted a value-added, more meaningful and more directly associated set of descriptions for what it provides.

The 32-bit superminicomputer market has outpaced other industry market segments in recent years. The communications-oriented side of the industry has also done well.

Thus, to gain market advantages by providing superminibased distributed data processing (DDP) has been a strategically appropriate move. Prime, in 1979, was the first vendor to see the merit in marrying powerful minis, data communications know-how and DDP capabilities to meet the requirements of the commercial sectors of the market.

The company remained committed to DDP during 1982 and 1983 and is offering some of the industry's most complete mixed-vendor solutions to provide customers with strong gateways to the IBM world.

Prime made a special effort during 1983 to increase its presence in the office. By introducing its first line of internally developed terminal products, it is clearly on its way to establishing its name in the office environment generally and certain end-user environments specifically.

Wang Laboratories, Inc.: Wang is among the few computer industry companies that developed successful commercial market-oriented computer systems incorporating 32-bit superminicomputer technology at the high end of the range of processor offerings.

Wang's VS100 family of processors is the company's supermini entry. Positioned as the leader (or co-leader, along with IBM) in the OA market, Wang has become more competitive in its large OA systems configurations in those instances where it has proposed using the VS100 as the heart.

For large centralized OA applications, Wang has the capability in its VS100 Series to challenge Prime, DEC, DG and IBM. OA

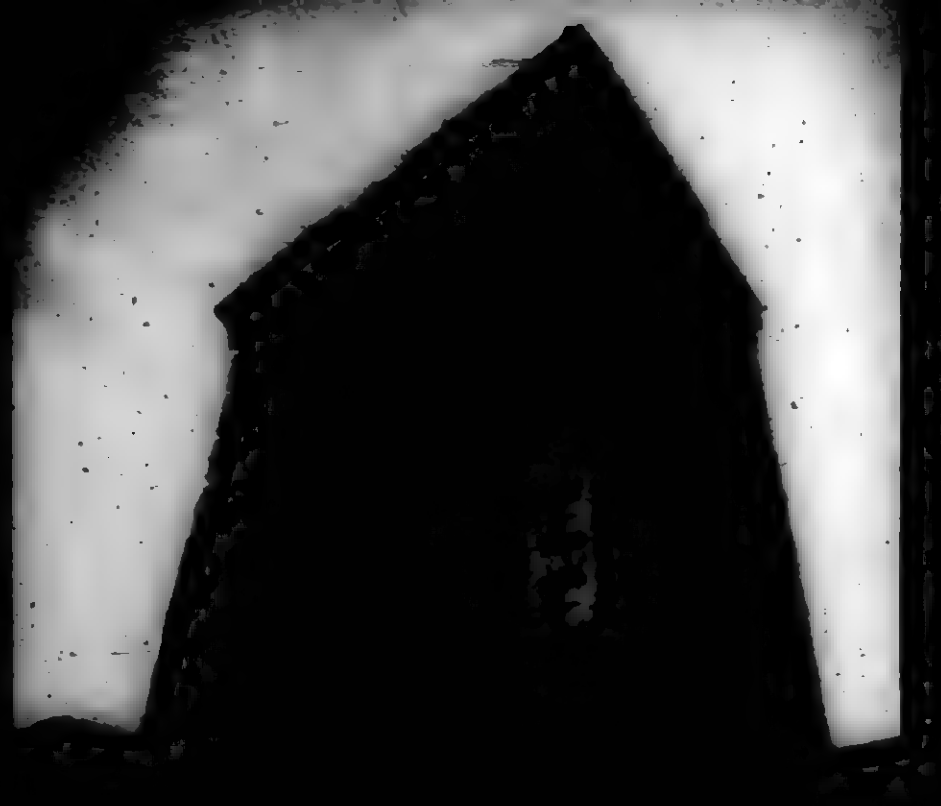
GETTING STARTED

Automating the office sounds like it should be, well, automatic. In reality, successfully implementing change is one of the most difficult stumbling blocks to office automation, as many organizations are finding out. This first Focus section of 1984 addresses many of the problems involved in OA implementation — hiring, training, vendor selection and change management.

Hiring the Right People 31
Selling the Idea 35
Multivendor Selection 41
Orchestrating Change 47
The Training Process 49

All photographs in this section © 1984 by Ed Braverman. Computerworld OA expresses its appreciation to the Boston Celtics organization for its cooperation.



1893. Architects discover up is better than out.

The proposition is easy enough to grasp. When space is at a premium, build skyward.

That's why Wright Line designed its PC WorkCenter to take up more vertical space and less horizontal. Let's face it, few offices embracing personal computers today were designed to accommodate an additional piece of substantial furniture.

Designed particularly for IBM Personal Computer Systems, our PC WorkCenter takes as little as 18″ × 24″ of floor space. Believe it or not, that's less space than your average office chair takes.

Our vertical ergonomic design provides for more efficient and convenient access to all computer components. The unit's storage capacity accommodates software manuals, diskettes and supplies, so every thing you need is all in one place. There's virtually no disruption to your normal work habitat.

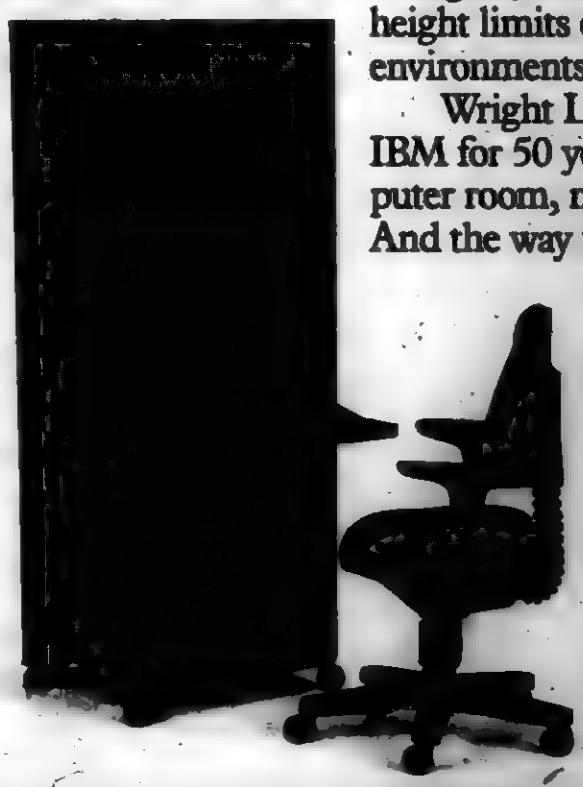
As for security, just roll down the locking tambour door for overnight protection against theft and unauthorized use.

1984. IBM PC users discover up is better than out.

An internal cable management system protects against wire damage while leaving nothing underfoot. The master switch with circuit breaker allows you to activate the whole system with just the flick of a switch. And locking casters are ready to roll in seconds for shared use in other offices.

The PC WorkCenter is available in 50″ and 63″ heights, both well within acceptable height limits of contemporary office environments.

Wright Line has been supporting IBM for 50 years. First in the computer room, now throughout the office. And the way things are going, the sky's the limit.



For more information on our PC WorkCenter or for a complete catalog of PC support products, contact Wright Line, 160 Gold Star Blvd., Worcester, MA 01606.

A UNIT OF BARRY WRIGHT

HIRING THE RIGHT PEOPLE

By Glenn Rifkin

Before an organization can worry about the lightning-quick changes in office technology, it must confront the more pressing need of forming a competent OA team. As consultants, personnel agencies and information systems managers are discovering, that is akin to hunting for unicorns: the species simply doesn't exist.

The reason for the scarcity of polished OA professionals is simple: Office automation, although widely discussed, is a relatively new phenomenon and not enough time has yet elapsed for a large pool of OA specialists to develop. Large organizations in the forefront of automation often train people in-house to manage and staff their OA programs. After training and experience, those professionals become

hot properties with headhunters and rival organizations seeking skills that can be acquired only through hands-on experience.

Because the pool of talent is so small, OA managers have encountered endless frustration while attempting to hire from outside their corporations. In-house searches, often focused in the management information systems (MIS) or DP departments, have not produced much better results. Managers are finding that a DP background for an OA job is often a less-than-perfect match.

"Finding competent people to manage emerging functions such as office automation has been difficult and always will be," stated Tim O'Leary, manager of office systems field operations for ITT Corp. "We've been in a hiring mode, off and on, since February 1982, and it's extremely tough to find competent people."

John Hart, manager of office systems at Avon Products, Inc., agreed. "The resumes I'm getting are long but light, and there's not much broad experience out there. From the resume, they might seem top notch, but when you get them in and ask a few basic questions, you realize there's a lot of overselling going on."

Though each company has specific needs when it comes to office automation personnel, OA managers and consultants tend to agree on the perfect candidate. Technical background with a good working knowledge of a wide variety of office-related technologies is highly desirable.

But, the experts noted, a more important qualification is the ability to communicate and interact with the end user. Interpersonal as well as analytical skills are the keys to a successful career in OA management.

Although a few professionals do fit the description, many of these new-wave specialists have found more lucrative rewards in sales or consulting.

Karen Orton, president of National Training Systems, Inc. of Santa Monica, Calif., pointed out that since the technology is evolving so quickly, each organization will need very specific solutions to its OA needs. That will preclude any standard solutions in hiring. "There are no rules and no courses to take," she said. "It really takes a desire to learn while doing."

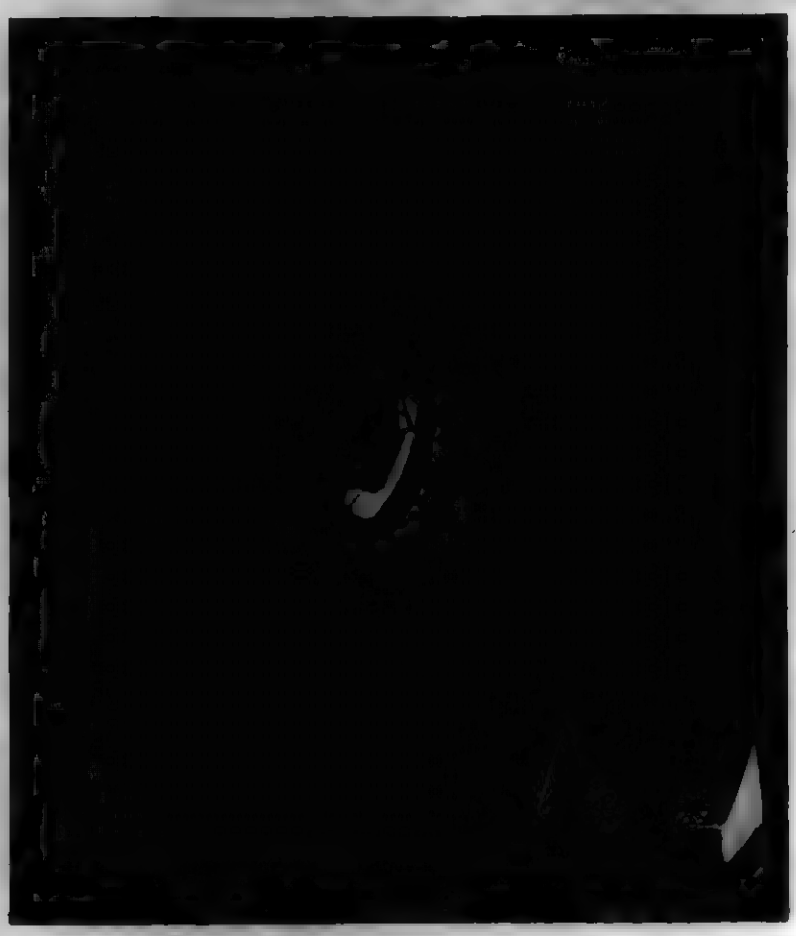
Of course, before a company can worry about an OA staff, it has to find a manager to organize and oversee that staff. Larger corporations, already heavily involved with OA, have solved the problem usually by looking within the MIS department for a senior-level person with an established relationship with top management. For organizations just getting started, the recommended approach is also to look in-house rather than outside. Some consultants believe that a strong manager is enough.

"If you can find the manager, you can solve the other problems," said Anne Mayfield, consultant for Arthur D. Little, Inc.

It is more practical to look within, the consultants said, not only because there are limited resources in the field, but also because a thorough knowledge of the business of the company is essential. David Dell, director of research services for the Diebold Group, Inc., said he does not see many efforts to recruit from outside. "You need good managers with credibility with top management. It would be unlikely to have some hotshot MBA with limited technical training come in and tell management to spend $30 million on office equipment."

The manager overseeing office automation does need greater business skills than technical

A SMART PHONE SYSTEM SHOULDN'T MAKE YOU FEEL DUMB.



With most smart phones, the only way you can access advanced features is through complicated calling codes.

With Focus ET, you just push a button.

Because Focus gives you five fixed buttons and 18 programmable buttons to work with. The five fixed buttons are pre-set for convenience functions like hold, flash, microphone on/off, speaker on/off, and call transfer. The other buttons can be programmed individually. For example, you can push one button and transfer all calls directed to your station over to another station within your network. Push another button to reach a busy station or outside line without redialing. Page hard-to-find people. Dial automatically. And more. Plus, Focus ET gives you one-button access to multiple business and private lines.

To make your calling even easier, all 23 buttons are labeled in plain English. So you don't have to look up instructions or secret operating codes to find the feature you want.

Our smart phone comes in two models: The Focus ET I, with all the advanced features mentioned above, and the Focus ET II with the same features, plus a 40-character LCD display. The display clears the clutter of message slips by recording the names and numbers of callers directly on your phone. The messages can't be misplaced or mistaken for trash. And only you can forget them.

Our Focus ET is the smart phone for smart business people. So next time you're looking for an important message or operating instruction, stop. And look up American Telecom at 3190 Mira Loma Avenue, Anaheim, CA 92806, (714) 630-7721, TX 685571.

American Telecom Inc.

skills, according to Mayfield. The issues tend to be management, not technical. To sell the corporate brass on a system, the OA manager has to be capable of communicating bottom-line benefits, not just bits and bytes. Increasingly, the OA manager's resume shows a liberal arts, not a technical, background.

While agreeing that a strong leader is vital, Randy Goldfield, president of the Omni Group in New York, is wary of entrusting too much power to an individual. The danger is that if the company makes OA a one-man band, it will lose that person to another outfit. The field is "very hot," she said.

Frank Goldschmidt, placement manager with Robert Half Associates, a Boston placement agency in the computer field, agreed, saying that "1984 will be a very strong year for OA in my business." He pointed out, however, that the positions most requested will be analysts, staff consultants and trainers rather than managers. Managers are likely to be in place within the organization already.

There are exceptions. At the Bank of New England in Boston, Stephen Dale, vice-president of productivity services, said he found a manager from outside the organization who had the perfect combination of experience to run the office systems group. She had eight years in a mainframe environment, but also had excellent communication skills. In addition, her knowledge of the OA environment allows her to forecast two to three years down the road.

Of the nine staff members in Bank of New England's OA group, half were hired from outside the company; the others were moved from the bank's DP systems area. "Good leaders tend to clone themselves in the people they hire," Dale said. "But finding that good leader takes a lot of luck."

Though the logical spawning ground for potential OA staffers would seem to be the DP department — to which OA usually reports — there are many pitfalls to recruiting from that traditional mainframe bastion.

"MIS is an obvious source of talent," Goldfield said. "They have the technical expertise and know the systems, but their score with end users is very low."

The profile of a DP person is very different from an that of an OA staffer, according to O'Leary, who said that if there has been crossover from DP into OA, those people were probably "renegades."

"The office systems person has to say, 'How can we make the technology work for the user?' Users are much more computer-literate than before, and you can't give them the old mumbo-jumbo about a task's being too difficult. They are driving the applications, and they know the jargon and what they want. You can't get away with the traditional DP practice of telling people you are protecting them

"Users are much more computer-literate than before, and you can't give them the old mumbo-jumbo. You can't get away with the traditional DP practice of telling them you're protecting them from something. Now they know you're preventing them from access to their data."

from something. Now they know you are preventing them from access to their data," O'Leary said.

Although not all DP staff members will be able to make the transition, some viable candidates will be found within DP, according to Mayfield, from Arthur D. Little. She estimated that about 20% of the DP staff could be molded to fit the OA profile.

Outside DP, organizations have found considerable success within the word processing departments in the search for OA candidates. Because WP was, in many cases, a company's entry into OA, it is a natural progression for WP managers to move into the expanded technologies.

At Kaiser Aluminum and Chemical Corp. in Oakland, Calif., the WP supervisor became the office systems planning manager when centralized word processing was eliminated three years ago. According to David Geary, assistant director of corporate information systems, all four members of Kaiser's OA staff were members of the WP group. Each broadened his role by becoming a trainer of other technologies and by helping others. It wasn't, however, an easy transition.

"Because of their backgrounds, it has been difficult," Geary said. "There are problems in understanding data communications and also in getting the word out to the user community. There is no easy answer."

At ITT, O'Leary has seen several former WP specialists make the move into OA. He said, however, that because that skill represents only one aspect of OA, the WP background runs out of usefulness very quickly, especially when a senior-level person is needed.

Another natural resource, according to Mayfield, is from the secretarial ranks. Secretaries tend to understand the needs of the end user in the office and will usually be among the first to interact with any new technologies brought into an organization. Former secretaries also tend to understand the fear and anxiety end users feel when confronted with new technology.

Unfortunately, secretaries often don't have the technical or systems analysis background, Mayfield pointed out, and it is very difficult in many organizations for secretaries to move out of their slots into management.

It is clear, though, that companies forced to look in-house for OA staff are expanding their horizons far beyond MIS. Administrative departments of all disciplines are becoming resource centers for OA staffers. A liberal arts background rather than computer science training is becoming the preferred profile. Seeking professionals with good communications and writing skills as well as strong interpersonal capabilities has become the priority.

"You can take someone without a technical background and get them up to speed pretty quickly as long as they have the desire," declared Dale of Bank of New England.

At Avon, where the OA implementation is in a more advanced stage, Hart is seeing a change in the type of person interested in OA: a move from the technology-oriented type to more people-oriented applicants. "Technology is not the driving force anymore," he said.

Corporations are generally unwilling to discuss OA salaries, but Goldschmidt of Robert Half Associates pointed out that the salary range "varies all over the lot." Aside from managers, whose salary level would depend on any number of factors, OA staff positions for analysts, consultants and trainers would range from a low of around $20,000 for an entry-level post, to the low to mid-$30,000 level for more senior positions, he said.

Those who, despite the difficulties, seek to hire from outside the corporation are uncovering both expected and unexpected resources. The vendors themselves provide fertile territory, as do distributors and consulting organizations. Former teachers, unable to find work in education, are turning to OA in large numbers and organizations are finding the teaching skills an invaluable asset.

"We just hired a former English teacher with 16 years experience at a private school," related Dale. "He was tired of the education field and he is really motivated and driven. He's a little low on the technical side, but he has the good communication skills of a teacher."

With backgrounds such as teaching, in-house training is a must. Though many organizations have neither the time nor the money to invest in extensive retraining, industry analysts believe training will become a major concentration for OA departments.

At the Continental Bank in Chicago, an acknowledged frontrunner in OA implementation, bank policy prohibits the hiring of experienced personnel for any accounting or systems jobs. Instead, the bank seeks out recent college graduates who immediately enroll in a 15-week training program within the bank. The trainees are not brought in for a specific position; various related departments recruit them after they are in the program.

Ed Wundrum, manager of Continental's OA marketing group, pointed out that because the bank is in the advanced stages of OA, the staffers need to be even more sophisticated. He looks for people who are independent in nature, with a grasp for analytical work. They need, he said, the interpersonal skills to work with everyone from the clerical level up to senior vice-presidents.

In fact, two separate OA groups exist within Continental. The marketing group is responsible for applying technologies to solving business problems for the bank's 12,000 employees. The second group, composed of product managers, is mandated to upgrade the bank's current OA product line with new technologies. Both groups have drawn from the bank's training program and its supply of both computer science and liberal arts graduates.

According to Goldfield of the Omni Group, the OA groups in most organizations will evolve in two directions, in much the same way Continental has. She foresees the need for both strategic planners who know the technology and operations people who will manage implementation and use on a regular basis.

"Both these groups are hard to staff," she stated, "since office automation is just getting started and no one has done all of it as yet."

Dell of Diebold agreed and said the difficulty in finding quality applicants will keep the core OA staff small for quite a while. He predicted that OA will grow into more of a disciplined management function and less of an entrepreneurial activity and that the end users themselves will pick up the slack for the OA department.

"The core group will probably stick with design and implementation and leave the grunt work to the end users," he said.

Ironically, it is the end user who brings optimism to the bleak OA hiring picture. In many organizations, users are ingesting so much knowledge about the technology they need that they are often more well-versed than the office systems staff.

With the end user as the catalyst, solutions to the OA hiring mystery will undoubtedly be found.

"The changes will happen," Mayfield added. "OA is a huge growth industry and there is great opportunity in it." OA

Rifkin is Computerworld OA's senior writer.

"Before Soft-Switch," that is."

"It used to be difficult to share information at our company because our office equipment comes from different vendors. Consequently, when we needed a finished document, all of the information had to be re-keyed for the word processors.

"Not any more. Soft-Switch lets us exchange all of that information intact, with no document clean-up.

"Soft-Switch is a Document Control System from ITI, and it runs on our IBM mainframe. It permits documents created on one type of equipment to be used by other devices, regardless of the vendor (word processors, personal computers, printers, etc.).

"Soft-Switch gives us extensive edit level translation capabilities. It stores documents in libraries on the mainframe—no more hunting for diskettes for last year's reports. And routing is simple and efficient. Whether the document goes to storage at the mainframe, or to a device across the hall, or to 25 branch offices around the country, Soft-Switch requires just one command. Conveniently, the recipient gets the document directly from the mainframe. This is especially useful when you route across time zones.

"It's simple to install and doesn't need much maintenance. The staff likes it because it's easy to use, requires very little training, and just about eliminates document back-up.

"Soft-Switch supports both MVS and VM/CMS operating systems, and it's the first Document Control System that's fully compatible with IBM's DIA/DCA.

"Soft-Switch is available for most major OA equipment. And if you don't have a mainframe, you can still use Soft-Switch by time-sharing through CSPnetwork Corporation.

"For years you've been hearing about 'integrated' offices. Well, now you really can integrate what you want, when you want—with Soft-Switch. Check it out. Call ITI."

MULTIVENDOR SELECTION

By William H. Allen Jr.

Several types of relationships are possible between a user and a vendor. Obviously, different relationships need different management responses. Although generalized, three types of vendors can be readily identified:

- The vendor that tries to become involved in customers' planning activities and to influence the direction to be taken.
- The vendor that prefers to take orders and ship products.
- The vendor that has a monopoly and is slow to respond.

These generalizations offer scenarios from which a plan can be devised.

The involved vendor — Initially, the involved vendor

sounds contemporary, interested and aggressive.

This description suggests a vendor organization with which everyone would like to work, but this may not be the case. All too often, problems are identified in the context of the vendors' products. This situation is automatically contrary to the philosophy of allowing multiple vendors to compete for business.

The criteria for selecting products are performance, price and support. Vendor involvement may be important in some instances, but in actuality the vendor's products are hardware and services, not planning and consultation.

The uninvolved vendor — The uninvolved vendor takes orders, delivers the product and presents an invoice. Although this type of vendor avoids involvement or interference in the customers' direction, this can present problems, too.

At one time, companies could depend on the vendors to recommend how specific products could be used. Recently, especially with respect to some smaller ticket items (for example, modems), members of the vendor's sales staff have appeared limited in their ability to compute costs and take the order. As a result, the office staff must be able to properly evaluate and configure the necessary equipment.

The vendors can transfer to the customers the cost of technical sales review and planning and, in some cases, installation. With an uninvolved vendor, a product without the desired capabilities may be mistakenly ordered because the salesperson is merely an order taker. The salesperson neither takes the time to study the organization's needs nor has the technical background to catch the error. This situation has a hidden cost.

Some smaller vendor companies do have lower prices, but they may also have little expertise available in their company to help their customers arrive at proven technical solutions.

The monopolistic vendor — The monopolistic vendor, a vendor that is the sole provider of a particular service needed by the company, is often the most difficult to manage. The difficulties encountered when dealing with this type of vendor include grappling with a large bureaucracy and sometimes trying in vain to secure an enthusiastic response whenever a problem arises.

Escalation of the problem is usually the only avenue of relief available. In this instance, the business cannot be switched to another vendor; therefore, the threat of that action does little to stimulate vendor activity. The best method of working with this type of vendor organization is to learn how it conducts business and who of its management personnel will help when a problem occurs.

Price, performance and support are important criteria for the office management staff to evaluate during the selection process. In the multivendor environment, operational problems may be reduced significantly if the criteria are expanded to include compatibility with other vendors and products; this refers not only to plug compatibility, but also to support compatibility.

Some vendors with very good products have rigid rules about interfacing with other vendors' products. Some may have problem-identification procedures that do not work well when their products interface with other vendors' products. Office management may have to decide whether to exclude these vendors or to use their products exclusively. Only an astute manager

Paper Processing Magic!

There's a breakthrough in word processing productivity that you should know about.

It's called the Intelligent Paper Processor by Ziyad.

It selects paper (or envelopes) and inserts it into a printer automatically.

Aligns paper, removes it and collates it.

Remembers names and addresses as originally typed, then addresses envelopes automatically, collating them with multi-page letters, in proper sequence ready for signing.

Adjusts margins automatically for different sizes of paper – letterhead, bond or envelopes.

Handles footnotes, page numbers, headers, subscripts and superscripts easily.

It warns the operator when paper runs out so you never have to print on the platen again.

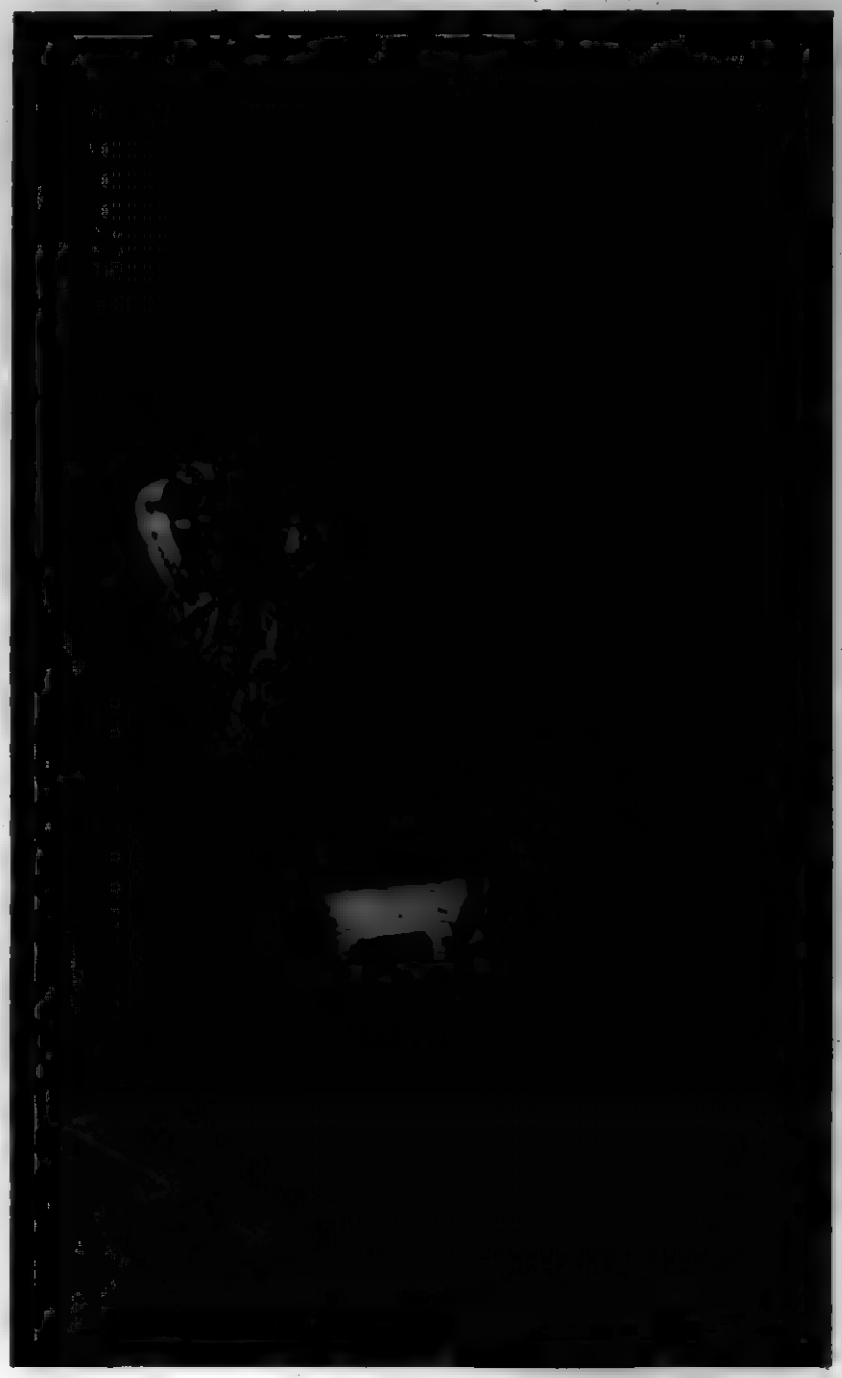
It can save an operator at least an hour a day of tedious, manual paper-handling.

It is so cost effective, it wins management support readily. It can pay for itself in one year.

The world's best word processor companies offer the Intelligent Paper Processor as part of *their* systems, with *their* names on it.

Does a system that can do all this seem like magic? Not at all!

It is the one-of-a-kind, down-to-earth, businesslike, practical step toward increased word processing productivity.



The Intelligent Paper Processor™ by ZIYAD®

For more information and the names of those companies that feature The Intelligent Paper Processor, write or call: Ziyad, Inc., 100 Ford Road, Denville, N.J. 07834 (201) 627-7600. Ask for Kim Turner.

can know which is most advantageous.

Some vendors may not accept nonstandard agreements. Vendors that will not modify their agreements can afford to take such a stand because their business volume is not significantly affected by the loss of a sale or two.

Such vendors are not necessarily small companies that are flexible in order to obtain business, nor does willingness to sign a nonstandard agreement indicate the vendor or its products are inferior. Most companies that accept such agreements have fine products, but simply ventured into the market years ago with this contracting flexibility and have been unable to change their stance.

A nonstandard agreement can be a significant advantage for the customer or can at least counter the vendor's advantage. Therefore, office management should consider this possibility during the evaluation phase.

A new dimension to the already difficult problem of managing the multivendor environment has emerged recently. Because of electronic office networks and distributed processing, office management now faces the task of coordinating multiple vendors in multiple locations. Although purchasing is typically handled in the central location, a great deal of vendor contact occurs at the remote sites, especially with vendor repair and maintenance personnel. Contract enforcement is particularly a problem.

Vendors may do a poor job of communicating with their personnel in cities outside the one in which the sale was made. Sales people stress the size of their maintenance organizations and their organizational structure, which suggest good communications and control of each problem. Almost invariably, however, the first repair person to show up at a new remote location reveals little knowledge about the operation and a lack of even the most cursory briefing.

There are other problems as well. Often, because the remote site is small, repair personnel treat it as though it were less important than headquarters in that city. Repair personnel may be in awe of large installations and may not appreciate that even though a node may have a small hardware configuration, each node in a network is important.

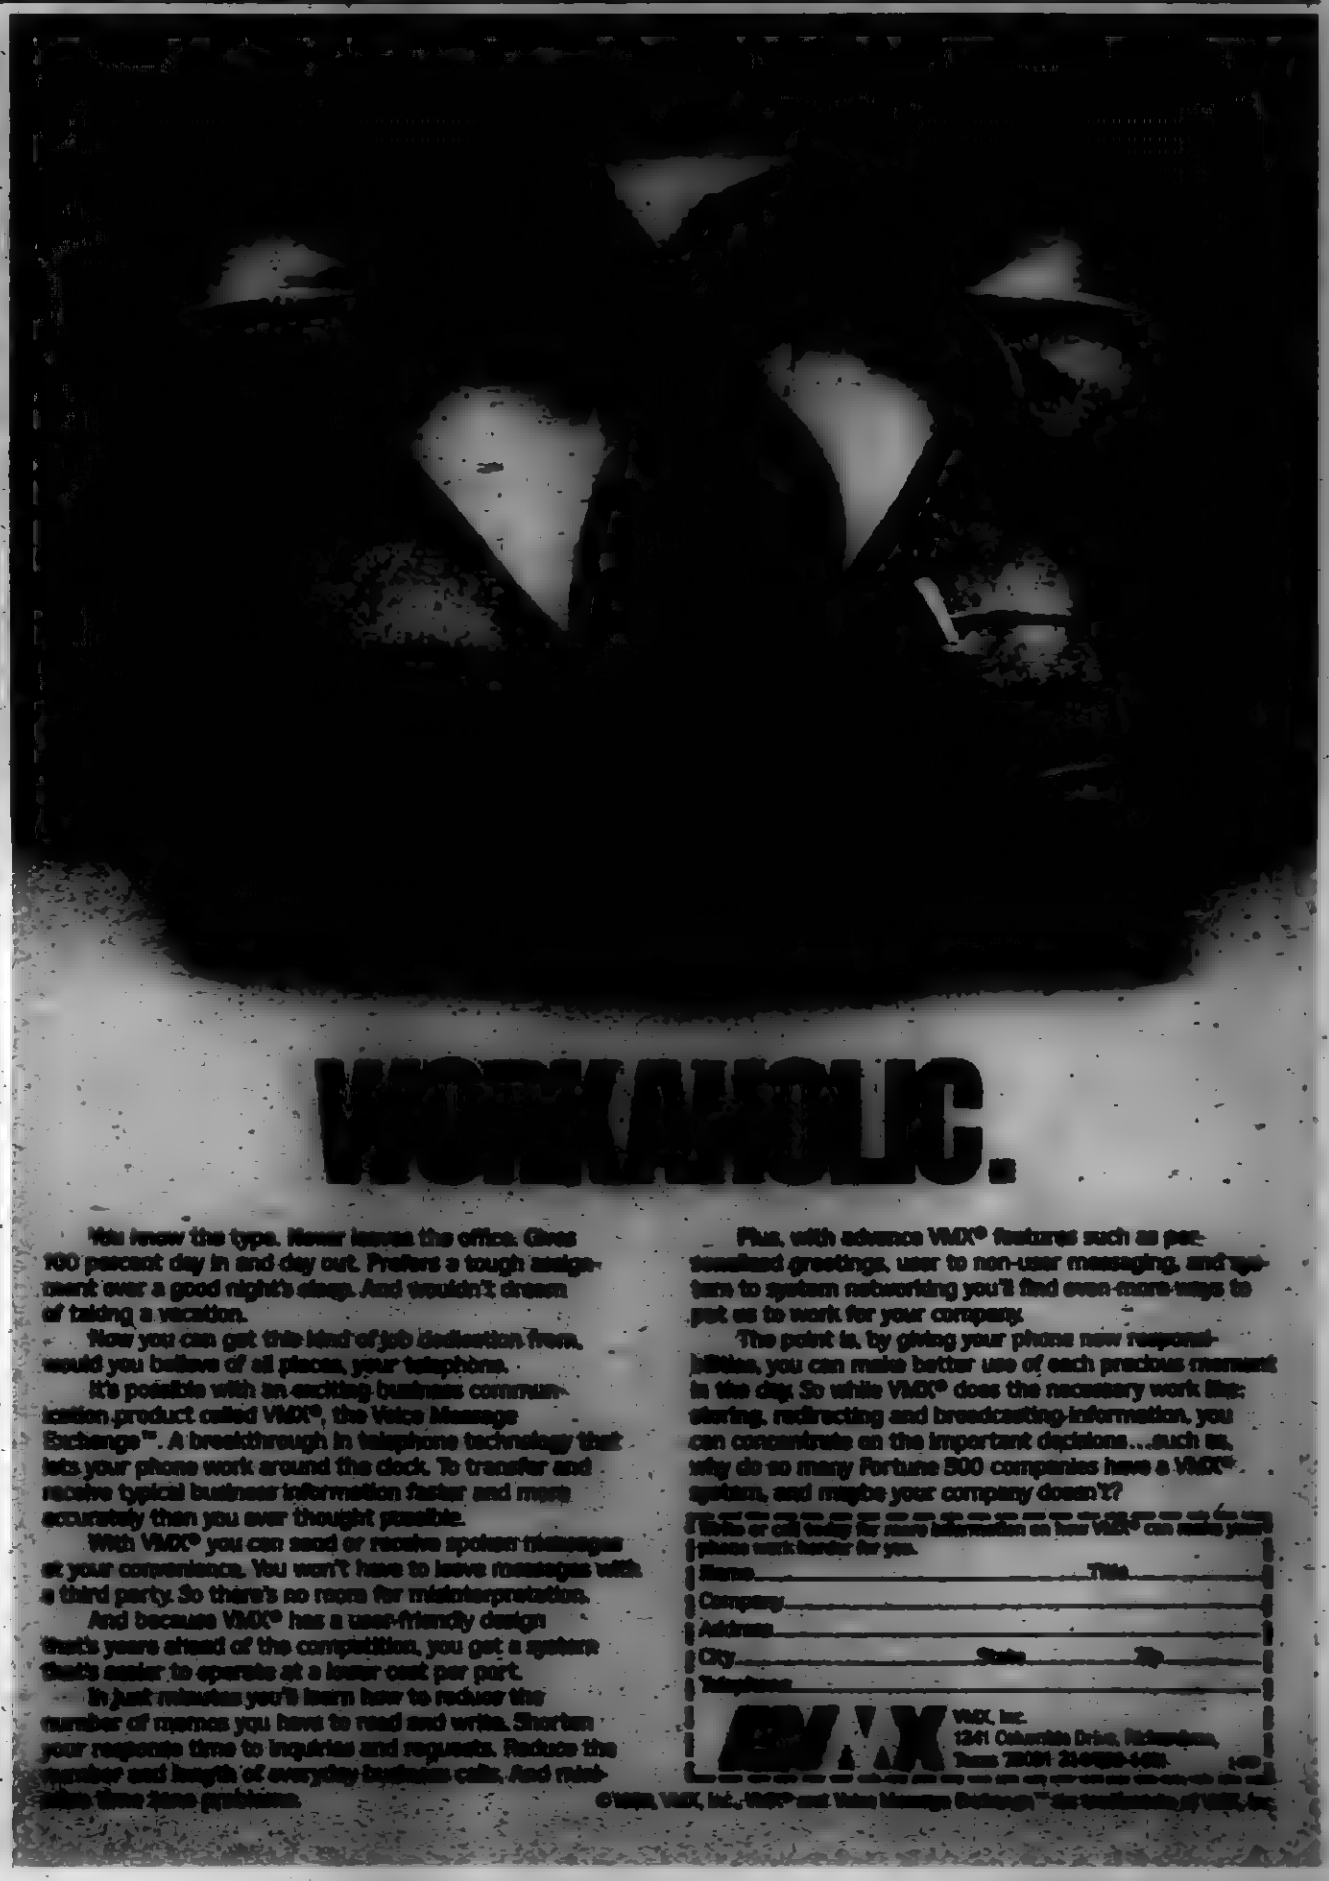
In very small cities within the network, spare parts and repair personnel are not available and must come from the closest large city, thus increasing downtime and maintenance cost.

The manager's efforts in these situations focus on contract enforcement:

A nonstandard agreement can be a significant advantage for the customer or can at least counter the vendor's advantage.

The manager seeks no extra services, but attempts to secure the minimum acceptable service. Two simultaneous avenues can be followed to achieve this result. The first is that the salesperson's responsibilities should not be ignored. As much pressure as possible should be placed on the sales group to communicate a description of the network to every office supporting the network.

The group should also emphasize to its repair and maintenance management that the customer is



Present shock.

The installers have left.

Your fully integrated multi-user word processing system is ready to go.

What's that? A couple of operators called in sick?

Now, what?

Suggestion: Call Manpower Temporary Services.

To provide the word processing operators needed in today's automated offices, we're training people daily. In Manpower offices on popular makes of word processors using our own Skillware® — instructional diskettes developed by and for word processing operators.

We've also introduced a series of machine specific operator support manuals that enable our temporaries to operate your word processors with more ease and confidence.

And we've designed innovative methods for identifying and verifying word processing skills of experienced operators so we can match the right temporary to each assignment.

For these shock absorbing reasons, call us whenever you need effective word processing operators to maintain productivity.

MANPOWER®
TEMPORARY SERVICES

demanding better service. The office manager should emphasize to the sales group that this problem must be escalated within its company and not be confined to the local level and that some evidence of its management's awareness of the problem must be forthcoming.

The second avenue consists of office managers making themselves known in as many remote locations as possible. On business trips to those cities, the manager should take the time to make calls in that location on the vendor personnel who will directly service the account. The manager should also meet vendor management. To improve personal relations, the remote site supervisor or a key network user should also meet occasionally with the vendor in that city. The vendor branch office must not be allowed to regard the remote site as merely another account number.

The best advice available on the subject of contract enforcement is to be prepared to pressure the vendor before an agreement is signed. In this situation, the nonstandard agreement is most beneficial; it can be written to strengthen the office manager's position with respect to contract enforcement.

For the most part, vendors do meet their responsibilities. They will not, of course, give anything away, and they may cut corners occasionally. They tend to provide their most responsive service to their biggest customers or to customers with pending plans for expansion. The agreement therefore becomes vitally important if the office manager is not among these customers. The agreement must state explicitly a level of service that defines the vendor's responsibilities. If the agreement is properly written, the manager must enforce it on every occasion in which the vendor does not comply. Otherwise, permitting the vendor to slip on occasion could become a precedent for future service levels.

Some costs involved in the management of multiple vendors in multiple locations are hidden. For example, vendors sometimes provide less service, which means more downtime. In addition, long-distance telephone and travel expenses are necessary to perform contract enforcement. Another hidden cost is that problems handled over the telephone take more time to solve and consume more staff and management time per problem.

In its long-range plans, office management must anticipate how vendor support will change and how this change will affect plans and budgets. Perhaps the biggest change in computer-based industry will occur in the relationship between vendors and their customers — a change in both roles and attitudes.

In the past, customers relied heavily on their vendors; for the most part, the vendor's support came with the product. One major change — unbundling — has already occurred. In the future, customers are likely to take on more problem-solving responsibilities. This idea is supported by the increased availability and sales of telecommunications and other testing and monitoring equipment and by the increased demand for people with specialized technical skills — equipment and personnel with capabilities once found only in vendors' operations.

When forecasting and planning, office management must anticipate the possibility that vendors will continue to withdraw support and service in order to maximize their profit picture. This action could pose serious problems to small operations.

The standard business practices of tomorrow will possibly resemble current OEM business practices. In the near future, customers may provide all but the most difficult portions of their own preventive maintenance and install a large percentage of their equipment.

The practice of employing multiple vendors will continue to grow despite the difficult managerial, technical and administrative problems. The economics are tempting to both vendor and customer. Because vendors are divesting themselves of providing full support, office management groups need to become correspondingly stronger. This strength will eventually help companies take full advantage of the multivendor environment.

When forecasting and planning, office management must anticipate the possibility that vendors will continue to withdraw support and services in order to maximize their profit picture. This action could pose serious problems to small operations. To some degree, such operations are prevented from taking full advantage of the market because they do not have the strong technical staff required for entering the multivendor environment.

Office management can consider whether implementation of the following steps would better organize their multivendor-environment management effort:

- Reorganize portions of the office management group around the vendors that supply the goods and services. This reorganization should take management, technicians and administration into consideration. For example, appoint a specific group responsible for telecommunications.
- Establish written guidelines for controlling the environment, including guidelines for vendor contact, rules for problem escalation and procedures for administrative authorizations.
- Implement a system support program that will work in the multivendor environment.
- Encourage management, technical and administrative personnel to spend time developing credibility and personal rapport with vendor counterparts.
- Teach executive management about the costs of both personnel and tools needed to achieve possible savings from the multivendor environment. This is a difficult management task.
- Monitor and review procedures and continually make enhancements to guarantee that the desired approach is being followed. Don't assume that a solved problem remains solved.
- Involve the company's internal auditor, who might suggest procedures for dealing with vendors that protect the company and the office manager and ensure fair treatment of all vendors. The office manager must be aware that a staff member possibly could be influenced by something other than a vendor's product.
- Small office management groups that want to take advantage of the multivendor environment, but cannot afford the full-time technical staff might turn to the management information systems (MIS) staff or a large, neighboring data center in another company for help. There, the smaller organization might pay an hourly rate for technical help, as needed. This idea also appeals to the manager of the MIS operation or the other company because it defrays some of the cost of the large staff.

The approach an office manager must follow in managing the multivendor environment — defined by guidelines, procedures and rules — should be written and effectively communicated. A baseline should be developed for each logical segment of the operation. Problems and deviations must be recognized quickly and communicated effectively to the vendors. A deliberate attempt should be made to improve and maintain rapport, which should not be left to chance. No section manager or supervisor should have the option to manage vendor relationships in his own style; the style to be used is the one developed by the office manager.

One must anticipate that problem solving in the multivendor environment will typically take longer than in the single vendor environment. To keep downtime to an acceptable minimum, the office management staff needs to identify problems and responsibilities quickly. After a chain of vendors is contacted and scheduled to work on a problem, downtime lengthens. Because the vendors cannot be made to work more quickly, the office management staff must make up the difference. This is why test and diagnostic equipment is so important.

Cost savings is usually the prime benefit cited for employing multiple vendors, but the ideas that these vendors bring to operations should not be discounted. New approaches to problem solving, the competition and the industry's expansion are contributions that grow out of the multivendor environment. ◊ OA

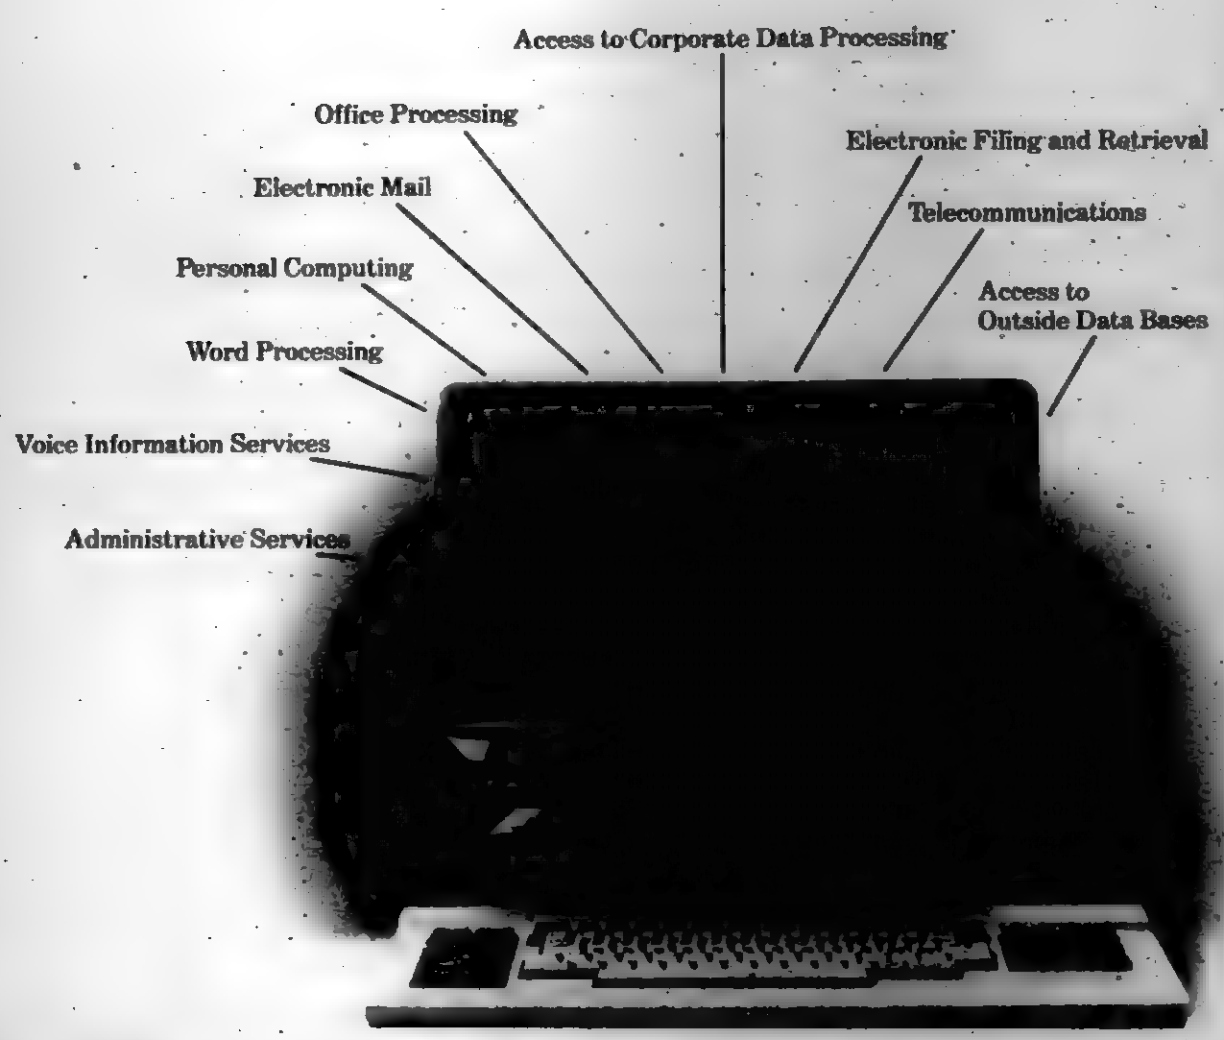
SPERRYLINK™
OFFICE SYSTEM



Just about the only thing it won't do is brew your morning coffee.

SPERRYLINK. The one piece of equipment that can handle all your office automation needs.

It ties into the central computer for mainframe information and mainframe support.

It's a data processor when you need to handle data, a word processor when you need to handle words.

It's a personal computer for filing, retrieving, keeping your calendar, your time schedule, your memo board.

And it's a telecommunications terminal with electronic mail and digitized voice capabilities—your link to the outside world.

This is the SPERRYLINK System. A system beyond conventional ideas of office automation. Beyond words and numbers, voice and image.

It's the one system that finally brings it all together.

Sperry Corporation, Computer Systems, Department 100, P.O. Box 500, Blue Bell, PA 19424.

SPERRY

We understand how important it is to listen.

SELLING THE IDEA

By David Shay

It is easy to justify office automation. Many people in OA today, including most vendors and many consultants, are throwing up their hands at the thought of cost-justifying the OA expenditure, whether they want to call OA an expense or an investment.

You can justify your OA expenditure, but first you must understand three key points:

- Different personalities — you and your boss, for example — may require different degrees of proof of justification.
- Traditional ways of cost-justifying factory expenditures do not usually apply in the office.
- People react differently to the dozen or so justification

HERO BREAKS DOWN OFFICE WALLS.

MDS HERO TRANSFORMS ISOLATED WORKSTATIONS INTO NETWORKSTATIONS.

The personal computer is not all pluses. This modern miracle of speed and precision has created a kind of cubbyhole mentality. Isolated, self-protective pockets of valuable information, inaccessible to other computers or the rest of the organization.

How will your company move forward when its best thinking can't even move from office to office? Your company needs HEROS™.

IN THE OFFICE, HERO UNITES AND CONQUERS.

HERO is the intelligent, desktop Networked Personal Computer from MDS. It does everything an ordinary personal computer can do. And lots that it can't. HERO can form interactive alliances with mainframes, trade information with other computers, make peace between departments and convert diversified knowledge into decision-making power.

HEROS LOOK GREAT IN BLUE.

HERO and IBM. Together, they're unbeatable. Mated with MDS SUPER 21™ Communications Processor, HERO slips comfortably into IBM SNA networks. It looks like Big Blue's 3270 SNA and 3776 remote-job-entry systems. And our MDS SUPER SNA™ option gets both on one communications link. Additionally, HERO runs MS-DOS software, as well as a fast-growing library of MDS software programs.

HEROS PLAY "SHOW AND TELL," NOT "HIDE AND SEEK."

HERO and SUPER 21 give you the power to liberate data from personal, departmental and corporate databases that used to play hard-to-get.

With INTELLIGENT 3270™ (an intelligence only MDS offers), your people can write their own programs and integrate them with data in the mainframe. HERO lets you access to the database, extract information, process it, display it, update it and utilize it. Then return it or store it right at the workstation.

MDS HERO WILL MAKE A HERO OUT OF YOU.

With HERO and SUPER 21, what's been out of control will soon be under control. Yours. And your current investments in data processing will pay off even more handsomely. Instead of your system not working, it will be networking. Efficiently, effectively and economically.

Not just in the office, but throughout your entire organization.

Furthermore, MDS systems are planned for non-obsolescence. They're modular in design to accommodate future growth. So, like a hero, every MDS system, is immortal.

TOGETHER, WE'LL MAKE HEROIC STRIDES.

MDS is a multidivisional, multinational corporation. We've grown by helping our customers to grow. We'd like to do the same for you. Not just in IBM country, but beyond.

Wherever you are, or want to be, we are. MDS offers service and support capability around the world. Around the clock.

Ask our customers about us. And give us a call. Dial **800-MDS-HERO.** Together, there's no barrier we can't break through.

MDS MOHAWK DATA SCIENCES

7 Century Drive, Parsippany, New Jersey 07054. And over 430 locations, worldwide.

arguments, so you should find the boss' hot button and go with it. There is no right or wrong justification argument.

To understand the first point, we must understand the psychology of the rate at which different people adapt to something new. Almost everything in life follows the normal curve or distribution, and the technology acceptance curve of OA is no exception. The technology acceptance curve is composed of four major groups, three of which can be associated with a dominant personality type. At the beginning of the curve are leading-edge people and early adaptor people. The personality type associated with leading-edge and early adaptor groups is that of the innovator. These people will try almost anything new; they require little or no justification for purchase beyond feeling that the purchase is sound.

Leading-edge people probably had personal computers three years ago; the early-adaptor people are piloting and experimenting with OA now. Together, these two groups represent approximately 15% of the population.

A large percentage of the population is currently interested in and investigating OA; they are called the early majority. They are utilitarian, and the personality type associated with them is that of the activator. The typical activator is the busy production manager or sales type with the cluttered desk.

These people recognise the usefulness of the new technology to one or more facets of their daily tasks, purchase it and quickly compute a pay-off agreement in their minds. They then go on about their business. The activators represent about 35% of the population.

Together, the innovators and the activators represent about half the entire population of U.S. business; they have OA installed. A full 50% of the population is now up the technology acceptance curve, and the stage is set for the entrance of the late majority or the controller type.

The late majority represents 35% of the remaining 50%. After half of the entire population of U.S. business has OA installed, the late majority will decide to start piloting and experimenting with OA. This group is usually very precedent-oriented; it plans the future based upon the lessons of the past. It is characterized by the personalities of the attorney, the controller, the management information systems (MIS) executive and many other executives who have climbed the ladder of corporate success.

These people want a relatively safe bet, which they can defend to their bosses and peers. As they see it, OA is not yet a safe enough bet for them to put their careers on the line. The issues are still too fuzzy.

The final 15% — the last community of skeptics — will come on board only many, many years later, if ever.

We have to use new techniques in the office for justification.

In its major contribution to understanding the knowledge worker, the American Productivity Center concluded in its report, "White-Collar Productivity — A National Challenge," that "the first step to greater white-collar productivity is to recognise that what works in the plant won't necessarily work in the office. Time/motion studies may produce positive results in some clerical areas, but the lessons of industrial engineering are, for the most part, of limited value, because in many situations white-collar work is not patterned or sequenced and does not result in a tangible product."

One of the major recommendations of the panel on the knowledge worker for the recent White House Conference on Productivity was to "reduce the emphasis on case-by-case justification of isolated information technology purchases. Instead, examine the overall effects of investments on business unit productivity and on the quality of services."

The justification arguments of the farm didn't work in the factory, and we can't expect the justification arguments of the factory to work in the office. We are now in an information age, and a variety of justification techniques can be applied.

Hard-dollar savings is the most "factory traditional," the most sought after, frequently the most elusive, the most difficult and perhaps the most dangerous form of justification in the office.

Because the easiest target for automation is a highly repetitive clerical-type function, many people try to automate typing and attrition off a secretary to pay for the equipment. Typing is less than 2% of the cost of running an office. I strongly advise that the time saved by automation in the secretarial ranks be used to support the professionals, managers and executives rather than to lay off secretaries. These higher paid people are distracted from their personal effectiveness by spending close to 20% of their time performing administrative-type tasks that they find tedious but that a secretary might find rewarding.

There are some hard-dollar savings available through OA, however, that you can use in justification arguments. Frequently automation smoothes the peak-load problem in a department, thereby saving the budgeted cost of such items as temporary employees, overtime, overnight couriers and long-distance calling. Some systems speed up the sales or collection cycle fast enough to save the hard-dollar carrying cost of a day of inventories or receivables.

Other hard-dollar savings include having certain items produced in-house. These might include slides, graphics, large proposals and mass mailings. In some instances, teleconferencing technology can save travel cost, and voice or electronic mail can save on lengthy telephone calls. It is possible to juggle enough work among various intelligent workstations that the labor grade for a whole job can be lowered, which is also a hard-dollar savings.

Most OA applications can eliminate forms because you can combine work steps and stations. Remember, the hard-dollar savings associated with the annual purchase of the forms have been estimated by experts to be only 5% of the total cost of the form. The other 95% is a soft-dollar savings associated with the purchasing; recordkeeping; inventorying; and the completion, inspection, data entry, computer processing, distribution, reading, copying, filing, and/or disposal of the form.

Soft-dollar savings is really a very broad category of savings. I like to define these savings more narrowly as improvements in a process which are immediately recognizable as beneficial, but which can probably never be converted into a measurable benefit. The ability to communicate smoothly across town or across time zones is an excellent example of an immediately recognizable benefit of today's telecommunications technology. So is the memo that is better prepared and produced more quickly for the executive supported by word processing.

As time goes on and we learn more about measurement, the soft-dollar category will shrink. A company need only see noticeable increases in salesmen's productivity as a result of the communications gear, and the soft-dollar savings can be moved over to the hard-dollar column as profit margin on incremental sales.

Some other hard-to-quantify benefits often quoted as soft-dollar savings involve the higher quality of correspondence and communication associated with a smoothly produced document on word processing; the decreased need for travel as a result of better communications; faster communications; more time for more complete analysis; better decisions; and fewer problems with time zones.

Cost avoidance is a popular form of justification for OA. Unlike a hard-dollar savings, which is a savings against an actual or budgeted expense, cost avoidance says "I will not have to spend unbudgeted money I know I would have spent." Good examples are avoiding the inevitable new hire next year, absorbing peak work loads or new government regulations that would have forced the company into using outside services or overtime in the past.

Task delegation is one of the most promising forms of cost-justification associated with OA.

Study after study shows that managers, technical and professional knowledge workers spend over 20% of their time (and probably 30% of payroll costs in an average company) on administrative work. That is an hour and a half daily of administrative tasks that could be delegated to lesser paid individuals more qualified and more challenged by these tasks.

If OA frees two hours a day of administrative support personnel time, do not apply the factory mentality of laying off every fourth administrative support worker. Rather, go find those easily transferable tasks and move them from the principal's desk to the support person's workstation. This is job enrichment at its best, as well as bona fide cost-justification. In one organization with support personnel with a fully loaded cost of $7 an hour, it was possible for OA to attribute three hours savings daily per person. No one was laid off, but three hours a day of regular administrative work could be delegated to administrative support people. The company saved $30 by transferring that work to the support person and the support person had a more challenging day. In addition, the senior staff had more time to perform the analytical work they were hired to perform.

Time savings is another form of soft-dollar savings. In the clerical ranks (as with the factory worker) an hour saved will not become dollar savings unless management takes care to schedule another hour of work for the person involved. This factory mentality is one reason why many managers are skeptical of savings from OA.

To be sure, if you roll in a word processor, save someone an hour a day and do not add more work or transfer work, productivity has suffered. You have not changed the output, but you added $12,000 or more to the input.

The majority of the white-collar head count and the lion's share of the payroll, however, goes to professionals, technicians and man-

At last, a system with a head for numbers, an eye for pictures, and a mind of its own.

Introducing the Kodak KAR-4000 information system. Take the processing power of a stand-alone computer. Add a "photographic memory" to access original document images. Top it off with comprehensive, one-source software and service.

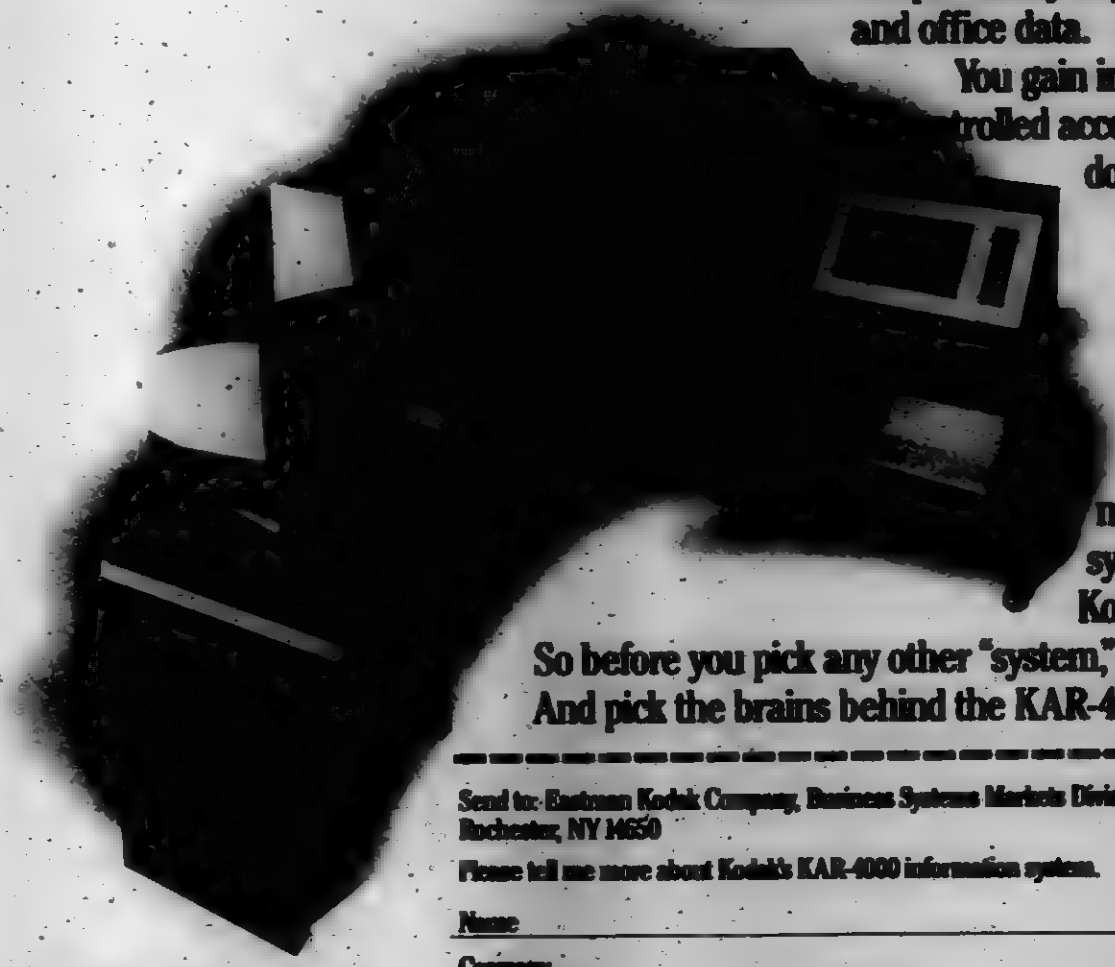
The result: a Kodak KAR-4000 information system.

It outperforms any other computer-assisted retrieval system. But it also functions independently to process both documents and office data.

You gain independent computer-controlled access to on-line data and documents. Without the staggering expense of on-line computer storage.

You even gain independence from service—all components in the KAR-4000 system are serviced by Kodak.

So before you pick any other "system," send in the coupon. And pick the brains behind the KAR-4000 information system.



The Kodak KAR-4000 information system. It gives the computer a photographic memory.

Please answer the following:

1. How many incoming documents per day do you process? ☐ 1000-2000 ☐ 2000-5000 ☐ Over 5000
2. How many documents do you normally retrieve each day? ☐ Less than 10 ☐ 10-25 ☐ Over 25

agement. If you save these people an hour, they will use it (probably as efficiently or effectively as they spend the rest of their day). I recommend that we convert these hour savings into time for cost-containment or revenue-producing idea sessions. Even if OA saves a principal only one hour a week, we can isolate that hour and put it to work.

The second major set of justifications for OA — value justifications — generally has little to do with dollars that might eventually hit the bottom line, but more with the quality and value-added aspects of performance.

Quality of work life and job enrichment studies in the U.S. are demonstrating dramatically that happier employees are more productive employees. This type of performance seems to affect the bottom line, although it is difficult to formally trace the connection between a happier, more cordial receptionist and increased sales.

If you introduce automation to get rid of tedious, boring tasks and then add some spice to the person's life, you use OA to get a happier employee who will be more productive. On the contrary, if you take typing away from all secretaries, send it to a WP pool and increase the number of principals the secretary supports, you will probably have some less happy and less productive folk. A WP pool does have merit in many places, but by and large the typing pool is an obvious example of hold-over thinking from the industrial age the U.S. left when it entered the information age. Companies were probably looking for hard-dollar savings when they invented the typing/WP pool. Worse than that, pools have buried very valuable technology in the corner or the basement.

If the early and late majority people could see that technology working on desks around them, they would start to see valuable applications for the equipment.

In addition to enriching jobs, OA can frequently improve employee morale and, ultimately, productivity. It does this by smoothing down chaotic peak loads; eliminating boring work valleys, where people feel they have to stretch out their work; and by introducing a wider variety of work.

Lower unit cost should be a major accomplishment of OA and is one of the most convincing arguments for the early and late majority decision makers. Even with no layoffs, a good manager can understand that if the old cost was $10 per transaction and the new cost is $8, he can add substantial volume to a department without adding new resources. However, a word of caution: Don't be amateurish in determining unit cost. Do your accounting homework. You do not want to present cost data to management as justification and then have an accounting technician blow a substantially sound argument out the window because you didn't realize a task was fixed or semi-variable or you did not use a full absorption overhead formula.

Because the OA workstation has the inherent capability to do so many different tasks, it invariably lowers the unit cost because there are fewer steps, such as editing, checking, recalculating, forms, stations, time, supervision, error correcting and inspection time per invoice, order, new hire, proposal, benefit claim and customer inquiry.

Streamlining the operation is another of the more promising areas for OA. Probably the biggest contribution to the explosion in the use of personal computers is the ability of the OA workstation to perform so much work that used to be compartmentalized and specialized in the factory mentality.

There should be little doubt in the mind of even the most skeptical manager when OA can bring about a completed transaction by two people in three steps instead of the old 13 steps in three departments by seven people, with considerable delay in everybody's in basket and out basket. Every time a paper has to move, it requires some form of preparation to leave a workstation and then some form of preparation before it can be worked on in the next department. OA can eliminate all these little clearinghouse operations, which added no value, just cost, to the end product.

In addition to enriching jobs, OA can frequently improve employee morale and, ultimately, productivity.

Increased service is another benefit. Whether we are in factory or service jobs, we have customers or clients that reward good service by repeat business. Banks and insurance companies might be obvious examples of firms that will pay handsomely for service-increasing devices, but all firms should recognize their importance. OA can frequently increase the response time to customer inquiries, reduce the errors in processing, produce more concise and accurate responses, capture data for trend analysis, provide faster response on pricing or transaction status and so on.

Time saved for value-added activities offers another area for justification. Under cost-justification, we recommended that some of the time saved for principals might well be isolated for working on cost-containment or revenue-producing activities, brainstorming or task forces. Some of this time saved should also be singled out for value-added activities.

Suppose OA saves a principal one hour a week. Set up a rotating schedule on that individual's calendar to spend every Monday from 11 a.m. to noon on some critical topics and at the end of the year the department will be running substantially better because of that 50-hour block of time. These topics include more time with customers, planning for next year, scheduling work better, desk-checking employee work, counseling employees, training employees, writing policies and procedures, writing job descriptions, setting goals and holding department meetings.

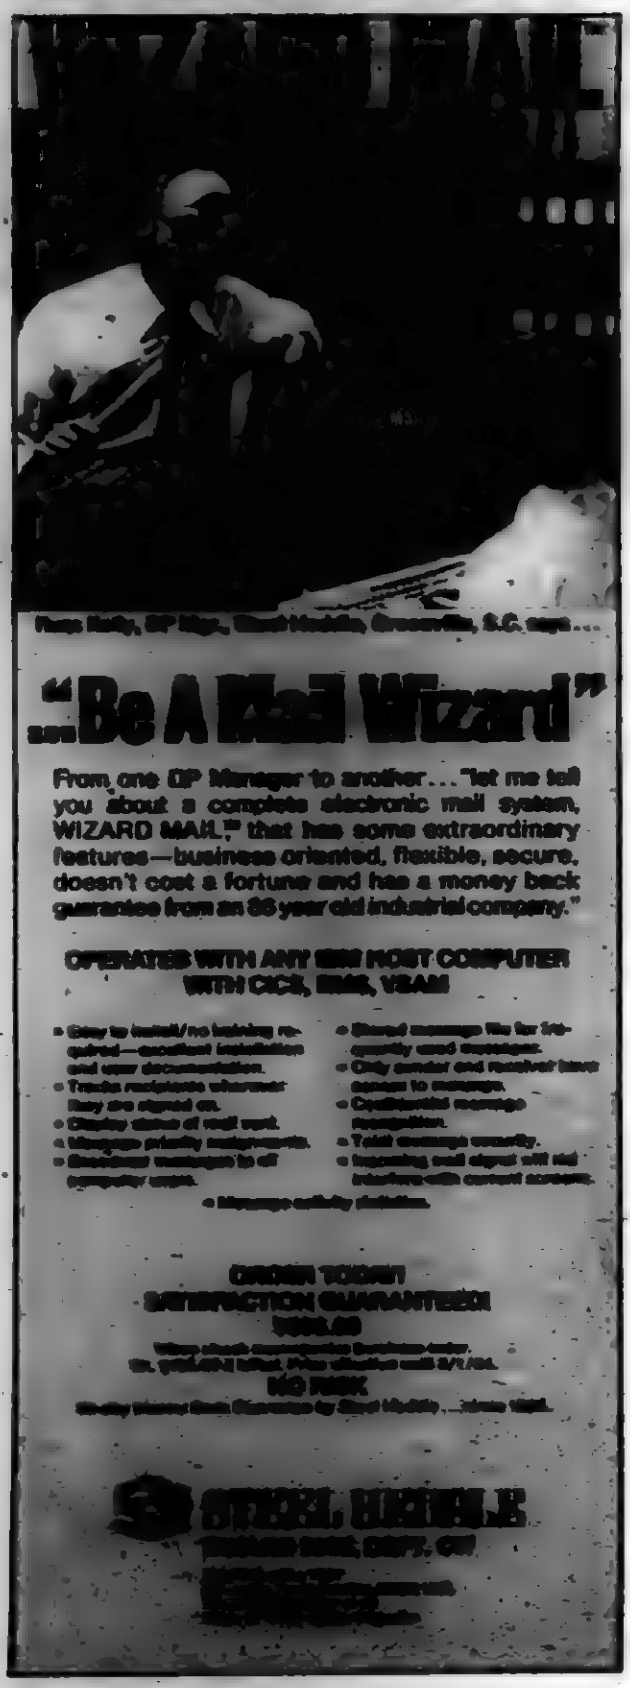
All these tasks add value to an organization and management is always complaining that they have no time for them. OA can fill this gap.

Although the guidelines above can help justify OA, it is ultimately up to the OA committee or department to produce appropriate and valid justification arguments that will satisfy their particular managements and will allow their companies to enter into the office of the future.

One last word of caution: Entrepreneurial, fast-track, high-tech companies are frequently managed by leading edge early adaptors and early majority people that quickly grasp the inherent productivity gains available through OA. Many of these companies are off and running with OA and experiencing the benefits of cost-justification and/or value-justification, whether they cared to stop and measure the results or not. (They usually do not.)

If your company or your company's OA program is managed by late majority personalities who prefer to wait until 50% of the nation is doing something first and not suffering from it, you may have a competitive problem. I recommend you quickly dig up those convincing justification arguments in your company so that it, too, can enter into the office of the future. OA

Shay is a manager in the New York office of Peat, Marwick, Mitchell & Co. and heads up the firm's white-collar productivity practice on a national basis.



ORCHESTRATING CHANGE

By Vernell K. Munson

A major obstacle to implementing office automation today is the traditional "bean counting" approach frequently applied to measuring productivity. That method may have worked well for the application of early computer technology, but it is no longer appropriate for the advanced technologies designed to support the individual consumer of the office environment.

An effective strategy for introducing new technologies in such nontraditional areas as professional, managerial and executive support goes far beyond basic training and end-user involvement in the design and selection of technology. At least in a general sense, users must understand how OA is going to change the way they think about their work and

about their expected roles in the process.

Until recently, computers were seen mainly as a means of handling more efficiently the input-process-output aspects of office work already being done. Office systems analysts found earlier factory work flow models useful in identifying where and how to apply early computer technology to achieve fairly well understood benefits — such as lower transaction costs.

Today, however, technology is moving beyond these infrastructural systems of the office toward support for the professional, the manager, the executive and — in a larger sense — the general business needs of the organization.

We still know little about how, in the long term, the individual knowledge worker will actually use new products and technologies developed to support managerial work. We do know that advanced technology holds great promise for nonquantitative, nontransactional office work. We also know change can be painful.

Success in introducing OA into nontraditional areas depends on the effective management of the process of change. Future users of a new technology need to learn more than how to push function keys — they need to be aware of and accept the need for changes in their own attitudes and behaviors and, ultimately, in the organization itself.

The traditional approach to using an office system to solve a business problem has been to define the problem in terms of the system's capabilities rather than to identify a business opportunity first and then look for an appropriate technological solution.

This focus on technology rather than on business is usually the first (and often the fatal) mistake companies make when developing implementation strategies for OA. Simply automating the artifacts of the office, such as calendars, "to do" lists and telephone directories, does not ensure a more effective and efficient office.

More specifically, if an individual has a time-management problem, putting his manual calendar on a computer does not guarantee that the person will manage his time better. Rather, the systems analyst and the user need jointly to rethink the work process involved. Before deciding on an automated approach, they need to analyze what has to be done when and why, and to identify the objectives and expectations that shaped the existing system.

If we shuck the old methods, how do we develop strategies for introducing advanced technologies into the office? One of the biggest difficulties for an organization is to identify a business opportunity correctly and then to choose technologies that let it take advantage of that opportunity. Taking off the blinders and seeing the forest and the trees requires discipline. The most effective approach is to integrate technology planning and business planning.

When the reason for introducing new technology has been determined, equally careful planning is needed for the next step — deciding what change is to occur and how to make it happen. Most companies tend to see training as the entire solution. They identify what applications will be automated and who will perform them. Then they send these employees off to a training course, where they learn how to push the buttons.

This approach works if the job is fairly routine and has been correctly analyzed, and if the users learn the new way of doing their jobs. Managers and professionals, however, may use a given technology in different ways to do their jobs. Therefore, training professionals to push keys does not guarantee the change will stick.

For example, the office systems group of a major insurance company decided its in-house lawyers would benefit from personal use of management workstations offering automated calendars, "to do" lists, telephone directories and other functions.

The legal department's secretaries were trained on the product and used it mainly for word processing. The lawyers were not given training because it was assumed they would learn from their secretaries how to use the terminals. Some basic applications — such as the department's library check-out system — were transferred to the system.

After six months, the department manager decided to keep the terminals, but only for the clerical staff. The lawyers had seen no benefit in changing their old ways. Many said they didn't understand all the excitement. They saw the terminals as toys, not as tools to help them do their jobs.

The problem, of course, was this implementation strategy lacked many ingredients necessary for the successful establishment of a new way of thinking. The introduction of the new technology should have been part of the senior-level planning process. Members of the management team, however, were treating the department members like guinea pigs. They did not see the terminals as solving a specific problem and did not view the decision to use them personally as essential for the lawyers to meet personal or departmental objectives.

Neither the lawyers nor the secretaries took part in the decision to acquire the terminals. But WP helped the secretaries so much that they overcame any initial resistance to change they may have felt. Otherwise they, too, would have gone back to their old way of doing things. At some point, ownership of the decision to change must transfer from the original decision maker to the person experiencing the change if the changed behavior is to stick.

A new technology may solve the problem that prompted the users to consider change, or it may offer a means of doing something not possible before. For example, the marketing department of a furniture manufacturer implemented a digital voice store-and-forward product. The decision makers correctly believed the system would solve the department's telephone tag problem. But it also opened up opportunities for communicating in ways not possible before. In retrospect, eliminating telephone tag turned out to be less significant than the fact that system users solved other problems — and created new opportunities — through creative application of the technology.

The traditional approach to using an office system to solve a business problem has been to define the problem in terms of the system's capabilities rather than to identify a business opportunity first and then look for an appropriate technological solution.

For an organization to adopt a new way of thinking, each individual must know about the coming change, develop a positive attitude and at some point assume responsibility for making the change. When employees brag about how they now do their work on a terminal instead of the old way, it is clear they own the decision to change and do not feel it was imposed on them. Pinpointing factors that cause people to change is part of successful change management. For example, the desire to maintain a competitive edge led the public relations professionals of a major financial institution to switch from typewriters to word processors. Although they had considered WP to be strictly a clerical tool, seeing one of their peers increase his productivity by using WP convinced them that, in order to get ahead, they would also need to use the new technology.

In addition, the apparent limit on the number of available terminals prompted staffers to ask for a workstation quickly before the supply ran out. After they requested the terminal — thereby owning the decision — they did not complain about change and worked nights and weekends to learn how to use it. The entire department (there really were enough terminals to go around, of course) was using WP within only a few months. The department manager said later that if he had mandated change, the staff would have resisted or possibly refused outright to get involved. He identified the right technology and the right motivating factors and, in a sense, let nature take it course.

Underlying the process of managing change are two assumptions: A desired change will be for the better, and the choice of technology is the right one. The right technology may solve either a perceived problem or a problem not immediately apparent when the process was set in motion, or it may offer an unforeseen opportunity to do something that couldn't have been done before. If the perceived value of the change outweighs the perceived cost — including the pain of personal change — it is likely the change will stick and the technology intervention will be successful.

In evaluating results, managers should not insist on a direct relationship between their expectations and reality. The furniture company, for instance, would be shortsighted if it judged the impact of voice store-and-forward system only against the elimination of telephone tag. This would ignore the unforeseen positive results that were not built into the assessment model. Nor should OA planners focus on the product as the critical variable. The product is a neutral element. It is the change management strategy that determines success or failure.

More and more OA products whose ultimate impact on the office will not be well understood for some time are finding their way to the desks of knowledge workers. As this happens, office systems planners are going to find traditional input-process-output models less and less useful. What they need now are approaches that incorporate the theory of change management.

The diffusion of innovation within a culture — in this case the office — follows a known pattern. After it has been developed and tested, an innovation, along with good reasons to accept it, must be communicated to those who are expected to change. People need time to adopt or reject an innovation. Change occurs if and when the innovation is adopted.

The challenge and opportunity we face in implementing OA technology is to shorten the cycle of innovation diffusion and adoption. We must develop new strategies tailored to the nature of knowledge work if we are to manage the introduction of new technology effectively and to realize the promise of office automation. OA

Munson is manager of the Advanced Systems Laboratory at Wang Laboratories, Inc. in Lowell, Mass.

THE TRAINING PROCESS

By J. Thomas Monk and Kenneth M. Landis

One of the most overlooked issues in work place automation is the training required to support and sustain the new automated environment. Most organizations' approach to training is strictly on the job, through trial and error. This blind-leading-the-blind approach invariably follows little or no formal training.

In cases where the vendor has not bundled training or consulting time with the system, the end users are usually on their own. Rather than accentuating and enhancing the use of office systems, this traditional approach effectively retards the full development of the office information environment. However, work place automation has a profound effect upon the organizational structure (both formal and

informal) and upon information flows and individual jobs. New approaches to training might indicate ways to help the user incorporate these tools in his own work style.

One of the challenges of work place automation management is delivering the necessary training to the appropriate audience. Training, not technology, provides the vehicle for improving organizational effectiveness. The technology is nothing more than an "information engine," and the end users are the engineers. Training in the automated work place should be defined as the vehicle to promote both effective and efficient use of information.

Why make the investment? Because information is an important business resource and must be managed with the same intensity as other business resources, such as personnel, plant and equipment and cash. It is standard practice to have specialists handle important business functions such as compensation, benefits and facilities management programs. Although work place automation does not produce information specialists, training must focus on the use of the available tools and technologies to allow users to do their jobs better.

Even when presented with this unique opportunity, organizations still do not emphasize training; in many cases, they may even relegate it to unassigned or second-tier personnel. For an organization to achieve maximum return on investment from the use of technology in the work place, a directed, viable training program is mandatory.

The decision to employ technology vs. existing operations to support a business strategy is only the first step. The equally important decision must be made to invest in the training necessary to ensure that the technology succeeds. Any organization wants to make optimum use of its information. To ensure this, training and development programs and services must be developed, implemented and coordinated to meet both business and human needs. If either of these two needs is overlooked, the new information automation systems will be viewed as either another edict from management or, even worse, as job threatening.

These programs and services must simultaneously address both technical and professional skills training needs, which will evolve as a result of the new information environment. Because of this critical need to synchronize training, the training strategy must be developed in the same manner and with the same attention to detail as a business strategy developed for the delivery of goods and services in the marketplace.

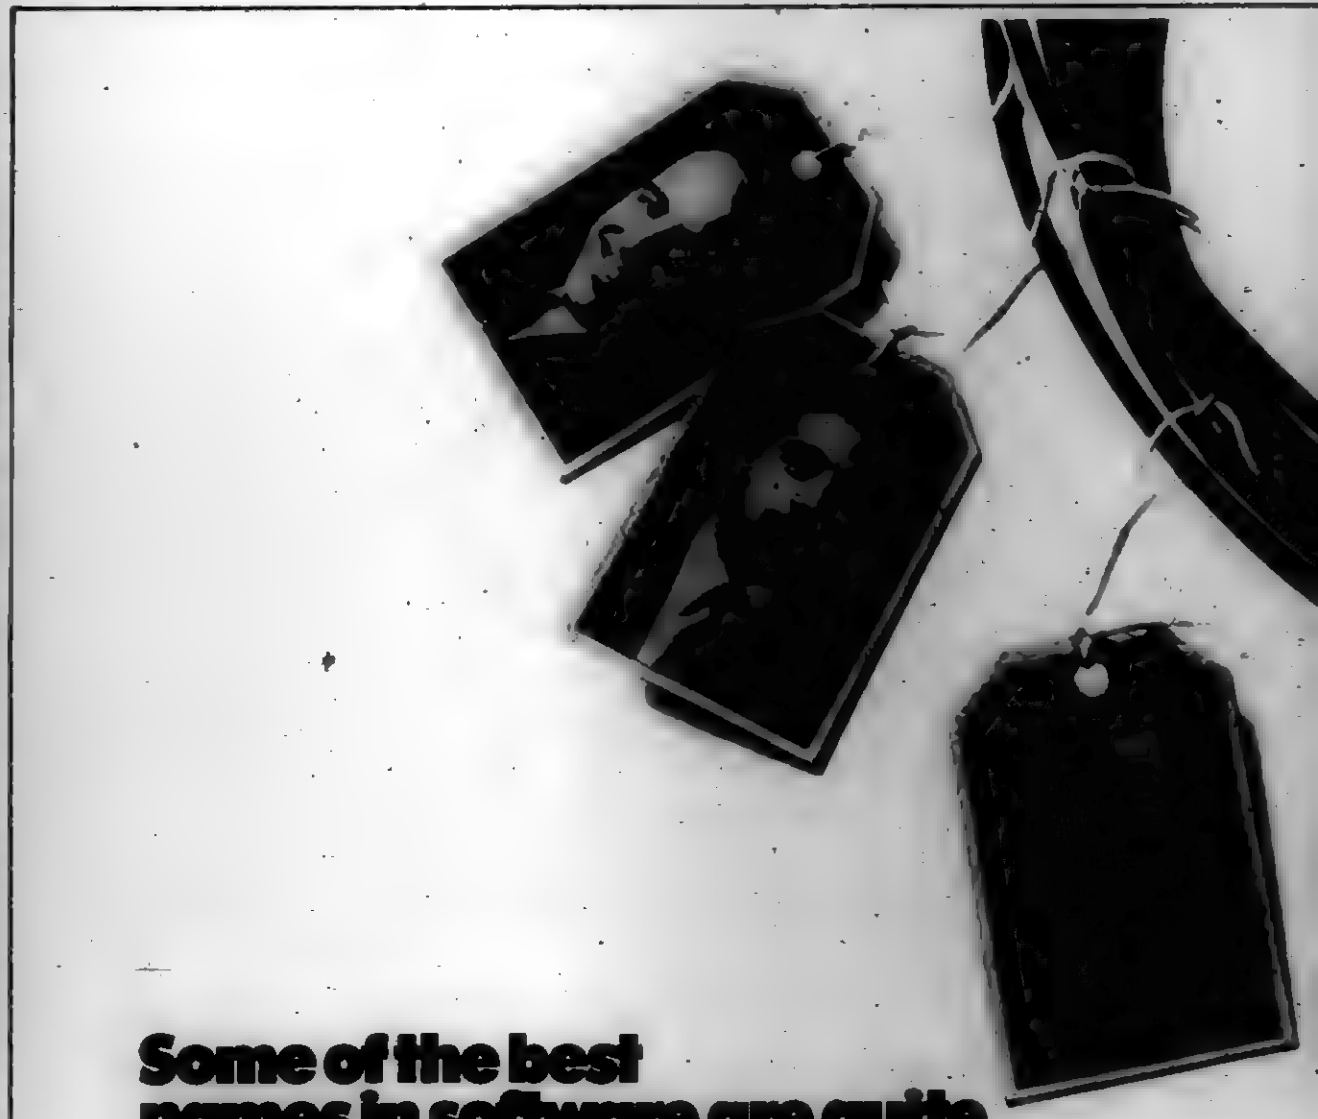
The first task in the development of a training strategy is the identification of the target market or audience. In any organization, whether a Fortune 100 corporation or a private business, the work force can be segmented into discrete groups for which a training product can be developed.

The technology is no more than an information engine and the end users are the engineers. Training in the automated work place should be defined as the vehicle to promote both effective and efficient use of information.

For purposes of illustration, let's look at a company that decided to use technology to solve a business problem. The name and business of the company have been changed.

The Triangle Magnet Co., located in the Midwest, has 500 employees. In early 1983, after pursuing an aggressive two-year growth plan, Triangle's management realized that, because of the business' growth, they now had serious problems processing orders; communicating price changes; and coordinating the activities of the marketing, manufacturing and home office support groups.

The executive vice-president of operations commissioned a study, which resulted in the acquisition of an integrated office information system. The system encompassed all the home office departments and all the regional offices of the firm. A key point of the study was analyzing how the employees of the company used



Some of the best names in software are quite attached to our network.

These people know PCs. They also know a good idea when they see one. That's why they're building future networking software around today's networking standard—Ethernet. And why they chose our PC networking system to help them do it. EtherSeries from 3Com.

What EtherSeries is doing for them.

"3 large, growing, and diverse Ethernets are at the heart of our software development activities. Our 3Com hardware has been very reliable—it has never failed us."
—Bill Gates, Chairman, Microsoft (Bellevue, Washington)

"We want to develop our popular dBase II® to a multiuser networked database environment. To meet the demands of our customers we chose the high-performance 3Com EtherSeries.""
—David Clayton Cole, Chairman, Ashton-Tate (Culver City, California)

"The ease of sharing information and printers led our 1-2-3® advanced development team to choose 3Com's EtherSeries® over all of the alternatives."
—Mitch Kapor, President, Lotus Development (Cambridge, Massachusetts)

"We wanted network software transparency. Our PFS:® software runs without ANY change on 3Com's EtherSeries"—it protects our user's software investment."
—Fred Gibbons, President, Software Publishing (Mountain View, California)

"The Ethernet standard and 3Com's EtherSeries® will be an important part of our in-house networking strategy. It provides the connectivity we require for our growing organization."
—Bob Frankston, President, Software Arts (Wellesley, Massachusetts)

"Our mainframe link software and Peachtree software ran perfectly in the 3Com environment. We dropped

and disseminated information.

Based upon the results of their study, Triangle Magnet segmented its work force into the following categories:

- Decision makers or decision information users: 10%.
- Staff members or information handlers and processors: 60%.
- Manual laborers or questionable users: 30%.

Triangle Magnet's objective and justification for investing in the office system was to use the technology, coupled with a training and education program, to increase the percentage of decision information users in the company. By teaching the information handlers and processors to use information effectively, this group could increase its span of control and, in effect, could become decision makers. This in turn would enhance Triangle's ability to respond to changes in the business environment.

One of the most important issues a training philosophy must address is that of personal fears. This anxiety will take many forms: For some, it is the fear of failing in front of peers or subordinates; for others, the fear of trying at all.

The study also indicated that, from a technological and managerial perspective, Triangle's office operations were years behind its marketed products. The introduction of the new system provided the company with an opportunity to reorganize and streamline its operations at the same time it introduced the new information tools. Triangle also had an opportunity to increase the effectiveness of members of the category called "questionable users." Under the auspices of the training program, TMC's management made a conscious effort to identify and groom high-potential candidates from this group.

To develop a cohesive training program, companies must adopt and standardize on a training philosophy. A successful training philosophy for work place automation reflects management's needs and concerns and is sensitive to the needs of the target audiences.

One of the most important issues a training philosophy for the automated work place must acknowledge and address is the issue of personal fears. The introduction of technology will cause varying degrees of personal anxiety at every level of the organization. This anxiety will take many forms: For some, it will be the fear of failing in front of peers or subordinates; for others, the fear of trying at all. A key element of a successful philosophy is a plan to minimize personal exposure, thereby reducing fears.

An equally important issue is the differentiation between management skills and job-related or task-oriented skills. Each segment of the work force requires different skills to perform its function for the organization. The training philosophy that explicitly acknowledges these differences provides the foundation, direction and scope for developing the training strategy and subsequent programs. The training philosophy defines the training that each segment of the work force should receive to support the business.

Developing the training strategy: The combination of the training philosophy and the composition of the target audiences defines the training strategy. Each segment of the work force requires a basic set of managerial and job-related skills. In the case of Triangle, the strategy was:

- To provide the decision information user segment with management development training, which would represent investment in this segment and would provide the basis for succession management.
- To provide the information handlers and processors with training that would enhance the skills necessary to accomplish their present jobs. The training would be tailored for new personnel. Training for the current staff would be flexible in order to accommodate changing job dynamics caused by the new technologies.
- To provide the questionable segment with specific training that focused on a particular task for a particular reason. This group would be exposed to only those

EtherSeries" right into our IBM Information Center and can now share disks and printers."
— Dennis Vohs, Executive Vice President, MSA (Atlanta, Georgia)

"We wanted the expandability of 3Com's Ethernet as a base for our networked products. VisiSeries" for EtherSeries" is the beginning of a family which will include VisiOn.""
— Dan Fylstra, Chairman, VisiCorp (San Jose, California)

What EtherSeries will do for you.

Tying into 3Com EtherSeries was a smart business move for these PC software experts. And it can be for you too. You'll maximize office efficiency, now. Cut operating costs, now. And you'll realize the full potential of your IBM PCs using software that is readily available off-the-shelf, now. All for the low price of $950 per link.

And until January 31, 1984, we'll give you our award-winning EtherMail — a $750 value — with the purchase of EtherSeries and three PC links.

EtherSeries is available at leading computer stores. Call or write Cory Randall at 3Com for more details.

subjects required to do a specific job because this segment's present work load was, in the classic sense, a textbook example of Taylorism.

Training techniques and systems: The inventory of training techniques and systems available is limited only by the creativeness and skills of the trainer. Technology has advanced to the point where multimedia presentations are no longer prohibitively expensive. As the cost of human resources continues to rise, alternative training techniques become more feasible.

While deciding what form of training systems will be both appropriate and cost-effective, organizations must consider an important relationship: the depth of knowledge required vs. the investment required. A training program that falls one dollar short of what's needed can destroy the potential of a million-dollar system. A well-defined program reflects management's expectations. The actual training techniques will depend upon the investment, the target audience and the depth of knowledge required (the philosophy).

Training techniques can be traditional, technological or innovative.

Traditional training includes the one-to-one relationship as well as lectures, workshops and seminars. This category may be the most expensive to implement because of its high labor intensity. As the size of the target audience increases, the resources must be increased proportionally or the schedule of events must be extended.

The traditional approach is better suited for developmental training; it facilitates the exchange of concepts and ideas by creating an atmosphere for dialogue. In many instances, the traditional approach becomes synergistic as role playing emerges. Nevertheless, the traditional approach is neither cost-effective nor good for specific skill training. The one-to-one relationship is direct and personal, which in many cases causes the training program to appear management-oriented rather than product-oriented.

Triangle believed the traditional approach would be a good investment for its management group. Individuals were selected for training in project management, the general management skills of coaching and counseling, effective speaking and writing and interpersonal skills development. What was interesting, however, was that Triangle also chose to use one-on-one coaching when they had installed the new equipment and were ready to implement the new system and procedures.

Because Triangle considered it important to minimize personal risk, it decided to introduce the new technology through traditional one-on-one and small group seminars. Other companies have

followed this philosophy by teaching basics to peer-level managers in a workshop setting and then allowing each person to use the technology as he desired. Personal consulting should also be available, as the manager requires it, to enhance the benefits derived.

Triangle wanted to use technology to approach its information handlers because specific skill training requires a structured environment of: Input → Practice → Feedback → Motivation. In the past, the company had taught the use of the keyboard in a classroom setting, and the training proceeded at a set pace. This technique worked well for fundamentals, but as the personnel became more knowledgeable, the approach became less and less attractive because of time constraints and costs.

After the staff learned the basics of the new system, Triangle decided to use computer-assisted instruction (CAI) and multimedia tutorials to teach the new office practices. The investment required was a one-time cost to develop the office policies, procedures and tutorial; plus the cost of the vendor-supplied CAI package. The CAI package was a structured tutorial that used reinforcement through testing and self-paced advancement.

New training technologies have provided many other cost-effective alternatives for exchanging information and establishing a knowledge base. Videotape presentations have proven effective for presenting overall concepts or ideas. One technique that works uses a known expert to lend credibility to a program. Videotape is an excellent vehicle for demonstrations or for illustrations of current situations (such as work flows) and how they will change in the future.

When combined with workbooks, videotapes become multimedia. When the desired result is more skill-oriented, a more active medium is required. In this case, you need to integrate hearing and seeing, as well as doing.

The use of television has greatly increased recently for such things as behavior modeling and modification, guided discussions (with a trained group leader), experiential learning, live demonstrations or classroom simulation. When television-based training is carried to its limits, videoconferencing and in-house closed circuit networks are the result.

As work place automation matures, vendors will enhance the usefulness of on-line Help facilities. Nevertheless, the user will need a base knowledge and understanding of equipment operations before on-line facilities will have an appreciable impact.

The strength of on-line Help facilities is that they provide a single automated reference manual for a user when questions arise. A good Help function will provide available alternatives, including an explanation of the alternatives, at the point where the problem occurred. More recent versions also allow data to be entered from the Help screen and then passed back to the point in the program where the trouble occurred. Help is an excellent way to provide initial training as well as continual reinforcement after the process has been implemented.

The innovative training category is really only a combination of traditional and technological methods with the objective of using resources effectively. Triangle wanted to teach very specific job-related skills to its "questionable" segment to improve production efficiency and to decrease the cost of manufacturing its products. Printed job aids had effectively provided quick answers for many day-to-day questions for this group; Triangle therefore developed a series of plastic-encased aids, which were placed at each workstation in the production process. When an employee had a question, he would use the job aid before he called a supervisor; as a result, a majority of problems were solved immediately. Triangle's job aids formed a good way to allow training to be used to address "nonroutine" routine problems. Classroom training was offered on a regular basis to the supervisory personnel.

As a direct result of its philosophy, Triangle adopted another approach to training. Employees throughout the organization's departments had been identified and targeted to play a key role in the training strategy. These employees demonstrated a high potential for advancement at the company through job performance and willingness to accept additional responsibilities. This group was offered a completely different training series that included both technical and subject matter training. Triangle's management called these employees "lead implementors."

A lead implementor was an employee with a functional business background rather than a technical background. These people were able to communicate in nontechnical terms; as a result, they were able to understand fully the business requirement. Triangle found that the offices that had lead implementors quickly started using the new integrated system because the lead implementors could translate the business requirement into an automated solution in language the other office workers understood. The lead implementors became a virtual extension of the training staff, providing a constant, on-site resource.

In the final analysis, work place automation is not just installing new equipment and issuing a new set of policies and procedures. The human resource is often the critical success factor within the new environment. Training, then, becomes paramount and usually represents a greater investment than that usually contemplated. Many vendors offer some training, but this training is either too technical or too skill-related for both information handlers and decision makers.

Successful users of work place automation have developed unique approaches to training by adapting various techniques to their unique needs. These companies have been successful because they took the time to define their objectives and training philosophy and because they implemented strategies that deliver the appropriate amount of knowledge at the appropriate level within the work force. VOICE-DATA PBX DEBUTS

BY JOHN COMBS

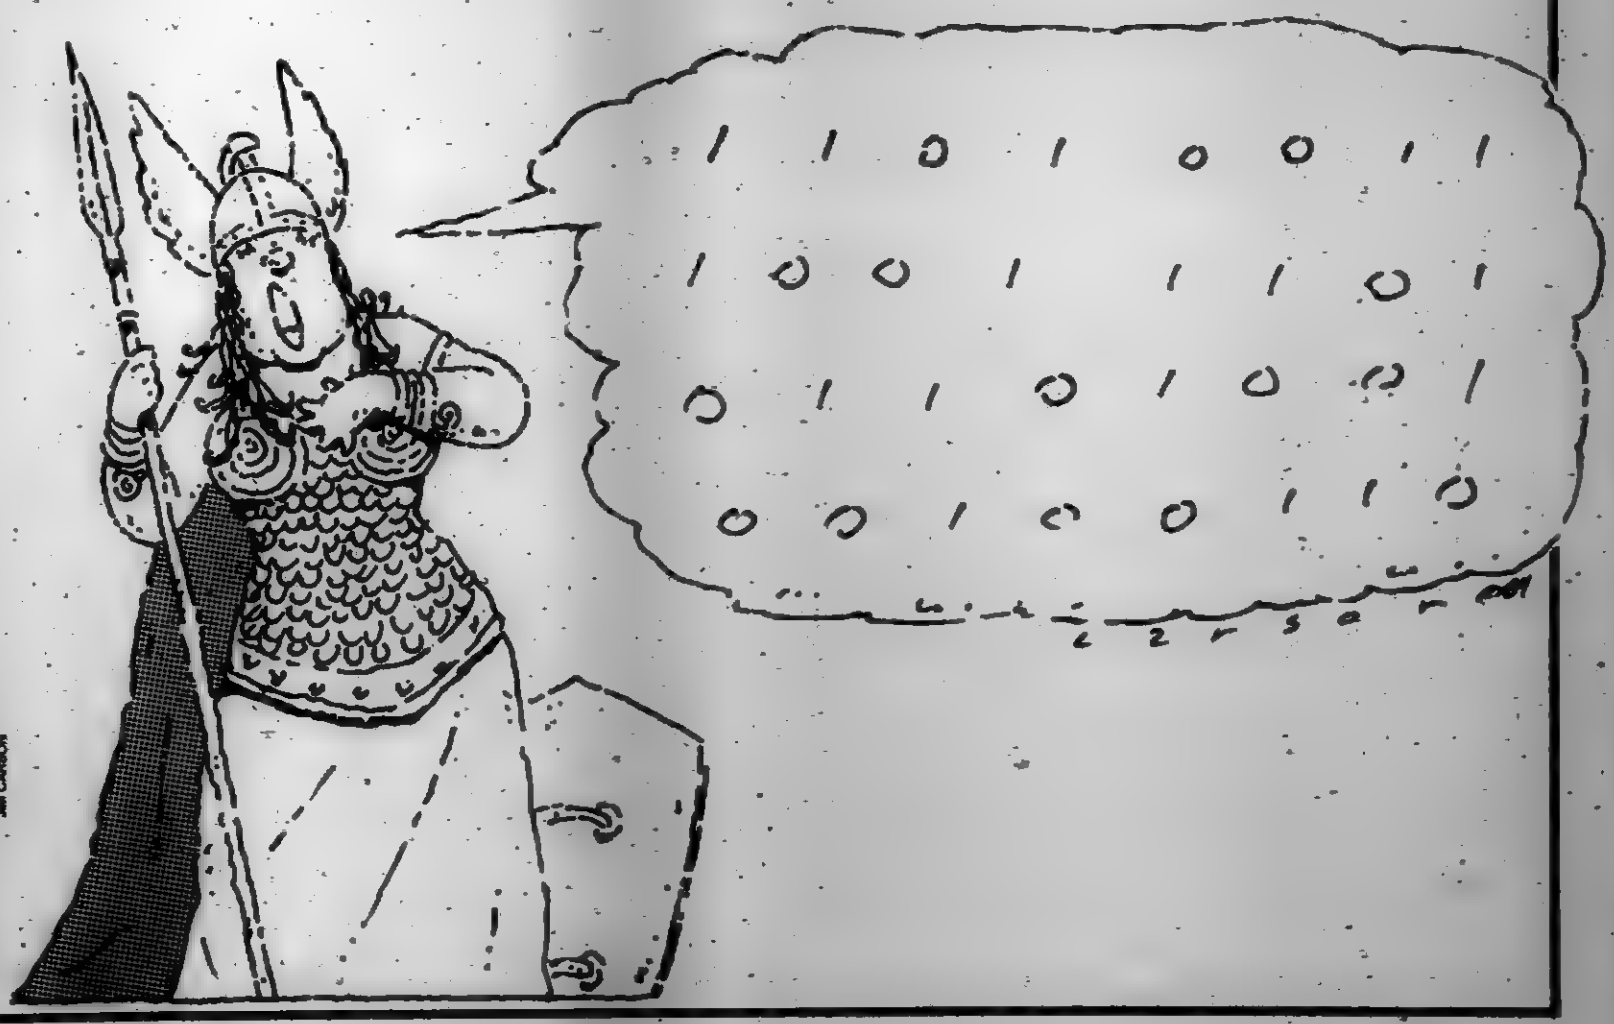
A conflict exists between the term "office automation" and the nuts and bolts procedure of automating today's office environment. As a result, management is often wary of the OA concept, frequently envisioning today's office as a treadmill that is becoming increasingly difficult to control in relation to costs, new equipment and human resources.

Current OA technologies include word processing, communications, accounting and business support systems, electronic mail and messaging systems, as well as public data bases, information services and private centralized computer systems serving remote offices through data communications networks.

Though these units and information sources have individually increased office productivity, a major source of the conflict between the OA concept and reality can be credited to the inability of these individual systems to communicate with each other. Particularly in larger organizations, this lack of equipment integration has led management to resist the OA concept because the full benefit of the technologies involved has not been realized.

The voice-data private branch exchange (PBX) is a solution to this problem. Its value can be traced to the data terminal, which commonly provides access to most office information sources. Approximately 5% of today's office workers use a data terminal in their jobs. This number will increase to 50% in the near future because of the increased need for information and the reduced cost of terminals. Whether the device is a display or dumb terminal, a personal computer, an intelligent workstation or an advanced voice-data workstation, the voice-data PBX can effectively offer the information terminal user access to various OA technologies and information sources.

The voice-data PBX is an office switching system that handles voice communications in addition to data



communications. Modern PBX systems have been switching data in the form of digitized voice for the past seven years.

Consequently, it is highly feasible for the digital PBX to add the capability of switching computer data. The only modification is in the interface to the data distribution system and the data terminal. The actual PBX switching network does not need to know whether the information it is passing is digitally encoded voice or data.

One major advantage the voice-data PBX offers the data user is access to many different resources, such as computer ports for local applications and modems and multiplexers for connecting to remote computers. Formerly, the user was connected directly to a computer. A different terminal was used to access an application stored in another computer. With the voice-data PBX, the user's terminal can become a multipurpose workstation by independently switching to many computers upon request.

Cost-efficiency is another important value of the voice-data PBX. The automated office already utilizing a PBX has an extensive local network, the telephone wiring plant, which can be exploited for data transmission at low cost. When the telephone instrument sitting on every office worker's desk is connected to the voice-data PBX, it can become the outlet for numerous data features.

For obvious reasons, the data terminal is a cornerstone of the OA concept. The voice-data PBX is flexible enough to accommodate a wide variety of terminal types, as well as future terminal installations. At present, the most popular terminal is the low-cost asynchronous Ascii, which is capable of sending and receiving data at rates up to 19.2K bit/sec. They also represent 90% of the market and will continue to proliferate in the office environment.

More sophisticated data users or those who require local computing power for specialized functions may currently be using an intelligent terminal or personal computer. Because of the popularity of these devices, the need for intercommunications increases, as it also does with disk and printer services for resource sharing.

Intelligent terminals and personal computers rely on file transfers from a centralized data base to the local intelligent terminal for processing of information. Fast response time is an important factor in these transfers in order to enhance productivity. The voice-data PBX can handle asynchronous data rates (up to 19.2K bit/sec) and synchronous rates (up to 56K bit/sec) in order to support high-speed file transfers.

Just as a variety of data speeds must be accommodated, a multitude of data formats and protocols also exist. The voice-data PBX is capable of connecting various terminal types with their host computers. To do this, it must be transparent to the data and control signals being switched. Two examples of specialized data formats that require transparent switching are word processing systems and computer graphics terminals.

With the voice-data PBX, the user's terminal can become a multipurpose workstation by independently switching to many computers.

A step forward in PBX technology is the computer-to-PBX interface (CPI) standard, which has been accepted by Digital Equipment Corp., Hewlett-Packard Co. and some other major computer manufacturers. Certain manufacturers have enhanced the technology by designing systems that will support true end-to-end CPI, allowing not only T-I interface to computers, but also terminal-to-computer parameter exchange. Fewer steps in protocol conversion result in a more effective link among terminal, PBX and computer with less costly telephone wire utilized as a shared resource.

An emerging trend in the telecommunications and DP industries is the introduction of combined voice-data workstations. These workstations incorporate a full complement of voice features and data terminal features. These new terminals are an important development in OA because they integrate voice and data at the user's desk and bring a number of information resources to the decision maker. As these terminals become as prevalent

Nearly Nine Million Computer-Involved People Around the World Rely on Our Publications For the News They Need.

We're CW Communications/Inc.: the world's largest publisher of computer-related newspapers and magazines. And wherever you go in the computer world, you'll find computer-involved professionals reading—and relying on—our publications. With highly trained and experienced editorial staffs all over the world, our publications give readers the best and most up-to-date information available in this rapidly changing industry.

Around the world:

We publish, co-publish or provide editorial services to the leading computer publications in the world, including publications in all of the following countries:
Scandinavia—Denmark, Sweden, Finland and Norway.
Western Europe—Germany, United Kingdom, France, Italy, Spain, Greece, the Netherlands.
The Mid-East—Kuwait, Saudi Arabia.
Asia/Africa—People's Republic of China, Korea, Japan, Singapore, Southeast Asia, South Africa.
The Southern Pacific—Australia.
Central and South America—Mexico, Brazil, Argentina, Chile.

In the United States:

In the world's largest computer market, we publish a whole series of publications that cover different aspects of the industry. Our largest publication, with more than half-a-million readers every week, is *Computerworld*, a weekly newspaper aimed primarily at larger computer users. Its companion publications include *Computerworld Office Automation*, *Computerworld On Communications* (each published semi-monthly) and a series of *Buyer's Guides* covering all major segments of the industry.

In addition, we publish *MICRO MARKETWORLD* for dealers, distributors, retailers and others involved in the microcomputer marketplace. For microcomputer users, we publish *InfoWorld*, *Microcomputing*, *PC WORLD*, *80 Micro*, *inCider*, *Run*, and *Hot CoCo*.

No one in the world publishes more computer information for more people in more countries than we do. And we'd be happy to give you more information on any of our publications. Just send a telex to our U.S. offices, attention CW International Marketing Services, (telex #95-1153) or write us at the address below.

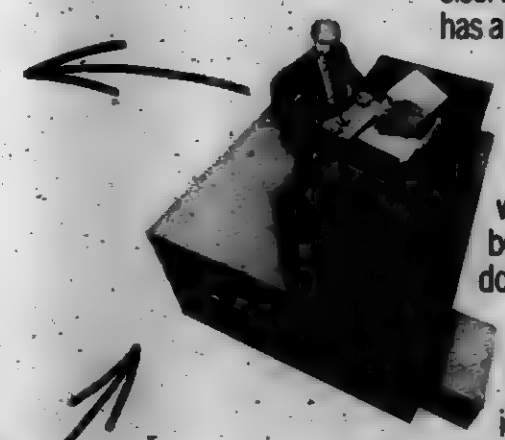
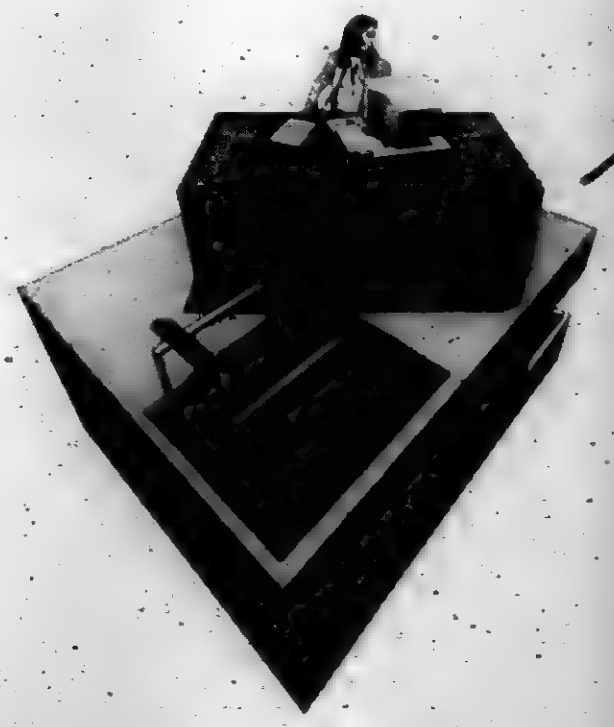
We bring everything in your office closer together. That's what puts Wang way ahead.





Let's face it. Making things work together is where most computer companies fall apart.

They talk about compatibility, while they deliver a family of products that relate to each other in name alone.

Quite simply, that's what separates Wang from everyone else. Because unlike everyone else, Wang has a family of products that is truly compatible. From personal computers. To word processors. To office information systems. To large computers.

And it stands to reason that when everything in your office works better together, everyone in your office does too.

As more people manage information and communicate it in more ways than ever before—in words, images, numbers and voice—it just makes sense to choose Wang.

Because Wang offers you total solutions that bring everything, and everyone, in your office closer together.

That's what puts Wang way ahead.

For a presentation on Wang office automation computers, call 1-800-225-9264. Or write to Wang Laboratories, Inc., Business Executive Center, One Industrial Avenue, Lowell, MA 01851.

WANG

The Office Automation Computer People.

and useful as the telephone is today, they will become a significant tool for retrieval and manipulation of information in the automated office.

Still another important value of the voice-data PBX is its suitability for networking. Networking capabilities — the ability to efficiently link various information sources together — have become increasingly more critical. This has happened because the information source or service a user requires often exists outside the local facility. In this case, the user wants access to a data communications network to connect to that distant resource. The voice-data PBX is capable of interfacing with data communications networks via analog facilities. The PBX is the hub of the office's voice communications network; it is a small step to adapt that hub to provide data communications over voice-grade lines.

The modem pool is the prime tool for this application. For example, the system can route the data call via the modem pool to a company's private network over leased or private lines. This would be particularly effective if a company relied extensively on networks to communicate with distant computers, such as financial institutions or airline reservation agencies.

Another example might be the case of the user that requires business information services, such as Dow Jones reports. This user could use the modem pool to access information service data networks, such as Compuserve, Inc.'s offering, over central office or other common carrier trunks. Other global communications networks such as GTE Telenet Communications Corp.' Telenet and Tymnet, Inc.'s Tymnet are being used by many companies for corporate data base access, as well as for access to advanced office features such as electronic mail and protocol conversion.

Still another important value of the voice-data PBX is its suitability for networking. Networking capabilities — the ability to efficiently link various information sources together — have become increasingly more critical.

The voice-data PBX system will offer more advanced networking services in the future through direct digital interfaces. More effective data transfer can be realized over the public data networks which offer interfaces at 56K bit/sec and higher synchronous data transmission rates on the customer premises. Networks such as the Advanced Information Service (AIS)/Net 1000, Telenet, Tymnet, Satellite Business Systems and others are now emerging in the marketplace with this capability.

Eliminating the direct connection between the terminal and the information resource through the installation of a voice-data PBX can assuredly provide greater access to different resources for the user. However, these gains can be negated if the PBX imposes another level of procedures to access the desired resource. User acceptance of the voice-data PBX is an important element in providing the maximum utility of the data switching service in the office.

One procedure may require the user to set up the data call similar to dialing a voice call using the traditional telephone. This procedure can be removed using a prearranged connection much like a hot-line voice call.

This can be effective if the user is dedicated to one particular function. However, the intensive user needing switching access to multiple resources requires the PBX to be transparent for establishing data connections. This can be accomplished by allowing the terminal rather than the telephone to be the call-originating device.

The user then keys in the task to be performed (or the name of the source), rather than the directory number (or complex code) of the resource in which it is stored. In this way, the procedure is oriented more toward both the DP professional and the occasional user.

The voice-data PBX has another advantage over a separate data communications or switching network: the centralized maintenance and administration facility. Service orders can be used to specify both voice terminal and data terminal changes. The service order routines may be accessed through the data switching feature via the terminal, allowing an authorized user to input moves and changes on any terminal.

This can offer two benefits to the administrator of a company's communications system: reduced costs of terminal moves or additions, and a common procedure to be used for both telephone and terminal changes.

A centralized facility would also be useful for collecting administrative reports such as call detail recording and traffic reports. Similarly, maintenance and testing of the system are simplified through the common control. Integrity of the data transmission network may be verified through manual and automatic loopback of data at the data interface unit and at the PBX inlet. If the PBX detects a problem affecting service to a number of users, it can generate an alarm and maintenance message so that a serviceman can quickly repair the system.

The OA concept has generated several theoretical tangents during its development. One tangent, the tripod theory, saw OA composed of three basic technologies: DP, WP and telecommunications. Each technology would occupy its own corporate turf with distinct responsibilities. Another saw a tug-of-war between the PBX and the computer.

However, what appears to be occurring is exactly what OA analysts originally predicted some 20 years ago — a merger between two technologies: telecommunications and information processing — and it is drawing mixed reaction.

It is important to underscore that, despite its recent period of rapid growth, telecommunications is not a new industry. Leading edge developments in the industry date back more than 50 years, with the research and development of the semiconductor and transistor paving the way for the computer industry.

Present-generation voice-data PBX and communications-related instruments like electronic telephones and voice-data workstations are unmistakable indications of a merger between technologies. Further signals have been received from Wall Street, where several industry giants are deliberately crossing paths with new business ventures.

The old guard from both industries will undoubtedly voice concerns. The question of departmental control within corporate organizational structures is already beginning to surface. But in an extremely competitive market where the stakes are high, two important questions remain: What does the end-user need, and what is the best solution?

The voice-data PBX offers the advantage of integrating voice and data communications in a single system, thus allowing OA to take a giant step forward, away from the conceptual storybook stage. OA

Computerworld/Mexico talks to computer people south of the border.

There are currently 15,000 installed computers on 12,000 sites in Mexico. These include mainframes, medium and small computers as well as personal computers. Experts forecast the sale of small, medium and large computers to grow at an average annual increase of 20% during the 1980s, despite Mexico's current economic problems. Minicomputers will be in great demand since they are small, affordable and efficient. U.S. manufacturers have maintained a 80% market share for the past three years with sales of over $182 million. *Computerworld/Mexico* can bring your message to 10,000 key-decision makers in the Mexican computer community. Published on alternate Mondays, *Computerworld/Mexico* covers all the latest developments in hardware, software and terminals in addition to data processing and computer related subjects. Its goal is to provide useful information to data processing professionals throughout Mexico and Central America.

Information Systems Deliver

By Jeri Lynn Edwards

Data processing technology has promised two things to corporations: increased productivity of operational groups and integrated information management.

It has delivered consistently on the first promise; however, it has not been so successful in integrating information for planning and control.

Most companies find themselves with only a partial automation of their information systems, for several good reasons:

- ***Unproven benefits.*** Corporations want to understand the benefits and risks associated with computerization before they commit vast resources to it.
- ***Resource limitations.*** Most companies cannot afford to automate everything. Instead, they start in areas where consistent high quality is required and the potential return on investment is highest.
- ***Unavailable technologies.*** Computer technology is advancing rapidly. In many cases, however, corporate needs go beyond vendor offerings. For example, the need for good graphics that can be used in conjunction with text-editing equipment has existed for a long time, but only recently have such packages become available.

Constraints such as those listed above have caused most corporations to develop DP systems for various operational areas one at a time; given the state of technology, this has been a prudent strategy. Now, however, such piecemeal approaches make integration very difficult. The applications have been developed separately on various different computer systems, and the "hooks" required for integration with other systems simply do not exist.

Corporations (and individual divisions within corporations) are all different from the standpoint of information management. The following four stages of development summarize the range of conditions that may exist:

- Stage 1. Centralized automation.
- Stage 2. Decentralized automation.
- Stage 3. Rudimentary networks.
- Stage 4. Integrated information networks.

Centralized Automation. In Stage 1, corporations are just beginning to understand computer technology. One or two key functions are automated, usually in a centralized computer system under the direct control of a corporate DP group. Typically, the applications perform highly structured tasks formerly done by production workers or clerks. No provision is made for interactions between applications, even though they run on the same computer.

Stage 1 can be characterized as follows:

- A few business functions in important operational areas are separately automated.
- The automated functions are simple structured business tasks.
- The applications run on batch-oriented stand-alone computer systems under the control of a central DP department.
- Typically, they do not require a

sophisticated data base management system.

• The applications are not integrated, and the data is rarely shared (even though computer resources are centralized).

• Middle and upper management find it hard to use the reports that are generated (because of their bulk, complexity, and single-area focus).

Decentralized automation. As large organizations advance to Stage 2 in their management of information, they begin to automate more and more functions in the operational areas. In addition, minicomputers begin to proliferate. Every manager is struggling to meet deadlines, every manager sees that computers could help get the work done, the hardware is relatively inexpensive and the machines are getting simpler to program. In the quest for immediate solutions to pressing problems, it is not difficult to justify the purchase of minicomputers, small business computers, word processors and so on.

As a result, the corporate computing environment becomes decentralized. In the operational groups, independent systems spring up, geared totally to local concerns and relying on data bases dedicated to and customized around particular applications. These systems and their associated data bases tend to be viewed as private property because they are bought, developed and managed at the operational level. At that level, few managers think about the vague and distant problem of integrated information management and few think to consult the central DP department about the problem of compatibility with existing equipment.

Because of the variety of these systems and their applications (and the absence of central control), several different ways of entering and reporting information will probably develop. Some applications will be batch-oriented, as in Stage 1. Others will be transaction-oriented (designed to process data relevant to individual business transactions as those transactions occur). The transaction-oriented applications will have advanced data base management systems that allow managers to query the data base interactively. Some systems will produce periodic listings or reports that will be rekeyed into the central corporate data base. Occasionally, such reports will be transferred to magnetic tape; in that form, they will be sent to some interested organization.

Developments in Stage 2 can be summarized as follows:

Multiple computer sites emerge, often with equipment from different vendors. Applications move out to user locations, where the data is generated and used.

Specific business tasks are automated. The automated processes use separate data bases customized for the local environment. The end user is accountable for the quality of the data.

In Stage 2, few managers think about the distant problem of integrated information management and few consult central DP about compatibility.

Some applications may be interactive, transaction-based and on-line, although many will still use batch techniques for data entry and retrieval.

Very few automated linkages exist between the computer systems. When there is a need to share or transfer information, data produced on one system has to be transported physically to the other.

As in Stage 1, managers can get only raw operational information from the various computer systems. However, in Stage 2, they may be able to access some of it interactively.

Rudimentary networks. In Stage 3 of the evolution of corporate information systems, additional functions are automated and communications links or rudimentary networking facilities begin to spring up selectively between specific computer systems.

The communications technology remains rudimentary at this stage. Most often, it allows only simple bulk transfers of data between systems. However, data base management systems, which allow data to be accessed interactively by users at terminals and by processes running on the computer, are becoming more advanced. When combined with sophisticated networking software, these advanced systems extend the interactive reach of local terminals and processes across several machines, thus creating a single virtual system composed of geographically distributed computers.

Announcing MinCAR from Minolta.

It's finally here. The computer-assisted microfilm retrieval system so flexible, it not only can be tailored to meet your present needs, it can adapt to your needs as they change.

What's more, you may already own the most expensive component. Because MinCAR is designed to work with practically any DEC computer. From the Micro-II's to the PDP and VAX systems. And soon with many IBM models.

And that's just the beginning of MinCAR's flexibility. It's the only CAR system in the world that can work as a stand-alone system. Or be integrated with your existing mainframe to give you all the benefits of CAR as well as office automation, such as electronic mail or word processing.

MinCAR is so user friendly, operators can be trained in a few hours. Yet so sophisticated, the number of files it can handle is limited only by the amount of available disk space.

You buy only the components you need. From a single source. And trouble can be handled with one telephone call. In many cases, problems can be diagnosed electronically over the phone.

Your authorized Minolta dealer has all the details. Find him in the Yellow Pages or call 800-821-7700, ext. 327.

MinCAR from Minolta. If you already own part of it, you're just a step away from the incredible benefits of owning all of it.

Mail to Minolta Corporation, Micrographics Division, 101 Williams Drive, Ramsey, N.J. 07446.

The major new developments in Stage 3 can be summarized as follows:

- Rudimentary, static linkages are formed between various application domains.
- Interdomain information for middle management is derived from these linkages.
- Advanced data base management technologies facilitate interactive queries of the information within some application domains.

Integrated information networks. In Stage 4, information management systems achieve a balance between decentralization (users doing as they please locally) and integration (ready availability throughout the company of various kinds of information from various different systems). Clearly the establishment of such a system is more than a technical achievement. It represents upper management's firm decision and commitment, based on an understanding of the critical importance of information management to the health of the corporation.

An integrated information management system of this kind, providing managers with a dynamic view of the state of the corporation, would almost certainly improve the quality of tactical and strategic decision making.

In Stage 4, information management systems achieve a balance between decentralization (users doing as they please locally) and integration (ready availability throughout the company of various kinds of information from various different systems).

There are at least three competing strategies for bringing such systems into being:

The single-vendor strategy: A corporation might create a Stage 4 information management system by working exclusively through a mature vendor that offers a broad range of vertically integrated computer products: networking, utility processors, advanced peripherals (such as printers or optical character scanners) and user workstations. Such vendors promise an integrated environment to users purchasing equipment and software exclusively from them.

However, the single-vendor solution locks the corporation into the products of a particular vendor and such vendors typically offer only low-level interfaces to other systems. Thus, the single-vendor approach is reasonable under either of two conditions. Under the first, corporations have no applications running on computer systems made by other vendors. Under the second, they are willing to rewrite those applications and live with the constraints imposed by the technology decisions of the chosen vendor in the future.

If applications must be rewritten, Stage 4 becomes more a revolutionary than an evolutionary development in the life cycle of the information management system, and the cost may be prohibitive.

The network-operating-system strategy: Integrated information management systems can be developed from diverse computer systems if the organization is willing to develop a layer of software compatible with each computer, providing a common data base and network architecture. However, most corporations do not have the resources needed to do this, and there is an alternative.

Several groups, such as the International Standards Organization (ISO), the Institute of Electrical and Electronics Engineers (IEEE) and the Consultative Committee for International Telegraph and Telephone (CCITT) are working on standards for a software layer that would provide a network operating system.

Computer system vendors are expected to adopt these standards, which will make possible the development of integrated information management systems through the common interface.

The following factors will probably prevent most corporations from implementing network operating systems as a way of advancing to Stage 4 in their information management:

Most of the new standards will be completed between 1984 and 1986, and it will probably take six or seven years for a substantial percentage of the vendors to modify their hardware and software to accommodate these standards. Thus, corporations interested in integrated information management will have to wait a long time for vendor-supplied solutions.

The only way a corporation can avoid the delay is to implement a network operating system itself, and this would require resources few of them have.

In either case, a network operating system would introduce a substantial amount of processing overhead — the existing systems would end up having to do a great deal of additional processing to maintain the integrated information environment.

The intelligent-network strategy: In the third strategy for developing an integrated information management system, a network of similar processors is established to provide a unified interface through which diverse computer systems could be linked. This single multifunction network would link and manage all information resources, tying people, devices, data and procedures together.

Key features of this concept are the following:

The intelligent network would perform all advanced communications and integration functions for the corporation, such as data base maintenance and report/inquiry capabilities; format-translation services between various data record structures, document images, screen displays and so on; message switching for various forms of information, such as graphics, facsimile images, voicegrams, text and formatted data; and information routing to the appropriate recipients, by content as well as by address.

The corporation's various interactive domains would be connected through the intelligent network. The network also provides access to an external information source (Bell's Advanced Information System (AIS)/Net 1000), which furnishes commodity information, stock prices, news reports and other kinds of information.

Information sent to the intelligent network from the application domains can be forwarded to other domains or stored in the network. The network can automatically translate between the different formats of the attached data bases.

The intelligent network provides the best of two worlds. It is a corporatewide resource under centralized control. Thus, there is centralized access to all resources, but it is physically distributed throughout the company. Such an arrangement reduces the high communications costs associated with an integrated information management system based on a central monolithic computer. It also adds to the fault-tolerance of the system and facilitates the development of customized interfaces or gateways to the network for each of the local environments. Each application domain interfaces to the intelligent network through a gateway designed specifically to meet its needs and capabilities. Thus, each can obtain information with and offer information to other domains without knowing about the particular communications ability of those domains. OA

Communications.

How to tie things together today without being tied down tomorrow.

This April, *Computerworld Office Automation* will give you a close look at the world of communications products and services. You'll read about what's out there now and what's coming. And how to get started while leaving your architecture open for the technologies of the future. And you'll get it all from the perspective of end users who have to increase productivity *now* while making sure the their company's investment won't be obsolete in two years.

And that's not all. There'll be feature articles on:

- PBX *versus* local area networks and how they'll merge
- voice technology
- videoconferencing technology
- satellite technology
- inter and intra company communications strategies
- product evaluations and comparisons

And after we cover all the developments for you, we'll offer you strategies to link them all together into one integrated system.

Computerworld Office Automation is designed to give you OA information geared to the DP/MIS environment — in a way that no traditional office publication can. As one of *Computerworld's* 114,000 subscribers in the U.S, you'll get six issues of *Computerworld Office Automation* in 1984 — as part of your subscription! And if your users need to increase their communications links, you won't want to miss this issue devoted to Communications in the office.

If you've got office automation and office communication products our readers should know about, then you need to get your ad reservation in by March 2nd.To reserve ad space in this April 11th issue of *Computerworld Office Automation*, call one of the sales offices listed below, or Ed Marecki, National Sales Director at 617-879-0700.

TECHNOLOGY

MAYNARD, Mass. — Dectalk, a voice synthesis product that reportedly allows computers to read aloud and that provides unlimited vocabulary was introduced by **Digital Equipment Corp.** Dectalk will be priced at $4,000 and will be available in March.

DEC also announced enhancements to its Decmate II Office Workstation; its All-In-One product; communications links to Wang Laboratories, Inc. and IBM; a Unix-like operating system for its VAX minicomputers; and an agreement with Microsoft Corp. to support Microsoft Windows for DEC's Rainbow personal computers.

Among the enhancements to Decmate II were Decmate/Decspell, Decmate Graphics Option and WPS word processing software version 1.5. For its All-In-One system, DEC unveiled Decpage for high-quality document output and Decdx for transfer of full documents between VAX systems and DEC WP systems. The company introduced Bisynchronous Terminal Support to allow document exchange with IBM 3270-type terminals and VAX systems; and External Document Exchange, which allows full document transfer between VAX and Wang's OIS Office System.

Decspell, WPS word processing version 1.5, Decpage and Decdx will be available this spring and will cost $395, $995, $7,000 including service and $2,850 with service, respectively. Decmate Graphics Option costs $695 and the BTS product is priced at $3,000 with service; both are available now.

More information on all the DEC announcements is available from Digital Equipment Corp., Main St., Maynard, Mass. 01754.

NEW YORK — **AT&T** announced the release of a new, enhanced version of Unix System V and introduced three new software packages designed to serve in a Unix environment.

According to the company, the new version of Unix will run programs about 5% to 10% faster than the current offering and offers greater job control; a new way to handle electronic mail; and a new command, which allows administrators and users to send trouble reports to the Unix software support center.

AT&T also unveiled Unix Documenter's Workbench, Unix System Basic and the Motorola Software Generation System designed for users that are developing software using Motorola's 68000 microprocessor.

The enhanced version of Unix System V is available for $43,000 for an initial source license (those already holding System V licenses can get the upgrade and Workbench for $2,500). Workbench is priced at $4,000 for an initial license; Basic at $5,000; and the Motorola Software for $7,500 for an initial license, the vendor said.

For more information, contact AT&T Technologies Software and Sales Division, Greensboro, N.C.

RYE BROOK, N.Y. — **IBM** unveiled its Personal Computer Interactive Executive (PC/IX) operating system, derived from AT&T's Unix Time Sharing System, for its PC. The system can reportedly be used for program development, text processing or running a variety of existing Unix system application programs.

According to IBM, PC/IX is a recompiled set of Unix system source statements with a redesign of the essential portions of code to improve performance and reliability. It was developed for IBM by Interactive Systems Corp. and runs on both the IBM PC and the PC XT, requiring at least 256K of memory, one dual-sided diskette drive and one 10M-byte fixed-disk drive. The product, available in April, will be priced at $600 for a one-time license charge from IBM, 900 King St., Rye Brook, N.Y. 10573.

SANTA CLARA, Calif. — The British are coming (and they're bringing personal computers). **Applied Computer Techniques (ACT)**, Great Britain's largest microcomputer company, has in-

You can count on 3M diskettes. Day after day.

Just like the sun, you can rely on 3M diskettes every day. At 3M, reliability is built into every diskette. We've been in the computer media business for over 30 years. And we've never settled in. We're constantly improving and perfecting our product line, from computer tape and data cartridges to floppy disks.

3M diskettes are made at 3M. That way, we have complete control over the entire manufacturing process. And you can have complete confidence in the reliability of every 3M diskette you buy.

Look in the Yellow Pages under Computer Supplies and Parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M diskettes.

3M hears you...

3M

TECHNOLOGY

troduced its Apricot executive microcomputer in the U.S. Apricot, reportedly a fourth-generation, IBM-compatible, 16-bit microcomputer, is 8086-based and includes 256K bytes of main memory, three operating systems (MS-DOS, CP/M-86 and concurrent CP/M-86), 3½-in. Sony Microdrives and bundled executive software. The Apricot weighs 17½ lbs and can be used in a portable mode.

It is available for $2,495 from ACT (North America), Inc., 3375 Scott Blvd., Suite 336, Santa Clara, Calif.

CUPERTINO, Calif. — While most of the attention has been focused on the Macintosh, **Apple Computer, Inc.** introduced a lower priced, enhanced version of its Lisa system.

The Lisa 2 series includes three new versions of Lisa: Lisa 2, Lisa 2/5 and Lisa 2/10. The Lisa 2 reportedly has 512K bytes of memory and a 3½-in. microdisk drive for mass storage. The Lisa 2/5 and 2/10 share these features and offer additional mass storage. Each member of the series can also run programs designed for the Macintosh as well as Lisa software.

Apple is offering owners of the original Lisa a free upgrade to a Lisa 2/5 until June 1 (after which time the upgrade will cost $595) or an upgrade to a 2/10 for $2,495. The series ranges in price from $3,495 to $5,495 from Apple Computer, Inc., 20525 Mariani Ave., Cupertino, Calif. 95014.

LOWELL, Mass. — **Wang Laboratories, Inc.** announced enhancements to its Professional Computer as well as to its DVX Digital Voice Exchange.

For its Professional Computer, Wang introduced the 3278 Emulation Board, a combined hardware and software package that allows the Professional Computer or the Wang Professional Image Computer to access instantly an IBM mainframe data base when attached to a 3270 terminal network. The 3278 Emulation Board is available as a stand-alone product or as an attachment to the Wangnet Cmux-3270 Cable Multiplexer. It costs $1,095 and will be available next month.

Wang and **Microsoft Corp.** of Bellevue, Wash., announced that Microsoft Windows, an extension of the MS-DOS operating system will be available for the Wang Professional Computer. The product will be offered as part of the bundled software for the Professional Computer beginning in the second quarter of 1984.

Wang also unveiled enhancements to its DVX digital voice exchange including the DVX Message Waiting unit (priced at $225 per unit), DVX networking capabilities ($1,000 per node and $10 per month license fee) and DVX Feature Package 3.8 ($14,000 initial charge and $140 license fee).

For more information, contact Wang, One Industrial Ave., Lowell, Mass. 01851.

MORRIS PLAINS, N.J. — The Monroe System 2000, a 16-bit high-speed microcomputer, was introduced by Monroe Systems for Business, Inc. The System 2000 is based on the Intel 80186 microprocessor and comes complete with the CP/M 86 DPX and MS-DOS operating systems, 128K bytes of random-access memory expandable to 896K bytes and a 12-in. amber monochrome video display screen.

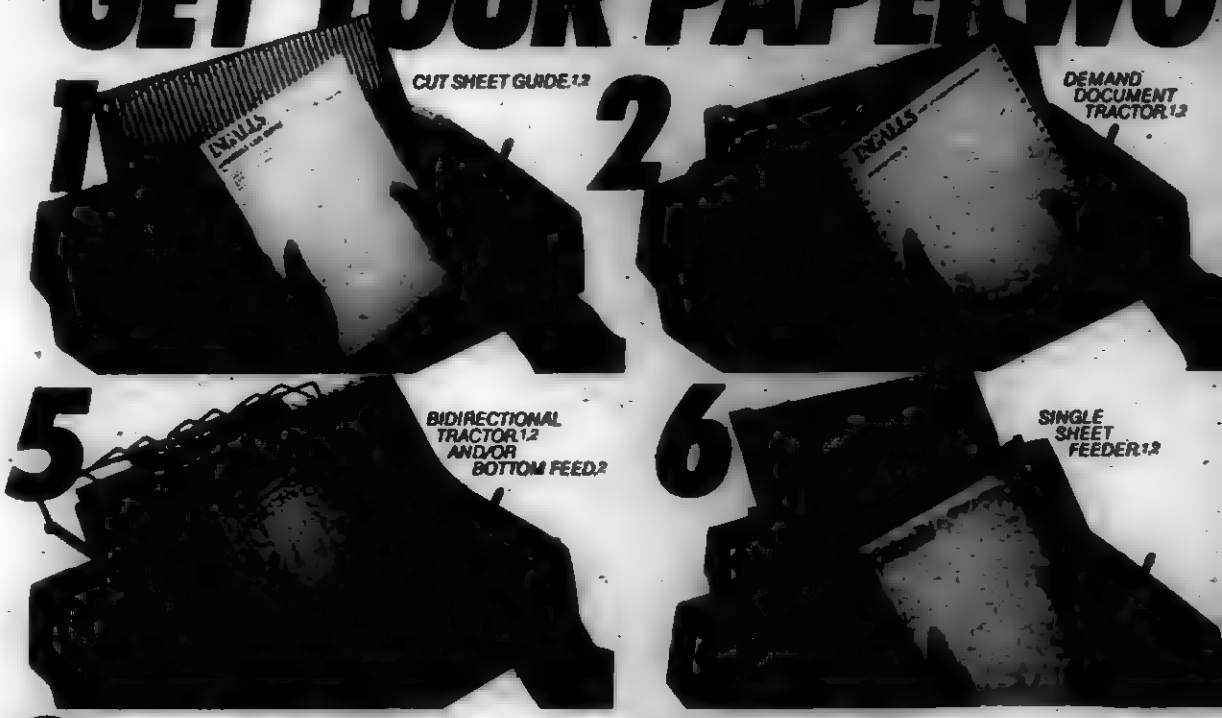
The system is available for $3,675 from Monroe Systems for Business, The American Road, Morris Plains, N.J.

NEW YORK — Pro Computing has unveiled its integrated software package for business professionals.

Propel is reportedly fully integrated and has multiple applications such as phone communications, written communications and number processing. It can be used to send and receive voice messages; prepare letters, memos and reports; and analyze numerical data presented in tables, graphs and spreadsheets, the vendor said.

Propel will initially operate on Digital Equipment Corp.'s Professional 350 microcom-

SPINWRITER INTR
GET YOUR PAPERWO



No other printer gives you so many options for automatic paper handling.

These nine NEC forms handlers can automate most of the printing operations in your office. And to put them to work, you don't have to change the way you work. Because they handle your existing forms, letterheads and envelopes.

With most other printers, you'd be lucky to find even one of these productivity tools.

Why is NEC so committed to forms handlers, while others ignore them? For one thing, we make the world's finest letter quality printers. And we believe that if you buy a computer system in the first place, you ought to be able to take advantage of everything it can do.

YOU CAN GET YOUR CORRESPONDENCE IN THE MAIL 50% FASTER.

Shift from word processing to billing, shipping or inventory control in seconds.

Seconds is all it takes for the average operator to change most of these NEC forms handlers.

Want to dash off a few hundred original letters to your customers? Just snap on our automatic Single Sheet Feeder.

If you add our Dual Bin or Envelope Feeder, you can take care of second sheets or envelopes at the same time. And you'll have the whole package in the mail in about half the time it would take to do it manually.

One of our most popular options is the Bidirectional Tractor. It gives you the precise forward and reverse paper motion you need to print subscripts, superscripts and complex graphics and tables.

OA TECHNOLOGY

puter and will be available in March for $1,195 (minimum orders) from Pro Computing, Suite 3314, One Penn Plaza, New York, N.Y. 10119.

HOUSTON, Texas — Zalsan, Inc. introduced its ES.1 voice/data workstation.

The ES.1 reportedly integrates an advanced executive-feature telephone; a data terminal with a 9-in. high-resolution CRT; an internal 300 bit/sec. full-duplex modem; a detachable keyboard; and personal business support software.

The ES.1 is scheduled for shipping in the first quarter of 1984 and is priced at $650 from Zalsan, Inc., 13910 Champion Forest Drive, Houston, Texas 77069.

SANTA MONICA, Calif. — Compucorp, Inc. announced its OA 3200 minicomputer and Omegamite, a transportable version of the company's word processing equipment. The OA 3200 is a 10 MHz 68000-based CPU, with error-correcting memory ranging from 256K bytes to 2M bytes. It features several I/O processors and four independent buses, including the IEEE 796 Multibus and includes two high throughput front-end communications processors for supporting multiple local-area networks.

Omegamite reportedly combines a WP package and support of a host of CP/M applications in a transportable device that weighs less than 25 lbs. It is targeted at professionals who spend considerable amounts of time away from their offices. It is available with from 64K to 512K bytes of random-access memory, single or dual 655K-byte floppy disks, a 9-in. amber CRT and a communications modem.

Omegamite is priced at $2,995 from Compucorp, 2211 Michigan Ave., Santa Monica, Calif. 90404.

JERICHO, N.Y. — Computer Associates International, Inc. has released CA-Executive, a microcomputer software product for the executive workstation. The product reportedly consists of a full line of integrated business applications, a micro-to-mainframe link and communications facility, as well as a window manager.

CA-Executive was designed to run on IBM and compatible micros including IBM's PC/XT. It runs under the PC DOS 2.0 operating system and uses a full-color graphics monitor. It requires 256K bytes of memory and includes data base management, spreadsheet, WP, editing, graphics and others.

CA-Executive is priced at $1,295 for five to 10 units (with prices descending as order size increases) from Computer Associates International, 125 Jericho Turnpike, Jericho, N.Y. 11753.

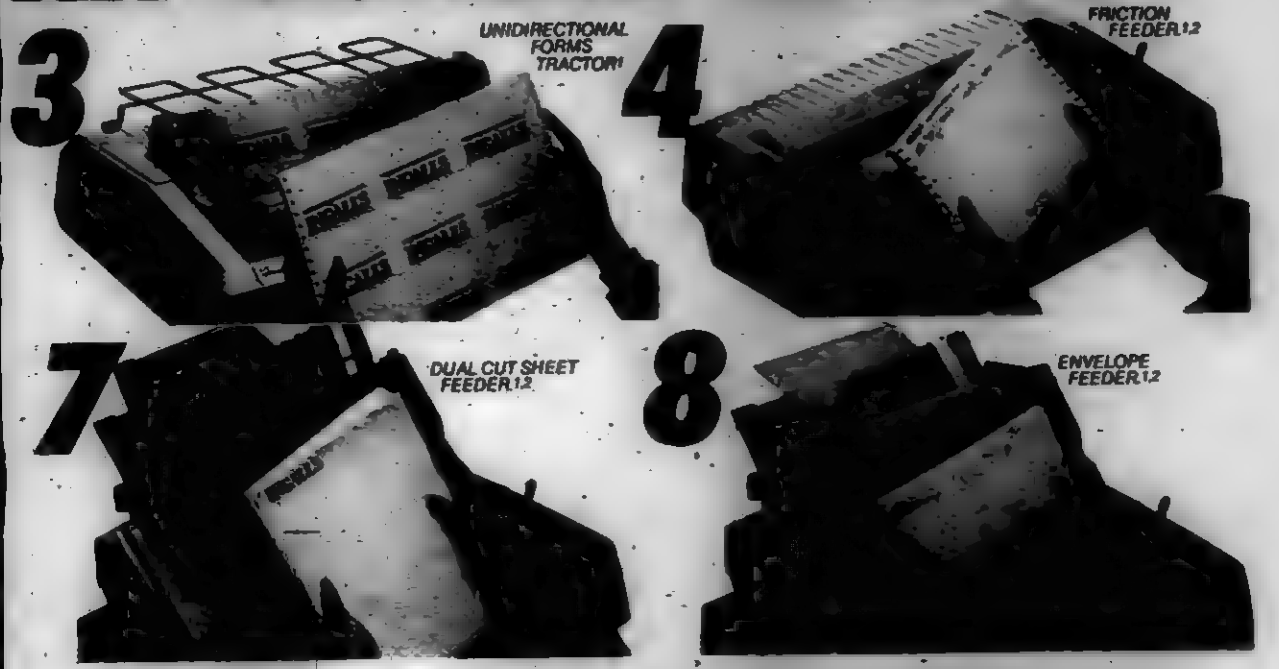
SECAUCUS, N.J. — Panasonic Co. introduced its personal portable computer, the Senior Partner. The portable reportedly utilizes the the MS-DOS 2.0 operating system and can run IBM-compatible software and hardware. It also features a built-in thermal printer, a double-sided, double-density disk drive, 128K bytes of random-access memory and a 9-in. CRT.

The Senior Partner utilizes a 16-bit 8088 microprocessor with an 8087 coprocessor socket. It weighs 28.7 lbs and will be available in March for $2,495 from Panasonic, One Panasonic Way, Secaucus, N.J. 07094.

NORWOOD, Mass. — Raytheon Data Systems Co. made its entry into the office automation market with the introduction of its RDS Signature 8200, a 16-bit business computer featuring DP, WP and communications capabilities.

The system is available with either a 15-in. color or 12-in. monochrome monitor and reportedly features the F8300 Processor module as the core of each workstation. A typical WP configuration, consisting of the monochrome display and keyboard, processor module with dual floppy drives and 512K bytes of random-access memory costs $9,050 from Raytheon Data Systems, 1415 Boston-Providence Turnpike, Norwood, Mass. 02062. OA

ODUCES 9 WAYS TO
RK MOVING FASTER.



NEC forms handlers are designed and built by the same people who make the Spinwriter.

You'll find most competitive forms handlers, when you can find them, are made by third parties. Which means they're compromises.

NEC forms handlers, on the other hand, are anything but. They have all been conceived by the Spinwriter team. So they are perfectly integrated with the Spinwriter. That's why most NEC devices can be used on any Spinwriter model, including our new 2000 series. **Spinwriters have a hard-earned reputation for reliability.**

Spinwriters are known for their dependability. In fact, five years without a failure is not unusual. Which is about twice as good as any other printer.

If you ever do need a little service it's nearby and our modular design makes it fast and easy.

Where can you find Spinwriters and NEC form handlers? At participating ComputerLand stores, Sears Business Systems Centers, IBM Product Centers, Entre Computer Centers and authorized NEC Spinwriter distributors nationwide. Or call 800-343-4418 for product literature. In Massachusetts call (617) 264-8635. And find out why more and more PC users are saying "NEC and me."

1. 2000 SERIES. 2. 3500 SERIES.

BASF Qualimetric FlexyDisks fe qua lif
assurance that the vital informat enter on
today will be secure and unchanged tomorrow. Key to th
extraordinary warranted performance is the BASF Qualim
standard...a totally new set of criteria against which
magnetic media will be judged.

You can count on BASF FlexyDisks bec the Qualimetric standard reflects a continuing BASF comm ment to perfection in magnetic media. One exa le is the unique two-piece liner in our FlexyDisk jacket. This BASF feature traps damaging debris away from the disk's surface and creates extra space in the head access area for optimum media-head alignment. The result is a guaranteed lifetime of outstanding performance.

For information security that bridges the gap between today and tomorrow, look for the distinctive BASF package with the Qualimetric seal. Call 800-343-4600 for the name of your nearest supplier.

*Contact BASF for warranty details.

International group forcing U.S. hand on Cobol standard

By Paul [illegible]
CW Staff

VIENNA — The International Standards Organization's working group on Cobol-80 last week bucked tradition and adopted a proposed American National Standards Institute X3J4 Committee standard and modifications before public review or approval by the parent X3 Committee.

The move could signal a breakthrough in the deadlocked attempts to reach a Cobol-80 standard.

In an unusual move, the ISO Technical Committee 97/Standing Committee 5/Working Group 8 approved and sent on to the parent SC5 Committee the most recent Ansi X3J4 proposal — sometimes called the "pink book" — and X3J4's "S" and "D" modification documents. The move came despite the fact that the standard is scheduled to undergo at least one more limited public review — a process that could last into 1985 — before it is submitted to Ansi's X3 Committee.

If the WG8 recommendation is approved, the machinery would be set in motion to adopt an international standard before the Ansi standard is approved, a highly unusual action, sources said.

The Cobol-80 standard has been ex-

Lotus adds two steps to '1-2-3'

NEW YORK — Lotus Development Corp. last week added steps four and five to its fast-selling Lotus 1-2-3 integrated microcomputer software package when it unveiled a single-floppy program that includes word processing, communications, graphics, spreadsheet and data base capabilities.

The $695 program, named Symphony, will be available July 2 for the IBM Personal Computer and Personal Computer XT. The five-function package requires 320K bytes of random-access memory, but its data base function needs 640K bytes of RAM, the stiffest dose of memory available on the Personal Computer, to operate at full strength, a spokesman said.

Symphony includes a window management system that allows a user to create an unlimited number of windows and to enter data simultaneously through each of them, according to Lotus President Mitchell Kapor.

Other features include a word processing-to-communications link, the ability to store 8,000 records in the data base, a spreadsheet of 8,192 rows by 256 columns, a zoom key for enlarging a window to full screen size and a command language for manual programming.

The word processor, which Lotus described as being similar to those offered by Wang Laboratories, Inc., can combine data

FYI

Making (and putting) their mark on micro software

By John Gallant
CW Staff

When Philip Raymond likens his software testing company to Underwriters Laboratories, Inc. and *Good Housekeeping* magazine, the comparison is not made casually. Nor is that analogy used solely by Raymond.

Raymond's firm, Peripheral Vision Co. of Marlboro, Mass., is one of at least three companies that currently offer to stamp their seals of approval on microcomputer software that has met their testing requirements. For the other two — the International Bureau of Software Test of Sunnyvale, Calif., and Benchmark Computer Systems, Inc. of Edina, Minn. — as well as for Peripheral Vision, comparison with the *Good Housekeeping* and UL seals of approval is an important marketing tool to bolster credibility.

IBST is the only firm among the three that deals solely with software testing and approval. The company has been in business since 1982 and currently employs 26 consultants and full-time software experts who put new software packages through their paces on a variety of micros in IBST's testing labs.

If a package is fully approved by the test team, according to IBST President William Goss, its manufacturer can display IBST's Seal of Approval, which is earned by about 15% of the packages tested.

Like Peripheral Vision and Benchmark Computer Systems, IBST claims to employ rigorous, structured testing methods that involve at least three experts. "We're independent, and we take a systematic, thorough approach," Goss said. "We find problems that the in-house testing team might have overlooked. The software developer is often too involved with the product to be objective, and he might overlook problems we can catch."

Raymond, a former design engineer who left Digital Equipment Corp. in 1982 to found Peripheral Vision, said the Peripheral Vision Software Seal of Approval can be a powerful marketing tool for a software manufacturer. "Buyers can't judge software from its packaging or its documentation. They can't choose between 10 or 15 similar packages simply on what they say on the outside. Our position as an independent software testing firm will help buyers to choose one vendor's package over another's."

Raymond claimed Peripheral Vision's revenues from software testing grow from 20% to 50% of its annual earnings last year alone. Raymond's network of consultants also reviews technical manuscripts for most major publishing companies. Peripheral Vision has targeted the stamp of approval service at the publishing firms, Raymond explained, as they enter the micro software marketplace.

"We sell a comprehensive strategy of software integrity approval to the software publishing industry. We want to help the publishers of printed media use their established market position to sustain a foray into software publishing and distribution," Raymond said.

Benchmark Computer Systems has taken a slightly different approach to soft-

Three tie micros to mainframes

DG board links its small units to IBM CPUs

By Susan Hathaway
CW Staff

WESTBORO, Mass. — Data General Corp. has introduced a communications interface that is said to permit direct communications between IBM mainframes and DG's Desktop Generation, Eclipse S/20 and Eclipse C/30 low-end processors. The product is scheduled to make its debut today at the Office Automation Conference in Los Angeles.

The ISMC/2 is a two-channel, front-end, intelligent synchronous micro controller board that enables its processors to offload high-speed synchronous communications for more efficient file transfer and interactive communications, according to a DG spokesman.

Supported by DG's bisynchronous DG/SNA and X.25-compliant Xodiac communications software products, the ISMC/2 lets the Desktop Generation, S/20 and C/30 systems connect directly to a Systems Network Architecture/Synchronous Data Link Control or public data network, as well as DG's own network, the vendor said.

Direct tie to IBM CPUs

The ISMC/2 gives the Desktop Generation a facility for communicating directly with IBM mainframes via DG's bisynchronous and DG/SNA products.

The product, which runs under DG's AOS and AOS/WS operating systems, is a single 7- by 9-in. printed-circuit board that reportedly fits into any unreserved slot in the CPU chassis or expansion module of a Desktop Generation Model 10SP, Eclipse 20 or Eclipse 30, according to a spokesman for the vendor.

The ISMC/2 is composed of a 16-bit Microeclipse processor with 32K bytes of dynamic random-access memory, a host I/O system and two communications channels. Each channel is capable of full-duplex communications, with modem control and a choice of interface, the vendor noted.

At press time, the price for ISMC/2 was set at $1,650. Additional information is available from DG, located at 440 Computer Drive, Westboro, Mass. 01580.

CORRECTIONS

An announcement of the Cause on-line member data base [CW, Jan. 23] should have stated that the data base includes information from more than 150 different applications divided into 10 areas.

An announcement of Syncsort, Inc.'s Syncsort OS Release 2.5 [CW, Feb. 6] failed to state that the major enhancement to the new release is performance improvements of between 15% and 35%.

Real-time link ties IBM micro to SI software

By John Gallant
CW Staff

ANDOVER, Mass. — Software International Corp. last week entered the micro-to-mainframe communications market by announcing a real-time link between its mainframe general ledger package and a variety of applications that run on the IBM Personal Computer.

Smart Link enables Personal Computer users to extend the data extraction and manipulation resources of Software International's on-line General Ledger and Financial Reporting System at the micro level, a spokesman said.

The product is said to provide for on-line, real-time extraction of live data and does not use any batch processing mechanisms to create a shadow file accessed by the micro.

No modifications

Smart Link reportedly requires no modifications to Software International's General Ledger and Financial Reporting System on the mainframe. It provides users with the ability to perform operations such as data input and report production on the Personal Computer that would otherwise be performed on an IBM 3270 terminal.

In addition, Smart Link reportedly uploads budget information to appropriate mainframe general ledger files under comprehensive security and audit trails.

Restricted upload capabilities are provided to prevent loss of mainframe data integrity, the spokesman said. The security systems are the same as those that govern access to Software International's mainframe applications.

Smart Link also allows users to load data into a variety of current spreadsheet packages and data base management systems, including Lotus Development Corp.'s Lotus 1-2-3, Visicorp's Visicalc and Microsoft, Inc.'s Multiplan. It will also operate with micro applications that incorporate Software Arts, Inc.'s Data Interchange Format.

Smart Link does not require rekeying of commands in order to rerun a download or upload session, the spokesman noted. It automatically recalls a session if it was stored in Smart Link's library; sessions can be modified to give new download or upload specifications.

Data from the General Ledger and Financial Reporting System can be placed into a specific area of the user's spreadsheet for greater flexibility, according to a spokesman for the vendor.

Smart Link will run on the IBM Personal Computer or Personal Computer XT equipped with Technical Analysis Corp.'s Irma board coaxial interface.

The software is priced at $2,995 per micro from Software International, 1 Tech Drive, Andover, Mass. 01810.

Products help micro emulate 3270 terminal

By Jeffry Beeler
CW West Coast Bureau

SANTA CLARA, Calif. — A one-year-old data communications vendor claims to have tightened the integration between IBM Personal Computers and CPUs with the introduction of a micro-to-mainframe link that reportedly enhances a Personal Computer's 3270 emulation features.

Forte Data Systems, Inc.'s micro-to-mainframe link consists of six related hardware and software modules:

- Forte-PJ, an emulation and adapter board that provides IBM Personal Computers and Personal Computer XTs with a coaxial cable interface to 3270-based networks and allows the micros to emulate 3278 and 3279 display terminals.
- Forte-Graph, a "daughter" board that enables Personal Computers to duplicate the IBM 3279 color display station's color graphics capabilities and produce hard-copy output with the same resolution as the micros' display screens.
- Three File-Net packages that permit mainframes to download whole TSO, CICS or CMS files at once rather than in one-page sections.
- Forte-Call, a Personal Computer-resident communications utility that allows remote terminal users to dial into 3270 coaxial cable networks and thus gain access to corporate data bases.

Forte-PJ occupies one Personal Computer or Personal Computer XT chassis slot and — in an effort to simplify future product upgrades — implements all its associated software on diskettes rather than in programmable read-only memory.

When equipped with the board, IBM Personal Computers can double as terminals interacting with host mainframes and as stand-alone processors operating in the PC-DOS operating system mode, according to Forte Product Manager Ron Rawson. Users can reportedly switch back and forth between a mainframe session and stand-alone operation by touching just one button on a Personal Computer's keyboard.

Forte credits its PJ board with supporting up to 32K bytes of buffer memory, eight times as much as the company's existing 3270 emulation product, the PC78-2. This expanded storage capacity, in turn, allows an IBM Personal Computer or Personal Computer XT to emulate a larger set of 3279 color graphics capabilities than was previously possible with the 4K-byte PC78-2, Rawson said.

In addition to its increased buffer memory, Forte-PJ incorporates an interface expansion bus into which users can plug various daughter boards and thus enhance a Personal Computer with additional "personality" or functionality, he said.

One such daughterboard is Forte-Graph, which rides piggyback on the PJ and gives IBM micro users ac-

Application generator ends hand-coding for VAX

By Staff
CW Staff

WELLESLEY, Mass. — Cortex Corp. last week introduced an application generator for Digital Equipment Corp. VAX-11 superminis that it said virtually eliminates the need to write code for standard applications.

Called the Application Factory (Factory), the software allows systems analysts and programmers to develop applications through an interactive terminal dialogue. It constructs applications that include screens, reports, computations and data base management. Programs can be customized and regenerated using the Cortex Application Builder (Builder), a high-level language, a Cortex spokesman said.

Factory can be used to prototype working models and is said to eliminate much of the program design, coding and testing process. It generates modules written in Builder, which can be modified.

Factory provides standard procedures, such as menu screens and the standard mechanisms for using them, such as menu items, which the designer fills in interactively. Program modules can be specified interactively and code generated automatically.

Factory ensures that a generated module is consistent with the data and with other modules, the spokesman said.

Among the activities supported by Factory are data set creation, data dictionary specification, the linking of data sets into logical views, screen layout, report layout, definition of menus, coordination of logical flow, data validation specification and data extraction specification.

An optional facility called Customizer allows screen and report characteristics to be changed. The Application Accelerator, also an optional facility, generates object code from Factory source code, enabling programs to run as efficiently as Cobol programs, the spokesman claimed. Without Accelerator, Factory generates a pseudo-code that executes more slowly.

Still another optional module, Application Targeter, allows applications to be generated in object code to run on other machines within the DEC line, including the VAX-11 series, PDP-11 series and DEC Professional 350.

The Run-Time System, also an option, provides an interface to the file system of the target machine. The End-User Facility is an option that gives end users limited query, sort and report-generation functions.

For the VAX-11/750 and VAX-11/780, the Application Factory costs $25,000. The cost of the options are: Customizer, $10,000; Application Accelerator, $15,000; Application Targeter, $15,000; Run-Time System, $2,500 and End-User Facility, $8,000.

A package made up of the Application Factory, Accelerator or Targeter, Customizer and End-User Facility costs $49,000. All products cost 40% less for the lower end of the VAX-11 line.

Cortex is located at 55 William St., Wellesley, Mass. 02181.

Convenience pact rates, license fees raised by IBM

By Tom Henkel
CW Staff

RYE BROOK, N.Y. — In what appears to be an effort to rid itself of older rental and lease agreements, IBM last week raised its convenience agreement rates on most older hardware by 7% to 10%.

At the same time, the company also raised the license fees on about half its system and language program products by the same 7% to 10%.

Monthly maintenance rates on a handful of older products also underwent changes. Some were increased by as much as 10%, while others were decreased by 10%.

Most users affected by the increases are holders of lease and rental agreements signed before IBM established the IBM Credit Corp.

Convenience lease and rental agreements are those offered directly through IBM rather than the IBM Credit Corp. Most users affected by the increases — effective June 1 — are holders of lease and rental agreements signed before IBM established the IBM Credit Corp.

Processors affected by the increases include the 4321, 4331 and 4341; the 8130 and 8140; the System/34; and the 3060 series. Exempted from the increases were the System/38 and systems announced after the formation of the IBM Credit Corp., which include the 4361, 4381 and 8150, a spokesman said.

As examples of the price increases, IBM said a System/34 Model D23 processor, which formerly carried a convenience lease price of $1,860/mo, will now cost $1,990. The convenience rental fee on the same model is now $2,189 instead of $2,045.

A 3084 Model Q48 processor, which formerly carried a convenience monthly lease rate of $289,920, now costs $310,200. The rental fee for the same processor is now $387,000/mo instead of $362,400.

Initial and monthly license fees on roughly half the systems and language software program products and a small number of applications program products were also increased 7% to 10%. The increases in initial license fees are effective immediately; monthly license fee increases are effective June 1.

The license fee increases affect about 20% of all IBM program products and include the MVS/SP operating system, CICS/OS, VM/High-Performance Option, IMS/Data Base/Data Communications, all software for the System/38 and System/34, the DPPX operating system for IBM's 8100 line of distributed processing systems and OS/Cobol. Monthly software service charges on all IBM software were also increased by 7% to 10%. For example, users formerly paid $1,170 for the monthly license program support charge (MLPSC) for MVS-SP Version 2 Job Entry Subsystem 3. They will now pay $1,250.

DPPX/Distributed Presentation Services (DPPX/DPS) carried a basic license charge of $186, which has been increased to $199. The MLPSC has been increased from $18 to $19.

Finally, IBM announced both price increases and decreases in the monthly maintenance fee of a handful of IBM hardware products. The price changes range from 10% decreases to 10% increases.

The decreases are effective March 1, and the increases are effective June 1, IBM said.

Major systems that received price decreases include the 30 series of mainframes and the smaller System/3 and System/7 processor lines. Systems hit by maintenance price increases include the 3431 and the 4321.

The $6,810/mo maintenance charge on a 3033U Model U16 processor has been dropped to $5,520. But users of 4331 Model J11 processors will now pay $351/mo instead of $325.

Equipment purchase prices were left unchanged, as were IBM Credit Corp. three-, four- and five-year term leases. According to the spokesman for IBM, the price changes were a result of a normal business review.

Cornellian wins ACM award

ITHACA, N.Y. — A postdoctoral associate in the department of computer science at Cornell University has won the 1983 Doctoral Dissertation Award of the Association for Computing Machinery (ACM).

Thomas Repa won the award for "Generating Language-Based Environments," a thesis he wrote while earning his Ph.D. in 1982. The award includes a $1,000 check, publication of his thesis by MIT Press and royalties from sale of the book.

The award was announced at the ACM Computer Science Conference Feb. 14-16 in Philadelphia.

FORTE from page 2

cess to all the 3279 graphics software packages residing in central mainframes. The board thus enables Personal Computers to support as wide a selection of colors as the 3279 and to provide the same display resolution and extended character attributes, Rawson said.

Complementing Forte-Graph are three mainframe-resident file transfer packages — TSO File-Net, CICS File-Net and CMS File-Net. All three are extensions of their respective IBM subsystems' command language and are written in 370 assembler, a feature that maximizes communications efficiency, Rawson said.

The result is that the packages allow complete TSO, CICS or CMS files to be downloaded from a mainframe all in one operation rather than in one small chunk at a time. File-Net therefore overcomes one of the main limitations of usual 3270 emulation, which typically requires files to be transmitted to a Personal Computer in one-page segments, according to Forte President James Ottinger.

After being downloaded from a host CPU to a Personal Computer, data is reportedly displayed in PC-DOS formats to simplify integration of the files with popular microcomputer applications like spreadsheets and word processing.

The last of the six Forte communications is Forte-Call, which is said to allow any remote Ascii device to retrieve data from a central mainframe through a host Personal Computer.

Forte-Call costs $295, compared to $1,195 for the Forte-PJ board and $1,395 for the Forte-Graph board and all its associated software. The TSO File-Net and CMS File-Net packages license for $1,000 each, while the CICS version is available for a one-time license fee of $10,000 per site.

All six of the Forte micro-to-mainframe link products will be available for shipment in April from the company at 1500 Norman Ave., Santa Clara, Calif. 95050.

Thoroughbred

Meet the newest champion in the world's greatest sorting stable!

(SyncSort OS 2.5)

Call (201) 568-9700.

Find out why it takes a SyncSort to beat a SyncSort.

Here we go again—Improving the Sorting Breed!

That sleek young thoroughbred out in our main paddock is SyncSort OS, Release 2.5. It's by SyncSort 2.4 out of that celebrated brood mare, High Technology. And it's destined to win a lot of prizes on OS/VS and MVS/XA tracks.

IMPROVING THE UNIMPROVABLE: Until now, SyncSort 2.4 was the best OS/VS sort program ever bred. It was far faster than any IBM sort. And it was easier to use, too— thanks to a tack-room full of advanced features.

SyncSort 2.4 probably could have continued to win prizes for years. There was only one catch—it wasn't good enough for us.

PICKING TOMORROW'S WINNERS: We knew that new hardware and software systems would create opportunities for evolution of advanced sort programs. Speed would still be essential. But productivity would continue to skyrocket in importance. So that's the way we bred 2.5.

FASTER SORT PERFORMANCE: We've added new sorting techniques to SyncSort 2.5 to make it the only sort that outperforms 2.4. You can expect savings in critical resources up to those shown at lower left. And that can add up to a big increase in total systems throughput.

NEW PROGRAMMER PRODUCTIVITY FEATURES: As any seasoned sort-watcher knows, there's a lot more to data handling than sorting. SyncSort 2.5 introduces a Data Utility set that applies its proven techniques to a wide range of processing and reporting jobs.

For example, with a single execution, 2.5 can sort, format and present data in virtually any form you want:

- **SortWriter**—a powerful tool that can produce extensive reports as a by-product of your normal sorting—without user exits and the associated programmer investment. Headers, trailers, total and sub-total capabilities provide flexible formatting.
- **Record Formatting**—To existing features like INCLUDE/OMIT, INREC/OUTREC, SUM and others—all of which have been expanded—2.5 adds new and useful capabilities like data conversion, editing, insertion of literals.
- **Multiple Output**—From a single sorted file, you can create multiple files and reports. Each can include the same or different data as determined by INCLUDE, OMIT, OUTFIL or OUTREC parameters.

If you're tired of betting on sort programs that empty your pockets of resources and are tough to handle, give us a call. We'll arrange to have SyncSort OS 2.5 run a few furlongs on your own turf.

SyncSort OS 2.5

NCR brings out Cobol-oriented supermicro

By Tom Henkel
CW Staff

DAYTON, Ohio — NCR Corp. last week replaced its aging I-9020 line of minicomputers with a Cobol-oriented version of its Tower 1632 supermicro.

Called the I-Tower, the new system offers two to six times the internal performance of the I-9020, NCR said. The I-Tower's hardware is virtually identical to the Unix-based Tower system announced by the firm a year ago, the vendor said, noting that both are based on Motorola, Inc.'s 68000 microprocessor.

The I-Tower supports RM/Cobol, a specialized version of Cobol developed by a long-time supplier of NCR software, Ryan-McFarland Corp. of Rolling Hills Estates, Calif.

The I-Tower system also runs Ryan-McFarland's RM/COS, which optimizes the execution of Cobol programs.

Users of the original Tower 1632 can now run Cobol on their systems. This, according to Jim Krohe, program manager for the Tower line, can be done in two ways. Users can run RM/Cobol directly on the Unix operating system, or they can run both Unix and Ryan-McFarland's RM/COS. He noted, however, that the operating systems cannot run concurrently.

Likewise, users of the I-Tower can, if they wish, purchase the Unix operating system for nonconcurrent use.

Krohe said NCR plans to offer RM/COS, RM/Cobol and Unix packages to Tower 1632 and I-Tower users, but the packages are not yet available.

While NCR representatives seemed unclear on how the firm plans to market the I-Tower, its assistant vice-president of interactive systems, John C. Duritsch, said one group of potential users is microcomputer users who have exhausted the capabilities of their current systems. He noted that from a performance standpoint, the I-Tower offers roughly the same power as IBM's System/36 or Burroughs Corp.'s B93 series of processors.

The I-Tower can run some existing I series applications, including NCR's Interactive Financial Management System (IFMS). It also supports off-the-shelf programs that operate under Ryan-McFarland's RM/Cobol compiler and RM/COS operating system.

While the I-Tower is not directly compatible with larger processors in the NCR line, users of RM/Cobol can migrate to the larger I-9300 line of mainframes by making a software conversion, according to Raymond B. Smith, director of general-purpose systems product marketing. To switch to the I-9300 line, I-Tower users will have to make file modifications and recompile their Cobol programs. Smith claimed the conversion process is a minor task, requiring about two hours per program.

The I-Tower can handle 16 users and is equipped with 512K bytes of standard random-access memory (RAM). It can be expanded with a processor memory control module that offers up to 2M bytes of RAM.

The I-Tower supports up to two 5¼-in. floppy disk drives, each offering 1M byte of storage, and a maximum of two 5¼-in. Winchester disk drives, each offering up to 46M bytes of unformatted storage. Two 8-in. Winchester disk drives, each offering up to 84M bytes of unformatted data storage, can be used in addition to the 5¼-in. Winchester drives for a total disk storage capacity of 260M bytes.

The I-Tower includes a 90 in./sec streaming tape drive, which can store 21.6M bytes of unformatted data, as well as a battery-powered memory support feature designed to protect the system against power fluctuations.

An I-Tower processor with 512K bytes of RAM, 46M bytes of Winchester disk storage, a 1M-byte flexible disk drive, a 20M-byte streaming tape drive, a 125 line/min printer, CRT terminal, eight RS-232C I/O ports, IBM 2780/3780 remote batch communications protocols, RM/COS and RM/Cobol costs $28,880. It will be available next month and distributed through the firm's direct sales force.

NCR's corporate headquarters is located in Dayton, Ohio 45479.

ANALYSIS

NCR becomes first to replace mini with supermicro

By Tom Henkel
CW Staff

NCR Corp. has scored a first with its newly announced I-Tower Cobol-oriented supermicrocomputer: It became the first of the big five computer vendors to replace an existing minicomputer line with a supermicrocomputer.

Whether NCR can parlay the newly announced system into a highly successful product, however, remains to be seen.

NCR stated that the I-9020, the mini line replaced by last week's announcement of the I-Tower, has been its most successful product to date, with more than 20,000 installed systems. However, NCR representatives who presented details of the I-Tower last week did not seem to have a clear focus of who that system's target user would be.

One obvious market for the I-Tower is as a replacement processor for I-9020. NCR said the I-Tower can operate up to six times faster than the I-9020, but users who want to make the switch from an I-9020 must convert from NCR's Imos operating system to Ryan-McFarland, Inc.'s RM/COS.

The other market NCR appears to be eyeing for the I-Tower are microcomputer users who have exhausted the capabilities of their single-user systems. How NCR plans to attack that market remains unclear.

Raymond B. Smith, NCR's director of general-purpose systems product marketing, noted that NCR has approached traditional NCR third-party software developers to adapt existing Cobol programs for the I-Tower. But that raises the question of how that list of Cobol programs compares with the list of Basic programs available for microcomputers. And will NCR be able to convince micro users, who have been weaned on Basic, to switch to Cobol?

Jim Krohe, NCR's program manager for the Tower line, noted that there are currently more than 1,000 off-the-shelf programs that run under RM/COS. Krohe said that it is a fairly simple process to convert other Cobol programs to run under RM/COS.

NCR estimates it will take users 15 minutes to two hours per program to convert to the RM/Cobol compiler. Krohe said the amount of time the conversion takes depends on how much non-Ansi-standard code a given Cobol program uses. Users of strict Ansi-standard Cobol would just have to recompile Cobol programs to use them under RM/Cobol.

Regardless of whether NCR cracks open a new market for small business users, the I-Tower may carve out an alternate, profitable niche for the Tower line, said Dave Moschella, an analyst with the Framingham, Mass., market research firm International Data Corp.

According to Moschella, NCR has basically acted as a systems integrator in developing the Tower line, basing it on the Motorola, Inc. 68000 microprocessor, OEM peripherals and third-party software. The original Tower 1632, announced about a year ago, has shown moderate success as a small business system, Moschella said, noting many Tower sales have gone to systems integrators, not end users.

But NCR's assistant vice-president of interactive systems, John C. Duritsch, disagreed with Moschella. He contended that NCR has also been able to sell the Tower 1632 to end users. In any case, both Moschella and Duritsch agreed that NCR is fairly pleased with sales of the Unix-based version of the Tower.

Moschella said the Cobol-oriented I-Tower is probably guaranteed at least limited success just on the strength of the I-9020 market. Moschella added that since NCR is simply remarketing an existing system to a new audience, the development costs associated with the newly announced I-Tower are very low.

Xerox cuts 8010 Star price; adds stand-alone, remote models

By Tom Henkel
CW Staff

PALO ALTO, Calif. — Xerox Corp. appeared to be trying to rekindle a market for its 8010 Star microcomputer last week when it slashed $5,000 from the micro's $15,065 purchase price and added stand-alone and remote workstations to the Star line.

Announced in 1981 to operate with the Ethernet local-area network, the 8010 Star was greeted with a great amount of interest because it employed such innovative features as multiple windowing, a mouse and icons. However, the network workstation was never very successful because, industry watchers say, it was far too expensive and possibly too sophisticated for what was then a new market. Critics of the system said Xerox simply missed what turned out to be a very fertile market for smaller, stand-alone microcomputers.

Currently, Xerox apparently is trying to reignite the Star. The stand-alone and remote workstation models announced last week are essentially identical to the original network workstation, but they do not require users to buy cabling and pay the service charges for Ethernet.

The stand-alone model, which costs $8,995, is equipped with the same proprietary 16-bit microprocessors used in the network workstation. It comes with 512K bytes of random-access memory; a 10M-byte hard disk drive; a 1.2M-byte, 8-in., double-sided, double-density floppy disk drive; and Xerox's proprietary Mesa operating system.

What is missing from the system are circuit boards that allow it to be connected to Ethernet. However, the stand-alone unit is field upgradable to the remote workstation and the network workstation, Xerox noted.

The remote workstation is offered in the same configuration as the stand-alone workstation, but it is equipped with communications capabilities that allow it to communicate with an Ethernet system via an RS-232C port. To the user, the workstation operates as if it were attached to a local-area network, but the user also has the ability to perform local computing.

Xerox made its announcement through its Office Systems Division, located at 3333 Coyote Hill Road, Palo Alto, Calif. 94304.

COBOL-80 from page 1

broiled in controversy since the first Ansi draft standard was released in 1980. Critics charge that conversion to Cobol-80 would be expensive and time-consuming. Supporters say the standard would add significant features that could make Cobol a viable alternative to many fourth-generation languages.

Action 'closes debate'

The ISO action on the X3J4 standard "effectively closes debate on the American side," said Jerome Garfunkel, president of Jerome Garfunkel Associates, Inc. in Litchfield, Conn., and a member of the Ansi X3J4 and ISO Cobol committees. "I expect [Ansi] will also go along and adopt this as a standard."

Another X3J4 Committee member concurred that the action puts pressure on Ansi to come to an agreement quickly. "The implications are that we are essentially going to lose some control on finalizing a standard," said Lawrence K. Madison, associate director of data processing at the Travelers Insurance Co. in Hartford, Conn.

Lemuel Skidmore, manager of systems development and educational services at New England Data Services in Guilford, Conn., called the ISO action "very important. . . . It says the international community is not pleased with the slowness of our process, and they're going off on their own."

"It's a political game that's being played," Madison said. "The international community is essentially saying, 'Hey, Ansi, let's get going on this.' "

Garfunkel, who has been an outspoken proponent of a new standard, said adoption by the ISO SC5 Committee will force the federal government to adopt the standard as a base for hardware procurement. He noted that hardware vendors will probably follow the government's lead.

Skidmore agreed that hardware vendors may add impetus to the project by standardizing their compilers based upon whichever standard is adopted first. "If I were IBM, I wouldn't want to be married to two different standards. I'd say it's more important that they match up," he said.

However, Madison pointed out that any ISO action is still subject to a six-month international letter ballot, at which time problems could arise. "If the international organization says, 'Let's throw caution to the wind and try to pass something through,' they may find out what X3J4 found — that it's not that easy to convince users who have a substantial investment [in existing programs]," Madison maintained. "Just because [WG5] has made a recommendation, doesn't mean it will be adopted."

The Data Processing Management Association's (DPMA) principal representative to the X3 Committee indicated that the standardization process is too far along to be rushed by international pressures. "We feel that if the progress that's been made on X3J4 continues, we'll see a draft standard that DPMA can approve shortly," Art Dubnow, who is chairman of the DPMA's Standards Committee, said.

ISO changes procedures for making Cobol revisions

VIENNA — At the same time that it approved and sent on for review the latest version of the Ansi X3J4 Committee's proposed Cobol-80 standard and modifications, an International Standards Organization (ISO) working group last week also adopted a resolution to change the current procedures for revising the language.

The resolution approved by the ISO Technical Committee 97/Standing Committee 5/Working Group 8 proposes to add new features to the Cobol standard every two years. It also extends the period between complete overhauls of the standard to 10 years.

Currently the standard is slated to be revised entirely every five years. But controversy over proposed revisions has delayed the adoption of the Cobol-80 standard by more than three years.

According to the resolution's originator, Jerome Garfunkel, a member of the Ansi X3J4 and ISO Cobol committees, the resolution would make it easier to keep Cobol current with state-of-the-art languages. "Very few people ever had complaints about new features," said Garfunkel, president of Jerome Garfunkel Associates, Inc. in Litchfield, Conn. "This proposal is designed to isolate new features and speed up development."

But critics believe adoption of the dual schedule could pose serious compatibility problems. "If you're going to slow down the clarification process, you're dropping the portability issue," said Lemuel Skidmore, manager of systems development and educational services at New England Data Services in Guilford, Conn. "The faster you introduce new features, the less time you have to clarify them."

Skidmore noted that the resolution could result in a proliferation of incompatible compilers that include new features that have not been fully studied. "If we keep changing the standard, we open the door to more incompatibility," he said.

LOTUS from page 1

base functions, communications, spreadsheet and graphics and allows users to preview documents as they will appear when printed.

The communications package combines terminal emulation, automatic dial-up and logon to remote data bases, data capture, point-to-point file transfer and user control of all terminal parameters. Users can instantly suspend a communications session, analyze the captured data using Symphony and return to the communications mode, the spokesman claimed.

The forms-oriented data base lets the user enter a list of items to be included and automatically creates the basic data base structure. It includes report generation employing the spreadsheet and, when combined with the word processor, offers the ability to perform mail-merge functions.

The expanded spreadsheet is compatible with Lotus' 1-2-3 spreadsheets and includes a new ability to manipulate text as well as numeric information in spreadsheet models.

Asked if Symphony would be adapted for the IBM 3270 Personal Computer, Kapor said his company had as yet made "no definite commitment" to adapt the product to micros other than the Personal Computer and Personal Computer XT. However, he added that Lotus has a broad intention of making Symphony available eventually on all boxes that can run 1-2-3.

At present, 1-2-3 also operates on Texas Instruments, Inc.'s Professional Computer; Zenith Data Systems Corp.'s Z100; Wang Laboratories, Inc.'s Professional Computer; Digital Equipment Corp.'s Rainbow 100; Bytec Management Corp.'s Hyperion; Grid Systems Corp.'s Compass; and Compaq Computer Corp.'s Compaq.

"We would like to become preeminent in the software industry. But we have to demonstrate — to ourselves, to the financial community and to users — that Lotus is here to stay," Kapor told the members of the press who gathered for the announcement at the Pierre Hotel here. He went on to say that the company, which turned a $14.3 million profit last year, was threatened not by "a mythical software shakeout," but by the challenge of marketing its own new products.

As an introductory offer, owners or new purchasers of Lotus 1-2-3 can buy Symphony for an additional $200. David McElfresh, vice-president of product development for Lotus, said the offer, due to run for three to six months, was designed to provide "an easy path" for upgrading to the higher priced product and "to protect our user base." Lotus is at 161 First St., Cambridge, Mass. 02142.

'Symphony' gets hesitant bravos

NEW YORK — Users gathered at the Pierre Hotel here last week to hear Lotus Development Corp. announce its Symphony integrated software package were excited about the product, but they suggested that Lotus 1-2-3 devotees may not yet be ready for it.

Frank Tanzillo, business systems analyst at Corning Glass Works, said Symphony is "beyond the leading edge" of most users' technical accomplishments. "It's easily the most powerful thing out there, but it will be a while before people are ready to take full advantage of it," Tanzillo said.

But software specialist Esther Dyson, president of Rosen Research Co., said users would not be dissuaded from buying Symphony even if they have yet to exhaust 1-2-3's capabilities. "You don't have 1-2-3 and then have Symphony for dessert," she said, noting that the five-function tool will appeal to a broader market.

Even so, James I. Magid, an electronic connector industry analyst at L.F. Rothschild, Unterberg, Towbin, said the WP or communications functions alone would convince many users to pay Lotus for the new product.

Dyson said that Symphony's $200 introductory price for 1-2-3 users would allow the new software product to ride the coattails of the hot-selling package. She added that Lotus does not "want to cannibalize" the market for 1-2-3 and so is giving users an incentive to buy both products.

Appeals court calls moonlighting on system criminal

By James Connolly
CW Staff

INDIANAPOLIS — Using an employer's computer for moonlighting is just as much of a crime as the surreptitious tapping of telephone, power or CATV lines, an Indiana appeals court has ruled.

The three-judge Second District Court of Appeals late last month reinstated the theft convictions of a former computer programmer for the Indianapolis Department of Planning and Zoning. The court said that Michael McGraw must face sentencing for using the city's IBM 3031 computer in connection with his second job, selling a franchised diet product called Nature Slim.

McGraw faces a maximum penalty of four years' imprisonment and a $10,000 fine.

The appeals court ruling, which defense attorney Phillip Melangton has asked the court to reconsider, reversed a Marion County Superior Court judge's override of a jury verdict of guilty on two theft counts. That judge said Indiana's theft law wasn't specific enough to cover the theft of computer time.

McGraw's attorney had likened McGraw's actions to a worker "using the office xerox machine to copy a recipe for his wife." He said there were only 35 pages of Nature Slim-related work — such as client lists and form letters — in the 1,100-page printout of McGraw's computer library.

But County Deputy Prosecuting Attorney James Warden appealed to the higher court, which ruled that "computer services, leased or owned, are a part of our market economy in large dollar amounts. Computer time is a service for which money is paid . . . thus it is property."

Now involved in computer sales, McGraw was fired by the city in 1981 for failing to complete his work, apparently because he was working on his second job on city time, according to Warden.

NEWS

VDT operators report 'adverse' pregnancies

By David Meyers
CW New York Bureau

NEW YORK — The National Association of Working Women, 9 to 5, said here last week that it has uncovered a work site where 50% of the pregnancies of VDT operators ended "adversely" over a four-year period.

United Airlines' telephone reservations office in San Francisco was named as the site where the pregnancies of 48 VDT operators ended in 15 miscarriages, one stillbirth, one death of a newborn infant, two children born with birth defects, two premature deliveries and three other undisclosed "problems" between 1979 and this year.

"We're not pointing the finger only at [VDT] manufacturers," Karen Nussbaum, executive director of the Boston-based labor organization, said at a news conference here last Thursday. She admitted 9 to 5 had not identified the cause of the pregnancy problems and was unable to give the name of the manufacturer of the terminals at the United reservations office.

Nussbaum said 9 to 5 has asked the National Institute of Occupational Safety and Health to investigate the United work site.

A spokesman for United Airlines in Chicago cited studies by the Center for Disease Control and the National Academy of Sciences finding "no evidence that radiation emitted [by VDTs] reaches or exceeds any international standard of safety and health." Noting the "vast majority" of VDT operators are women of reproductive age, the spokesman said that "clusters of problem pregnancies will occur by statistical chance alone" and are unrelated to VDT use.

Dr. Jeanne M. Stellman, a Columbia University public health school professor brought to last week's news conference by 9 to 5, agreed there is "no proven link" between VDT radiation and health problems. She went on to note that there is also "no evidence of widespread birth defects" among VDT operators.

Nevertheless, Stellman maintained that the U.S. trails the "rest of the world in providing health protection for VDT workers."

Nussbaum acknowledged that the stress caused by VDT work could be relieved by "painfully simple solutions" undertaken by employers without VDT design or manufacturing changes. However, she said that 9 to 5 is "calling for new standards for manufacturers," including metal shielding for terminals.

The labor group leader said 60% of the terminals manufactured in the U.S. do not meet international safety standards. Bringing the rest "up to snuff" would be "cheap in comparison to the human costs."

The association also released results of a voluntary survey of 871 of the nation's 10 million VDT operators, showing that over half experience eye or muscle strain and 45% reported pregnancies ending in miscarriage, abortion, stillbirth, early death of the infant, premature delivery or major birth defects.

At the same time, 48% of those responding to 9 to 5's questionnaire said their health was "about the same," while 35% described theirs as "slightly worse" and 10.9% as "much worse."

Codex to OEM Ungermann-Bass local network

MANSFIELD, Mass. — Codex Corp., a manufacturer of modems and multiplexers, moved to diversify its product line last week by introducing a local-area network that is being supplied to the company by Ungermann-Bass, Inc. under a five-year agreement.

Under terms of that agreement, Codex will market, install and maintain Ungermann-Bass' Net/One local network under its own name. It will be the first member of a family of new networking products called the Codex 4000 series. Ungermann-Bass will also continue to market Net/One.

Adopting an unusual tactic in the marketing of local-area networks, Codex will offer one- to five-year lease options for network hardware and software components.

Like Ungermann-Bass' Net/One, the Codex local network will be available in either broadband or baseband versions or in a hybrid version, where baseband "feeder" networks can be interconnected with a high-capacity broadband backbone network. Other support options available from Codex for the network include initial site survey and the design and installation of the cable plant.

Codex reported that a typical local net configuration would cost between $450 and $750 per port.

Codex is located at 20 Cabot Blvd., Mansfield, Mass. 02048.

2 Trillion

Last night we backed up two trillion (yes, that's 12 zeroes) characters of data, and checked our work.

VMBACKUP

We bring files back alive, the way they should be—readable, usable—which some "cut-rate" backup systems *don't* do. We verify the data before moving it to tape. That's why 75% of the Fortune 100 companies trust their vital data to VMBACKUP.

How do we do this?

- Start with a solid design.
- Take the best systems people in the VM community.
- Have them build it right.
- Add competent, helpful support people.
- Stay close to our customers.

And we create a winning situation for our users.

Strict testing the vendors' aim

Many of the companies that submit their microcomputer software products to the International Bureau of Software Test (IBST) are not seeking that company's seal of approval.

Those software manufacturers, according to IBST President William Goss, simply want their products to undergo strict, out-of-house testing that may reveal problems their own quality assurance experts may have missed. In addition to testing, IBST will build test data sets that its clients, which include Digital Research, Inc. and Verbatim Corp., can utilize repeatedly.

"We relieve their designers of test work and allow them to focus on developing new products," Goss said. "Also, our thorough testing can save a software manufacturer quite a lot of money because we catch problems that would otherwise have to be fixed in the field."

IBST charges between $5,000 and $25,000 to test a microcomputer software package. Some tests run as high as $100,000, depending on the number of functions incorporated in the package.

Relatively cheap

In comparison, the certification processes offered by Peripheral Vision Co. and Benchmark Computer Systems, Inc. are relatively cheap. Both firms charge between $400 and $2,000 to test and approve most micro packages.

Peripheral Vision President Philip Raymond guarantees a four-week turnaround time for certification. Benchmark claimed an average three-week turnaround record, and IBST said its seal of approval testing process takes anywhere from four to 10 weeks, depending on the sophistication of the micro package.

"Narrow-scope programs are easy to test," Goss said. "But a micro operating system or a multifunction application takes considerably longer to review because there are many more interrelationships to study."

One of the most common problems IBST encounters with micro packages is poorly written documentation, a flaw that Raymond and Ken Thoreson of Benchmark also highlighted.

"First, we take the package's documentation and grade it, just like in school," Thoreson said. "Then we match the documentation to the operation of the software itself to see how useful the manuals are to the user. Many times the documentation is so poorly written it's useless."

SEALS from page 1

ware testing and approval, according to Vice-President Ken Thoreson. The Minnesota firm, an established retailer of turnkey financial systems, will not only grant its Benchmark Seal of Approval, but will publish and market a package for its developer.

"There are a lot of people out there buying micro software," Thoreson said. "But a lot of that software is developed by loners and entrepreneurs who often don't utilize the most stringent testing methods. That can be very frustrating and costly for the user.

"We can ensure that the package you're buying is a quality product. That's where the UL and *Good Housekeeping* comparison comes in."

Both Peripheral Vision and IBST offer testing for minicomputer software, but Raymond and Goss said demand for that service has not yet developed. All three executives admit that marketing their approval is the biggest obstacle.

Carrier promises reduced telex rates

NEW YORK — Rates "up to 60% below those charged by traditional telex services" were promised earlier this month by International Record Carrier, Inc. when it began marketing its Supertelex service in the U.S.

A telex transmission between the U.S. and the UK, Hong Kong or Israel costs 75 cents per minute, said International Record Carrier President James McKenna. To continental Europe, the per-minute price is 95 cents; to anywhere else, it is $1.85.

All International Record Carrier telex traffic goes directly from the U.S. customer's terminal to a computerized switch in London. It is forwarded to other countries from there if necessary.

The terminal-computer hookup is provided by GTE Telenet Communications Corp.'s packet-switched network at no additional charge to the customer. This arrangement eliminates the delays inherent in competing services, which accumulate outbound international telex traffic at store-and-forward switches in New York, Miami and other U.S. gateways before transmitting it overseas, McKenna explained.

International Record Carrier traffic is transmitted to London at approximately 1,200 bit/sec, considerably faster than traditional telex service, he added.

McKenna reported that his company has developed a software package which "bypasses the complicated accessing procedures of other telex services as well as eliminates the need for a specially trained telex operator."

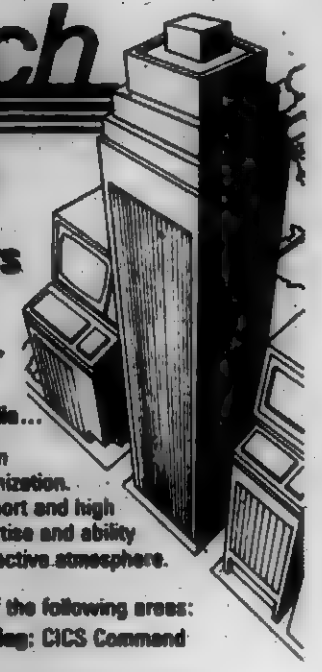
Stored on a floppy diskette, the software is compatible with microprocessors from 28 different manufacturers, including Apple Computer, Inc., IBM and Wang Laboratories, Inc. International Record Carrier will provide compatible micros to customers without them on a free, trial basis, according to McKenna.

International Record Carrier is a subsidiary of Consortium Holdings Ltd., headquartered in Israel, which already markets Supertelex service in that country, throughout Western Europe and in Hong Kong."

TelTech

We're Looking For The BEST CICS Instructors In NYC...

...and Chicago, Los Angeles, San Francisco, Orlando, Washington D.C., Dallas, St. Louis, Atlanta, Minneapolis...



Now's your opportunity to join TelTech, a leading CICS organization. We supply the students, support and high salary—You supply the expertise and ability to share it in a relaxed, interactive atmosphere.

If you are fluent in several of the following areas:

- **Programming and Debugging:** CICS Command Level and Macro
- **Internals:** Recovery/Restart, Architecture, Tuning, Debugging
- **Databases:** IDMS, DL/1, ADABAS
- **Files:** VSAM
- **Telecommunications:** VTAM

TelTech wants to hear from you today!

IMS VERSUS CICS

DO YOU KNOW THE DIFFERENCES?

Once, it was enough to know only CICS or only IMS. Today, the online world is expanding so that you can no longer afford not to know the capabilities of both.

IMS VERSUS CICS

This one-day seminar provides concise and useful information regarding technical and functional differences between IMS and CICS. Among the topics covered will be:

- Transaction Management/Flow
- Backup/Recovery
- Data Security/Integrity
- File/Database Management
- Migration (Conversion) Considerations
- Application Coding Differences

Attention Managers: Special 2-day seminar, with emphasis on the decision makers perspective, also available.

Attention: Introducing our most recent course offering - Computer Networks and International Standards.

Seminars are presented on-site and publicly offered in French for Canadian clientele.

R.L. Hayer Consultants, Inc.
101 East 52nd Street - Suite 900
New York, NY 10022

Please send me additional information:

Afcom predicts 7% rise in '84 DP operations salaries

By Patricia Keefe
CW Staff

GARDEN GROVE, Calif. — The salaries of computer operations personnel are expected to rise an average of 7% this year, with a high of 7.8% for data entry managers and a low of 6.2% for key-to-disk operators, the Association for Computer Operations Managers (Afcom) predicted in its annual salary survey.

Undermining this rosy prediction, however, was Afcom's note that the average rise in salaries during 1983 was only 3.8%, considerably less than the anticipated 7.5%. "This is a much smaller increase than was experienced [in 1982], but given the lowest inflation rate in many years, it is not inconsistent with the general economy," the survey said.

The survey, which covered 250 sites, serves as a guide to salaries currently being paid to employees at various levels within the data entry, data control and computer operations departments of the data center. It claims to be one of the few such surveys to make a distinction between the computer operations manager and the DP operations manager.

Afcom defines DP operations managers as "those who are in charge of computer operations, data entry and data control," whereas computer operations managers are responsible only for the computer room. Using Afcom's definition, there are some small shops that call their DP manager computer operations manager. "Surveys that do not make this distinction severely underestimate the highest operations management salaries and, in effect, perform a great disservice to operations," Afcom said.

Anticipated increases for management personnel led the way, as they did last year, with an average of 7.5%. Other departments followed that high with estimated 7.1% increases for both computer and data processing operations, 7% for data control and 6.9% for data entry.

Actual 1983 increases

In 1983, computer operations, by department, led the way in salary gains with an average increase of 3.5%, Afcom said. Data entry salaries rose 3.5%; bringing up the rear was data control, where overall salaries rose a miniscule .8%.

The position that showed the single largest average increase last year was DP operations scheduler, whose salary jumped 12%. Next was computer operations managers, whose salaries rose 11.3%.

On a national basis, DP operations managers earned an average annual salary of $36,150 last year, earning 20% more a year than their counterparts in computer operations.

In large installations (those spending more than $150,000 in equivalent monthly equipment rental costs), the DP operations manager is earning $42,000, and the computer operations manager is earning $34,284. In smaller centers (under $50,000 in equivalent monthly equipment rental costs), the DP operations manager averages $31,320 a year, and the computer operations manager averages $26,556.

The survey also delved into recruitment problems. The heaviest recruitment efforts targeted the computer room, where survey respondents said they encountered the most difficulty in finding qualified and experienced candidates. For example, 59% of the respondents experienced difficulty in locating qualified computer operators, while 60% found it "very difficult, if not impossible," to find qualified DP operations managers.

Conversely, there was no shortage of computer operator trainees.

Copies of the survey are available for $10. Afcom can be reached through Data Center Management Services, Suite 201, 11501 Brookhurst, Garden Grove, Calif. 92640.

Sting nets five alleged smugglers

MARLBORO, N.J. — U.S. Customs Service agents last week charged five people, including a Chinese citizen and an AT&T Information Systems, Inc. engineer, with plotting to smuggle high-tech equipment to China.

The five, arrested after what prosecutors claimed was one of a series of meetings with an undercover customs agent, allegedly tried to buy 100 transverse-wave tube amplifiers from the agent, who was running a "sting" operation.

Held in lieu of bails ranging from $250,000 to $1.5 million, the five were charged with conspiracy to export munitions illegally — specifically, $1 million worth of Watkins-Johnson Co. amplifiers, which allegedly can be used for missile-guidance systems and for jamming radar. Assistant U.S. Attorney Andrew Ruotolo Jr. told a federal magistrate that the suspects gave the agent a "shopping list" of items that they wanted to buy and told the agent they had smuggled other goods to China.

Ruotolo said the lists included various types of computer equipment and military night scopes.

The AT&T Information Systems employee was identified as Kuang-Shin Lin of Lincroft, N.J., a naturalized American citizen. Ruotolo said Lin didn't use his AT&T position in connection with the conspiracy.

MTI leases IBM compatible line printers to give you higher performance at lower cost.

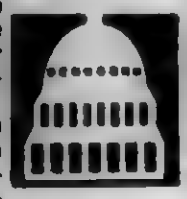
DP crime bills sitting on congressional back burner

By John Gallant
CW Staff

WASHINGTON, D.C. — Pending federal computer crime legislation is wintering in subcommittee this year, languishing on the congressional back burner while foreign policy and budget issues hold sway.



Four major DP crime bills are still awaiting action in the House of Representatives' Judiciary Subcommittee on Civil and Constitutional Rights, which is chaired by Rep. Don Edwards (D-Calif.). While Edwards said at November hearings that the subcommittee would move promptly to determine if there is a need for a federal computer crime law [CW, Nov. 28], three months later no further hearings or subcommittee action is scheduled.

According to a subcommittee staff member, Edwards is still awaiting the U.S. Justice Department's recommendation on the need for legislation before moving on bills introduced by Reps. Bill Nelson (D-Fla.), Daniel A. Mica (D-Fla.) and Lawrence Coughlin (R-Pa.). The staffer said the Justice Department promised a recommendation at the subcommittee's Nov. 18 hearings, but was delayed by the recent resignation of Attorney General William French Smith.

The fifth DP crime bill, introduced by Rep. William J. Hughes (D-N.J.), is still on hold in the House Judiciary Subcommittee on Crime. A staff member said the subcommittee, chaired by Hughes, anticipates at least one additional day of hearings on the bill, which deals primarily with credit card fraud. Though not yet formally scheduled, those hearings are expected in March.

In the Senate, no action has yet been scheduled on a federal crime bill filed last August by Sen. Paul Trible (R-Va.). That legislation — the Senate version of Rep. Nelson's DP crime bill — is still awaiting initial hearings in the Senate Judiciary Subcommittee on Criminal Law.

Hearings on the Senate version of the Small Business Computer Crime Prevention Act, approved by the House in October [CW, Oct. 31], are slated to begin March 7 before the Committee on Small Business. The bill, introduced by Sen. Paul Tsongas (D-Mass.), would set up a public and private-sector task force to investigate the problem of computer crime in small business and recommend preventative measures.

Earlier this month, the Computer Crime Prevention Act of 1984 was filed by Sen. William S. Cohen (R-Maine) in response to recent Senate hearings on computer hacker activities (see story below).

If no action is taken on the stalled crime bills by Congress' scheduled Oct. 4 adjournment, the bills' sponsors will have to decide whether to reintroduce the bills in the next session.

Nelson's Federal Computer Systems Protection Act of 1983 (H.R. 1092) would make computer crime a federal offense if it involved federal agencies, institutions insured by the U.S. government or computers that operate in interstate commerce. The bill, which currently has 116 co-sponsors, calls for fines of $50,000, or up to twice the monetary gain from such a crime, and prison terms of up to five years.

H.R. 4259 and H.R. 4348, both introduced by Mica, would set up a clearinghouse on federal computer crime (see story on page 13) in addition to making it a federal offense to use a computer without authorization and with the intent to defraud or steal. The bill prescribes a fine of up to $50,000 and five years' imprisonment. H.R. 4259 also faces review by the House Ways and Means Committee because it incorporates an income tax credit for buyers of micros.

Rep. Coughlin's succinct three-paragraph H.R. 4301 would make the use of a computer in a manner not authorized by the owner a federal crime punishable by a fine of up to $100,000 and up to 10 years' imprisonment.

The DP crime portion of Rep. Hughes' H.R. 3570, designed to curb credit card fraud, would make the fraudulent use of a computer a federal offense punishable by a fine of up to $10,000 and a prison term of up to 10 years.

Bill targets unauthorized access

By John Hirshmer
CW Washington Bureau

WASHINGTON, D.C. — A new computer crime bill, introduced recently in the U.S. Senate after hearings on rampant, illegal computer hacker activities, contains special provisions to deter unauthorized access of data bases.

The Computer Crime Prevention Act of 1984, proposed Feb. 8 by Sen. William S. Cohen (R-Maine), contains specific penalties for buying,

CRIME from page 12

procuring or selling the passwords to the computers covered in the legislation in order to obtain money or services illegally. The penalties for this offense would be $50,000 or three times the amount obtained and/or a maximum prison sentence of five years.

To deter computer hackers, penalties for any unauthorized access not involving fraud or damage would be up to $5,000 and one year in jail. These would be levied only against "intentional hackers." It would "not penalize computer enthusiasts who accidentally tap into the computer systems," Cohen said.

Like other computer crime bills now under consideration in Congress, the proposed law covers computers owned or operated by the federal government and federally insured financial institutions and any system used in interstate commerce. Fines for illegally using computers for fraud, damaging computers or altering their content would be $50,000 or three times the amount of any money obtained and up to five years in prison.

Cohen noted that his Subcommittee on Oversight of Government Management held two days of hearings on hacking and computer crime last October. "Those hearings vividly illustrated that computer breaking should not be treated as simply innocent pranks by curious youngsters," he said.

Computer crime clearinghouse proposed

A clearinghouse to identify "vulnerabilities and threats to federal computer systems" has been proposed in legislation filed by Rep. Daniel A. Mica (D-Fla.) to combat what he called the "dangerous mismanagement of federal computer resources."

Dubbed the Interagency Committee on Computer Crime and Abuse, the clearinghouse would compile and disseminate information and statistics on the incidence of computer fraud and abuse.

The clearinghouse idea was incorporated in two DP crime bills introduced by Mica last year. The bills — H.R. 4259 and H.R. 4384 — currently are awaiting action in the House, where they received only limited attention in the previous session of Congress.

The bills call for the clearinghouse to be established within the executive branch of the federal government and to be chaired by the attorney general. The interagency committee would also have as members the secretaries of commerce, defense and the treasury, the chairman of the Federal Communications Commission and the director of the Federal Bureau of Investigation.

Would also coordinate research

Aside from its responsibilities as a computer crime information clearinghouse for federal departments and agencies, the interagency committee would also be charged with coordinating research relating to "the development of more secure computer systems." In that function, it would make recommendations to governmental agencies for improving the security of federal computer systems.

But perhaps its most important role would be that of making recommendations to Congress "for such legislative changes as the committee determines to be desirable in order to protect computer systems from fraud and abuse." In that role, Mica told recent hearings of the House Subcommittee on Civil and Constitutional Rights, the clearinghouse could effectively aid Congress in combating computer crime.

In addition to the proposed clearinghouse, Mica's pending legislation calls for the creation of a Computer Security Research Program. Administered by the secretary of commerce, the program would provide funding to individuals for research and development in new methods of protecting computer systems from unauthorized access and use.

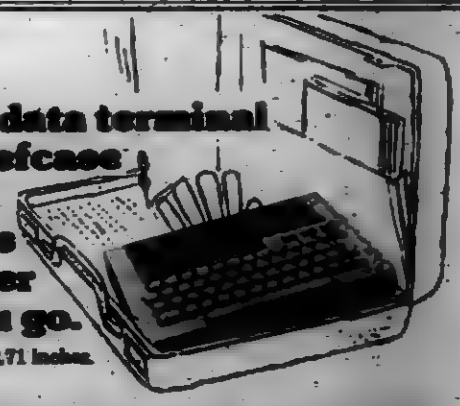
NCR Users Conference set for April 29-May 2

CINCINNATI — The Federation of NCR User Groups will hold the 14th annual NCR Users Conference (Nucon) at the Cincinnati Convention Center here April 29 to May 2.

The conference will include more than 60 educational sessions, including presentations on hardware, operating software, software tools, application software management techniques and communications. Also included will be an address by C.E. Exley Jr., NCR Corp.'s president and chief executive officer.

The conference fee is $365 for participants who register prior to March 16; after that date the fee is $395.

Further information is available from the Federation of NCR User Groups, Mail Station SDC-2, Dayton, Ohio 45479.



Slip TI's new data terminal into your briefcase and you'll be able to access your computer wherever you go.

Dimensions: 8.46 x 11.73 x 2.71 inches.
Weight: 5.9 lbs.

Lease the TI707 portable from MTI for $45/month including maintenance.

The Silent 700* Model 707 portable data terminal is ideal for electronic mail applications, data base usage, real estate multiple listing printouts; and much more. The built-in Bell 103 compatible modem lets you access your computer from the nearest telephone jack. With the optional acoustic coupler and battery pack, you can even talk to your computer from a pay phone. The TI 707 features 30 cps matrix printing with true upper and lower case characters.

Decision on higher Ecom rates due Friday

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — The U.S. Postal Service's much-maligned Electronic Computer-Originated Mail (Ecom) service may get a new lease on life this Friday, when the U.S. Postal Rate Commission is scheduled to act on a proposal for higher rates.

The proposal, submitted 10 months ago, would raise the price of a one-page Ecom message from 26 to 31 cents; a two-page message, now priced at 31 cents, would rise to 40 cents. If the new rates are adopted, according to Karen Uemoto, Ecom's director, the service will "begin to break even late next year or early in 1986," and by late 1987 there will be enough of a surplus to repay all of Ecom's accumulated deficit, which currently totals more than $35 million.

However, not everyone agrees with Uemoto's rosy forecast. Critics include the U.S. Department of Justice and Rep. Glenn English (D-Okla.), chairman of a House of Representatives government operations subcommittee, as well as vendors of competing private electronic mail services.

When Ecom began service in January 1982, postal officials predicted it would handle at least 50 million messages during fiscal year 1983, which ended Sept. 30. The actual volume was 15.3 million messages.

Last December, *The Washington Post* reported that one customer, Automotive Incentive Development Co., accounted for 50% to 75% of Ecom's total volume. The company's president, James Young, was quoted as saying that if the proposed rate increase is implemented, he will stop using Ecom service.

In addition, Ecom's managers have been accused of exceeding their authority by unilaterally modifying the service. As originally conceived, Ecom was to be a "generation II" electronic mail offering. Messages would be transmitted on-line from the sender's site to a serving post office (SPO) near the recipient; each message would be printed at the latter point, placed in an envelope and delivered by a letter carrier on his regular rounds. The whole trip, from sender to receiver, was supposed to take a maximum of two days.

But the Postal Service has admitted that a significant percentage of Ecom messages have not been transmitted to the "addressee SPO" for some time. Instead, these messages are transmitted by the sender only to his local post office, where they are printed out, placed in envelopes and forwarded to the recipient as ordinary airmail.

About 50% of Ecom messages are handled in this way, according to a statement published by the Postal Service last April in the *Federal Register*. However, Ecom director Uemoto last week estimated that figure at between 30% and 35% of the total amount of Ecom messages.

Cost advantage

The major advantage of this arrangement for the customer is that it saves the cost of transmission to the addressee's post office, typically amounting to about $1 per message. The local post office transports the message, after printing and enveloping it at the sender's end, and the total charge to the sender for printing, enveloping and transport is 26 cents or 31 cents, depending on the number of pages.

Consultant Mike Cavanagh, who is probably Ecom's most vocal critic, contended that this modification of the original Ecom service demonstrates what is wrong with the whole concept. His basic point is that the only market for Ecom is "junk mailers" needing a cheap, quick distribution system. Since there are not enough such mailers to make the service viable, the Postal Service has simply modified Ecom to make it even cheaper.

"But there just aren't enough customers out there even at the lower price," Cavanagh argued, "so the Postal Service's other patrons have to make up the difference between what Ecom takes in and pays out. In effect, they're paying a steadily mounting subsidy to support a handful of junk mailers."

Although Cavanagh and his fellow critics have attracted a lot of press and public support for the idea that Ecom lacks any redeeming virtue, there is at least one other view.

According to that view, the bulk of the Postal Service's revenue comes from first-class mail; business-related letters supply the bulk of that revenue, and a rapidly growing profusion of online terminals threatens to reduce that revenue stream significantly.

A related argument is that, like the local telephone company, the local post office performs a unique and valuable public service; therefore, if it is desirable to subsidize the local telephone company so it can retain business customers, it is equally desirable to subsidize the post office so it can do likewise.

Critics of that argument, however, point out that unlike the local telephone company, Ecom is not a successful business venture.

The upcoming report of the Postal Rate Commission will significantly impact Ecom's future. Besides the rate increase proposal, the commission will also consider whether to let Ecom users, for an additional four cents, send a business reply envelope along with a message and whether to let users send any number of messages at one time (they must currently send at least 200).

If either of these latter changes is approved, it will mark the first time a major modification of Ecom's original design has been officially endorsed.

MCI announces service to compete with Ecom

WASHINGTON, D.C. — "We're in the same market arena" as the U.S. Postal Service's Electronic Computer-Originated Mail (Ecom), "but we're offering much more," a spokesman for MCI Digital Information Services Corp. said last week after the company unveiled MCI Volume Mail, a second-generation electronic message service that works much like Ecom.

In both services, the user transmits multiple messages to a receiving center, where they are printed, enveloped and then delivered by the Postal Service as ordinary first-class mail.

MCI charges 70 cents to $1 for a one-page letter, depending on volume and job requirements. This is roughly what Ecom costs. But while Ecom requires users to send at least 200 messages at a time, MCI Volume Mail customers can send any number of messages.

In addition, the MCI service allows business reply envelopes or other inserts to be sent along with the message, accepts a wide variety of message formats, reproduces company logos and features a simple sign-up procedure.

The U.S. Postal Service is currently seeking authority to provide a business reply envelope as part of Ecom and to do away with the 200-message minimum.

DEC TO IBM SNA

Now available...full SNA capability for your DEC computer! Comboard/SNA gives your terminals access to IBM interactive applications. Data can be transfered between systems transparently, all in the complete fully supported package, from Software Results.

Comboard/SNA is a proven and reliable, single-board, 256KB communications computer that plugs into your DEC Unibus. Teamed with Comboard software, the system is a cost-effective solution to troublesome SNA communications problems.

Comboard/SNA allows your DEC to emulate an IBM PU Type 2 communications node. You have a full gateway into your SNA without the trouble of passing through a secondary network.

Need general accounting software for IBM System/38?

We've simply solved your problem.

LAWSON ASSOCIATES has solved it with the first general accounting software specifically designed for IBM System/38. Not merely compatible, but state-of-the-art to fully utilize your computer's capabilities. Compare. You won't find a total software solution like it anywhere else.

DESIGN FEATURES: They include: on line systems using data base management; menu driven, user friendly programs written in RPGIII, the System/38 language; and integrated modules. Their benefits: ease of installation and use, plus maximum employee productivity.

INTEGRATED MODULES: Those available include: General Ledger and Report Writer/Accounts Payable/Accounts Receivable/Fixed Assets/Payroll/Personnel/Purchase Order/Order Entry/Inventory Control

SERVICE FEATURES: Fully documented and supported. Onsite training and implementation. One year warranty. Available now for immediate installation.

For more information, please call or write:
Lawson Associates, 2021 East Hennepin Ave., Minneapolis, MN 55413
(612) 379-2633

LAWSON ASSOCIATES
WE SIMPLY SOLVE PROBLEMS

Ways to bypass the phone net on the rise

PRODUCT SPOTLIGHT

By Phil Hirsch
CW Washington Bureau

One of the nation's more extensive bypass networks was put into operation last year by Citicorp, the New York-based banking giant. The network links 10 sites — three on the East Coast, two on the West Coast and most of the others in the Midwest — allowing them to communicate with each other via 56K bit/sec digital circuits.

At the other end of the bypass spectrum is a 1.544M bit/sec digital microwave channel that a company is using to connect two buildings across the street from each other. This system, according to a spokesman for M/A-COM, Inc., a leading manufacturer of private microwave equipment, costs about $20,000.

Citicorp, by comparison, is paying $24 million annually just to lease the satellite channels connecting its 10 earth stations. Each of the stations cost another $1 million.

But in both cases, the motivation is the same — to reduce communication costs below what the wire-line carriers (telephone companies that own transmission facilities) are charging for equivalent transmission capacity and/or to obtain service features not available from the carriers.

How many companies today are using services that bypass the telephone network? Because the figures come from biased sources — bypass vendors and telephone carriers — it is impossible to know accurately. The Federal Communications Commission is expected to issue a detailed analysis within the next month or so, although the commission is not universally considered unbiased.

However, it seems certain that bypassing will increase, both in terms of increasing revenues and in terms of a broadening of the types of users involved. Higher tariffs are a major reason. AT&T's proposed rates for private-line service, filed last October and now scheduled to become effective April 3, call for a 15.7% overall increase in interlocal access and transport area private-line rates. Because of the FCC's recently amended access surcharge plan [CW, Jan. 30], this percentage is expected to increase.

Conflicting definitions

One difficulty of discussing bypass is that conflicting definitions of the term exist. It may mean going around the local-exchange network or going around the long-distance network — or both.

And while some observers talk about bypass in terms of customers and/or traffic, others are concerned about costs and revenue. This semantic confusion creates problems because if a bypass facility is defined as one that provides communications more cost-effectively between and among points normally served by the analog telephone network, then the biggest providers of bypass facilities are the telephone companies themselves.

AT&T is laying fiber-optic cables down the East and West Coasts, as well as elsewhere, which will interconnect several of the nation's largest cities. Meanwhile, many former Bell operating companies are installing local as well as long-distance fiber-optic channels.

The Pacific Telesis Group (Pactel) has laid three fiber-optic loops in downtown San Francisco that can put 90M bit/sec of digital transmission capacity on the doorsteps of nearby companies. In addition, Pactel has just about completed a fiber-optic network in the Los Angeles area that will interconnect the sites of the 1984 Olympics, which are scattered over an area stretching 90 miles north, 30 miles east and 110 miles south of the city. By 1986, the company expects to have all of California's major cities connected by fiber-optic cable.

Meanwhile, it has requested FCC permission to offer digital termination systems in 19 California and Nevada cities and is installing fiber subscriber loop carrier systems in several areas, which would replace much of the existing residential and business customers' analog local loop with a fiber-optic cable that carries 24 digitized voice signals totaling 1.5M bit/sec.

Pacific Bell also has proposed constructing a CATV system to serve Palo Alto, Calif., and several surrounding communities. Part of the system's capacity would be reserved for data transmission at all popular speeds.

Private microwave

A "key alternative" to these telephone company-provided facilities, according to a recent report published by the market research firm International Data Corp. (IDC), is private microwave. "Given the demand in the 1980s for multifaceted data/voice services," IDC said, "we expect to see major growth in . . . microwave-based private communication networks."

Part of this growth will be produced by digital termination systems vendors. A digital termination systems network basically consists of a centrally located microwave transceiver which communicates with users up to about eight miles away through three or four microwave antennas, each serving a different sector of the surrounding area. Users within each sector share a 1.5M bit/sec, digital, full-duplex channel. Because transmission capacity is limited, digital termination systems are generally considered feasible for interactive rather than batch-type data communications and are not suited, at least presently, for voice traffic.

More than 50 companies have requested FCC permission to build and operate digital termination systems, and such systems have been authorized for most of the nation's major cities. Although only a few are actually on the air at the moment, several are scheduled to begin operation this year, so those new bypass facilities should become accessible to a substantial percentage of the nation's corporate communications users by the end of 1984.

See BYPASS page 16

How to Bypass Your Local Telephone Company

Major sources	Types of facilities offered	Comments
AT&T, the former Bell operating companies, independent telephone operating companies and other common carriers	The former Bell operating companies offer long-distance access (local exchange network bypass) using terrestrial analog/digital transmission facilities. Connections link user with AT&T, other common carrier network nodes or with user's private local/long-distance network. AT&T and other common carriers offer Inter-Lata (local access and transport areas) satellite, terrestrial private-line facilities. The former Bell operating companies offer Intra-Lata private-line facilities. Two telephone companies (Rochester Telephone and Southern New England Telephone) are building multistate private-line networks.	All carriers making increased use of fiber-optic cable for local long-distance transmission. Many former Bell operating companies planning to introduce local-area data transport services, circuit-switched digital capabilities, local-area networks this year; they may be authorized to offer digital termination systems (DTS). Some former Bell operating companies are planning to build cable TV networks providing private-line services. The former Bell operating companies are also likely to build office parks offering other tenants teleport and/or shared access to terrestrial networks.
Multitenant services vendors (owners of office buildings and office/industrial parks who provide communications services to their tenants)	Long-distance access using private lines typically leased from phone company. Auxiliary services — electronic mail, private branch exchange and message centers — are also frequently available.	Shared communications services are now offered by 58 office buildings concentrated in New York City, Dallas and Chicago. Telephone companies and other common carriers are investing in real estate-related communications ventures. Video teleconferencing to be offered this year by at least one multitenant services vendor.
DTS/Dama suppliers (DTS provide data-only services within metropolitan areas; digital electronic message services are DTS networks interconnected by satellite/terrestrial facilities leased from others.)	Point-to-point, point-to-multipoint, microwave-based transmission at speeds of 9.6K bit/sec to 1.5M bit/sec.	Only one DTS carrier is operating at the moment. Several plan to be on the air by the end of this year; however, their networking capability will be limited. New technology and the opening of 18-GHz frequency band promise to increase DTS transmission capacity.
Teleports (Some are primarily office/industrial park real estate ventures which include access to on-premises satellite earth stations. Others are "antenna farms" providing only satellite-based communications service.)	Long-distance bypass for voice/data communications. Some teleports also bypass local exchange networks.	New York City teleport, first of its kind, scheduled to begin operation late this year. At least two more (Bay Area Teleport in San Francisco and Las Colinas office park between Dallas and Fort Worth) are likely to be operational in 1985. According to one estimate, within three years teleport-equipped office/industrial parks are likely to be operating in the nation's 30 largest metropolitan areas. "Antenna farm" teleports are now operating in about 25 cities.
Cable TV networks	Coax/fiber-optic-based private-line services connecting user on point-to-multipoint basis with local sites and/or with long-distance network nodes.	Cable TV-based private-line services are now offered in a number of cities — notably, New York, Pittsburgh and Omaha. They are planned in several more, but local telephone companies are insisting that the companies must first be certified by state public utilities commissions. The Federal Communications Commission has been asked to assert federal jurisdiction.
Private network vendors	Primarily microwave (including DTS) providing point-to-point, point-to-multipoint transmission at all popular bit rates.	Business use of microwave to bypass local exchange networks is increasing. Most new systems operate in the 18- or 23-GHz range. Transmission up to 8 miles without regeneration is possible.

WASHINGTON UPDATE

JAKE KIRCHNER

Japan will reconsider trade proposals: U.S.

WASHINGTON, D.C. — U.S. government officials said recently they believe Japan will reconsider several controversial high-technology trade proposals that have raised serious concern among American firms.

Chief among the U.S. complaints is a Japanese proposal to create a patent-like protection mechanism for software, allowing for only 15 years of protection and including compulsory licensing to the end user. American industry claims the proposal would allow Japan to raid U.S. software to help it catch up in this important high-technology field.

The other area of concern is a proposal to limit foreign ownership of a certain type of telecommunications network the Japanese government may try to foster in that country.

Both proposals are in the early stages, and U.S. trade officials told U.S. industry leaders recently that Japan has agreed to consider American views as the proposals are developed. U.S. computer and electronics industry representatives who met with U.S. Commerce Secretary Malcolm Baldridge and U.S. Trade Representative William Brock reported the government has assured them of strong support in the controversy.

CAB orders regulations on reservations nets

WASHINGTON, D.C. — The Civil Aeronautics Board (CAB) has directed its staff to prepare regulations to minimize bias in the computerized airline reservations systems provided by airlines to travel agents.

The CAB decision is the latest move in the agency's investigation of complaints that some of the systems, provided by a small number of airlines, are biased in favor of the providers' own flight schedules, to the detriment of carriers who rent time on the systems.

Although there are several systems providers, most travel agents use the systems developed by United Airlines and American Airlines.

Independent studies by the CAB and the Justice Department found a potential for major abuses with anti-competitive consequences in current systems operations.

The CAB rejected suggestions from some airlines that these systems operations be divested.

The regulations being developed by the CAB staff reportedly will include provisions to ensure all airlines' schedules on a system are listed without preference to any carrier and that participation fees charged by the system providers to other airlines are not excessive.

Group plans ad campaign on VDT safety, tech issues

WASHINGTON, D.C. — A newly formed Coalition on Workplace Technology is planning a major advertising campaign on ergonomic and safety issues in support of increased use of office technologies.

The coalition, initially concentrating on VDT safety, was formed in response to concerns that new technology is not put to its best use in the work place, according to the Computer and Business Equipment Manufacturers Association (Cbema), a major force behind the coalition. The coalition will also target what it terms "unnecessary" legislation now appearing at the state level to regulate implementation and use of computer-based office equipment, particularly VDTs, said Cbema spokeswoman Charlotte LeGates.

Besides Cbema, other members of the coalition, representing manufacturers and users of high-technology equipment, include the Air Transport Association of America, the American Bankers Association, the American Electronics Association, the American Insurance Association, the American Newspaper Publishers Association, the American Society of Personnel Administration, the Electronic Industries Association and the Printing Industries of America.

LeGates said the number of prospective members is three times the number of groups that have already joined the coalition. She said the group's funding level "is very much up in the air," but that a "major advertising campaign" now under consideration would cost a minimum of $50,000.

In a statement issued last week, Cbema President Vico Henriques said, "We have a great deal of information about the best installation and use of visual displays, about how to introduce new technology in the work place and about the kinds of questions and problems that users experience."

BYPASS from page 15

According to Telestrategies, Inc., a McLean, Va., consulting firm that devotes most of its time to studying the bypass industry, digital termination systems networks in 45 cities will be operating by the end of this year. At least a few of the cities are also likely to be interconnected by then, so some users should be able to employ the new networks for long-distance as well as local communications.

Another significant source of bypass services is multitenant services vendors. A typical multitenant vendor is the owner of an office building or office park which leases communications circuits from a carrier and resells them to its tenants.

According to Jerry Lucas, president of Telestrategies, Inc., 58 office buildings around the country now provide such services. It is "virtually certain," he added, "that any office building of more than 300,000 square feet built in 1985 will provide shared communications services to its tenants."

Most offices with fewer than 300 employees can save six cents to 20 cents a minute per call by sharing long-distance service instead of dealing directly with the phone company, Lucas contended. And besides this direct saving, he pointed out, the sharer gains access to sophisticated private branch exchange equipment — offering electronic mail boxes, least cost routing and similar features — which the sharer often cannot justify on its own.

Although multitenant service vendors typically lease terrestrial circuits, they may also use satellite facilities. Late last year, for example, Olympia & York, the largest office developer in North America, announced plans to interconnect all of its properties, located in New York and eight other cities, using satellite channels supplied by United Telecommunications, Inc., a major independent telephone company.

Teleport services

A related form of bypass involves "teleports." The best known of these is being built jointly by New York, the regional port authority, Merrill Lynch & Co. and Western Union. Located on Staten Island, the teleport will provide access from a single location to 24 existing or planned domestic and several international satellite networks.

Some of the teleport's users will be located in an adjoining "corporate park"; others will be in neighboring areas of New York and New Jersey. Two similar teleports, consisting of earth stations and an adjacent office area, are also under construction.

One is in the San Francisco Bay area, the other near Dallas. The big advantage of the teleport-cum-office park is that it can largely eliminate the access circuitry — and its related costs — which existing carriers like Satellite Business Systems must add to their charges.

Telestrategies' Lucas expects teleports to be built in the nation's largest 30 cities within the next three years. He also expects "antenna farms" to be built in the largest five cities. Antenna farms, he explained, are satellite earth stations without office parks, connected by leased circuits to users scattered throughout a metropolitan area. Their operators would lease satellite transmission capacity at bulk rates and resell it in smaller pieces at rates less than those charged by other carriers.

Regulatory policies

Although the economics of bypass services will have an important bearing on their viability, regulatory policies will also play an important role.

For example, although a number of CATV companies now offer data transmission services and more plan to do so, they are being stymied by telephone companies' insistence that the CATV operators must first obtain common carrier licenses. According to a survey conducted last year by Time, Inc. and reported to the FCC, eight states — New Jersey, New Mexico, New York, Oregon, California, Colorado, Connecticut and Nebraska — are investigating this.

Meanwhile, legislation is pending in Congress to free cable-based private communication services from regulation, and the FCC is considering whether to preempt state regulatory authority over cable.

BIM-EDIT vs. IBM ICCF:

Higher productivity is the better deal.

When you compare program editor capabilities, there's no comparison between BIM-EDIT and ICCF. BIM-EDIT has more than 25 features that ICCF can't match. Time-saving, productive features like:

- fast, automatic recovery after CICS failure
- library backup without interrupting on-line users
- concurrent library member addition and deletion from batch and on-line
- immediate logoff from any point, including mid-edit session
- logon returns immediately to logoff point and status
- log session maintained per user of commands and responses
- line block group commands — copy, move, delete (cc-cc, mm-mm, dd-dd)
- easy switching between concurrent edit and display sessions
- access to all system commands from any screen or session
- high-speed, highly functional, POWER spool queue access
- spool access, edit, other session types, all use same scrolling commands
- multiple commands for one or multiple session may be entered at any time regardless of session type or position
- may end an edit session without permanently affecting the member
- hierarchical library directory structure
- edit lines up to 256 characters wide
- support for 3270 models 2, 3, 4, and 5
- dynamic adjustment of screen size support
- exit routines
- member name length up to 32 characters
- access control by sub-library, member, or access type
- Help screens
- implied objects of commands (uses last referenced member name)
- library directory always in alphabetical order

Compare the features. Compare the price. You'll agree, the higher productivity of BIM-EDIT is the better deal.

BIM has more than a dozen other DOS/VSE system software products, also performs systems programming consulting, and provides computer time services on a 4331-2 system.

IBM seen marketing micro with 'Trojan horse' strategy

By David Meyer
CW New York Bureau

NEW YORK — With its antitrust worries safely behind it, IBM has developed a "Trojan horse strategy" for infiltrating American businesses with its Personal Computer and for taking over the entire hardware market through services delivered over its Information Network, The Yankee Group said at seminars held here and in San Francisco earlier this month.

IBM's aim is to "intoxicate end users with [the] limited processing power" of desktop Personal Computers, "creating an explosive demand" for storage media, software and processors, Dale Kutnick, executive director of the Boston-based consulting firm, told about 120 executives from user and vendor firms who attended the seminar here, titled "The IBM Impact."

"IBM has settled into its role as the standard-setter for the industry," Kutnick said. Before the U.S. Justice Department dropped its antitrust case against the company, "IBM was almost paranoid about competition and felt uncomfortable with third-party software developers."

But despite its clear aim to "dominate the industry," IBM is vulnerable in office automation, he contended. It lags behind its minicomputer-making rivals in developing a $35,000 to $40,000 system to act as what he called "a departmental file cabinet."

"There is a desperate need for this machine. Customers are looking for a system in the $20,000 range. They're still looking for that magic box," Kutnick said.

The rapid acceptance of the IBM Personal Computer, with 550,000 units shipped in 1983 and 1.5 million expected to be shipped in 1984, has obscured IBM's lack of a departmental-level office automation minicomputer, according to Kutnick.

Local-area net to debut?

Until IBM is able to design a 4300 family machine "small enough to fit onto the departmental level" — a process expected to take three years — it will pursue its strategy of dominance through networking, Kutnick told the seminar attendees.

Kutnick predicted that the company's local-area network will finally be announced in the second half of the year. A stopgap measure — a network designed for the Personal Computer — is likely to be made available at mid-year, the fruit of a joint development effort by IBM and Soltex, an Israeli firm.

"All the IBM local-area network will be is a local physical implementation" of Systems Network Architecture (SNA), Kutnick maintained. And it is through SNA and the SNA-based Information Network that IBM is plotting to conquer the computer industry, he added.

By year's end, IBM had captured a .9% share of the $4.23 billion computer services market, according to Yankee Group estimates.

Local net, 'Sierra' uniprocessor expected from IBM in '84

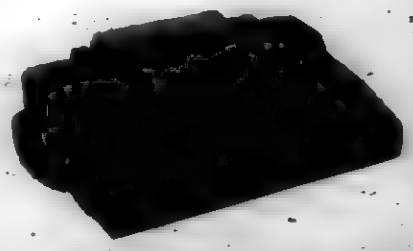
NEW YORK — Nothing as dramatic as the Personal Computer or the PCjr is expected from IBM this year, according to The Yankee Group.

Big Blue's major new product offerings this year will consist of the oft-predicted and oft-delayed local-area network as well as the project code-named Sierra, a high-end uniprocessor-based machine capable of obeying between 14 million instructions per second (Mips) and 19 Mips, Yankee Group researchers said.

The Boston-based consultants told attendees at seminars on "The IBM Impact," held here and in San Francisco earlier this month, to expect midyear, 15% price cuts on the 3081 and 3084 systems, along with higher maintenance costs on the 3033 family.

Other announcements said to be on the way include:

- Introduction late this year of a version of the Personal Computer, able to run subsets of System/36 operations.
- The unveiling of a Personal Computer with a built-in modem late this year or early next year.
- The release sometime this year of an MVS-like operating system to encourage IBM's 20,000 DOS users to sidle over to MVS.
- Availability late this year of a Systems Network Architecture support capability for the VM operating system.
- The marketing throughout the year of various enhancements to the Personal Computer, including a portable version, a different keyboard and a voice-input module.



Lease the Digital LA12-C plain paper portable from MTI for $83/month including maintenance.

We are authorized distributors of Digital's terminals, printers and personal computers.

Digital's Correspondent is the most versatile portable around. It uses any paper, prints multi-part forms, prints up to 132 columns at 150 cps, full ASCII character set plus bit map graphics via a highly legible 9x9 dot matrix. There are five models of this versatile portable with different data communications capabilities. The C model has an integral 300 baud acoustic coupler.

MTI is one of the few Authorized Digital Terminals Distributors, so we can give you the best of two worlds; terminals, based on advanced technology from the industry leader, and the expertise and service from applications specialists.

Whether you buy, rent or lease our equipment, you'll find MTI is the one source for all the terminals, peripherals, systems, applications expertise and service you'll ever need. At good prices. Call us today.

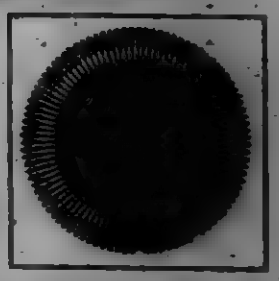
Rough writer.

In the business machine torture chamber most of us call the office, one word processing printer shows true grit. We build our DP-Series daisywheels to keep turning out letter-perfect documents month after month. In the face of adversity, and in the hands of a secretary. Call your printer distributor. Or contact Dataproducts at (213) 887-8924, 6200 Canoga Avenue, Woodland Hills, CA 91365. In Europe, 136-138 High Street, Egham, Surrey, TW 20 9HL, England.



Dataproducts Daisywheel Printers

MCBA is looking for some professional bill collectors.

More specifically, we're looking for some dealers who like money. Lots of it. Because when you carry our powerful, field-proven software, that's exactly what you can expect.

Why? It's quite simple, really. The quality of MCBA's library of 17 modular manufacturing, distribution, and accounting packages is attested to by over 15,000 users worldwide. In fact, it's really the only serious software of its kind available for mini and micro environments. Thanks its modularity and flexibility, not to mention its comprehensive documentation. All of which has helped us develop and maintain successful relationships with dealers like you for over 10 years now.

This means you can establish a relationship with us and have at your disposal a comprehensive library of software packages. All of which can be mixed or matched to suit the unique needs of your customers. And as your customers grow, they'll come back to you for more business. Because you can expand their systems with totally integrated packages that work with each other like the movement in a Swiss watch.

So no matter what size your customers are now, or what size they are tomorrow, your business keeps growing. And the bills (the green kind) keep pouring in. It might even get embarrassing.

So if you're a dealer who's in it for the money, call MCBA now at (818) 957-2900. You may not end up being famous. But you could end up rich.

MCBA®

Software that grows on you. And with you.™

2441 Honolulu Avenue, Montrose, California 91020

For HP, Wang, DEC, and TI minis and UNIX, and RM/COS-based micros.

SDC employee charged with bribe attempt

By Patricia Keefe
CW Staff

ALEXANDRIA, Va. — A federal grand jury here has indicted a contract employee of Systems Development Corp. (SDC) on charges that he attempted to bribe a consultant to a Massachusetts state agency in return for help in securing an estimated $9.4 million state contract.

The indictment, announced two weeks ago, also charges consultant M. James Errico with interstate travel in aid of racketeering and two counts of wire fraud. If convicted on all four counts, he could receive up to 25 years in jail and a $31,000 fine. Errico has entered a plea of not guilty. The case is scheduled to go to trial March 19.

Errico is under contract with SDC to serve as both consultant and director of marketing, according to Bernard Fried, vice-president, general counsel and secretary at SDC. He said that top management is currently reviewing the case and is expected to decide soon whether to terminate Errico's contract.

"Just because someone is indicted does not mean he is guilty," Fried pointed out.

Errico is accused of promising James R. Camicia, an industrial management consultant hired by the Massachusetts Welfare Department, with future consulting work with SDC in exchange for arranging to have the state contract awarded to the firm. The contract concerned development of a system called the Massachusetts Public Assistance Control System (Mpacs), which will be used to manage several major welfare programs.

The alleged bribery attempt failed, and the contract was awarded to an SDC competitor, Computer Co., last June.

According to a Welfare Department spokeswoman, the bribery attempt was reported immediately to the Massachusetts attorney general, who turned the case over to federal authorities because "it involved facts beyond the jurisdiction of Massachusetts."

Medicaid contract threatened

A subsidiary of Burroughs Corp., SDC was awarded in 1982 an unrelated $49 million contract to automate Massachusetts' $1.2 billion Medicaid program. That contract has been plagued with delays, resulting in at least two warnings from state officials to shape up or lose the contract. Repercussions from Errico's indictment could jeopardize SDC's Medicaid contract, even though that contract is separate from the one involving Mpacs.

According to Welfare Commissioner Charles M. Atkins, if Errico is convicted, the state's contract with SDC has a provision allowing the state to terminate the Medicaid contract — something it has threatened to do twice now.

The first warning was in August in an attempt to get SDC to meet its deadline for getting the system online [CW, Aug. 22]; more recently, SDC was placed on notice that unless it reduces its backlog of processing claims to a 14-day waiting period by March 5, its contract will be canceled.

In response, SDC has filed a 25-page plan to resolve its problems, including an agreement to increase its staff. Nonetheless, Welfare Department officials have estimated the Medicaid management information system has saved the state $28 million since last September.

Groups granted DPMA charters

PARK RIDGE, Ill. — Two new special interest groups in the areas of education and software maintenance have been granted provisional charters by the Data Processing Management Association (DPMA).

The Special Interest Group for Education will seek to enhance communication between industry and education and promote further development of the DPMA model curriculum for computer-based information system education in colleges and universities.

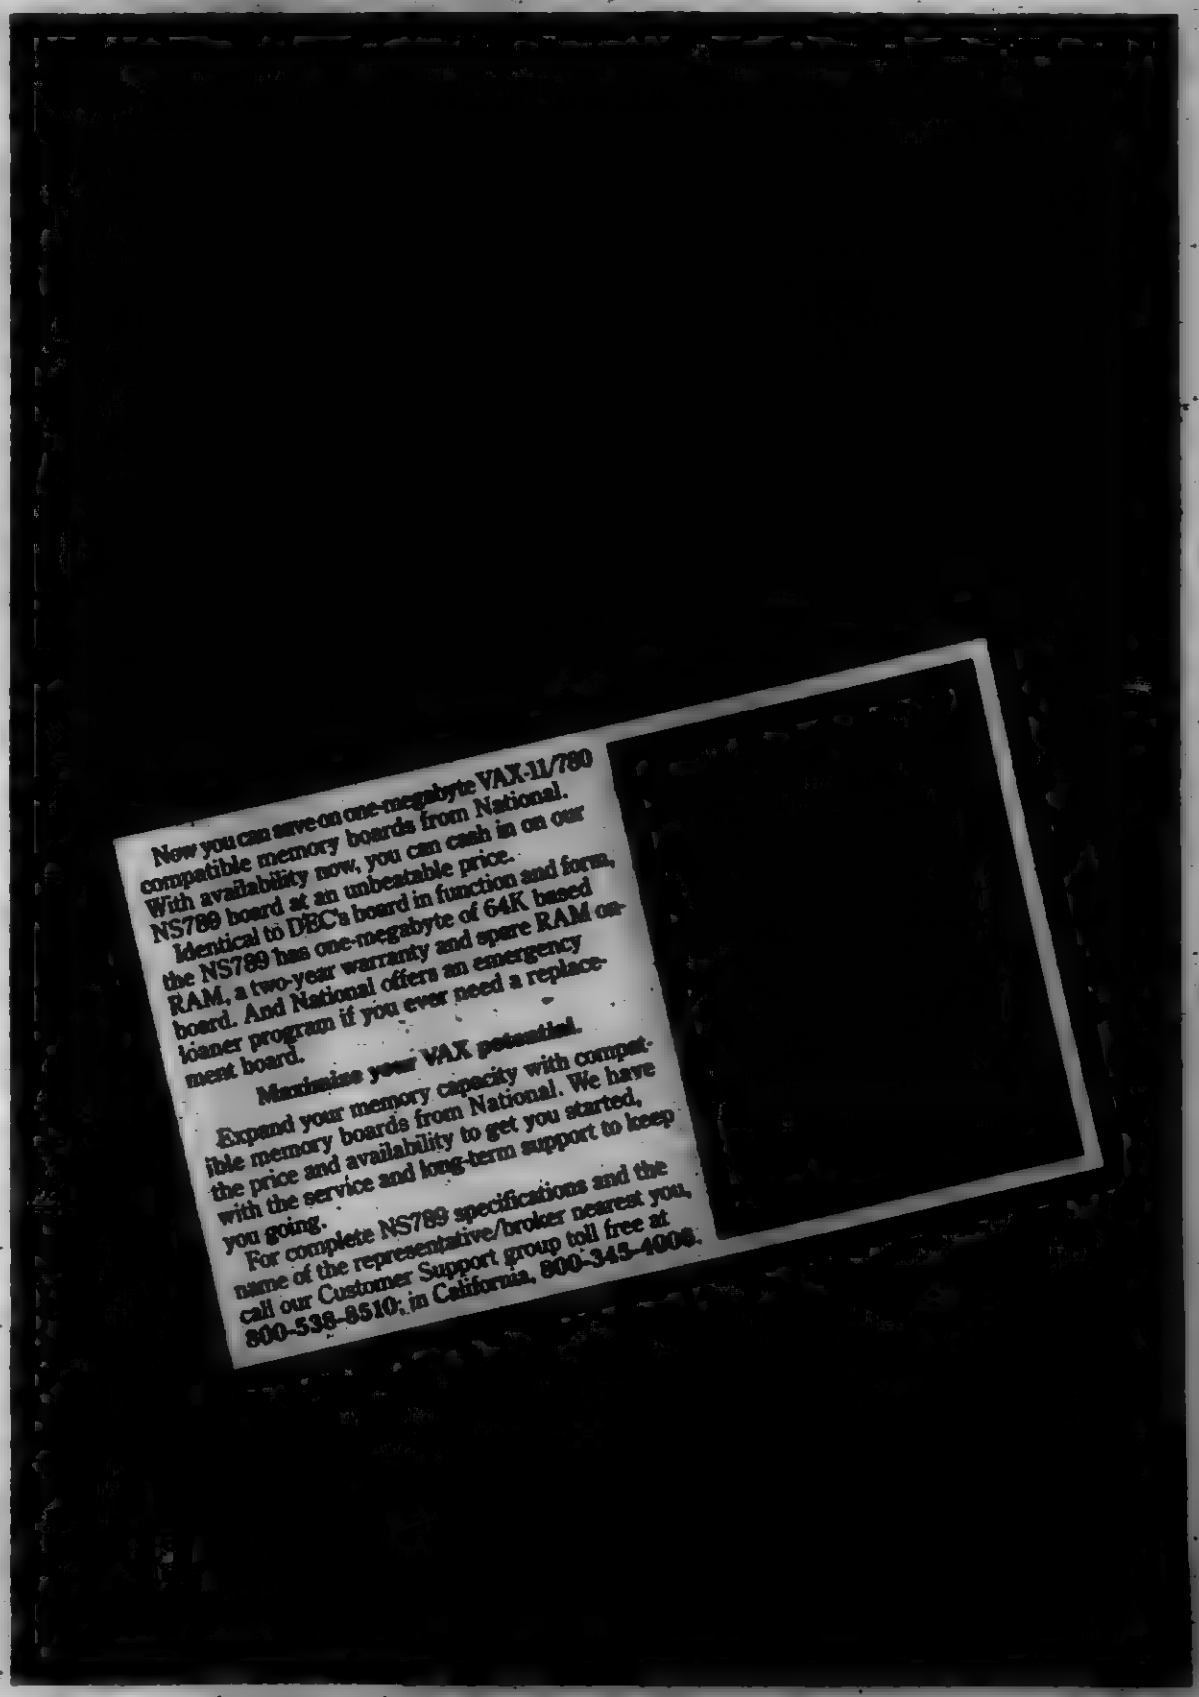
Officers of the group are Dr. Georgia B. Miller, president; Dr. Herbert Rebhun, vice-president; and Kathleen T. O'Neill, treasurer.

Membership information is available from Miller through Indiana University, P.O. Box 647, Indianapolis, Ind. 46223.

The Special Interest Group on Software Maintenance will deal with the problems of enhancement, modification, upgrading, adaptation, tuning and correction of existing software.

Group officers are Dr. Ned Chapin, president; Barbara J. Taute, vice-president; and Nicholas Zvegintzov, secretary/treasurer.

Membership information is available from Zvegintzov, No. 5F, 141 St. Mark's Place, Staten Island, N.Y. 10301.



"Rockwell International eliminates order management paperwork and ships products faster with a ***Tandem NonStop Computer System.***"

Our Tandem NonStop computer has dramatically streamlined order tracking for our broad line of products at the Electronics facilities located in Anaheim. This automated operation is part way to being able to ship products [illegible] sports customers much more quickly and efficiently.

The Tandem system handles data pertaining to each order from the time it is received right on down the line to shipping. And, because the system is on-line, other departments have immediate access to this information as well. Accounting, for example, now generates invoices automatically, resulting in much improved cash flow. Manufacturing is saving $175,000 a year in internal freight charges due to the reorganization of ordering and shipping procedures, and the Group as a whole has been able to eliminate more than 300,000 reproduced documents a year.

Other system benefits contributing to our improved customer service include better control of backorders, more accurate pricing information and the ability to make detailed forecasts of market conditions for planning purposes. The net result is an operation that is helping us achieve some very significant gains in plant productivity.

The NonStop System

Ideally suited to on-line transaction processing where continuous availability of up-to-the-second information is critical to your business,

Tandem. Fully supported by a worldwide sales, training, service and manufacturing organization.

For information on how a Tandem NonStop system can improve your productivity or your P/L statement, call your local sales office or Tandem Computers Incorporated, 19333 Vallco Parkway, Cupertino, California 95014, U.S.A. Toll Free 800-482-6336 or (408) 725-7500 in California.

A sure cure for the problem of information bottleneck.

Programming backlog is the source of the problem. Eliminate it, and you eliminate the bottleneck.

Which is precisely what Sperry has done with the MAPPER™ System.

With MAPPER, you work with the computer directly. You ask questions in plain English. And you get immediate answers.

And if the information you get raises other questions, you can ask them right away. With no delay for programming. Or reprogramming.

MAPPER is that powerful. It allows you to manipulate information in almost any way you want. And, interesting to note, it can even help your programmers become more productive.

AN AFFORDABLE SYSTEM.

You don't have to be a large company to have a MAPPER System. MAPPER can be scaled to the real and present needs of just about any size company. The cost of a MAPPER System makes it practical for even a department within a company to own its own system. Or you can time-share through a Sperry service bureau.

What you get for your money is a whole new order of efficiency in your day-to-day management tasks. Because you'll have the information you need right at your fingertips. Literally.

SEEING IS BELIEVING.

We've made some promises here that may sound extravagant. But if anything, our claims are on the conservative side. And to prove it, we offer you the opportunity to see a demonstration of MAPPER at work.

800-547-8362

But first, you might want to look over our MAPPER brochure. A copy is yours for the asking. Call toll-Free: 800-547-8362 (9 a.m. to 5 p.m. E.S.T.). Or send us the coupon.

Scofflaws nabbed at work by printout-wielding police

By James Connolly
CW Staff

INDIANAPOLIS — Armed with computer printouts, local police officers struck at banks, factories and other businesses earlier this month, rounding up hundreds of people wanted on traffic tickets and other misdemeanors.

The dragnet, coordinated through a pair of IBM 3031 mainframes, featured police arresting people at their places of work. The 165 well-publicized arrests in the first day of the program and more arrests in the days that followed inspired 2,500 other people to appear voluntarily in court to clear up outstanding warrants.

The 3031s combined information received from court and police data bases with information collected from another, unidentified source to determine up-to-date home and work addresses for 7,000 people wanted for misdemeanors.

"About nine months ago, we got together with the municipal courts and the prosecutors and found that we were successful in serving only one out of 25 warrants," said Indianapolis Police Department Lt. David Cupello. "Eighty to 90% of the time, the address on the face of the warrant was erroneous, and even where it was accurate, we had little chance of finding the people at home. So we started using various on-line systems to update the addresses."

To ease a backlog, officials offered a 50-day amnesty period under which 27,000 people named in outstanding Marion County misdemeanor and traffic warrants could surrender and pay their fines without risking imprisonment. Only 2,000 accepted the offer.

Meanwhile, the police and the court's 3031s, with software developed in-house, matched the names of wanted persons with places of employment and up-to-date addresses.

The source of that address information remains a secret. "We won't reveal it by agreement with those involved," said Cupello, who is also executive officer of the police department's data processing branch.

During the amnesty program, the police department mailed explanatory letters to 30 major employers to forward to workers who were believed to have outstanding warrants. Those letters warned the workers they were subject to arrest when the amnesty program expired on Feb. 1.

On that date, 25 two-officer teams hit the streets, armed with printouts with names and home and work addresses for 7,000 people. They rounded up 165 people that day.

Employers often let officers use personnel offices and summoned suspects there, rather than having employees handcuffed at their desks, according to Cupello.

With the publicity of the first arrests, 2,500 people voluntarily appeared in court within one week to pay fines or arrange for trials.

But all didn't run smoothly.

At least one of those arrested and booked under the glare of television news crews' lights was a woman who argued that she had already paid her speeding ticket. The woman is planning a lawsuit.

TSO USERS

Compare these features:

- Up to 50% less overhead than SPF
- Full-Screen Editor (LRECL up to 4096)
- Data Set Manager (Controls TSO files)
- JES Sysout Previewer (Direct from JES Spool)
- File listing facility (LRECL up to 32760)
- Programmable function keys
- Split-Screen facility (Two fully-active screens)
- Customer-defined exit facility (Controls all FSE+ functions)
- FSE+ tuning parameters (Optimize performance)
- Structured menus for new users
- Command oriented for experienced users
- MVS 3.8, SP and XA support
- Free trial period

NEWS

INTERNATIONAL REPORT

CW INTERNATIONAL NEWS NETWORK

AUSTRALIA

MELBOURNE — While Telecom Australia continues to debate whether to support a second standard on its proposed videotex service, Computer Power has unveiled a videotex service that will reportedly support both the UK's Prestel system and AT&T's North American Presentation Level Protocol Syntax on the same terminal.

BRAESIDE — Labtam International Pty. Ltd. has abandoned its plan to incorporate Motorola, Inc.'s 68000 microprocessor in its three-processor system. Instead, Labtam will use National Semiconductor Corp.'s NS16032 chip in the system, which will run Q1 Corp.'s Idris as well as Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems concurrently.

FRANCE

PARIS — OC France, a major copy machine vendor here, has become France's first user of the IBM 4361. OC's system, which replaced a 4331/2, includes 4M bytes of memory, six 3370 disk drives, two tapes, a line printer and two 3274 controllers. It runs under DOS/VSE, but OC is planning a conversion to MVS.

■

PARIS — Thomson-Brandt recently started selling Eagle Computer, Inc.'s microcomputers here under the name Micromega 16. Thomson also markets Micromega 32, a micro developed by Fortune Systems Corp.

JAPAN

TOKYO — Taking aim at IBM's 4361 system, NEC Corp. has introduced the mid-range Acos 430 system. Capable of performing 1 million instructions per second, the 1G-byte NEC machine is targeted for office automation applications as well as computer-aided design. It runs under NEC's Acos-4/AVP operating system. Options include a high-speed scientific calculation processor, an integrated array processor and a three-dimensional display. Although prices were not available, it was learned that the system rents from $7,660/mo, about half the rental fee of a comparable IBM system.

■

OSAKA — Kodensha, Inc., a leading software firm here, has unveiled My Letter Korean, a word processing system for Korean users that combines 2,000 Korean characters with 2,500 Japanese characters. The product was developed for NEC Corp.'s PC-8800; the two products are currently available as a turnkey system for $5,100.

NETHERLANDS

AMSTERDAM — Oscar Data has won an initial $10 million contract from Sweda International, Inc. to supply software for Sweda's point-of-sale cash register systems. The software order is thought to be the largest yet in the Netherlands.

PEOPLE'S REPUBLIC OF CHINA

BEIJING — The Chinese government has ordered $850,000 worth of microcomputers from Japan's NEC Corp. NEC will deliver 155 of its PC-8000 computers and another 150 of its more sophisticated PC-8800, which can display about 3,000 Chinese symbols and characters. The micros will be used for educational and agricultural applications.

UNITED KINGDOM

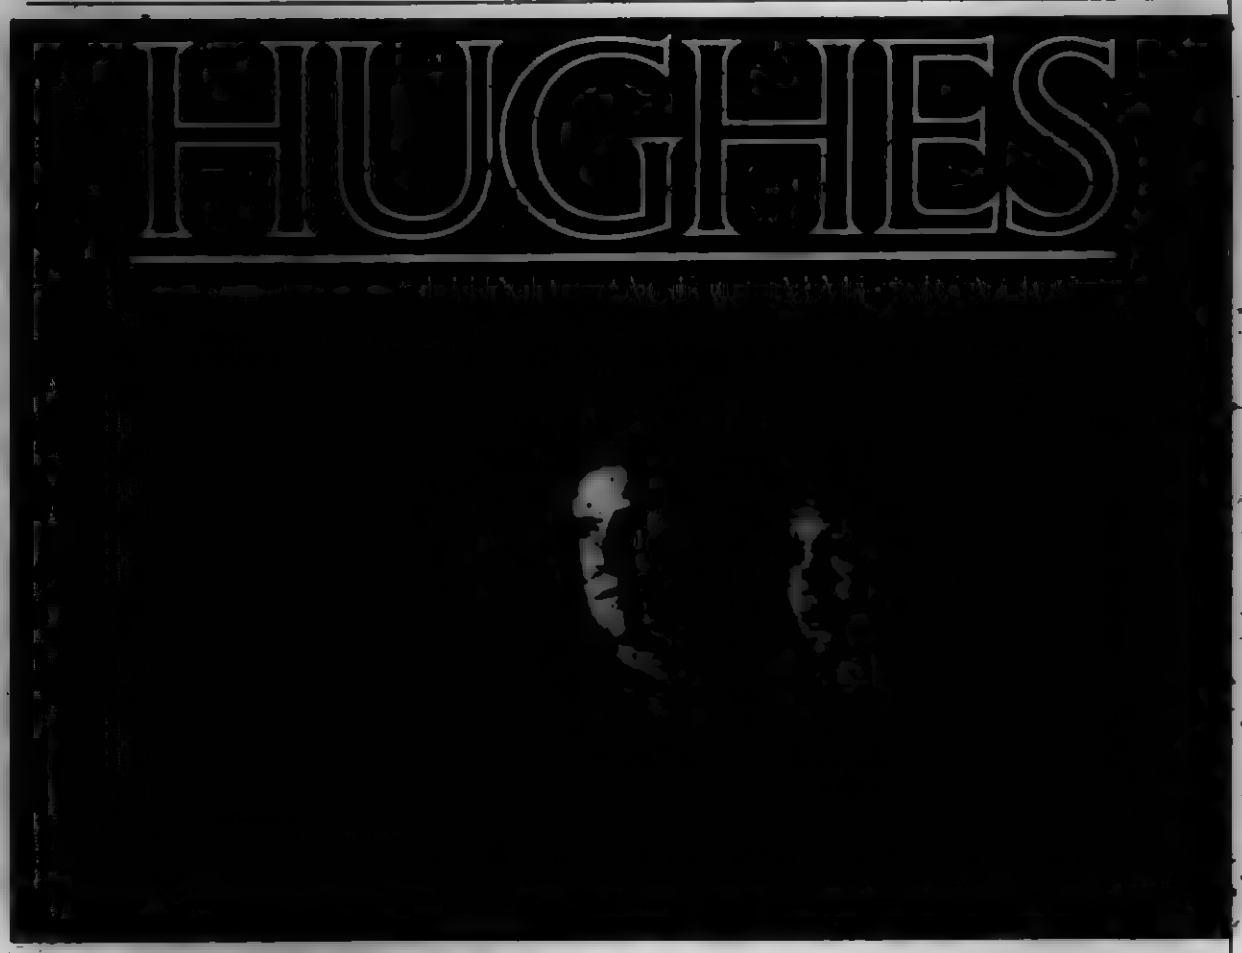
LONDON — Rank Xerox appears to be well positioned to be a leader in the emerging European office automation market, according to a recent study by Frost & Sullivan Ltd. According to the study, the vendor has already distinguished itself as having an "enviable record as an innovator" with products such as Ethernet and Star. But the report also maintained that Rank Xerox must win back the small copier market it lost to the Japanese during the 1970s and hope that IBM endorses Ethernet.

WEST GERMANY

MUNICH — IBM Deutschland GmbH and Siemens AG have signed an agreement to manufacture and market jointly storage peripherals. The contract initially calls for IBM to ship its 3380 mass storage disks to Siemens for its 7800 systems.

■

MUNICH — The German postal, telephone and telegraph (PTT) administration is reportedly trying to push through rate hikes for its Datex-P and Datex-L teleprocessing services. If the PTT is successful, customers will end up paying 50% to 60% more for the X.25-based service. The Ministry of Post and Telecommunications has yet to pass down an official decision.



SOFTWARE SPECIALISTS, COMPUTER SCIENTISTS, DATA PROCESSING SYSTEM ENGINEERS

The people at Hughes Space & Communications Group are proud of their major contributions to space-borne communications.

They are leading the challenge to new technical horizons.

There is a unique team spirit at Hughes Space & Communications Group. A spirit that has created a solid commitment to using advanced technology to develop better and more effective communication.

At Hughes, we know software is *central* to continued success.

Work with some of the most modern and powerful computer equipment and development tools. With top software experts in the field. On projects of vital importance.

It is hard to beat all the advantages that software specialists have at Hughes.

Two-thirds of all commercial communications satellites currently operating were designed and built by the people at Hughes.

Become one of these people with the Space & Communications Defense Systems Division. These are two of our many current openings:

Electrical Engineer
Ability to design, interface, test and integrate digital hardware in data processing systems. Must have capability in application of microprocessor and/or bit slice technology. Strong writing skills essential. Requires BS or MS in EE. 10 years experience preferred.

MTS Programmer
Operating system programmer analyst to maintain and improve large scale computer operating systems in PWB/ENG Computer Center. Must have operating system support experience in DEC VMS or UNIX/PWB. Requires BS in CS.

To respond to these and other openings, send resume to Ray Bevacqua at: Hughes Space & Communications, S41/A300, Dept. WC-826, P.O. Box 92919, Los Angeles, CA 90009.

How 3 famous names got together to

SOLVE YOUR PROBLEMS OF INTELLIGENT MICRO TO MAINFRAME CONNECTION.

Get the answers you're looking for—with the VisiAnswer Software System from Informatics®, the leader in mainframe to micro integration.

Informatics has teamed the best minds in the business to solve the problems of intelligent mainframe data access for microcomputer users. The VisiAnswer™ Software System is the breakthrough result of a unique team involving Informatics Corporate Micro Systems and VisiCorp™ products working with IBM® Personal Computers.

VisiAnswer solves the timely problems plaguing data processing professionals like you.

Available for use right now, the VisiAnswer Software System is the micro to mainframe system specifically designed to help you:

- Manage *and* control the integration of microcomputers with your current mainframe—right in *your* data processing department.
- Provide your company's micro end-users with access to specific mainframe data—without wading through unrelated information for hours.
- Maintain *security*/control of restricted portions of your corporation's data.
- Supply end-users access to *current "live" information*, instead of information that's historical and obsolete.
- Intelligently access *all* mainframe data, whether it's unique application data or part of a data base management system.

VisiAnswer makes your job easier and more efficient than ever.

With more and more managers and analysts in your company using desk-top computers these days, there's a tendency to improvise the way they obtain the data they need. That leaves the door wide open for mistakes and inaccurate information.

Now you can avoid these problems and maintain a high level of data processing efficiency for everyone who needs access to that data with the VisiAnswer Software System. It delivers intelligent solutions that make current mainframe data available to your end-users in an orderly fashion. That makes their jobs *and yours* easier and more accurate—something upper management will appreciate.

VisiAnswer was designed by the best minds in the business to fit your business.

You get Informatics' expertise in data access technology and mainframe system software... plus VisiCorp's expertise in user-friendly micro software. We chose the IBM Personal Computer for its leadership in delivering business solutions, and IBM chose us as a value-added remarketer.

This system works with *all* data bases on IBM mainframe systems. And your end-users will get data that is immediately usable with all Visi Series™ Products and other products utilizing the VisiCalc® file format.

Find out more about Informatics VisiAnswer system. Mail this coupon or call toll free today. See how VisiAnswer products can fit into your Personal Information Center as an integral part of your unique business strategy.

Get the facts on VisiAnswer—
the intelligent micro to mainframe connection.

TURNAROUND TIME

LARRY E. LONG

Q Our marketing people have asked us to respond to technical inquiries from three of our large customers who requested directions that would permit them to transmit orders directly from their computers to ours. This seems only logical, since the volume of transactions generated by these three customers is staggering.

Here is the problem. My staff is already overcommitted for the next two years. Preliminary estimates of manpower requirements for the project range from one to three man-years.

While this project would appear to be extremely cost-effective and convenient for both us and our customers, surprisingly I'm not getting much pressure to move on it. Personally, I think that a consumer goods company such as ours should place this project much higher on the priorities list, but those who make these decisions disagree. What are your feelings?

A You did not send a list of your priorities, so I cannot make any relative statements, but I am certainly willing to comment on the importance of intercompany networking: Don't delay.

Before long, your small and medium-size customers will be demanding similar services. The trend is to capture data as close to the source as possible. Why not go directly to the source, that is, your customers' computer systems?

Intercompany networking is no longer a carrot that you offer your customers; it is a marketing necessity in some industries (yours included). I know that several of your competitors already offer this service. Unless you can convince top management to revise its priorities or create funds for additional resources, your company is running the risk of alienating customers and losing a share of the market.

Q For the past five years, I've had responsibility for the DP department (about 20 people). I'll be the first to admit that I've neglected it in favor of my primary responsibilities in accounting and finance.

Being in the public sector, we cannot keep up with DP salaries and, as a result, have lost most of our best people. With our current staff, our DP department is faltering.

Momentum is building to get out of the DP business and bring in a facilities management group. One such group has proposed that they take over the entire DP operation. They said they can move into our present facility and use their software to do everything we are doing now, and do it for less than we are currently spending.

Is this possible?

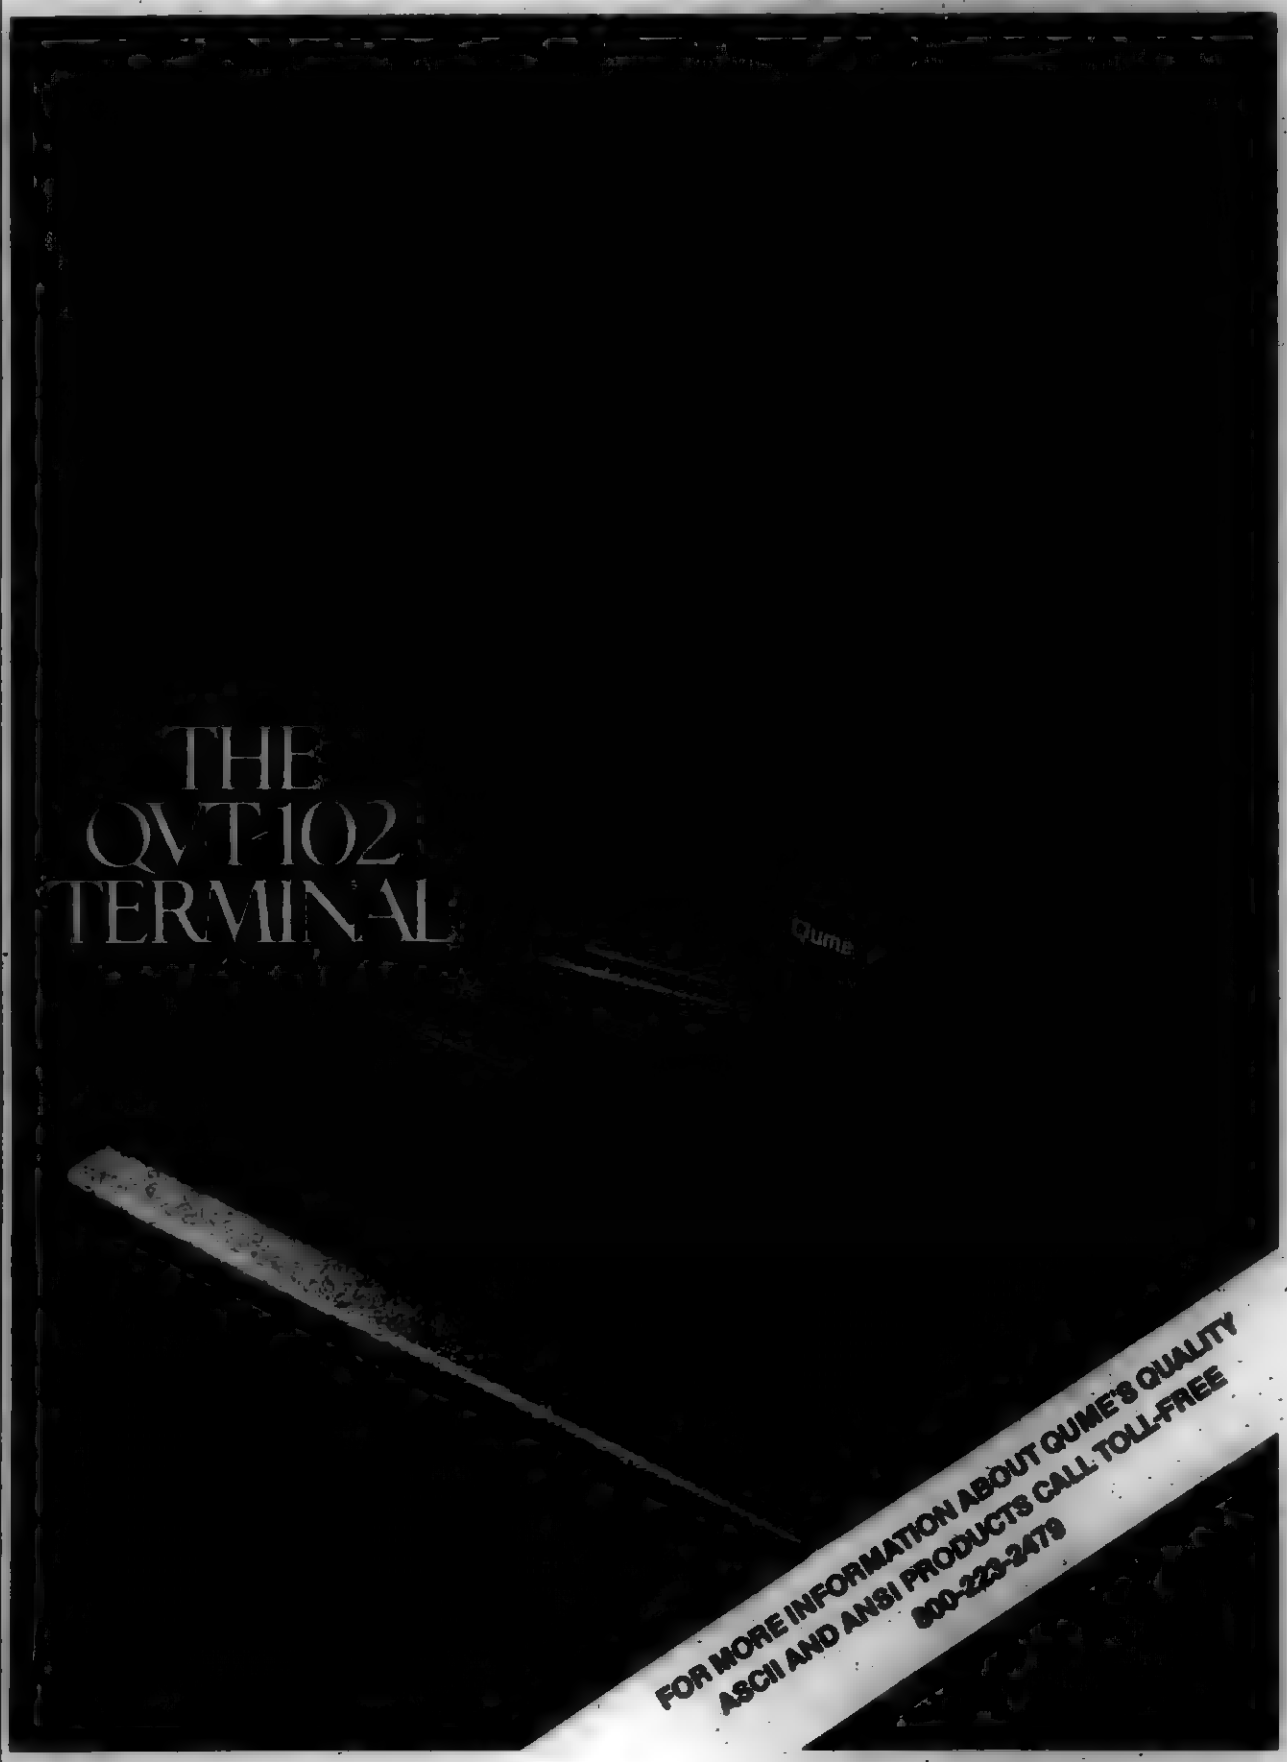
A Do what for less? It may be possible for the facilities management company to reduce DP costs and maintain the status quo over the short term, but is that what you want? You are apparently not satisfied with things the way they are.

Implied in the company's proposal is that services over and above the existing level of service will be billed. Don't overlook this important cost consideration.

External operation of the computer center has proved a smart decision for many organizations, but not for all. You never "get out of the DP business." Top management has an ongoing responsibility to relate information needs and priorities to the DP department. Whether run by an outside company or internally, it is top management's responsibility to provide strategic direction.

I detect from your letter that you expect to be absolved of further DP responsibilities once the facilities management company takes over. It doesn't work that way. If you continue to be aloof from DP, then don't expect any quantum leaps in the quality of the DP services.

Long, president of Long and Associates, is a consultant, lecturer and author in the field of information services. If you have a question you'd like him to address, send it to Larry Long, Editorial Department, Computerworld, *P.O. Box 880, Framingham, Mass. 01701.*



Standard sign language of DP terminology created

Cursor

Scrolling

By David Gleser
CW Staff

SAN JOSE, Calif. — If Steven Jamison has his way, the nation's deaf computer professionals soon will be communicating with their managers and co-workers by using a new standardized sign language of DP terminology.

For the past 10 years, Jamison, a personnel consultant at IBM's Santa Teresa laboratory here, has recruited deaf college students for a summer work program conducted by IBM. In the course of that work, he became aware of the lack of any universal agreement on signs for computer terminology. For example, three or four different signs are used for the word "computer" alone.

Convinced of the need for some standardized terminology, Jamison began in 1981 to compile a comprehensive glossary of DP terms in American Sign Language. IBM agreed to provide the time and money he needed to carry out the two-year project. Jamison's effort culminated last year with the completion of a 600-term glossary.

Those 600 terms have been compiled in an illustrated reference book titled "Signs for Computing Terminology," recently published by The National Association of the Deaf in Silver Spring, Md.

Jamison and the book's publisher expect that the book will be widely used by hearing-impaired students, teachers and computer professionals. They agree, however, that its greatest potential benefit may be for DP managers and others who want to improve their communication with the deaf.

At IBM and other companies within the computer industry, many deaf persons work in technically oriented jobs, such as programming, in which the ability to hear is not as critical as in other fields.

But communicating with a deaf worker can be tedious if someone has to finger spell all technical terms, Jamison said.

Panel of volunteers

To compile the glossary, Jamison recruited 24 associates to serve on an advisory panel for the project. Most of these volunteers were computer professionals; the majority were not only deaf but also skilled signers.

By means of mail surveys and a three-day workshop, the panelists reached agreement on which signs they preferred for all 600 DP terms. Jamison said the primary requirement for choosing a particular sign was the likelihood of its acceptance by the deaf community.

All publishing rights for the book have been turned over to The National Association of the Deaf, which will retain any proceeds from the book. S. Melvin Carter, director of the association's Communicative Skills Program, said the book has sold more than 2,000 copies during its first month of publication.

One company, Integrated Microcomputer Systems, Inc. of Rockville, Md., purchased 500 copies of the book for its employees and associates.

More information about the book is available from The National Association of the Deaf, 814 Thayer Ave., Silver Spring, Md. 20910.

QVT-102

The Price-Performance Leader.

Qume's new QVT 102 VDU terminal has all the features of the Hazeltine 1500* Lear Siegler ADM 3A/5,† and TeleVideo 910,** and emulates any of these terminals by simple menu selection. Features found in higher-priced terminals are standard, including block and conversational modes, local editing, 25th status line, menu set-up mode, and screen content printing.

The QVT 102 takes up minimal workspace and is designed to please the operator. Its non-glare green or amber screen minimizes eye strain with a big 9 x 12 character cell. The screen tilts and swivels for perfect viewing, and the low-profile keyboard is detached to allow placement for ideal reach and hand-rest position.

Sophistication. Comfort. And affordable price. Qume's Model 102 terminal is easily the smartest choice in its class. Features include:

• Line block, Page block, and Unprotected block transfer modes • Four separate function keys (twelve functions) • Line drawing graphics characters • Tilt/swivel, non-glare, green screen (amber optional) • 9 x 12 character cell resolution, 7 x 9 character size • Detachable, low-profile typewriter style keyboard with numeric pad • 24 lines x 80 characters with a 25th status/menu set-up line • Screen-saver time out (an inactive terminal shuts off its screen after fifteen minutes with no screen data loss) • 5 video attributes: blink, blank, reverse video, underline, and half-intensity • 3 emulations: Hazeltine 1500, Lear Siegler ADM 3A/5, and TeleVideo 910 • Self test • Switching power supply (efficient operation and low power consumption).

Display Format
24 lines x 80 Characters
25th status/set-up line (defeatable)

Character Formation
7 x 9 matrix in a 9 x 12 cell

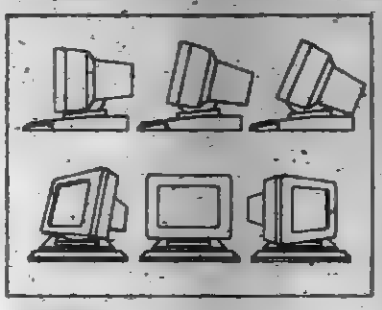
Displayed Character Set
96 ASCII characters, 15 line-drawing symbols, and 32 control character symbols

Editing
Cursor: up, down, left, right, and home.
Character/line insert and delete, erase to end of line/field/page, tab, back tab, field tab, field back tab.

Communications Interface
EIA RS232-C, 20 mA current loop

Communication Protocols
DTR and/or X-ON/X-OFF

Communication Modes
Full or half duplex, block/line, block/page; 7 or 8 data bits



Baud Rates
16 selections from 50 to 19.2k.

Auxiliary Port
Unidirectional EIA RS232-C, partial/full screen copy, transparent

Screen
Tilt/swivel 12-inch diagonal standard non-glare green (optional non-glare amber)

Character Attributes
Blink, blank, underline, reverse video, half intensity

Keyboard
Detachable, low-profile (home row 30mm from work surface), alphanumeric keys, 14-key numeric pad, 4 function keys (12 functions), defeatable auto-repeat and key click. Print, scrap, and no scroll keys.

Fields
Protected and Unprotected fields

Parity
Odd, even, mark, space

Screen-saver
Screen shut off after 15 minutes of inactivity with no data loss (defeatable)

Emulations
Hazeltine 1500, Lear Siegler ADM-3A/5, TeleVideo 910

Set-Up Mode
Menu style, preserved in non-volatile memory

Power Requirements
95-125 VAC
200-264 VAC
50/60 Hz. 30W

Dimensions
Keyboard 1.5"(H) X 18"(W) X 8"(D)
Display 14"(H) X 13"(W) X 12"(D)

Weight
Display 19 lbs. 2 oz., Keyboard 3 lbs.

Options
Amber phosphor screen
14-inch screen
Foreign character sets
20 mA current loop (passive and active)

Bureau doubles output with micro-to-mini link

ATLANTA — By developing a communications package to link varied microcomputers with its minicomputers, a service bureau here doubled in a year the number of tax returns it processed for 400 accountants spread throughout five Southeastern states.

Infoservices, Inc. sought a way to provide the on-line power of its minicomputers to accountants who use more than 30 different types of microcomputers at remote locations. The company developed a software system that it said allows remote users to utilize their micros as intelligent office machines that draw on the resources of Infoservices' Prime Computer, Inc. 550 supermini and Prime 400 mini, which are being replaced by a Prime 750 supermini.

The software, known as Infocomm, is a communications program which will run on the more than 200 microprocessors based on Digital Research, Inc.'s CP/M operating system, as well as microcomputers running under Digital Research's CP/M 86 and Microsoft, Inc.'s PC-DOS and MS-DOS, according to Infoservices Vice-President Bob Westerman.

The program permits the transmission of Ascii and binary files bidirectionally between the microprocessor and the host computer. It also provides a conversational mode whereby the microprocessor becomes a dumb terminal for routine interactive processing on the host system.

With clients in Georgia, Florida, Alabama, Tennessee and North Carolina, Infoservices maintains four divisions: a tax division, a time-sharing service, a division that markets Infocomm and a division that sells accounting packages. A focus of the service bureau operation has been the processing and laser printing of tax forms for professional accountants.

"Users throughout the five-state region who desire to do their own data entry use more than 30 different brands of micros running under more than four different micro operating systems to create tax data files.

"These files are then transferred to our Prime computers in Atlanta using our communications package Infocomm and the complementary program, Infohost, on the Prime. We even recreated on the micros the standard text editor available on the Prime so that our users do not have to contend with entirely different programs in their data processing work," Westerman said.

Users can process their tax returns interactively while on-line with the Prime systems. This reportedly gives them access to the greater processing power of the Prime minis and Infoservices' laser printers and access to current versions of software.

Infoservices support personnel can answer questions on specific returns by accessing the return on the Prime via in-house terminals and can monitor the interactive process while the user is preparing a return. After completing the return, the user can print control sheets and flag the return to be printed and delivered by Infoservices.

"We further capitalize on our customers' in-office computers," Westerman noted, "by providing tutorial programs that run on those microcomputers and that teach the user how to utilize our complementary system of micros and Prime."

He added that clients also use the communications system to produce financial statements and other reports, and that use of remote data entry decreases the time-sharing charges to customers who wish to have large computer power without a costly investment in hardware and software.

The Micro Solution

Finally, there is a total solution for your microfloppy needs . . .

The Dysan 3¼" Flex Diskette.™

It assures a source of high quality duplication services from Dysan's established production facilities.

It includes both alignment and Dysan's exclusive Digital Diagnostic Diskettes (DDD) for trouble-free drive operation and media interchangeability.

It utilizes a high performance, cost-effective and widely available media, selected specifically for minifloppy plug compatibility.

Its flexible jacket bends without damage, and optimizes media lifetime in contaminated environments.

It is from the same company who standardized the minifloppy with Shugart and the 5.25" Winchester drive with Seagate.

Considering supporting services, minifloppy compatibility, product availability and proven performance, it's apparent there is only one complete microfloppy standard.

The Dysan 3¼" Flex Diskette.

3¼" Flex Diskette is a registered trademark of Dysan Corporation.

Query system allows utility to break 'language barrier'

HICKSVILLE, N.Y. — Computers can be confusing to people who don't use them every day, and part of the problem has to do with the "language barrier" that must be overcome before most computers can be operated.

For employees of the Long Island Lighting Co. (Lilco), the public utility serving the Long Island area, computers are becoming easier to understand — and work with — thanks to an on-line software query system that allows users to interact with computers by using conversational English terms.

Lilco runs the Intellect software system from Artificial Intelligence Corp. of Waltham, Mass., with IBM's CICS teleprocessing monitor on an IBM 3033 in an MVS environment. Using Intellect, employees can access information on the complete listing of all computer equipment owned or leased by Lilco, current employee applications on file and the entire fleet of customer service vehicles.

When users log on to the system, they are greeted by the following message drafted by Donald Weidman, administrator of Lilco's Office of Computer Services here: "Good morning. Welcome to the world of self-service computing. We'll try to answer all the questions you pose. Don't be afraid to try."

Then, instead of relying on a complex series of commands, users draw data through Intellect with English-language commands. The system requires no programming or use of codes and imposes no requirements for structure, syntax, punctuation, definitions or key words, Weidman said.

"It's just like talking to a person," he explained. "Suppose you wanted to know the number of applicants on file for a position in the customer relations department. By gaining access to the applicant's file and typing, 'Tell me how many people have applied for positions in customer relations,' the system responds with information such as names and addresses, education, application test scores, interview dates and the other details you would need to make an initial evaluation of the applications on file."

Before Lilco installed the Intellect package, its data security staff developed a front-end security system which requires comprehensive user identification, according to Weidman. In addition, Intellect's dictionary of data terms is constructed so that only users with approved security codes can gain access to the system. Once the appropriate security codes are fed into a computer terminal at Lilco, however, the user need only type in the questions, and Intellect will do the rest.

"If you aren't sure what information you would like to have," Weidman said, "you only have to ask the computer, 'What information is available?' and Intellect will provide a complete list. You can continue asking questions to obtain even further details about the applicants on file, for example, or you can go on to a new subject by simply asking a different question."

That ability to link a continuing series of questions is the key to the system's functionality, Weidman said. "In the past, users had to depend on preformatted reports, or they had to send their requests for additional information to the information systems department, which would then generate a new report. Often, the answers to a question triggered other questions, which would also have to be answered in the same time-consuming way. With Intellect, the user asks questions directly and gets an answer right away."

User response to the Intellect system has been encouraging, Weidman said. "It provides decision-making information quickly. It's a very flexible system with no rigid ground rules, and the computer dictionary can be expanded to suit the terms used by different departments."

Lilco plans to expand the use of Intellect to other corporate applications. "This type of people-friendly program will allow more people to take advantage of computer technology," Weidman said.

ADDERS/Data Entry BEATS ALL OTHER DATA ENTRY SYSTEMS

...SIMPLICITY... ...FUNCTIONALITY AND...

Simplicity: *ADDERS/Data Entry runs on existing 3270 terminals under CICS or stand-alone in pseudo-conversational mode. End users can set up their own input screens to mirror source documents. No additional hardware needed!*

Functionality: *ADDERS/Data Entry offers all the functions of the best key-to-disk systems plus on-line power and direct data entry.*

Cost: *ADDERS/Data Entry protects your resources by removing the need for specialized hardware and making optimum use of your mainframe power.*

ADDERS/Data Entry provides the missing link between today's batch systems and tomorrow's on-line applications.

Call: 1 (800) 556-7845 now for a free trial. Your payback can start in just three months.

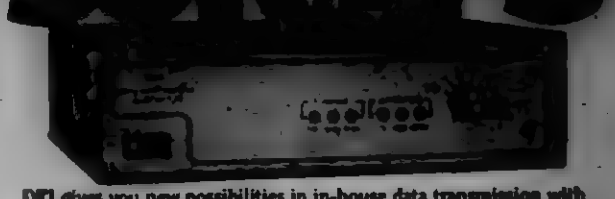
V.35
MODEM ELIMINATOR WITH
56KBPS



DEI gives you new possibilities in in-house data transmission with our Modem Eliminator (MME). A self-contained, standalone device (rack mount version available), one MME does the job of two synchronous voice grade or wideband modems. Take a look at MME's capabilities:

- **Data Rates** — 1200 BPS to 76.8 KBPS & 56 KBPS upon request
- **Optional Data Rates** — Up to 1 megabit
- **Interface** — RS-232, RS-449, V.35

DEI also offers the ME-1, a Modem Eliminator with 2400, 4800, 9600 and 19.2 BPS. The ME-1 standalone model is completely compatible with RS-232C (CCITT V.24). All DEI products are operator-oriented and backed by the DEI five-star guarantee of quality and service.

Info users to meet March 4-8

SAN DIEGO — The Info Users Group, comprised of users of Henco Software, Inc. products, will hold its third annual national meeting at the Hotel del Coronado here March 4-8.

The keynote speaker will be John Kirkley, executive editor of *Datamation* magazine, who will speak on "The Changing Information Environment Within a Corporation."

Other speakers will include Henco President Henry T. Cochran, users of Henco products and representatives from Harris Corp., Prime Computer, Inc., Digital Equipment Corp. and Honeywell, Inc.

The registration fee is $265, which can be paid at the door or sent to R2 Computer Systems, Inc., 5533 Ruffin Road, San Diego, Calif. 92123.

Dates set for Mumps seminars

BOSTON — Seminars for both programmers and nonprogrammers interested in learning more about the Mumps language will be held by the Mumps Users Group at the Sheraton Boston Hotel here March 5-6.

For nonprogrammers, there is "Introductory ANS Mumps Programming" March 5 and "File Manager" the following day. For programmers, there is "Development and Maintenance of Effective Mumps Applications" on March 5 and an advanced version of "File Manager" March 6.

Seminar tuition is $120. Registration information is available from the Mumps Users Group, Suite 306, 4321 Hartwick Road, College Park, Md. 20740.

'I don't get it. This week is almost over and nobody's come out with a new personal computer.'

N.Y. conference to examine micro strategies

NEW YORK — A conference on developing and implementing microcomputer strategy and policy will be held March 1 at the Park Lane Hotel here. Called "Microcomputers: High Performance/High Payoff," it will explore methods for enhancing organizational performance through the use of microcomputers.

Sponsored by Micro Mainframe, Inc. and Morris Decision Systems, Inc., the conference will feature as speakers Peter G.W. Keen, conference chairman and chairman of Micro Mainframe; Anthony P. Morris, president of Morris Decision Systems; and Thomas W. Johnson, vice-president for information systems, State Street Bank.

The conference will feature a panel discussion by microcomputer users as well as a round table discussion on the subject of "Microcomputer Opportunities and Challenges."

Also speaking will be representatives from American Express Co.; Michelin Tire; Hartford Insurance Group; Sun Co., Inc.; Touche Ross & Co.; and the Internal Revenue Service.

The registration fee is $395 per person. More information is available from Micro Mainframe, 215 First St., Cambridge, Mass. 02142.

RAMIS II MAKES YOUR INFORMATION CENTER A GREAT PLACE FOR PEOPLE.

RAMIS II's complete solution is the most effective way to multiply the productivity and satisfaction of your end users and your Information Center staff. Today, RAMIS II means success at hundreds of Information Centers around the world.

POWER AND SIMPLICITY FOR END USERS

RAMIS II provides everything users need for maximum productivity. Its powerful report writer, relational database and language, full-color business graphics, SAS® interface, and many other capabilities meet the most advanced decision support needs. And, with our new RAMLink, IT series, and RAMIS II/PC software, end users have the ideal solution for mainframes and personal computers.

RAMIS II English comprehension extends the power of your Information Center to a multitude of new computer users. Through advanced knowledge-based technology, even people who've never been on speaking terms with a computer can ask questions, obtain answers, and create reports in only a few minutes using everyday English.

EFFICIENCY AND RELIABILITY FOR SUPPORT STAFF

Our complete solution lets your existing staff support many more users by dramatically reducing the number of products you need. And RAMIS II makes your support job easier with built-in computer-based training plus facilities to monitor and control usage.

RAMIS II delivers the performance and reliability needed to tackle even the largest decision support tasks with confidence. In fact, because RAMIS II is also a complete application development system, single-user systems can evolve smoothly into full-fledged applications.

SAS® is a registered trademark of SAS Institute, Inc.

RAMIS II... THE LEADER BY DESIGN

LISTEN TO OUR USERS

Send for our free guide, "Why Information Centers Succeed." It contains practical suggestions for success from RAMIS II Information Center staffs of organizations like yours. Organizations that have found that RAMIS II, the real leader in complete software for business, is the sure way to make an Information Center a great place for everyone.

Logic resting in the illogic

The logic rested in the illogic, and the decision of Nissan Motor Manufacturing Corp. U.S.A. to combine its information systems operations with its purchasing department [CW, Feb. 13] is a reminder that businesses may do well to take a second look — in some cases, a first look — at the unorthodox.

Nissan could have followed the well-worn path of other automated manufacturers and buried its computer and communications systems in the finance or production departments. But it didn't, theorizing that computer personnel and equipment in those departments sometimes have been victimized by the whims of noncomputer-oriented department heads who feel, at least in their own minds, that they most need the information systems' resources.

Instead, Nissan paired information systems with purchasing, a department that places minimal demand on those systems. The logic, according to Vice-President for Purchasing and Information Systems Robert A. Frinier, rests in Nissan's belief that information systems should be managed by executives who will not mold them to favor the parent department.

Frinier, who admits that he is learning fast what computers are about, said the move was made to sidestep the "bias" that might occur when someone like a vice-president of finance or vice-president of production shapes information systems to his own department's benefit and to the detriment of others who need the computer resources. Nissan hopes that the setup will provide all departments with fair access to the information systems.

Time will judge whether Nissan's reorganization works. It might indeed "knock the computer industry on its ear," as Frinier suggested with a smile. Or it might not; unfortunately, management decisions don't carry money-back guarantees. However, Nissan's decision carries a noteworthy message: Even the farfetched is worth considering.

The business world, particularly the computer-related aspect of it, will never stop evolving. At the heart of that evolution is the conviction that if something doesn't work right, it's worth trying something new.

'You know how the president feels about fat in the budget'

LETTERS TO THE EDITOR

Clearing up some issues concerning data processing in Nicaragua

I wish to clarify certain editorial comments that were added to the text of my article on Nicaragua "Nicaraguan DP managers face special ills" [CW, Jan. 23]. I spent two weeks in Nicaragua working in data processing. On the basis of my observations, I take issue with the following:

■ There is a reference to "war-torn Nicaragua." Although Central Intelligence Agency-financed "Contras" regularly attack along the sparcely populated border with Honduras, Nicaragua is not at war. Nor is it war-torn.

■ In the article, reference is made to a "Marxist regime." The Sandinista government is certainly socialist, but it also supports and encourages free enterprise. The economy is "mixed," not "upside-down."

■ A "lack of state-of-the-art technology" is mentioned. Developing countries do not need state-of-the-art technology; they need appropriate technology. An example of this is a pest-control system that runs on a microcomputer that was recently developed by American programmers in Nicaragua.

I could go on, but the point of my article is that in Nicaragua, programmers are expected to see themselves not as the technological elite, but as active participants in a revolutionary process. The problem facing DP managers is that many experienced programmers and analysts have left for higher paying jobs abroad.

The professionals who have remained, like Erick Brenes, director of data processing at the Central Bank, are deeply committed to the Sandinista movement. For them, computers are tools for increasing production and services. The problem of political apathy among young programmers is very real for them, for if these programmers are not motivated by a desire to help their fellow countryman they, too, may leave. This is not a case of "government pressure to fight for the country's Marxist regime." Nor is Nicaragua "one of the world's least desirable places for computer professionals," as attested to by the growing number of American programmers and consultants now working there.

Barbara Schaffer
Berkeley, Calif.

DP field in Nicaragua limited by economy, decades of larceny

While Barbara Schaffer's article "Nicaraguan DP managers face special ills" [CW, Jan. 23] conveys a sense of the limitations of data processing employment in Nicaragua, the essential context in which it takes place is missing.

Even under the best of circumstances, professional work in the data processing field in that country would still be limited: The economy is overwhelmingly poor and agricultural, and decades of larceny by Nicaragua's former leaders did nothing to develop the human resources needed for a healthy economy.

Today, data processing in Nicaragua must also contend with a U.S. boycott affecting new and spare computer parts, among other crucial im-

VIEWPOINT

Tweedledum vs. Tweedledee

LECHT ON SCIENCE

CHARLES P. LECHT

My purpose is not to judge the merits of allowing an American computer look-alike industry to function. The fact that it is here and has been for a long time means that our various watchdog and regulatory agencies are comfortable with its efficacy and are reasonably confident that they can handle the unique problems associated with it.

But the increasing number of litigation-bound cases we read about wherein the charge of copying figures as the central issue is rather unsettling. The very existence of such allegations lessens our enthusiasm to consider a look-alike manufacturer's wares for purchase because of our fear that the companies that make them may be in for trouble. Too much success may, paradoxically, guarantee it.

Look-alike lawsuits, as you can imagine, involve a wide variety of copying and/or just plain lifting charges. These include the gross no-no's of blatantly replicating another company's logo and affixing it to a shamelessly manufactured version of its patented products or distributing, without permission, outright duplicates of someone else's proprietary and copyrighted work to augment otherwise original developments.

The battleground between "look-alikers" and "real-thingers" seems hottest, for the moment, in the area of software. The kind of event reported in the article "Taiwan court sentences six for 'bad Apple' [CW, Feb. 6.], in which six Taiwanese computer executives were sent to eight-month prison terms each for copyright and patent infringement of Apple Computer, Inc. software, lets us know how serious world resolve has become to stop pirating in our industry. The previous week's coverage of IBM's victory against two companies who, according to *The Wall Street Journal*, were violating copyright law by offering an IBM Personal Computer look-alike along with IBM software from the real thing confirms this; however we may be inclined to sympathize with little guys trying to make a buck, we cannot condone their doing so with other people's property.

We can, of course, truly sympathize with honest look-alikers, those whose products confirm current legal opinion on how they must behave. Even if they fully adhere to the letter of the law, it is clearly still dangerous to create a truly compatible product. Not only do you have to survive the supreme tests of software and user program transferability between their tweedledee and your tweedledum, but if you do it too well, the likelihood is that a larger test is in store: survival in court against the manufacturer whose system you so admired that you made one in its image.

Thus, as you can imagine, life for the look-alike manufacturer isn't easy. Only the toughest can survive its pitfalls. Each successful product can expect to be subject to the closest scrutiny of a chorus of attack lawyers clamoring to contest that you copied it. To minimize the possibility of a truly unfavorable legal outcome, corporations building look-alikes may be well-advised to build, as well, their judicial pleas for innocence, if charged, and ineptitude, if convicted.

What's going on, what's possible

While each such manufacturer must surely devise a strategy in its own image, it is always prudent to see what others are up to before building anything. So without further ado, I offer the following as a sample of what's going on and a smidgeon of what's possible. Because of the possibility that this sampler may be seen as an attack on the practices of certain specific companies by their ever-alert attack lawyers, I wisely present it under the guise of advice.

First of all, don't make the look-alike system yourself. Assemble it if you must, but for the Lord's sake, don't make anything. Subcontract the entire system so that if by accident your look-alike turns out to be the real thing, your hands are kind of clean. Potential subcontractors should clearly include those already making the real thing for its manufacturer; subcontracting seems to be in vogue these days, so finding them shouldn't be too difficult. I advise the chosen subcontractors to, in turn, subcontract the look-alike manufacturer's work to eligible myopic components companies that know little more than how to deliver their products and that ask no questions.

Now that you've established your manufacturing plans, it's time to bring your look-alike to market. First, boldly take out full-page ads everywhere. The more the better. Show for six months two identical bananas side by side, but provide no text. Next, test the climate for introduction of your product as a hesitant swimmer tests the water temperature with his toe. A trade show, like the Consumer Electronics show, is best for this purpose because you can make a gigantic splash without actually "demoing" anything. A smart giveaway should generate enough excitement to bedazzle booth attendees. I suggest a mirror on which is inscribed in bananas "My look-alike and me," suitable for boardroom or boudoir. Employ the Dallas Cowgirls to pass out banana buttons and do so as near to the real-thing manufacturer's booth as you can get. If the Cowgirls aren't tackled by a team of attack lawyers, you're getting close to a safe introduction of your real thing.

Call a press conference to reveal the bananas mystery. When the press is assembled, have a Cowgirl roll a gigantic banana — a zipper running along its length — out on the conference room floor, then slowly unzip it, letting an apple — preferably a mackintosh — plop to her feet. Check faces for outraged litigious looks while she shoves the apple back in its skin and, with a Cheshire cat grin, rezips the banana.

Your secret is out. Now there's no turning back: Honest look-alike or not, prepare for war. Immediately confuse any lurking enemy by engaging in guerrilla tactics for as long as necessary. Have Chiquita Banana's granddaughter rush out to the press and apologize for all bananas everywhere. Have a kid dressed as a peanut start to squall. Next bring in an Eve to give Adam yet another apple to bite. Have an eagle swoop down to peck at the squalling peanut. Have a midget with a slingshot end the action by killing the eagle with an acorn. You get the idea.

This is the moment of truth: the demo. Quickly and quietly slip Macrosoft-DOS into the computer — preferably a real thing camouflaged to look like the look-alike you're announcing. If everything works out, your product is in the clear, and you're ready to try your hand at real commercial success.

If not, get the hell out as soon as possible. Retain F. Lee Bailey. Make a donation to John Glenn's campaign to establish your astronomical innocence. Disavow any connection with your product. Act like a Silicon Valley millionaire tired of creeping socialism and the mealybugs spreading it in Washington, D.C., and dedicate yourself to fight for America's return to the principle of the freest of enterprises — the liberty to produce anything at anytime by anyone, no matter who owns it. Go on TV and demand this — or death.

All right, all right — you may think these practices I advise to be excessive. But after all, warding off attack lawyers isn't easy. Oh, by the way, any thing, word or idea in my "advice" that suggests an actual firm or product, living or dead, is purely coincidental.

Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

LETTERS TO THE EDITOR

ports. And then there is the impact of the war being waged on the country by the large U.S.-financed "Contra" army in Honduras.

This, perhaps, is what makes it what the author calls "one of the least desirable places for computer professionals."

Nicaraguan programmers and other DP personnel cannot in the near future live a technology beyond their means, but they can make substantial contributions that can palpably improve economic performance and the standards of living. They can, as essential human resources, also participate in such trends as the "innovators movement."

Employees recognized by their peers as contributing new tools, processes or solutions receive government support in the way of access to shops, research facilities or special education with which to develop their ideas.

Needless to say, computer professionals here can influence policies that will enhance peaceful opportunities for their Nicaraguan counterparts.

Some more 'reasonable' ideas for marketing personal computers

I would like to comment on Jack Stone's article "Where are the knowledgeable micro retailers?" [CW, Jan. 30]. For some time now, Stone has recounted his "frustration, anxiety, depression and irritation with personal computer retailers." Apparently, Stone has convinced himself that all of his ideas for interfacing computers are rational and reasonable.

So now Stone wants to dump his random-access memory into a cassette recorder and load the data into his Processor Technology Sol 20 host. Never mind the fact that even *Byte* magazine has not had an ad for a Sol 20 for several years; any self-respecting dealer should stop training his service technicians and salesmen on current computers and focus on the good old Sol 20. Boy, my local dealer would love that. Why, I bet that the closest Sol 20 owner to Iowa is probably in Texas.

And a cassette dump. Wow! Of all of the personal computers that are sold in this area, I bet that there must be one or two with cassette interfaces in this day and age.

Now that Stone has settled on a spiral notebook and three pens, let us focus on his other needs for his trips abroad. First, we'll need a vehicle able to travel in the Sahara under high noon and to roam Antarctica during the winter. It must be able to fold up into a suitcase and fit under an airline seat, but it must be able to pull three tractor trailers filled with clothes, dime novels and back issues of *Computerworld*. Let's see, each ball-point pen should be capable of automatically erasing simply by aiming at the offending errors and rubbing the pen between the fingers. Not state of the art, but it would be quaint enough.

The notebook should be able to make duplicate copies of itself by being placed under a pillow at night. For two copies, use two pillows, four copies, four pillows and so on.

I hope that these ideas will help Stone in his trips around the world. Certainly, my ideas are as reasonable in today's high-tech world as Stone's ideas of how personal computers ought to be marketed and sold.

Caricature of user needs redrawing

In Jack Stone's article, "User emancipation from Big DP Brother: 1984" [CW, Dec. 26/Jan. 2], Stone is, of course, writing for an audience of DPers. But I feel he is being insensitive to the needs and aims of users.

Stone has caricatured a user as a DP ignoramus whose only objective is to "get control over the data processing establishment." He speaks as if users view DP as an end in itself and as if users "demand . . . support of computing machines, software, documentation, training and supplies" only to frustrate the DP manager. And though users always have a lot to learn about DP, I doubt if they have to be "straightened out."

What I don't think Stone realizes is that users are not trying to use their microcomputers to replace the DP establishment, but to supplement it. Micros are sophisticated tools that can quickly return dividends of increased productivity. There will be problems of data compatibility and a proliferation of data bases, but one must remember that these data bases are out there anyway, manually, though they are called ledgers, indexes, reports or lists — not data bases.

A clerk now using an electronic spreadsheet is doing the same job as he had been doing manually only now he is doing it faster and more accurately. A manager who develops a data base management system application on a microcomputer to handle a few thousand records is doing no more than his staff did before with index cards and file boxes, but is now doing it faster, cheaper and more accurately. In both cases, it would have been inefficient to have the DP department develop applications on the mainframe.

I am sure that the picture painted by Stone in his article is true somewhere, but I think it's the exception. Though there are some users resistant to learning data processing terminology, most try to understand as best they can. Their interests will always be, though, in the ends, not the means. As far as getting "answers to their trivial technical questions in the documentation" and "not . . . pestering the DP department," maybe Stone should offer a course in computerese; it is normally the manual not being aimed properly at its intended uses, not the intelligence or diligence of the user, that is at fault.

It is time that we stop talking about the user vs. the DP establishment and start talking about how users working with the micro hardware and accompanying software can, with the help of the DP department, reach a company's goals. It is the elimination of the waste of human resources doing tedious tasks manually that the use of micros can alleviate that should consume one's efforts.

VIEWPOINT

How new micro users convert to DP faith

HUMAN CONNECTION

JACK STONE

It is almost eerie how consistent the conversion process is by which first-time personal computer users shuck off their numbing ignorance of the technology and fly high the banner of computerism.

I thought it useful to share some empirically derived thoughts about this subject in the hope that an increased awareness of such transitions will help your dealings with the user establishment.

Here are the stages of the process that I have identified:

■ *Stage 1: Wonderment.* Many industry followers suggest that a large number of new users suffer violent mental agonies — cyberphobia — as they begin to approach the subject of automation, with the obvious implication that systems analysts or trainers require near-Freudian capabilities to deal with such users. I believe that the number of new users with deep-rooted psychological problems with computers is very small, in spite of all the media hype to the contrary.

I think the situation is much less complex: The vast majority simply wonder how automation will improve their lot in life and, given the opportunity to become users, whether they will do well and perform well on the job. The psychological situation is not terribly different from that which results from other major changes in one's career, such as obtaining one's first job or becoming a manager for the first time.

However, users are psychologically vulnerable during this period and are unduly influenced by what they experience. Machine breakdowns, boring instruction, abstruse systems documentation and irrelevant applications tend to lessen confidence in users' abilities to cope and interest in moving ahead. It's most important that new users work with soundly designed systems in this stage, otherwise their desires to pursue an automation program will diminish, and their dealings with the DP community will be strained.

■ *Stage 2: Enlightenment.* As a sometime trainer of users, it is no less than a thrilling event when my students succeed at the simplest of DP chores, like printing out their first word processing documents or observing the results on the monitor from their first data base queries. Expressions like "This is fantastic!" and "I can't believe it!" permeate the classroom and give a terrific boost to all the students, giving rise to stronger beliefs in themselves and their expectations of meeting the training challenge.

For this and other reasons, I believe that the early phases of user training, both in the classroom and on the job, should emphasize personal achievement and not notions of fancy advanced technology. In literacy training, the impact on the student of presentations of highfalutin advanced technology — like movies of global command and control systems — is negligible compared with the victory of a first-time paragraph move during a hands-on word processing exercise. For this purpose, the personal computer is ideal, because it provides a total systems environment under complete control of the student.

■ *Stage 3: Achievement.* The conversion process is complete when new users see output that directly relates to their jobs pour out of a machine — power on the premises, as it were. They are exhilarated, if not heady, by the obvious productivity gains inherent in well-designed systems, and many are positively giddy about prospects for the future. Continuing achievements lead to a growing systems "maturity" and independence.

However, for some users, this results in misplaced beliefs that they can do completely without the data processing department. For this reason, at some point during this stage, DPers should step in with a program — seminar, briefing, whatever — to bring users into the arena of production systems, sobering them up with notions that they never considered before and steering the user maturation process toward more realistic goals. ‡

Letters to Stone should be addressed to him at P.O. Box 33699, Washington, D.C. 20033.

"We're not sure of what it does, but it is the newest one out!"

The system that lets you forget to remember.

NCR COM

All you do is tell the NCR 5300 Computer Output Microfiche (COM) recorder how many duplicates you want. Then forget it. The recorder tells the new in-line duplicator what's needed. And that's what you get, completely collated.

All that without operator intervention. And at the fastest speeds you'll find in any COM system.

The system is flexible, too. You can choose between wet or dry-silver recorders. And duplicators that produce vesicular or diazo copies.

However, don't take that string off your finger yet. Wait until you've talked to your local NCR Micrographic representative. For more information call or write NCR Micrographic Systems Division, Box 606, Dayton, Ohio 45401. 1-800-543-8130 (in Ohio, 1-800-762-6517).

NCR Micrographic Systems Division

VIEWPOINT

Mid-range computer market here to stay

READER'S PLATFORM

DAVID WALLIS

Regarding Charles P. Lecht's article "U.S. computer industry: 1984" [CW, Jan. 9], I think Lecht's crystal ball needs some Windex. Perhaps the following considerations will help.

Concerning supercomputers, current designs are not "really high-powered stuff," which is why the market for such devices remains relatively small: Most installations are unable to make cost-effective use of array processing architectures. What is needed in most superlarge installations are parallel architectures that are not dependent upon data homogeneity. We will see more solutions to this: The marketplace demands it. However, they may not look very much like supercomputers; they may, in fact, look very distributed data processing-like.

The mid-range computer market is very definitely here to stay. Corporate users want to model all their business activities in their information systems. One particularly effective way of doing that is to provide appropriate information processing power at each corporate level. As long as vendors can provide cost-effective mid-range machines, users will find many places in their organizations where they can be put to profitable use.

It is not that "the advantages of centralized data processing will be rediscovered," since we never lost sight of them. What is true is that we have not yet paid enough attention to the advantages of making form follow function and making capacities match responsibilities.

I sincerely doubt that we will end up with a world in which anything less than a mainframe will eventually "metamorphosize into the dumbest terminals possible." Instead, I see an ever-expanding profusion of novel devices designed to solve various aspects of the problem of getting computers to communicate with people on mutually agreeable terms.

Here to stay

Anyone who says that programming is going to disappear betrays a lack of understanding of what programming is all about. Programming is the art of finding a solution to a problem by effectively applying whatever tools are available. As long as there are problems to be solved and tools to solve them, programming is here to stay.

The question to be asked is: "Who can best program the solution to a particular problem?" The answer is that a solution requires:

- A clear, urgent, experiential understanding of the problem.
- Familiarity with the capabilities of the tools.
- An adequate distribution/implementation/support system.

It may well be that no single organization has the three requisites to solve the problem, in which case a cooperative agreement must be worked out. Since the motivation for solving the problem ultimately rests on the one experiencing the problem, my suggestion is that users become more aggressive in actively creating such agreements with vendors.

I agree that users do not want to reprogram a problem that has already been solved. But they will be forced to as long as they rely upon in-house software development. This appears necessary in the current environment because independent software vendors as a group do not manifest adequate stability. The reason for this is that copyright, patent and trade-secret laws remain ambiguous with respect to software. The software industry's growth will remain stunted and deformed until its product is adequately protected.

The issue of the use of nat-

VIEWPOINT

ural language to communicate with computers is an extremely complex one, because the communication process is one of the most difficult tasks people must perform daily.

We do it so often we take it for granted, but with computers we cannot.

I would characterize communication as a trial-and-error process in which the sender of a message attempts:

- To identify the audience.
- To attract the attention of the audience.
- To instill curiosity in the audience, making it receptive to the message.
- To transmit his message using a syntax and vocabulary understandable to the audience.
- To test if the message was correctly received and is being acted upon.

Since communication problems manifest themselves in decidedly different ways in computers vis-a-vis people, it is not at all obvious that we want to communicate with them in the same casual manner that we communicate with people. In fact, even among people, we often restrict the communication process to minimize ambiguity (for example, printed forms, style and size restrictions on memos, contracts in writing and so on).

I am not saying that we will not continue to make computer interfaces more English-like and to use dialogs where appropriate, including vocal input and response units. What I am saying is that language restrictions are inherent in the communications process and will never go away; not in 1984, not ever.

Any discussion of computer interfaces in 1984 and beyond would be grossly incomplete without mentioning that the use of menus and windows in combination with various pointing devices will continue to prove to be extremely popular and cost-effective in many computer interface designs. Graphics will also increase in popularity as costs diminish and interfaces become more convenient.

Putting things in perspective, I would have to say that there will never be a time when Cobol will go away, to be replaced by apparently unrestricted English. We will continue to want a rich interface environment in which programming languages and natural-looking query and command languages will each have a small but significant part.

Lobbying efforts

I strongly disagree with Lecht that the thrust of lobbying efforts by American electronics companies is or will be "to prevent the sale of Japanese electronics in the U.S." Instead, I see the thrust of lobbying actively as being to arrange appropriate financial and legal support for advanced basic electronics research in this country.

What could we possibly gain from preventing Japanese sales here? The market is a global one, and restrictive U.S. laws cannot hope to do anything but remove the U.S. from participation in it. (If I want to buy Japanese components and U.S. law says I cannot, then I will buy them in Hong Kong, Singapore or Taiwan and move my assembly operation there.)

I think Lecht needs to get out of his think tank a little more often and see what real users' real problems are and what real vendors are really doing to address those problems. As IBM has proven for years, users are not impressed with the latest technology; they want their problems solved. When in doubt, seeing things from a more global perspective practically always enhances clarity. ‡

Wallis is advisory software engineer, software development, at National Advanced Systems in Mountain View, Calif.

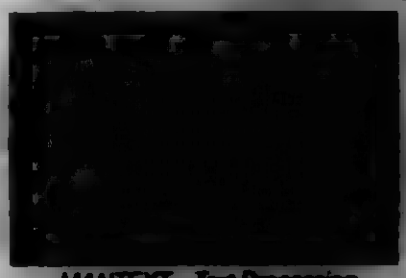
MANAGE USER SERIES

Cincom's new MANAGE USER SERIES™ combines the benefits of personal computing capability, mainframe power and greater data processing control into one comprehensive Decision Support System.

Personal Computing On The Mainframe

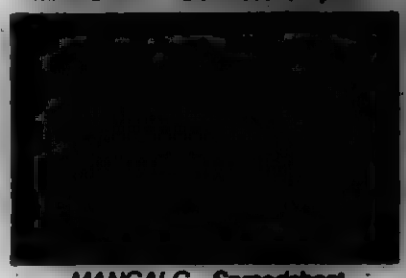
Simply explained, the MANAGE USER SERIES is Cincom's family of integrated mainframe software tools that work together as one powerful Decision Support System. No other software vendor offers such a wide range of Decision Support capabilities at the mainframe level.

Using the power and accessibility of the mainframe, MANAGE enables data processing to provide a wide range of personal computing capabilities while maintaining control over the corporate data resource. And because MANAGE has a conversational, user-friendly personality, it easily wins friends among end-users.



MANTEXT – Text Processing

MANGRAF – Business Graphics



MANCALC – Spreadsheet

Powerful Decision Support Tools

currently integrates four powerful tools that allow end-users to access, store and use production information from the corporate mainframe to aid in key business decision making:

- MANTEXT is a sophisticated free-form text processing system that enables users to access corporate files for the creation of business documents and corporate mailings.
- MANGRAF is an advanced business graphics tool that provides output from on-line applications using centralized production data base information.
- MANCALC is a 3-Dimensional electronic spreadsheet that facilitates "corporate-size" models and can automatically load information stored in corporate files, or build models based on private data as well.
- MANTIS is Cincom's industry acclaimed application development language. As the "integrator" of the MANAGE USER SERIES, MANTIS provides an effective bridge between the Development Center and the Information Center.

End-User Productivity Through Integration

The key to the power and versatility of MANAGE is its elegant integration. MANAGE provides the tools needed for preparation of business reports and day-to-day decision making. And because all components of MANAGE can access central or personal data files, users can merge a multitude of data types, display them graphically, simulate "what-if" futures and document the findings in one business report. The power of MANAGE is limited only by one's own creativity.

Another Major Cincom Technology

Like TIS,™ ULTRA Interactive Data Base System,™ MRPS™ and MANTIS™, MANAGE USER SERIES is a member of the integrated family of new Cincom software technologies. From data base to application software to Decision Support, the name Cincom has come to stand for excellence in software technology the world over.

For more information on MANAGE, or any of our new integrated software technologies, simply contact the Cincom Marketing Services Department, 2300 Montana Avenue, Cincinnati, Ohio 45211.

Soup up your Volkswriter.

Everybody knows Volkswriter, the word processing software package that's become synonymous with high performance. Now, there's a way to get even higher mileage out of your Volkswriter. Hook it up to a Dataproducts P Series dot matrix color printer.

The versatile P Series translates the executive class, word processing capabilities of the Volkswriter into brilliant full color charts, graphs and text. It delivers a full page of text quality print in nothing flat while its sheet feeder automatically prevents loading hassles. And the P Series uses pin feed or plain paper and has the brains to fill every appropriate line with crisp, sharp copy, even if it has to justify to do it. And the P Series color printer has dual speed capability for correspondence quality output for the Volkswriter's many word processing applications and high speed output for draft and spreadsheets.

The Dataproducts P Series color printer. Think of us as a supercharger for your Volkswriter.

For more information go to your nearest computer store and ask about the Dataproducts P Series color printer, or call Dataproducts, 1-800-258-1386.

SOFTWARE & SERVICES

Will Teradata revive a market?

SOFTALK

PAUL GILLIN
CW Senior Editor

Just when many software observers were ready to perform last rites over the data base machine market, Teradata Corp. surprised us last month by announcing a large-scale data base machine capable of handling trillion-byte data bases at speeds of up to 400 million instruction per sec (Mips). In an unusual departure from tradition, the company also announced that it had already installed about a dozen of its DBC/1012 machines in large DP shops.

The announcement will, no doubt, enliven the discussion that has persisted for the last three years about the viability of this intriguing, but so far unpopular technology. Since Britton Lee, Inc. announced the first commercially available dedicated data base processor in 1980, only a few vendors have ventured into the market. With the exception of Intel Corp., none of them are household names.

Vendors are understandably skittish about IBM's unpredictable pricing policies and improvements in hardware price/performance in general. In the large-scale data base machine market, "hardware cost won't be a factor. The important thing will be the performance of the relational model data base," said Vincent Rauzino, manager of new product development at Data Decisions, Inc. in Cherry Hill, N.J.

IBM made that distinction clear last year when it announced DB2, its relational data base management system (DBMS) for IBM MVS installations. DB2 works as an adjunct to IBM's IMS DBMS and requires a copy of the production data. The implicit message was that large shops will be willing to pay the hardware price in order simply to get data to their users in a usable fashion.

However, Teradata appears to have covered many of the criticisms leveled at data base machines. The company has

See DBMS page 48

University launches 'Turing'

Language boasts modular programming techniques

By John Gallant
CW Staff

TORONTO — A member of a University of Toronto research team that recently developed a new general-purpose programming language may one day be a very wealthy man.

"Sure, I might get rich," Richard Holt laughed. "I think we stand to make a great deal of money from this. But we try to think of ourselves like Beethoven enriching the world with his music rather than like Mick Jagger just making money."

Chairman of the university's Computer Systems Research Group, Holt joined forces in 1982 with fellow computer science professors Jim Cordy and J.N.P. Hume to develop the Turing computer language, named in honor of British mathematician and computer theorist Alan Turing. The Turing language, according to Holt, is simpler than Basic, more powerful and elegant than either Pascal or PL/I and offers debugging, portability and modular programming capabilities that outstrip all three.

Turing was born out of an intensive one-year development effort and is currently being used and studied by some 3,000 University of Toronto computer science students. A textbook on the language is being marketed through the Association for Computing Machinery, according to Holt.

The Computer Systems Research Group last month began marketing a Turing compiler for Digital Equipment Corp.'s VAX-11 superminis under Version 4.2 of Unix. Compilers for IBM 370 processors and the IBM Personal Computer are slated for release in the near future.

Not yet for business

As a general-purpose language, Holt said, Turing is useful for basic data processing, microcomputer and scientific applications, as well as for programming that involves data structures and link lists.

In its current form, however, the language is not designed for large, business-oriented DP shops. "It's not as good as Cobol for large file processing applications or for those applications that utilize dollar-type scaled integers," Holt admitted.

"You could use it and it would be better than Basic or Pascal, but whether you could convince people with a large invest-

Needs of the '80s will alter training

First in a two-part series

In many organizations, a "programmer trainee" is considered at best a necessary evil and at worst a lower form of life. This is in spite of the many desirable traits of trainees. These include few ego problems, willingness to work for low salaries, few technical bad habits, potential for several promotions, high probability of loyalty to the firm and willingness to work hard.

Many "experienced" programmers not only lack these characteristics, but also often overvalue their obsolescent skills. Trainees are traditionally unpopular because they:

- Can't start programming on Monday.
- Require training overhead (the trainee's own time plus the time of experienced staff).
- May have no interest in, or potential for, the work.
- May leave the firm as soon as the training is over.

These are real issues. Dealing effectively with the first two issues requires a planning process that is adhered to. Weeding out those with no interest or aptitude means avoiding taking trainees right off the street and putting them into

How To Implement The Best New PC Decision Support Software With A Pair Of Scissors.

YES. Tell me more about The New Context MBA and The Corporate MBA.
☐ Have a Context representative call me.

Name _____

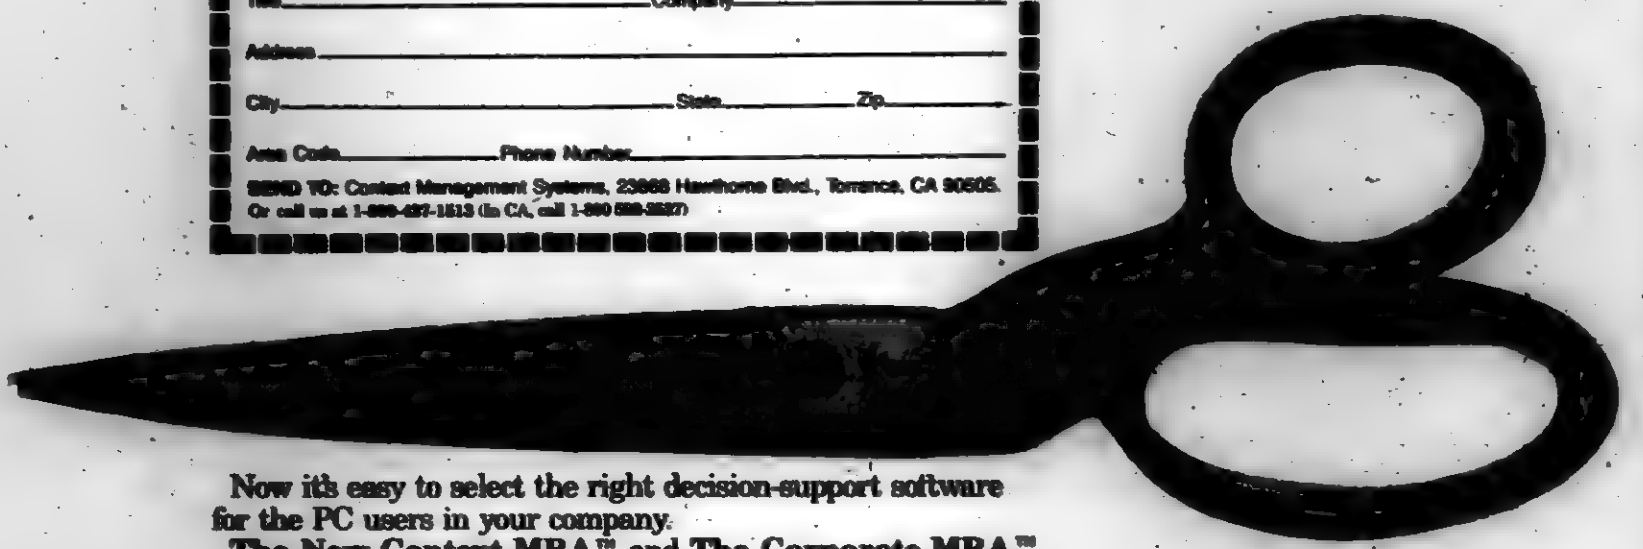
Title _____ Company _____

Address _____

City _____ State _____ Zip _____

Area Code _____ Phone Number _____

SEND TO: Context Management Systems, 23868 Hawthorne Blvd., Torrance, CA 90505.
Or call us at 1-800-437-1513 (In CA, call 1-310 539-5527)



Now it's easy to select the right decision-support software for the PC users in your company.

The New Context MBA™ and **The Corporate MBA™** both have all the functions PC users in your company need: Spreadsheet, Business Graphics, Database, Word Processing, Telecommunications, and Forms Creation.

They're all *integrated* in one software package. With advantages that'll make your life a whole lot easier.

Like full 3270 emulation. So *you* can connect their PCs to your Data Center network. For immediate, yet controlled, access to decision data. No more hand-holding or custom programming.

PC users in your company get the decision-support capability they need from a single, easy-to-learn package. And you get an easy way to plug one PC software package into the entire company.

Our **Context 500™** support team builds a custom training and ongoing support program for your company, so *you* don't have to.

Now *your* job of supporting *our* software is as easy as picking up the phone.

So make it easy on yourself. Cut out, fill in, and send us this coupon. And cut out a lot of heartburn over which of many PC software packages to choose.

Now where did you put those scissors?

Adesse enhances packages for VM operating system

The Adesse Corp. has announced a series of enhancements and updated releases of its software packages for use with IBM operating systems.

Adesse announced Release 1.3 of its CMS Read/Write OS Dasd (Direct Access Storage Device) Support system, which incorporates support for IBM's CMS/SP Release 3 operating system. The system reportedly permits a CMS application to write files on IBM OS-format disks. It can be used to write on disks that are also used by IBM's OS, VS or DOS operating systems as a means of transferring data.

In addition, Adesse announced that its VM/SP Enhanced Page Migration (EPM) system is now supported in IBM multiprocessing or dyadic processing environments under VM/SP Release 2 and Release 3. EPM also supports Release 3.2 of IBM's VM/SP High-Performance Option.

Adesse also announced its VM/SP Shared File Directory Facility (SFDF), which reportedly eliminates duplicate storage associated with read-only CMS disks by permitting one copy of the File Status Table entries for a disk to be shared by all users who access it. Also, the firm announced the Single System Image (SSI) control program for use with Release 3 of VM/SP.

The system is said to manage the resources of IBM and compatible 370, 4300 and 30 series system complexes to provide multiple users with virtual machine facilities. According to the vendor, SSI is a comprehensive facility that allows several VM processors to appear to the user community as a single CPU.

CMS Read/Write OS Dasd Support is licensed for $150/mo per CPU or can be purchased for $5,000; EPM is licensed for $250/mo and can be purchased for $9,000; SFDF is licensed for $100/mo and can be purchased for $1,900; and SSI is licensed for $4,500/mo and can be purchased for $100,000.

Adesse can be reached through P.O. Box 607, Ridgefield, Conn. 06877.

SYSTEMS SOFTWARE

HOLLAND SYSTEMS CORP.
SSP Version 2.4

Holland Systems Corp. has released an enhanced version of the software portion of its information resource management product.

Version 2.4 of Strategic Systems Planning (SSP) includes an additional 18 reports, automates the development of an information requirement dictionary and enhances the error-checking process during data entry, a spokesman said. It reportedly provides improved user control of the clustering threshold used in defining the information structure.

SSP runs on IBM or IBM-compatible mainframes under IBM's OS/MVS operating system. SSP Version 2.4, including software, method, education and documentation, is priced at $80,000.

Holland Systems, 3131 S. State St., Ann Arbor, Mich. 48104.

NORTH AMERICAN SOFTWARE
Jobqueues

North American Software has announced Jobqueues, a multiple job queue package for the IBM System/34 and System/36.

According to the vendor, Jobqueues boosts IBM's JOBQ function throughput in a mixed job environment, such as IBM's Mapics (Manufacturing, Accounting and Production Information Control System) and DFAS-II (Distributed Financial Accounting System).

Jobqueues was designed to conform to IBM syntax and screen-handling techniques. Suitable for any JOBQ job, the system features job-conflict resolution, four-level security, power-fail restart, performance testing and automatic Operator Control Language conversion. It is priced at $495.

North American Software, P.O. Box 440898, Denver, Colo. 80014.

PRODUCTIVITY AIDS

OXFORD SOFTWARE CORP.
UFO, Mezieak price changes

Oxford Software Corp. has announced price changes for its product line.

User Files On-Line (UFO) is an on-line application development system for IBM CICS and IMS/DC environments. For UFO/CICS, the new prices are $27,000 for IBM's DOS operating system and $38,000 for IBM's OS operating system.

Prices for Mezieak, an electronic spreadsheet for CICS environments, are reduced to $9,000 for DOS and $12,000 for OS.

UFO/Cobol is an on-line CICS application development system that uses standard Ansi Cobol as its development language. The DOS price is $24,000, and the OS price is $33,000. Until April, introductory prices are $18,000 and $24,750.

Oxford Software; 174 Boulevard, Hasbrouck Heights, N.J. 07604.

APPLICATION PACKAGES

DATA DESIGN ASSOCIATES, INC.
Accounts payable enhancement

Data Design Associates, Inc. has announced an enhancement to its accounts payable system for mainframes and large minicomputers.

According to the vendor, the system now helps companies comply with the backup withholding and reporting provisions of the Interest and Dividends Tax Compliance Act of 1983. The system recognizes when withholding should occur and automatically calculates and deducts the proper amount from a vendor's invoice. It is written in Cobol.

An on-line version is available for IBM mainframes and large minicomputers, and a batch version is available for all major mainframes. The system sells for $35,000 to $53,000.

Data Design Associates, 1279 Oakmead Pkwy., Sunnyvale, Calif. 94086.

DISTINCTIVE SOLUTIONS CORP.
Commercial Finance System CFS/3000

Distinctive Solutions Corp. has announced an interactive, modularly designed system for processing and monitoring commercial finance instruments, such as revolving loans, commercial loans and leases.

Commercial Finance System CFS/3000 is designed to operate on the Hewlett-Packard Co. HP 3000 superminicomputer and is available now.

It is said to allow input through menu selections or fill-in-the-blanks forms, with an on-line Help system intended to reduce errors.

The price depends on the number and type of modules ordered, with minimum packages costing $100,000.

Distinctive Solutions, 1305 Marsh St., San Luis Obispo, Calif. 93401.

See Tools page 47

Release 3.0 of DBDM out

ETA International, Inc. has announced Release 3.0 of its Data Based Development Methodology (DBDM), which is described as a systems planning and development methodology for use with Cullinet Software, Inc.'s IDMS, Integrated Data Dictionary and ADS/On-Line software.

DBDM provides detailed standards, procedures, controls and deliverables necessary to implement projects in data base, data communications and data dictionary environments. It reportedly consists of modules that support the planning, analysis, design and implementation of data-based development.

The DBDM modules include business systems planning for business and MIS, business function analysis, logical data base definition, program definition for data-based systems, physical data base design and data base implementation guidelines.

DBDM is licensed for $18,000, including the six primary modules, all supplemental modules and five days of customized on-site workshops.

ETA International, Seven Wells Ave., Newton, Mass. 02159.

TRAIN from page 43

a programming job.

The problem of "training a programmer for someone else" is the heart of the rational opposition to using trainees. Trainees do leave, but for the same reasons as other employees. Input, Inc.'s research indicates that the primary reasons for turnover in technical positions in the information systems department are:

- Lack of opportunity to learn or to work on challenging projects.
- A nonsupportive management structure.
- Obsolescent technology.
- Nonexistent or unclear career paths.

Unfortunately, all of these problems are often the direct result of training programs. In many trainee programs, it is apparent that management doesn't really know what to do with trainees. Usually there is an initial solid block of training that goes on for weeks. This is far too much to be absorbed at one stretch, especially when much of it is not (and cannot be) put to immediate use. Often, formal education is very hard to come by after the initial period — even when it is desperately needed.

After the block of formal education, trainees are often placed in the most difficult (and usually least rewarding) job in the information system department: maintenance. They are often assigned to a job and/or supervisor that knowledgeable employees successfully avoid.

The consequence of this classroom-maintenance sequence is that after a year, the trainee:

- Does not have a very broad perspective of data processing.
- Has picked up knowledge that is usually obsolescent and often wrong.
- Has done, at best, a mediocre job (the brighter trainees will be aware of this).

With an experience that ranges from unsatisfying to disagreeable, is it any wonder that trainees would look to other organizations for employment?

Why are so many training programs like this? Our research indicates that this is because so many trainees are hired in an unplanned fashion.

Let's take a look at hiring patterns before the recent economic crunch. Looking at a broad sample of corporations, over 40% of hirings were for new positions created by growth. However, companies generally wanted to fill 80% of their openings with experienced people. This is mathematically impossible. Consequently, actual trainee hirings track the numbers of new positions very closely.

This is a game of musical chairs; instead of chairs being subtracted, they are added. New recruits are hurriedly found, but not planned for and not really wanted.

Information systems departments should face mathematical reality and plan to hire trainees regularly. This will be much easier to do if information systems management believes that trainees have the potential for becoming superior employees. Effective training programs are needed to make this potential a reality.

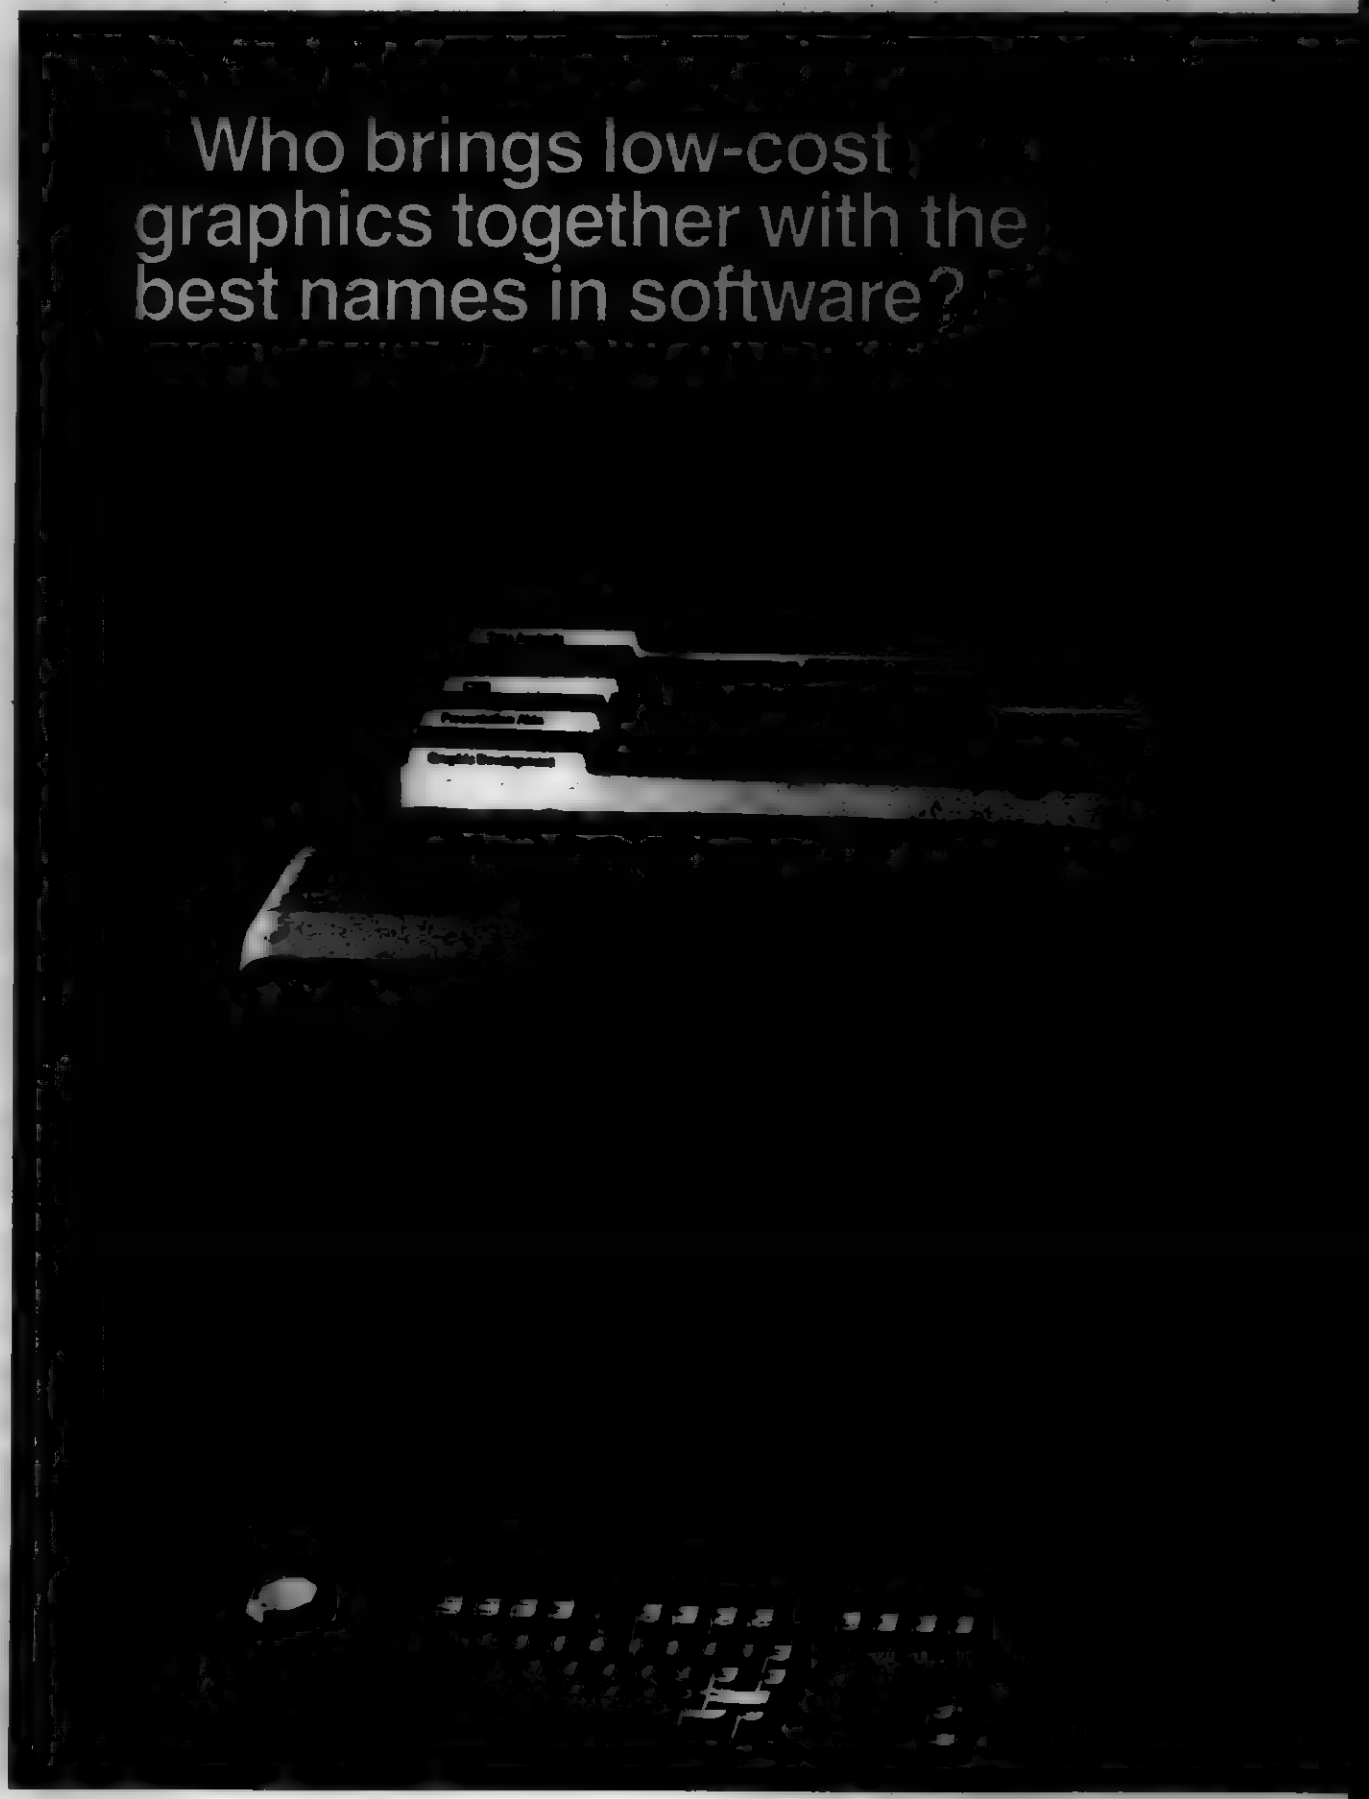
The new system environment will require, besides technical skills, aptitude in systems analysis and interpersonal relations and a knowledge of underlying business issues. This suggests that future trainees will have more diverse backgrounds than trainees now usually have.

Whatever the eventual structure of data processing, it will continue to need skilled people. Effective training will have at least as large a potential payoff in the future as it does now.

A successful training program will have these components:

- Both the organization and the trainee feel that the trainee is making a tangible contribution to the organization very early in the trainee's career.
- The trainee receives textbook knowledge in the amounts required and at an appropriate time.
- Trainees have a positive view toward their job and the organization from the start.
- Trainees stay with the organization.

O'Flaherty is principal consultant and director of software programs at Input, Inc., a research and consulting firm in Saddle Brook, N.J.



SOFTWARE & SERVICES

TOOLS from page 46

CYBORG SYSTEMS, INC.
Payroll; Human Resource Management

Cyborg Systems, Inc. has announced that its Payroll and Human Resource Management packages are now available for use in the IBM IMS DB/DC environment.

According to a company spokesman, standard IMS utilities may be used for backup and recovery.

One feature is said to be the ability to create new on-line screens within the Cyborg program, bypassing the Message Format Services of IMS for immediate use without recompiling programs.

The IMS feature is priced at $50,000.

The base price for the Payroll package is $45,000, while the Human Resources Management package is $35,000.

Cyborg Systems, 2 N. Riverside Plaza, Chicago, Ill. 60606.

DATA BASE MANAGEMENT SERVICES

JCA SOFTWARE, INC.
Sort-On-Line

JCA Software, Inc. has announced a software system said to provide an on-line sorting capability in the Cullinet Software, Inc. IDMS/DC data base management system environment.

Sort-On-Line (SOL) reportedly improves the ability of IDMS users to obtain information from the data base in sequences that are different from the way in which the data was originally stored.

The on-line sorting capability also works for Scratch, Queue and Table records, the vendor said.

SOL enables the end user to specify dynamically the sort sequence desired at the moment without need for program definition by a programmer, according to the vendor.

The product is fully compatible with Cobol, PL/I and Cullinet's Application Development System/On-line programs, the vendor said.

A license fee for SOL costs $10,000.

JCA Software, Suite 224, 2182 Dupont Drive, Irvine, Calif. 92715.

LANGUAGES

WHITESMITHS LTD.
C/370

Whitesmiths Ltd. has announced C/370, said to be a C language compiler for the IBM 370 mainframe architecture.

A vendor spokesman said C/370 permits C program development in the IBM mainframe environment and allows Digital Equipment Corp. VAX-11 users to move existing C and Unix applications to the IBM 370 architecture through recompiling and relinking.

The standard C/370 package includes Whitesmiths' Pascal-to-C translator, which reportedly gives users the ability to run Pascal programs in the 370 environment as well.

The spokesman said C/370 is a full implementation of the standard C language. It runs on all IBM 370, 4300 and 30 series and plug-compatible mainframe systems. It also operates with IBM's VM/CMS, through OS simulation and MVS/TSO, the vendor said.

C/370 is priced at $4,000 until March 30 and $5,000 after that date, according to the vendor.

Whitesmiths, 97 Lowell Road, Concord, Mass. 01742.

Tektronix.

No graphics terminals connect you to better utility or applications software, or with a broader range of computers, than Tek's desktop 4100 Series terminals.

Among the dividends of Tek's long leadership in graphics are the scores of program development tools and powerful applications packages already on-file and immediately compatible with most computers.

From analysis to reporting, cartography to CAD: compatible software helped make Tek's low-cost 4100 Series an immediate success.

Major software vendors like ISSCO, SAS, Precision Visuals and many others offer 4100 users flexibility in data analysis and presentation.

In more technical, engineering and scientific environments, users can take advantage of ANSYS,™ PATRAN-G,™ ANVIL-4000,™ GEOMOD,™ Tek PLOT 10 Computer-Aided Drafting and Easy Graphing II.

Tek PLOT 10 graphics development software library is installed on more computers than any other in the world. It now includes the core standard IGL; the new international standard GKS and TCS, nucleus for scores of specialized packages.

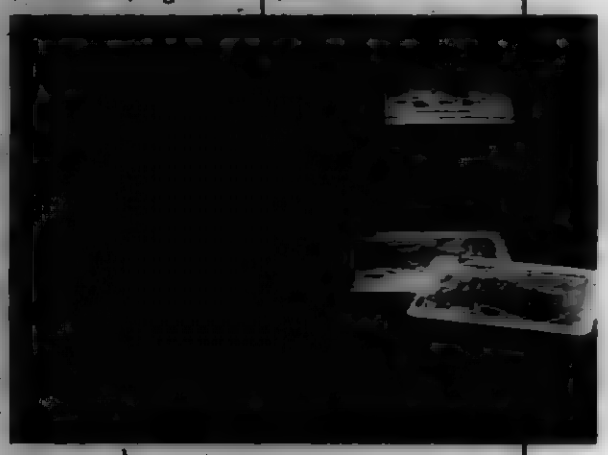
The 4100 Series lets you take full advantage of all these powerful software resources.

Fast, flexible, and priced fully equipped from just $3995, quantity one, the 4100 Series includes VT100 compatibility and ANSI X3.64 text editing right along with its exceptional graphics.

Choose from a range of resolution, segment memory and color capabilities, backed by performance unique to the price range—including a flicker-free 60 Hz non-interlaced display. 38.4K baud communications. And color manipulation by keyboard function keys.

The companion 4695 Color Graphics Copier now makes color copies practical.

It's a very quiet and reliable push-button easy desktop unit that doubles as an alpha-numeric printer. Single quantity cost is just $1595.



Powerful graphics team with Tek 4695 color copies and transparencies for a complete desktop analysis and presentation system.

Presentations come alive with the communications impact of full color transparencies that can be produced in minutes.

Your Tek Sales Engineer can help you find the perfect software for your computer, your needs, and our graphics. For literature or the location of your local Tek sales office, call toll-free: 1-800-547-1512. In Oregon, 1-800-452-1877.

SOFTWARE & SERVICES

DBMS from page 43

provided an IBM SQL look-alike query language that takes dead aim at IBM's decision to use SQL as a front-end language to DB2. Furthermore, Teradata claims to use a "true" relational DBMS combined with a processing architecture "built to support the relational model," according to Michael Ehrensberger, Teradata's eastern regional manager.

Teradata doesn't expect its data base approach to replace IMS or any other product DBMS soon. "Companies have a lot of money invested in their IMS data base, and we'd be foolish to expect they're going to give it up for our model," Ehrensberger said. But the company expects that growing information center requirements and the corresponding demand for relational processing will push companies to seek a more efficient way to process data for end users. In fact, part of the company's documentation offers guidelines for which applications are best offered on DBC/1012 and which are best left to IMS.

DBC/1012 uses Intel 8086 microprocessors, called Access Module Processors (AMP) running in parallel and controlled by Teradata's Ynet network processor, which consists of an array of active logic. Each processor has a dedicated 475M-byte Winchester disk drive with the data distributed evenly among the drives.

Requests are translated and distributed by an interface processor and sent to the AMPs, which access the data in parallel. Responses are transmitted over Ynet and coordinated and translated by the interface processor for return to the mainframe over a block multiplexer pipeline. Each processor can perform 30 access/sec, making a total access rate of over 30,000 access/sec achievable in the largest configuration.

Teradata has also challenged the IBM price umbrella. Storage can be added at the rate of $37 per megabyte, and horsepower can be increased at a cost of $60,000 per Mips.

In designing DBC/1012, Teradata employed the advice of 18 Fortune 500 companies over a 2½-year period to design the system in an agreement it calls the Partner Program. The companies provided input at each step of the design process in exchange for a discount on DBC/1012. Teradata claims to have letters of intent to purchase from nearly every member of the Partner Program.

The company faces an uphill struggle, however. The DP community is clearly skeptical of data base machines in light of their poor market performance to date. Teradata must also face up to the formidable disadvantage of not being IBM. Few companies will be eager to sink one million dollars or more in a complex system from a company that may not be around to support it in the future. It's easier to license DB2 for $30,000 a year and get the peace of mind of knowing it will always be supported.

Teradata expects to be profitable by the end of the year, and it will be worth watching to see if it achieves its objectives. If so, the company may open a door which many in the industry thought was fast closing.

ON-LINE DATA BASES

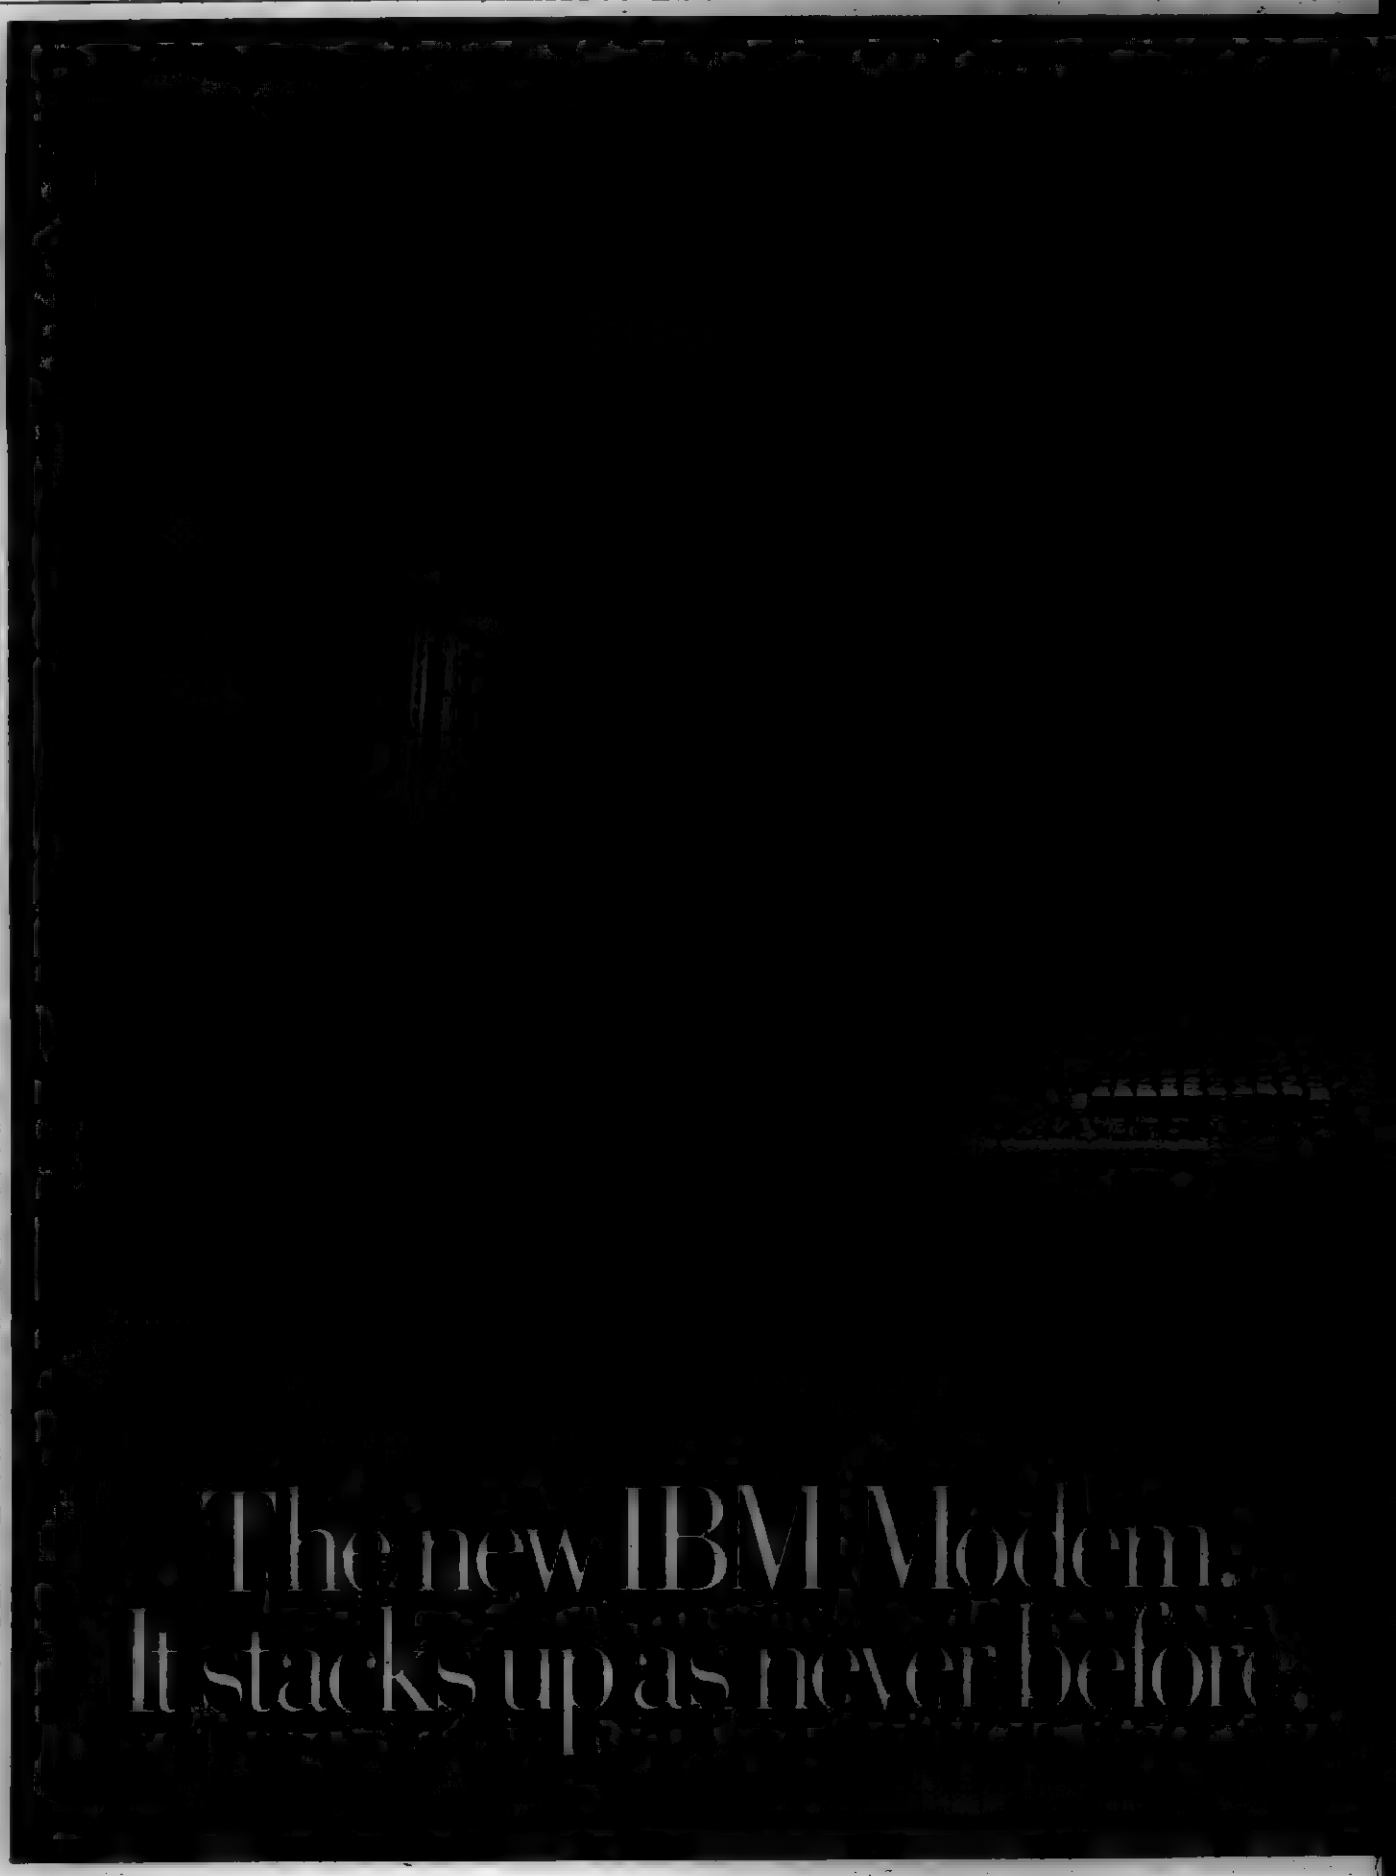
DOW JONES & CO., INC. Dow Jones News/Retrieval via Net 1000

Dow Jones & Co., Inc. has announced that its Dow Jones News/Retrieval business and financial information service is available through AT&T Information Systems, Inc.'s Net 1000 shared network service.

The Dow Jones News/Retrieval service provides users with business and economic news, securities quotes, financial and investment services and general news through its 27 data bases.

The service is offered through two pricing plans, both of which include a $75 sign-up fee. The standard pricing plan prices vary between 60 cents and $1.20 per connect minute. The executive pricing plan prices, which include a $50 monthly fee per user site, range between 40 cents and 80 cents per connect minute.

Dow Jones & Co., P.O. Box 300, Princeton, N.J. 08540.



TURING from page 43

ment in Cobol to switch is another matter entirely."

Holt said that inadequacies in PL/I and Pascal provided the impetus for the development of Turing. "We wanted to be able to use and teach the state of the art in software, which essentially left us the choice of PL/I and Pascal. PL/I had a lot of the power and Pascal had a lot of the elegance we wanted, but those systems don't incorporate many of the things that have been learned in the last decade."

Perhaps the most important advances those languages fail to utilize, he said, are modular programming techniques that allow a programmer to isolate one or more segments — or modules — of a code from the rest of the program.

The modules accommodate a building-block approach to system design and maintenance, an approach that ensures accuracy and flexibility, Holt said.

"We wanted a language that was easier to use than Basic, and I think we accomplished that," Holt said. "It has a very simple, clean syntax. You write down what you want done, and the language does it. That's different from Pascal or PL/I. [Turing] reads much like a simplified version of Pascal, yet it's more powerful, and it leaves behind the syntactic frills of Pascal. You have procedures that appear similar to Pascal procedures, but they are shorter and simpler."

Holt said the structured Turing language incorporates sophisticated debugging techniques, such as consistency checking, that ensure program accuracy. "There are many things that other languages allow that simply don't make sense. But Turing has built in, from an engineering standpoint, many features that minimize the number of errors that show up in your production program," he said.

No 'ruining bugs'

"The result is that when you first get your program running, it's correct. You don't have a whole series of lurking bugs that show up days, weeks or even months later," Holt added.

Turing has been well received by Holt's peers in the academic community, but the development group now faces the task of building a commercial user base. "We are hoping that people will see that this language is on the leading edge in software design.

"Most people who have seen it come away saying that it is. Turing is clearly better, but whether people with a large investment in other languages will convert is the real question. I believe that's a real possibility."

The new rack-mounted IBM 3868 Modem saves you space. And money. And effort.

Space, because IBM's new one-inch-wide vertical package allows you to mount up to 12 modems in one enclosure that fits a standard 19-inch rack.

Money, because each enclosure needs only one power supply and cooling system to support all of its modems.

And you manage your network with less effort because the IBM 3868 Modem has the same high availability and rock-steady reliability as other modems in the 386X Series—plus an enhanced Link Problem Determination Aid (LPDA).

Working with software available for many IBM host systems, the LPDA performs greater end-to-end management. Now line conditions are identified further downstream from the host, and in more detail. For example, conditions in any multi-point circuit can be pinpointed to a particular leg, including tailed configurations off multi-plexed links.

In fact, to help you keep your network humming, the LPDA and host software monitor and provide you with a line quality value, a receive signal level, an error-to-traffic ratio and modem self-test results to help you isolate line problems. Now you can more precisely communicate them to your communications carrier.

And because the 3868 Modem is so reliable, it's backed by a full three-year warranty.

Try them for up to four weeks: just select 2400, 4800 or 9600 bps line speeds. If you purchase in quantity, discounts are available.

To get your copy of a free brochure, or to arrange to have an IBM representative contact you, call toll-free, 1 800 IBM-2468, ext. 90. Call your IBM representative or return the coupon.

Nacha offers paperless trade system

By Patricia Keefe
CW Staff

WASHINGTON, D.C. — A system that electronically replaces the paper checks used in processing debits and credits between participating companies and their trading partners has been unveiled by the National Automated Clearing House Association (Nacha).

Corporate trade payments (CTP) are transmitted via any of 30 automated clearinghouse (ACH) networks, which provide a telecommunications link between banks, savings and loan associations and credit unions. The network reportedly replaces a total of 400 million checks annually.

Most of the regional automated clearinghouses utilize the clearing facilities, delivery methods and settlement services operated by the Federal Reserve System, although some utilize private processing facilities as well. Each clearinghouse is responsible for forming membership policies, pricing structures and the operating policies within its own region. Nacha establishes and maintains rules governing the exchange of automated clearinghouse payments between clearinghouse regions, as well as providing standards and technical support facilitating the same.

Nacha conducted a study in 1981 to determine whether development of electronic CTPs was warranted, and whether it was feasible to send those payments through the ACH. Study results included:

- Each of the corporations indicated interest in sending trade payments through the automated clearinghouse regardless of their level of automation.
- Forty-four percent of the corporations were involved in a net settlement system within their industry.
- The number of financial institutions with which they had accounts ranged from one to 90 on the accounts receivable side, with an average of 22 banks, and one to 50 on the payment disbursement side, with an average of 17. All of the corporations indicated the majority of their trad-

Confusion follows divestiture
Companies report service problems

By John Dix
CW Staff

"Genuine, legitimate and honest confusion" is how one communications manager contacted in a recent informal telephone survey summed up operating conditions in the environment created by the AT&T divestiture.

Each company queried related some dissatisfaction with the quality of service they have been receiving from the regional telephone holding companies and AT&T since they were separated on Jan. 1. The degree of dissatisfaction ranged from simple annoyance at having to work with new contacts within the carrier organizations to disgust with the inability of those companies to complete even modest requests.

In preparation for the divestiture, Bank of America forecast that quality of service would drop and tried to establish . . . tactical plans around that fact.

J. F. Sheedy, manager of network services for International Harvester Co. in Chicago, said there has been a noticeable lag in service and in getting things repaired, but that the company has been able to operate on a relatively even keel. Sheedy credits Harvester's stability to the fact that the company isn't in the midst of any major communications projects and that it uses communications equipment from many vendors.

There have been some problems, however. In the worst case, a disconnect order was issued for four Wats lines at a Harvester facility in Memphis, Tenn. "The order got bungled between AT&T and [Southwestern Bell Corp.]," Sheedy said, "and instead of taking down four lines, all 15 Wats lines at that location were disconnected." Service on all but two of the lines was restored within six hours, and the others were repaired the next day.

Sheedy said that in most other instances Harvester has had little problem getting business and Wats lines installed, but has experienced trouble in getting lines repaired. "There are more steps to go through now," Sheedy said, and "when you call a [regional holding company] with a problem, you often get shuffled around, and sometimes they have trouble finding your records."

The one major equipment delay that Harvester has experienced was in Fort Wayne, Ind. Sheedy said that AT&T Information Systems, Inc. reported that it will not be able to meet a delivery schedule for a Dimension System 85 that was to replace a Centrex-customer premise site, supported by non-AT&T General Telephone, the local telephone company. Sheedy is uncertain if the delay stemmed from divestiture or if AT&T is behind schedule in the construction of this new digital private branch exchange.

At Bank of America in San Francisco, Lloyd Isaacs, vice-president of international information technologies, reported that he has experienced increased lead times for line facilities and equipment. But that has not come as a surprise.

In preparation for the divestiture, Bank of America forecast that quality of service would drop and tried to establish two-, three- and four-year tactical plans around that fact.

In day-to-day operation, Isaacs said, "the placing and processing of orders has become confusing and time-consuming." He believes that one of the primary tasks at hand is to try to establish a working relationship with the splintered pieces of the Bell system. As he pointed out, there are regulated and nonregulated subsidiaries of the regional holding companies to deal with, as well as the similiar delineation at AT&T between AT&T Information Systems

COMMUNICATIONS

COMMUNICATIONS CONTROLLERS

PROTOCOL COMPUTERS, INC.
CPT 8276 SNA controller; Wordplex converter

Protocol Computers, Inc. has announced two products that provide IBM compatibility — the CPT 8276 SNA controller and the Wordplex converter.

The CPT 8276 SNA controller enables CPT Corp.'s word and data processing systems to communicate with IBM host computers. The product allows seven devices to be linked to an IBM network utilizing IBM's System Network Architecture (SNA). The workstations can be linked directly to the IBM network or can utilize dial-in capabilities, such as the ability to store data locally or to word process documents with the CPT terminal and then transfer the data to the IBM host for electronic mail or other processing purposes, the vendor said. The price is $7,000.

The Wordplex converter enables Wordplex Corp.'s workstations to communicate with IBM host computers. The workstations can be linked directly to an IBM network or can utilize dial-in capabilities for low-volume applications, the vendor said.

The converter is available in 1-, 3-, 5- and 7-port configurations. Prices are $2,900, $3,900, $4,900 and $5,600, respectively.

Protocol Computers, 6150 Canoga Ave., Woodland Hills, Calif. 91367.

VOICE/DATA COMMUNICATIONS

TIMEPLEX, INC.
Voice option for Link/1

Timeplex, Inc. has announced a voice digitizing option for the company's Link/1, the T-1 facilities management system.

The option enables up to 48 analog voice channels operating at 32K bit/sec to be digitized and multiplexed over a T-1 line operating at 1.54M bit/sec.

The option is offered in multiples of four voice channels, the vendor said.

Voice modules may be mixed in any proportion with the four-port synchronous data card with the Link/1, according to a company spokesman.

The voice option is priced at $3,550.

Timeplex, 400 Chestnut Ridge Road, Woodcliff Lake, N.J. 07675.

AUXILIARY EQUIPMENT

INTERNATIONAL RECORD CARRIER, INC.
Supertelex

International Record Carrier, Inc. (IRC) has introduced Supertelex, an international telex service available to North American customers.

IRC transmits worldwide via its London-based computer center. Customers link up to this facility through standard microcomputers or electronic typewriters and telephone lines, according to a spokesman for the vendor. The service reportedly allows shorter transmission time and guarantees 5-min delivery. It also permits customers to edit, update and transmit messages, the vendor said.

According to the vendor, the service is compatible with microcomputers from 28 different manufacturers. Customers receive free-of-charge preprogrammed Supertelex software on floppy disk format.

There is no monthly charge for Supertelex service, according to a company spokesman. International rates vary and are obtainable from the vendor.

IRC, 211 E. 43rd St., New York, N.Y. 10017.

MCI service transmits mail to telex users

WASHINGTON, D.C. — MCI Communications Corp. recently announced MCI Mail Telex Dispatch, a service to transmit electronic mail to telex customers and vice versa.

The service reportedly allows MCI Mail subscribers to transmit messages to telex subscribers worldwide and for telex subscribers to send messages to MCI Mail customers.

MCI Mail customers can send dispatches electronically to telex terminals with charges based on an MCI "mini-ounce," which equals 400 characters, MCI said. Rates vary according to the country of destination. Rates are available on-line to MCI customers.

There is no charge to MCI Mail subscribers for receiving telex messages, according to MCI, 1133 19th St. N.W., Washington, D.C. 20036.

The Data Center is under your command.

But is it under your control?

Value Computing's systems management software automates the critical tasks of production forecasting and scheduling, capacity planning, and resource allocation and accounting, and brings those tasks under centralized control. Your control.

The effects on data center operations are immediate: a more stable production environment ... faster turnaround ... fewer manual procedures ... shorter night processing times ... fewer mistakes, mis[illegible] re-runs ... less management dependency on operations personnel.

In short, a smoother running, better performing data center; a center where managers get the most intensive use of all resources. Without making a major capital investment in additional CPUs or peripherals.

We don't believe there's a more cost-effective way to improve the performance of your data center or the value of its position in your company. Call us and find out why more than 1500 users agree.

Value Computing Software Systems:
DCMS—The most powerful and comprehensive production scheduling [illegible] control system available.
[illegible]A-Charge—The industry standard in job accounting and computer billing.
VALU-LIB—An entirely new tape management system designed for today's VS environments.
SMF Express—A unique package for the management of important SMF data.

VALUE COMPUTING
THE OPTIMUM SOFTWARE FOR DATA CENTER MANAGEMENT

Now Wang gives you office automation on a platter.

Introducing Wang Office.

It's the kind of comprehensive office software and communications package only Wang could put together.

Because only Wang can bring you the most advanced electronic mail. Only Wang can bring you the newest in time and task management. Only Wang can bring you the industry's best word processing.

And only Wang can put all of this together with the world's most advanced communications in one flexible package—easy to put in place and virtually transparent to the user.

With Wang Office you can not only process information, you can send it to, or retrieve it from, any office, anywhere in the world. Instantly. Wang Office.

Thirty years of commitment, innovation and technology.

Yours.

On a platter.

For more information on Wang Office, call 1-800-225-9264. Or write to: Wang Laboratories, Inc., Business Executive Center, One Industrial Avenue, Lowell, MA 01851.

X.25 reference describes specs

BROOKLYN, N.Y. — AT&T Communications has announced an updated technical reference describing X.25 packet-switching network interface specifications for data systems users and manufacturers.

"X.25 Interface Specifications and Packet-Switching Capabilities" replaces a 1981 issue and describes X.25 features currently supported by AT&T and those considered for support in 1984 and 1985. It costs $37, plus $1 for shipping, and is published by Literary Data Center, Inc.

Literary Data Center, GPO Box C-9104, Brooklyn, N.Y. 11202.

NACHA from page 59

ing partners did have electronic funds transfer capabilities.

■ Data standards were a concern among most of the corporations. Data specifications had to allow for invoice and payment information to flow through the automated clearinghouse.

Also, benefits cited for using corporate trade payments included better cash management controls, improved business relationships due to knowledge of exact day credit or debit, reduction of paper and paper-related costs, more efficient use of personnel, better investment planning and improved speed of business activity.

The technology developed for corporate trade payments is similar to, although more complex than, the systems instituted several years ago to handle the automatic deposit of payroll, pension and social security payments for consumers, Nacha said. Corporate trade payment rules and regulations differ substantially from that of automated clearinghouse consumer payments. For example, corporate trade payments allow payment of multiple invoices with a single transaction. Also, the system was designed with safeguards, such as maximum dollar limitations that must be specified on individual debit entries.

One of the issues that had to be resolved in the development of a viable trade payment system was that of "float" — the interest earned on funds during the time period from which a check is issued until it is actually debited to the account. However, one method some corporations use to eliminate float impact, according to Nacha, is through renegotiation payment terms with major trading partners. These new terms might offer higher discounts or extended payment due dates in exchange for electronic payment in immediately usable funds.

With the successful completion of the test phase, Nacha claims it can now offer corporate trade payments to companies of all sizes.

A recent announcement by the U.S. Treasury Department indicating that it will begin making corporate trade payments with some of its trading partners in 1984 is expected to boost the volume of trade payments.

More information is available from Nacha, located at 1120 Connecticut Ave. N.W., Washington, D.C. 20036.

DIVEST from page 59

and AT&T Communications.

"We're going to be faced with 12 to 15 more months of this cloud before these things get sorted out," Isaacs said. In the interim, "decisions are going to have to be made under a greater degree of uncertainty."

This is forcing Bank of America to assume greater responsibility in the management of its communications facilities. As an example, Isaacs said that before divestiture, it had on order with AT&T a large Electrical Tandem Network. Now Pacific Bell Telephone Co. will own the switches, and AT&T will provide the interstate lines. "Whereas we had made the decision to go with a single provider of a network, now the responsibility falls in more than one camp. We have to take on the role of coordinator."

The only equipment delays Bank of America has experienced have resulted from order foul-ups. In one notable instance, Isaacs said that an order was noted as complete when it was not, and it had to be reinitialized.

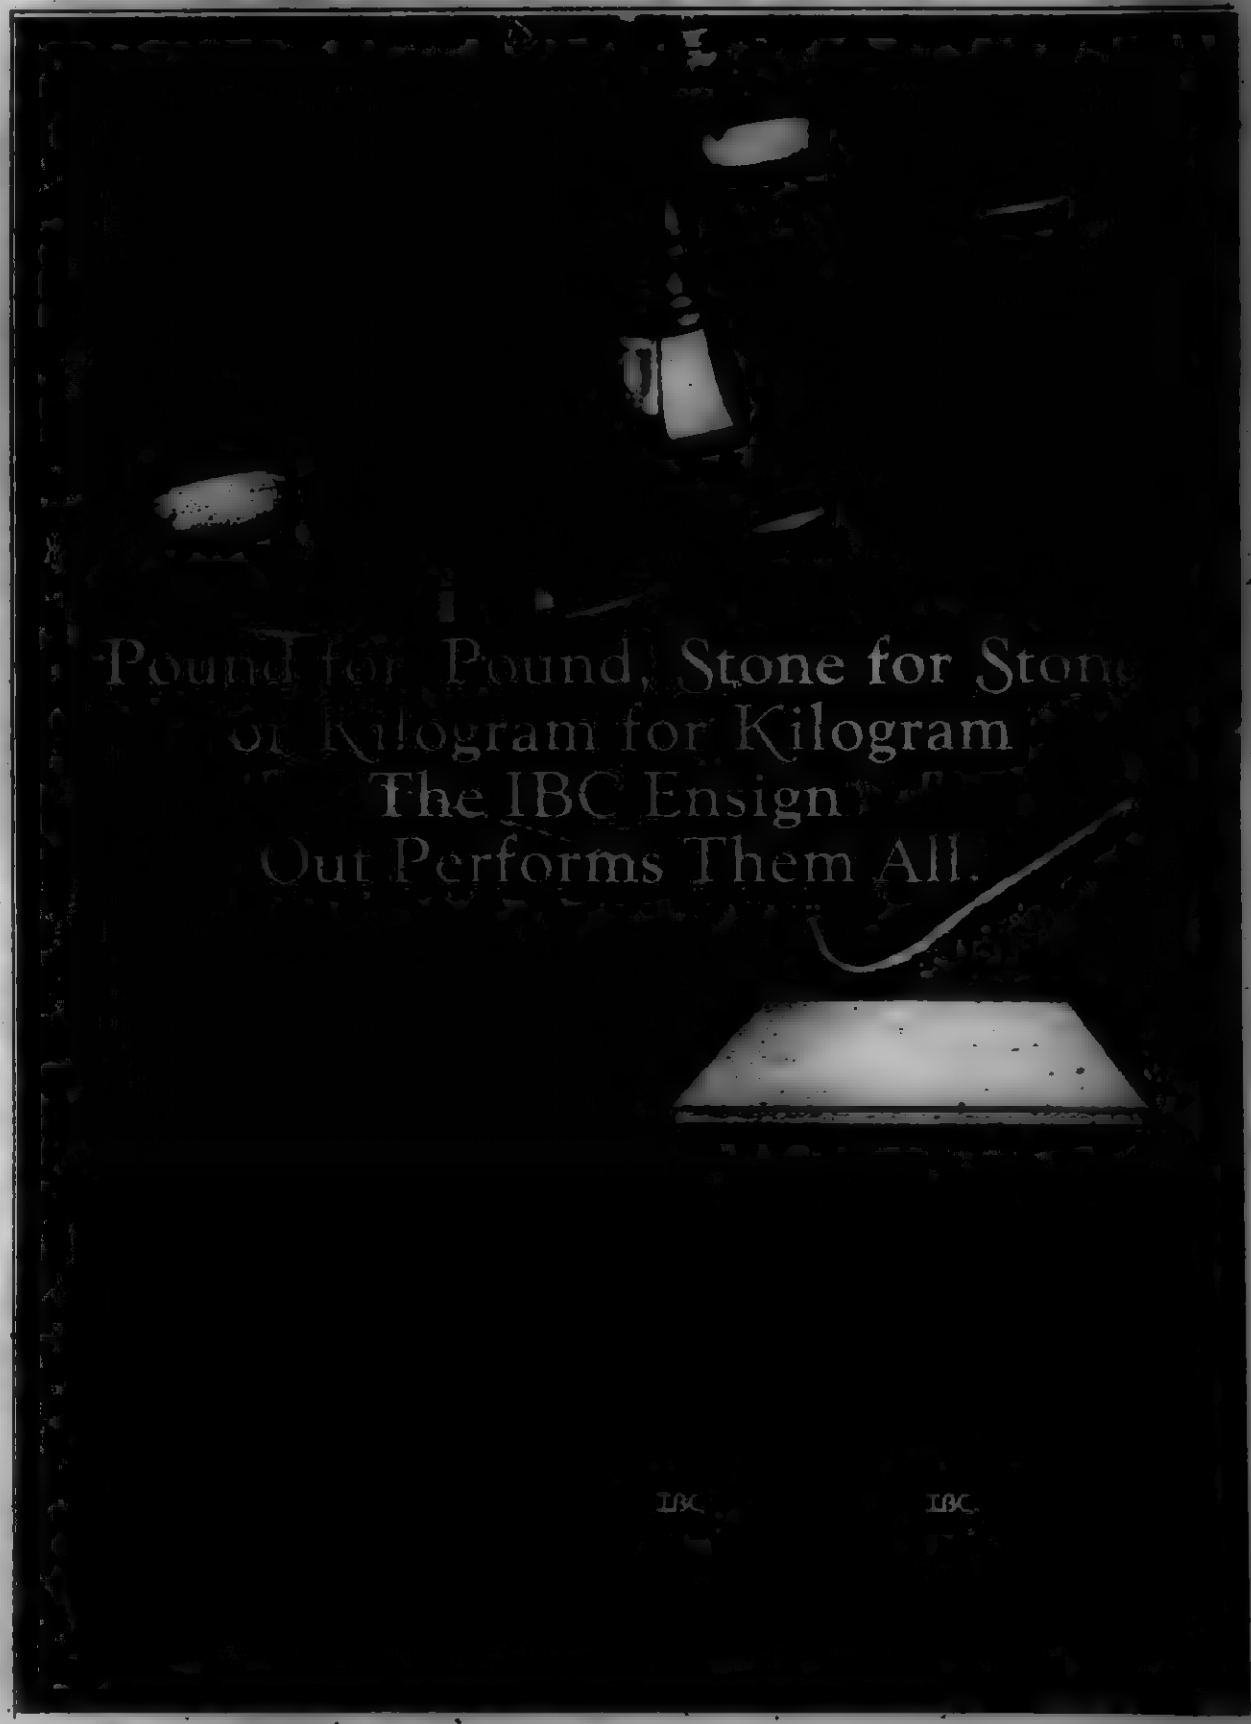
At Colgate-Palmolive Co. in New York City, Manfred Zerbe, director of communications services, said that it will be hard to disappoint his company because it has been anticipating the worst from divestiture.

Colgate's experience in the divested environment has been limited because the company didn't have a backlog of equipment and services. For the few equipment problems the company has experienced, the AT&T Information Systems Customer Service Support Operation provided a single point of contact, relieving Colgate of the responsibility of determining whether the problem was with AT&T Information Systems, AT&T Communications or New York Telephone Co., the communications director reported.

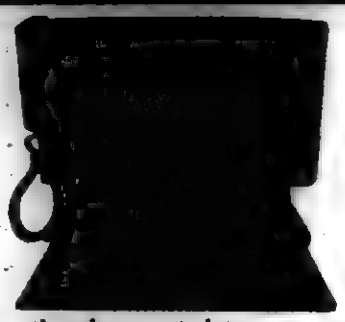
One point of irritation for the company came from the back-ordering of some electronic key systems that AT&T Information Systems said it would deliver in mid-January. More irksome than the actual delay was the fact that this information had to be pried out of the company.

A communications manager at a large Massachusetts company who asked to remain anonymous said that the service his company is receiving is horrendous.

The root of the problem lies in lousy coordination between AT&T and New England Telephone Co., the contact said. "I'm just glad we're not planning any network expansion," he added.



GET EVERYBODY ON BOARD.



Now there's a way to let everyone in your company chip in.

AT&T Information Systems, the company whose unparalleled communications heritage has been bringing people together for 100 years, now brings your office together. With state-of-the-art office automation that's designed to get your company moving ahead.

Electronic Document Communications, now available on System 85 and DIMENSION* PBX, is an easy-to-learn software application that's hard to beat. Because it integrates your office by letting everyone prepare, send and store documents and messages with the speed and efficiency of a computer. So you can have better access to the right information in the right form at the right time.

Electronic Document Communications can streamline your office in three ways:

Preparing Information—Reduces the time, effort, cost and wasted paper between drafts by electronically creating, editing and formatting documents and messages. "The Composer," a special software feature, checks spelling, grammar, punctuation and usage. EDC even measures whether documents are readable by technical and nontechnical readers.

Moving Information—Speeds documents to many people in different locations simultaneously so they can act decisively. EDC allows you to determine the timing and cost of delivery, and even check to find out when documents were received. Using a password ensures the privacy of your messages.

Managing and Storing Information—Locates documents, and retrieves and evalu-

ates contents quickly and easily with electronic files—while reducing the possibility of losing documents. An electronic "Mailbox" allows you to quickly determine which documents to read first. EDC reduces storing and filing costs with an electronic "Archives" that allows for either short- or long-term storage, and the "Wastebasket" which enables you to permanently delete items after a determined period of time. There's even an electronic "Calendar" that checks personal schedules and arranges mutually convenient meetings.

Not only will all these features help you further integrate your office, Electronic Document Communications is itself just one part of AT&T's line of completely integrated business systems. For state-of-the-art office automation, you can implement EDC in conjunction with other applications software like Message Center/Directory, a call coverage and message system. These office management applications are now available on System 85 and DIMENSION® 600 and 2000 systems with the Applications Processor.

The result is you'll be able to improve staff productivity at every level and get everybody on board. And as new features are developed in the future, they'll be compatible with your existing equipment.

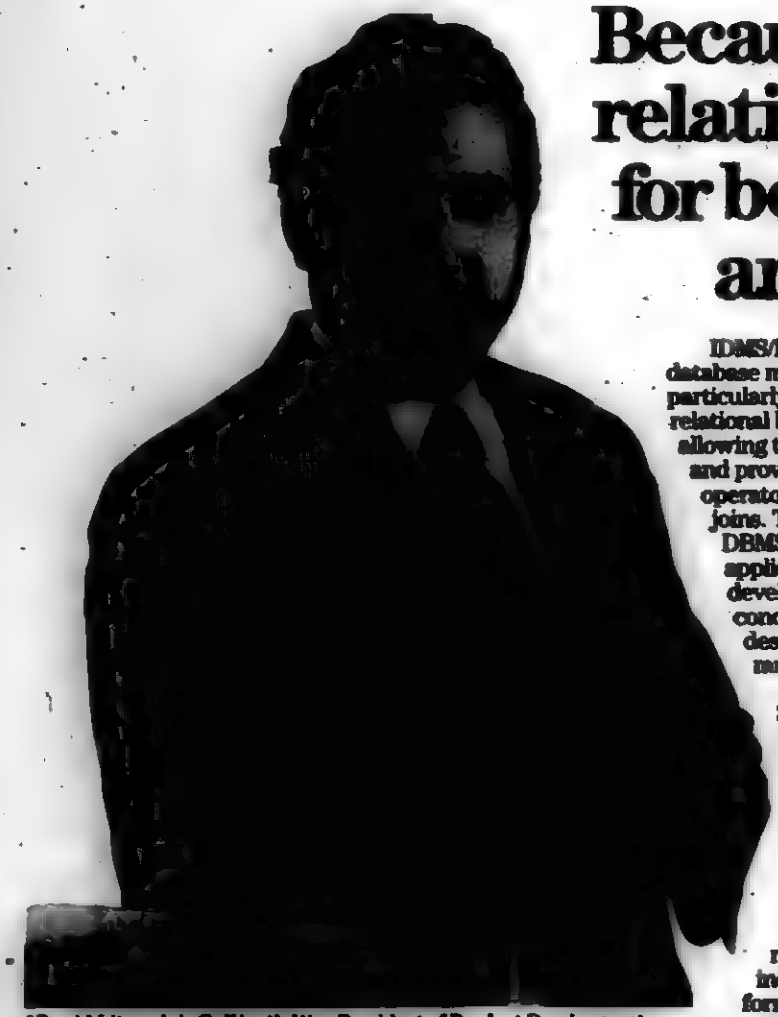
EDC was developed by Bell Labs systems designers who now work for AT&T Information Systems Laboratories. AT&T Western Electric produces EDC, and AT&T Information Systems will maintain it with comprehensive, conscientious service from the largest service organization in the industry. To find out more, call toll-free 1-800-247-1212, Ext. 879M.

AT&T's Electronic Document Communications: It's part of the integrated office of tomorrow that you can board today.

AT&T
Information Systems

"IDMS/R represents a major advance in database technology."

Dave Litwack*



Because IDMS/R is the first relational DBMS designed for both the DP professional and the end user.

IDMS/R is not only a relational database management system, but a particularly powerful one. IDMS was made relational by removing all pointers and allowing the user to define data as tables and providing the traditional relational operators such as selects, projects and joins. The major benefit of a relational DBMS is the capacity to develop applications faster because the developer does not have to be concerned with the database design. IDMS/R provides this and much more.

For example, the Automatic System Facility (ASF) of IDMS/R is a major advance over fourth generation languages. The ASF is so comprehensive and easy to use that all a user need do, to develop an application, is define a relational record. The Automatic System Facility dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. So, the developer can witness the application being produced, literally, in seconds. This capability makes IDMS/R the perfect system for the end user.

Data processing professionals can use the ASF to help develop production applications. The ASF can be used to build a prototype that can be enhanced, using Cullinet's fourth generation language, ADS/OnLine, into a complex production application. But, when they build a complex high volume application using IDMS/R, DP professionals require outstanding performance. Typically, 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R, they can simply change these relationships to predefined joins and benefit from a dramatic boost in performance. We call it Relational Fastpath. Relational Fastpath makes IDMS/R a unique DBMS and a perfect system for DP professionals' system development needs.

In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, full integration with personal computers and is also integrated with Cullinet's complete line of financial and manufacturing applications.

In summary, IDMS/R was designed to satisfy the requirements of those who want to develop applications faster and those who have the responsibility of processing them.

For further information, attend a Cullinet Seminar. Mail the attached coupon or call Cullinet at 1-800-225-9930 (in Massachusetts, 617-329-7700).

**David Litwack is Cullinet's Vice President of Product Development. Mr. Litwack has contributed significantly to the many technical advances Cullinet has achieved in database software products, including IDMS/R. Mr. Litwack joined Cullinet in 1976. He is a Cum Laude graduate of Brandeis University and holds a Masters in Computer Science from Boston University.*

SYSTEMS & PERIPHERALS

What's plaguing big CPU makers

HARD TALK

TOM HENKEL
CW Senior Editor

The big five mainframe makers all have the same problem. With mainframe architectures pushing 20 years old, they are quickly running out of clever ways to boost system performance. All five have tried to update their mainframe systems with newer technology, but all are bound by a morass of software that makes developing an efficient processor difficult. All five are also facing user demands for bigger, faster systems that take up less space, use less power and are more reliable than existing systems.

The problem is a complex one. Each time a mainframe vendor announces a system enhancement that offers 1½ or two times the performance of an older system, it takes one step closer to the technological limitations of its mainframe architectures. And with each doubling of performance, the vendors take even larger steps toward that technological brick wall.

Unlike the entrepreneurial firms developing systems based on microprocessors, mainframe vendors do not have the luxury of developing systems from scratch. Users of mainframe systems are so heavily committed to existing software environments that they are not in a position simply to "make a conversion." Large corporations, whose systems contain millions of lines of code, just cannot make a conversion. IBM learned a painful lesson back in the early 1970s when it pushed 360 users into converting from a DOS- to an OS-oriented operating system. There are still DP executives who hold a grudge against IBM for that conversion. And that was a much simpler time for DP shops. Today, such a conversion would be physically impossible for many shops.

The solution appears to be a transition

See [illegible] page 88

IBM unveils impact line printer
Can operate at 3,600 line/min

RYE BROOK, N.Y. — IBM has unveiled what it claims to be its fastest impact line printer, the 4248.

The unit can operate at 3,600, 3,000 or 2,200 line/min. At 2,200 line/min, the unit can print optical recognition characters, according to IBM.

The printer uses about 40% less power and produces about 26% less heat than the earlier IBM 3211, a 2,000 line/min impact printer. In addition, the 4248 can run all 3211 programs, the IBM spokesman said.

Through program control, an operator can change speeds, select between six or eight vertical line space/in. or adjust hammer-flight timing.

The unit is equipped with microprocessor-controlled self-diagnostics and uses a 12-char. display for diagnostic and test messages, IBM said.

The 4248 can be optionally expanded from 132 to 168 print positions. This option allows side-by-side printing of two 8½-in.-wide sheets of paper, a spokeswoman said.

A basic 4248 Model 1 printer costs $90,000 and will be available in March. Lease plans are available through the IBM Credit Corp. starting at $1,926/mo. The minimum monthly maintenance charge on the 4241 is $975. The option to expand the maximum number of print positions from 132 to 168 costs $10,000 when installed at the factory and $15,000 if installed in the field. Volume discounts of up to 20% are available to users who purchase mixed orders of the 4248 and the 2,000 line/min 4245 printer, according to an IBM spokeswoman.

The printer was announced by IBM's Information Systems Group at 900 King St., Rye Brook, N.Y. 10573.

Apollo DN320 workstation bows

CHELMSFORD, Mass. — Apollo Computer, Inc. has introduced a 32-bit, floating-point workstation said to offer three times the floating-point performance of the firm's DN300.

The floating-point computational performance of the DN320 is equivalent to larger systems, such as Digital Equipment Corp.'s VAX-11/730- or VAX-11/750-class machines, for one-third to one-half the price, the vendor claimed.

In addition, the firm reportedly has more than doubled the storage capacity available for the DN300 and 320 workstations with a 70M-byte Winchester disk drive and two 8-in. Winchester-type disk drives offering 80M and 167M bytes of storage. The drives can be used on the DN460 and DN660 processor nodes and DSP160 server processor.

The DN320 features 1.5M bytes of main memory; the firm's windowing software, which can handle up to 25 concurrent processes; 16M bytes of virtual address space per processor; high-resolution bit-mapped graphics; and connectability to Apollo's Domain local-area network. The unit's 17-in., monochromatic display offers a 1,024-by-800-pixel resolution, detachable keyboard and optional touch pad or mouse.

The DN320 node and disk are said to allow users to mix systems of varying power.

The DN320 is priced at $23,400.

The 70M-byte disk features random-access seek time of 45 msec. A 1.2M-byte floppy disk is optional for backup, software distribution or personal storage. The 70M-byte disk costs $12,800, or $14,300 if integrated with the floppy disk. The 80M-byte disk is priced at $12,800; the 167M-byte disk is $16,800.

Apollo is located at 15 Elizabeth Drive, Chelmsford, Mass. 01824.

Tandem 653X line gets 3270 emulation, voice recognition

By Jeffry Beeler
CW West Coast Bureau

CUPERTINO, Calif. — Tandem Computers, Inc. has enhanced its 653X terminal line with IBM 3270 emulation capability, two additional terminal models and a voice-recognition feature that reportedly provides an alternative means for entering data into Tandem processors.

Tandem also introduced a 55 char./sec. letter-quality printer for the 653X series and trimmed the price of its Model 6530 terminal by $275, a reduction of approximately 11%.

The 653X family had been slated to receive yet another product improvement — word processing capability — but the proposed upgrade reportedly suffers from serious shortcomings and is being withheld from the marketplace indefinitely, according to a Tandem spokesman.

Announcements of the latest enhancements to the 653X terminal line came on Feb. 10 during an annual shareholders' meeting at Tandem's world headquarters here. With the release of Tandem's EM3270 communications access method, all three members of the 653X series, including the two newcomers, can now interact selectively over bisynchronous lines with either IBM or Tandem host mainframes. Users can switch between IBM and Tandem processors by touching just one keyboard button, the spokesman said.

Implemented mainly in software, EM3270 enables the 653X terminals to emulate a wide assortment of 3270 series devices, including:

- The 3277 Model 2.
- 3278 Models 2, 3, 4 and 5.
- 3279 Models 2 and 3.
- Models 3284, 3286, 3287, 3288 and 3289 printers.

Because the 3270's emulation software resides in Tandem's Nonstop and TXP mainframes, none of the firm's terminals can communicate directly with IBM processors. Instead, the display units gain indirect access to IBM applications through Tandem's CPUs, the spokesman said.

EM3270 complements its developer's two existing access methods — TR3271, which allows 3270 series peripherals to treat Tandem hosts as 3271-type cluster controllers, and AM3270, which permits IBM-built 3270s to communicate bisynchronously with Tandem systems.

New terminals

In addition to operating with the existing 6530, the 3270 emulation capability is available with the 6531 and 6532, the two latest extensions to Tandem's terminal family. Unlike its older sister system, with its 15-in. monitor, the 6531 has a 12-in. display screen and is suited primarily for decision-making applications and "what-if" queries, the Tandem spokesman said.

The 6532, by contrast, comes with a 9-in. display and is aimed mainly at jobs in which desk space is at a premium.

Both 653X series additions are packaged with their electronics and monitors in separate boxes, which can be moved up to 6 ft apart from each other, the spokesman noted.

Like the existing 6530, the 6531 and 6532 support Tandem's just-announced Voice Input Option, which uses a microphone and headset to allow users to enter data simply by talking rather than by keying. Intended mainly for production-floor

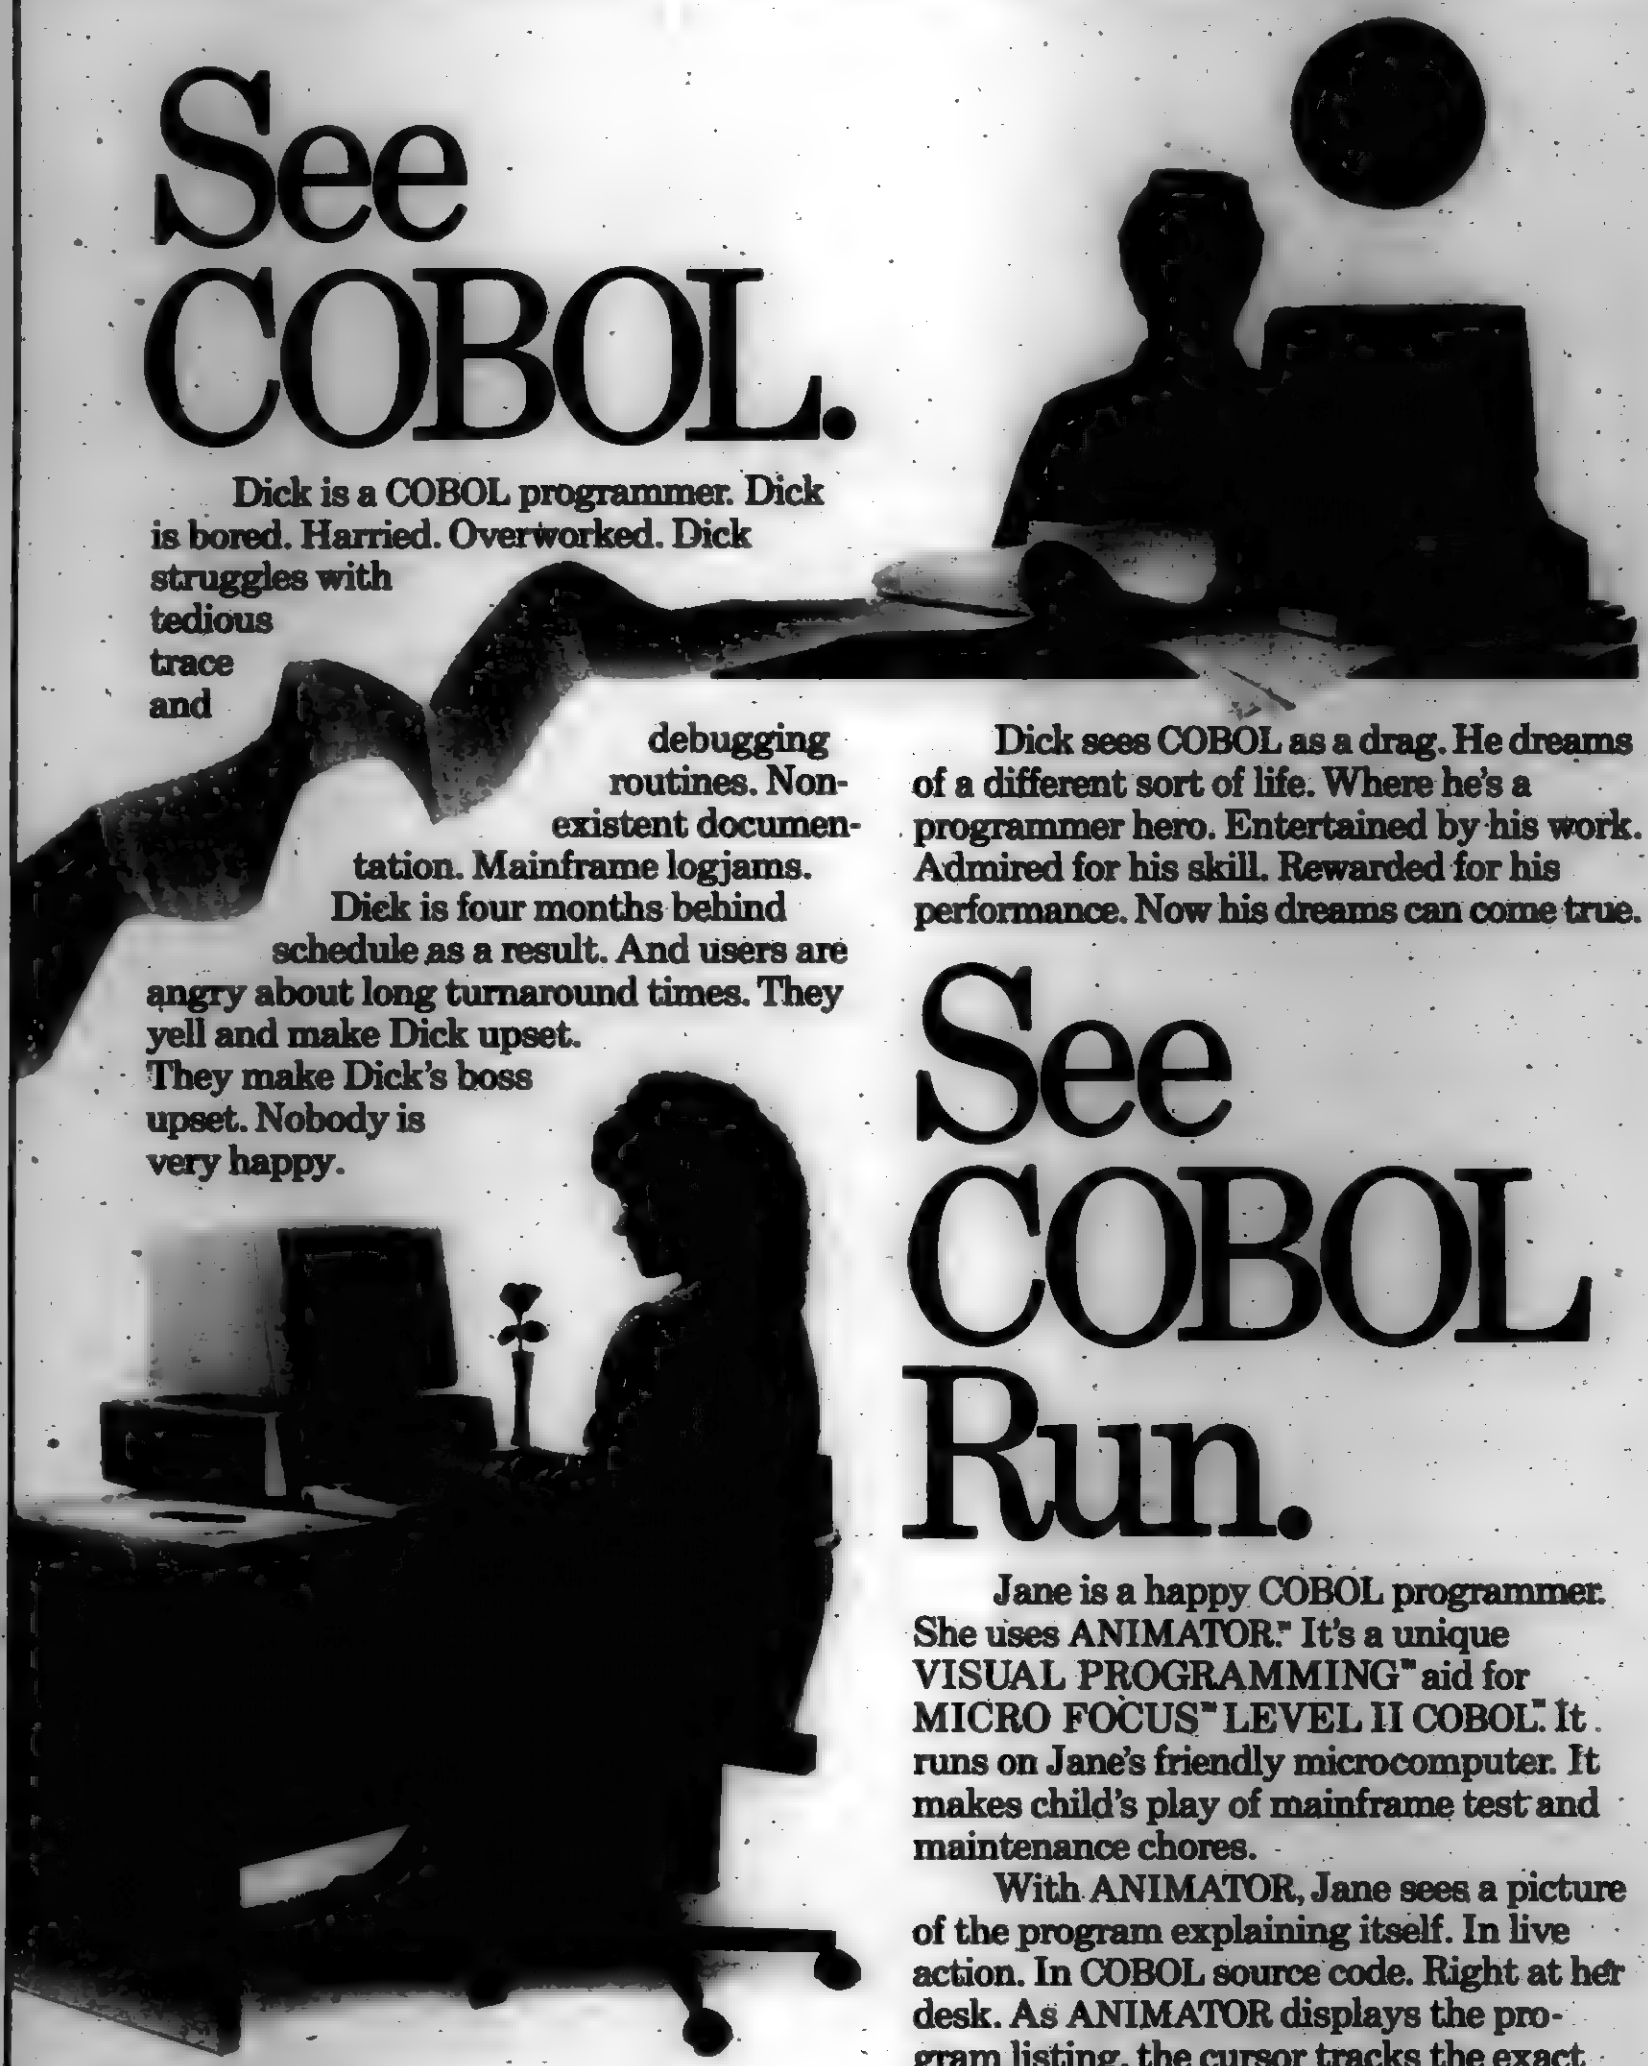
See COBOL.



Dick is a COBOL programmer. Dick is bored. Harried. Overworked. Dick struggles with tedious trace and debugging routines. Nonexistent documentation. Mainframe logjams. Dick is four months behind schedule as a result. And users are angry about long turnaround times. They yell and make Dick upset. They make Dick's boss upset. Nobody is very happy.

Dick sees COBOL as a drag. He dreams of a different sort of life. Where he's a programmer hero. Entertained by his work. Admired for his skill. Rewarded for his performance. Now his dreams can come true.

See COBOL Run.

Jane is a happy COBOL programmer. She uses ANIMATOR.™ It's a unique VISUAL PROGRAMMING™ aid for MICRO FOCUS™ LEVEL II COBOL.™ It runs on Jane's friendly microcomputer. It makes child's play of mainframe test and maintenance chores.

With ANIMATOR, Jane sees a picture of the program explaining itself. In live action. In COBOL source code. Right at her desk. As ANIMATOR displays the program listing, the cursor tracks the exact execution path. Including subroutine

branches. The view is precise. Compact. Unambiguous. And there's no waiting for computer time.

Jane can have the program run fast. Or slow. Or stop it. All at the touch of a key. This makes it easy to spot problems. Insert fixes. Set breakpoints. Instantly. Because of ANIMATOR's sophisticated debugging commands.

ANIMATOR gives Jane more freedom to innovate too. Her programs sometimes win awards. Yet she always meets schedules. Jane's boss likes this about Jane. Because he doesn't like users to yell at him.

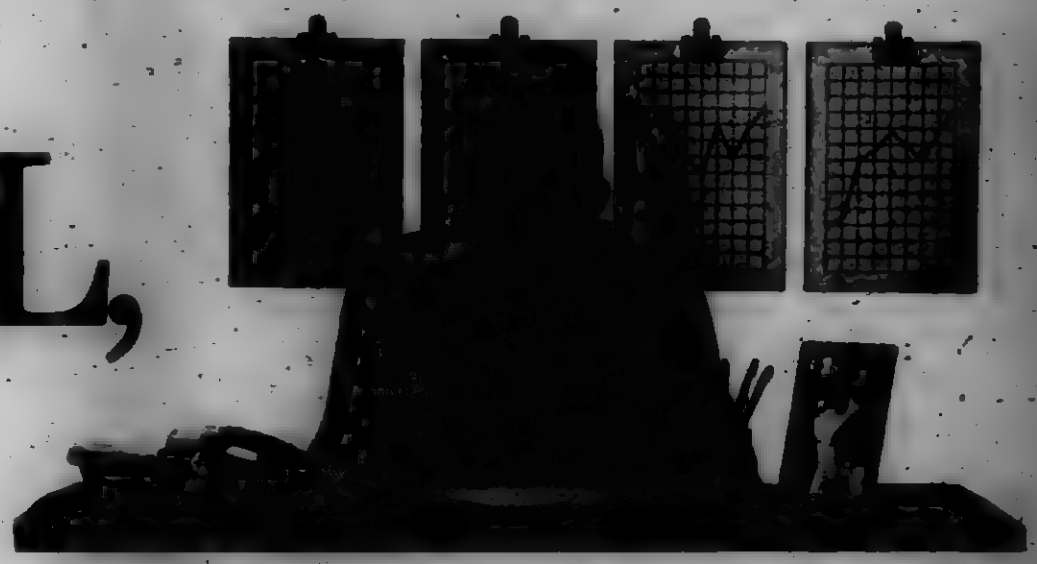
Run, COBOL, Run!

This DP manager just got a big bonus. Because he doubled productivity. He cleared the backlog. Cut costs. Compressed development cycles. Increased programmer efficiency and satisfaction. Produced terrific applications with faster turnaround times. Put control and prestige back into the central DP function. And nobody yells at him anymore. All thanks to ANIMATOR.

See ANIMATOR now.

Let Micro Focus put your DP shop on the fast track. ANIMATOR makes COBOL programs easy to comprehend. Fun to develop. A snap to maintain. Without the drudgery, your programmers will be happier. They'll do better work. In record time. And your users will probably stand up and cheer.

ANIMATOR runs with MICRO FOCUS Level II COBOL for compatibility with



ANSI '74 High Level COBOL implementations. A mainframe-micro communications link is recommended for downloading mainframe programs.

Write or call for a demo. Or detailed information. Right now.

Array processor fits VAX

BILLERICA, Mass. — CSP, Inc. has announced the availability of a multiuser, multitasking array processor system for use with Digital Equipment Corp.'s VAX-11/780, 750 and 730 computers.

The Mini-MAP Plus 4 system consists of up to four Mini-MAP 32-bit, floating-point array processors interfaced to one VAX-11. Each array processor can be accessed by a separate user with a different task requirement. Hence, the VAX-11 processor reportedly can accommodate up to four separate computationally intensive tasks simultaneously, each with 7 million floating-point operations per second.

The basic configuration includes the four Mini-MAP array processors, each with 64K bytes of memory and DEC Unibus interface cabling. The unit is packaged in a single 10½-in. chassis suitable for mounting in a DEC cabinet.

Larger configurations, including up to 16M bytes per Mini-MAP, are also available.

Also, the Mini-MAP Plus 4 system provides software development tools comprising the Scientific Subroutine Library of more than 225 algorithms.

The basic configuration is priced at $78,700.

CSP is located at 40 Linnell Circle, Billerica, Mass. 01821.

PE offers LP1200 printer

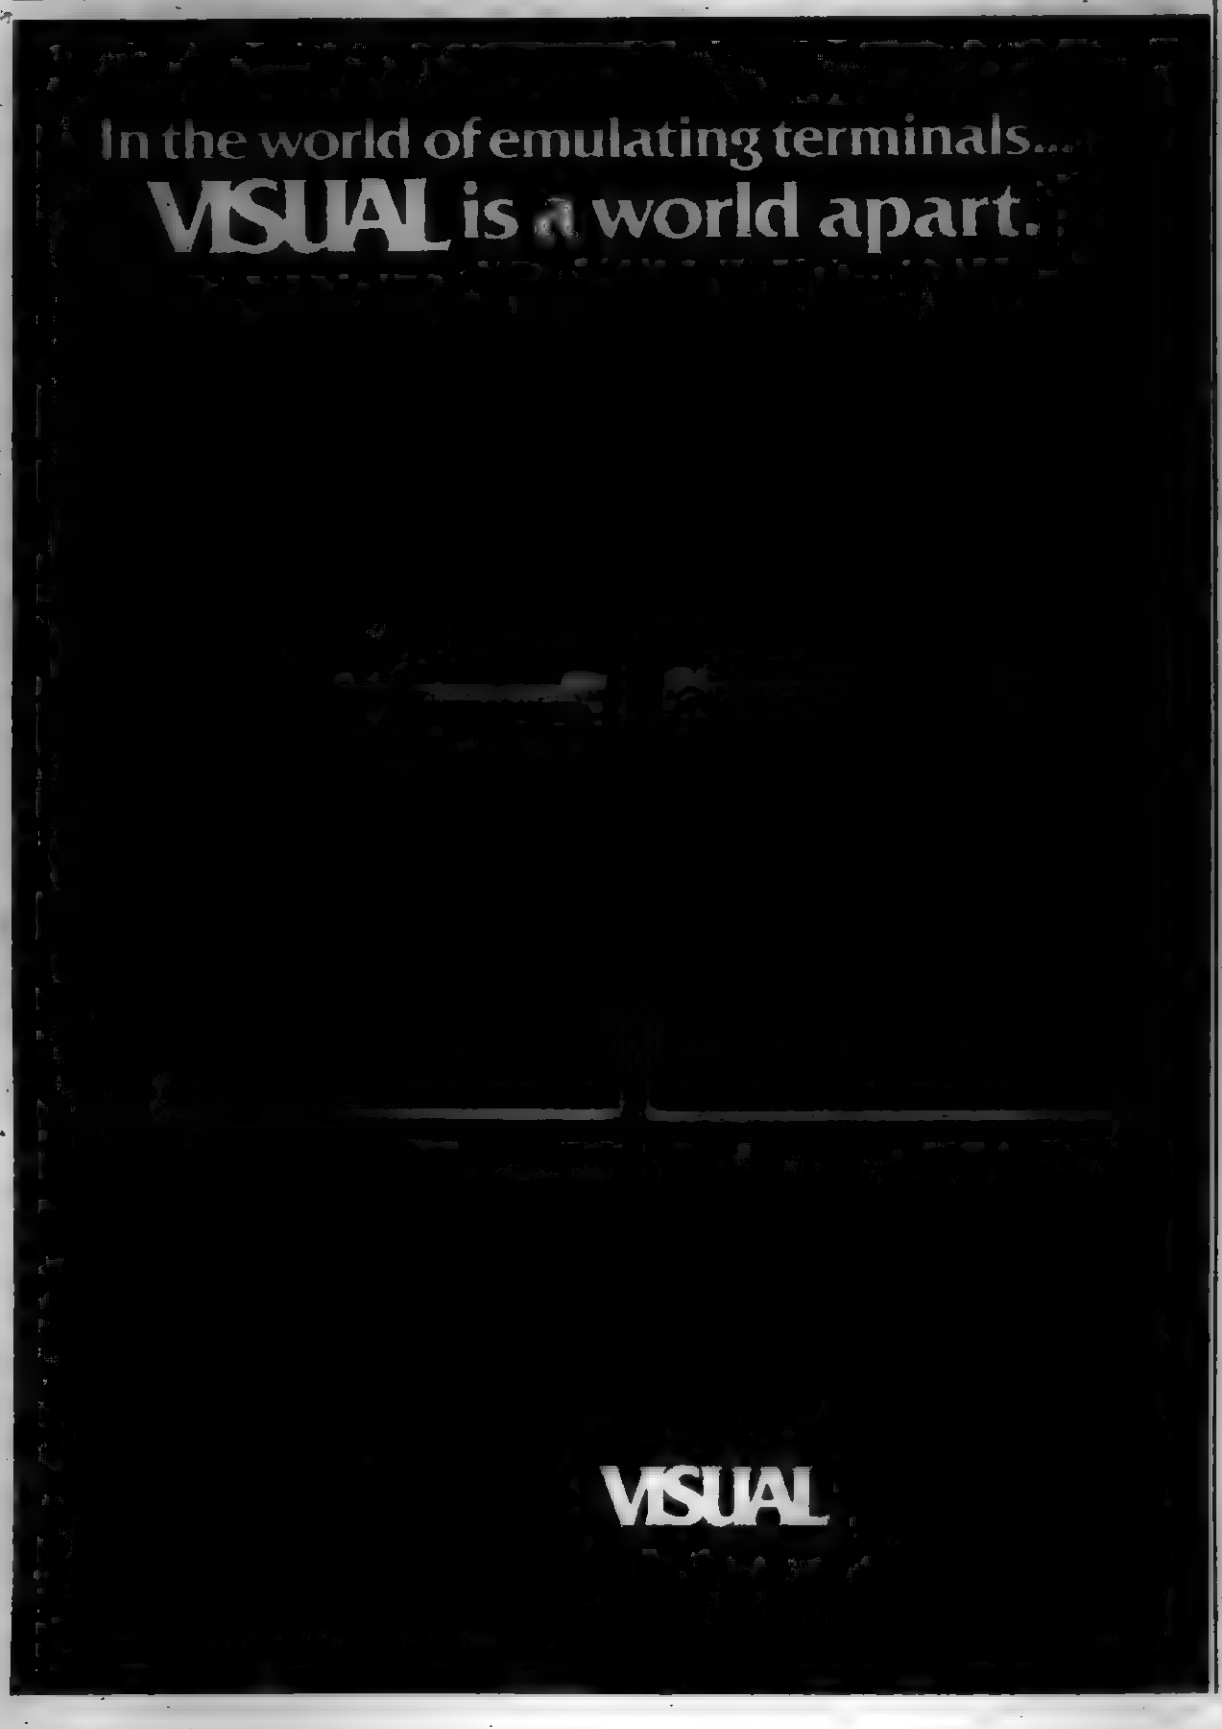
OCEANPORT, N.J. — Perkin-Elmer Corp. has introduced a high-speed band printer for use with its line of 32-bit superminicomputers.

The LP1200 is said to offer 80 or 132 columns of solid character font printing that produces hard-copy output on standard single-page or fan-fold paper.

The unit plugs directly into any PE Series 3200 superminicomputer and reportedly offers features that reduce setup time and maximize printer operation. Other features include a horizontal forms adjustment system, switch-selectable standard vertical spacing for 6 or 8 line/in., an automatic power stacker, touch-sensitive control panel and a typical throughput of 1,200 line/min when using a 64-char. set.

The LP1200 is priced at $20,000 and can be ordered with either a 64- or 90-char. set or both.

PE is located at 2 Crescent Place, Oceanport, N.J. 07757.



TURNKEY SYSTEMS

SKAMP COMPUTER SERVICES, INC.
Skamptrak

Skamp Computer Services, Inc. has introduced an entry-level turnkey system for distributors.

The system is based on a Texas Instruments, Inc. microprocessor and includes two TI Business Systems video display terminals featuring 256K bytes of memory, 17M bytes of disk storage, a 1.2M-byte diskette drive and a desktop printer that prints at a rate of 150 char./sec. It is expandable up to seven terminals.

The software, called Skamptrak, reportedly combines order entry, inventory control, purchase order, sales analysis and sales commissioning with general ledger, accounts payable and accounts receivable.

Skamptrak costs about $20,000, including installation.

Skamp Computer Services, 10261 Yellow Circle Drive, Minneapolis, Minn. 55343.

DATA STORAGE

INNOVATIVE DATA TECHNOLOGY, INC.
Magnetic tape subsystems

Innovative Data Technology, Inc. (IDT) has introduced two ½-in., 9-track, 800 or 1,600 bit/in. magnetic tape systems for the Mostek, Inc. Prolog STD bus line of single-card computer systems. The subsystems meet the requirements of IBM, the American National Standards Institute, the European Computer Manufacturers Association and the International Standards Organization.

The tape subsystems reportedly utilize an intelligent microprocessor-based controller (requiring a single STD bus slot) providing an 8-bit bidirectional parallel interface. Features include asynchronous handshaking, ping-pong buffering, front-end random-access memory buffers to 32K bytes and over 40M bytes of unformatted data storage for archival and/or disk backup.

A software sample application driver is supplied with the IDT magnetic tape subsystems.

The Series TD 1050/STD, a 45 in./sec system, is priced at $9,575; the Series TD 1750/STD, which operates at 75 in./sec, costs $11,950.

IDT, 4060 Morena Blvd., P.O. Box 178160, San Diego, Calif. 92117.

EMULEX CORP.
SC72

Emulex Corp. has announced a controller designed to allow intermixing of disk drive types on Digital

IF YOU WANT THE BEST APPLICATIONS DEVELOPMENT TOOL, TALK TO THE PEOPLE WHO DEVELOP THE BEST APPLICATIONS.

Of all the applications development tools ever designed, only one has the proven success of our new Millennium SDT.

Because Millennium SDT was designed by McCormack & Dodge, a company with over a decade of proven success developing applications. Business applications used in over thirty countries. By the world's biggest and most demanding corporate clients.

M & D design teams have developed everything from accounts payable to payroll/personnel software. Recently, they've won industry acclaim for developing the only family of systems on the market with a genuinely borderless environment. The Millennium series.

What made the Millennium series possible was our discovery of Millennium SDT, a remarkable tool based on a remarkable truth: eighty percent of the functions in all applications are, in fact, generic. Which means that 80% are reusable.

This discovery allowed us to vastly simplify and accelerate our entire systems development process. Tasks that once took months suddenly took days. And we were able to bring a breakthrough product line to the marketplace well ahead of our competition.

If Millennium SDT revolutionized our systems development process, think of what it can do for yours. You'll make more efficient use of your data processing resources than you ever thought possible.

And just to give you an idea of how fast our applications development tool works, we've included your first application in this ad. All you do is find the dotted lines, fill in the requested information, mail the completed form, and wait for the postman to bring a packet of important information. And, if you're in a real hurry, call 1-800-343-0325.

Soon your backlog will begin to disappear. You'll be a Millennium ahead.

START WITH THIS APPLICATION.

Equipment Corp. PDP-11/70 minicomputers.

The SC72 is said to operate on the PDP-11/70 cache bus using standard system software, diagnostics and embedding in place of DEC's RH70 controller.

The SC72 reportedly integrates into a single system any four industry-compatible disk drives operating at data transfer rates up to 2M byte/sec. According to the company, data packs are compatible and interchangeable between DEC RM03 (67M-byte), RM05 (256M-byte) and RP06 (174M-byte) drives and their compatible disk drive subsystems.

The RH70 emulation reportedly allows software-transparent operation under DEC's RSTS-E, RSX11M, RSX11M-Plus and other DEC operating systems.

The SC72 is available now and is priced at $7,950.

Emulex, 3545 Harbor Blvd., P.O. Box 6725, Costa Mesa, Calif. 92626.

TERMINALS

INFORITE CORP.
Inforite intelligent terminal

Inforite Corp. has announced a hand-written character-recognition terminal said to incorporate the functions of dynamic character recognition, mark/sense recognition and graphics capabilities.

The Inforite intelligent data entry terminal is said to input information directly from handwritten business forms while maintaining a hard copy of the original. It features a two-line by 32-char. LCD display, error messages and a programmable calculator function and accommodates three-part forms.

Operating independently of a host computer, it is based on the Zilog, Inc. Z80A microprocessor and contains 64K bytes of random-access memory (RAM), 56K bytes of read-only memory and 48K bytes of battery-backed Cmos RAM. Inforite costs $2,000 in single-unit quantities.

Inforite, Suite 201, 1670 S. Amphlett Blvd., San Mateo, Calif. 94402.

DATA GENERAL CORP.
Dasher D220

Data General Corp. has introduced an addition to its Dasher workstation line, said to be a color, alphanumeric video workstation for data and word processing operations.

The Dasher D220 is compatible with earlier Dasher models and offers programmable color features. It has a palette of eight colors and allows the user to select up to 64 foreground and background color combinations on a character-by-character basis, the vendor said.

The video workstation is supported by a number of operating systems and two operation modes: DG proprietary (7- and 8-bit modes) and Ansi compliant (X3.4, X3.41 and X3.64 modes). All modes are switch- and software-selectable.

The Dasher D220 is available in two packages: a monitor, keyboard and cables configuration for $2,210; or a monitor only for $1,895.

Data General, 4400 Computer Drive, Westboro, Mass. 01581.

MSD SYSTEMS, INC.
PSC-1

MSD Systems, Inc. has announced PSC-1, a retail point-of-sale terminal that uses a Zilog, Inc. Z80 microprocessor.

PSC-1 can function as a stand-alone unit or can be tied into a network, according to the vendor. The PSC-1 features a security program, density studies by the hour and department, inventory polling, product analysis and calculations of profit per square foot, the vendor said.

The unit sells for $3,895. Suggested options include a dual disk drive for $2,500 and a report generator which costs $995.

MSD Systems, Suite 305, 10031 Monroe Drive, Dallas, Texas 75229.

PRINTERS/ PLOTTERS

VERSATEC, INC.
Disk-based plotting systems

Versatec, Inc. unveiled optional 40M- to 140M-byte, 8½-in. Winchester disk drives for its random-ele-

Whether you're looking for Payroll, Personnel, Pension Administration or Claims Processing software, Information Science's "Whole Person" software gives you a comprehensive system that provides superior technical features.

Systems for both Database and Non-Database

InSci's state-of-the-art payroll/personnel database system is integrated into a number of database management environments–including IMS, DL-1, and IDMS. Native mode, the system is designed to take full advantage of each specific database structure, eliminating clumsy, resource-draining interface programs.

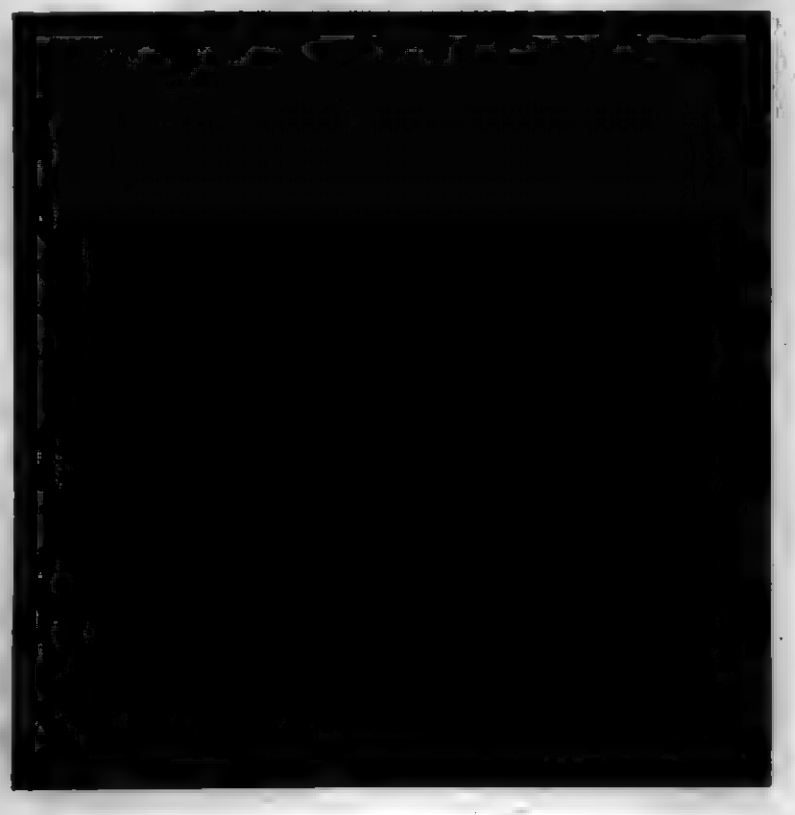
In addition, InSci offers two non-database systems. One using a sequential file structure, the other using a VSAM access method.

INSCI INT

"WHOLE PERSON" SOFTWA

SYSTEM THAT MEETS AL

PROFES



Introducing On-line PAS

PAS–InSci's new Pension Administration System–is available as a complement to our payroll/personnel package or as an independent, stand-alone system. PAS automates most aspects of pension administration from ERISA reporting and compliance to benefits calculation, retirement counseling, vesting schedules and benefits statements.

Software for Health Insurance Claims

Our health insurance claims processing system permits your organization to self-administer group health, dental, and disability claims–providing significant cost savings while eliminating the need to keep duplicate information for insurance purposes.

The Complete Human Resource Package

We call it "Whole Person" software because it is the most comprehensive, technically advanced set of human resource systems avail-

SYSTEMS & PERIPHERALS

ment processor and IBM-compatible on-line plotting controller. The disk options are said to enable Versatec on-line electrostatic plotting systems to handle longer, more complex plots in color or black-and-white with less CPU overhead.

The disk drive is available as an option with new systems or as an upgrade in existing installations. Acting as a raster data buffer, the disk drives spool the raster image for a high-speed transfer to the plotter. On-line electrostatic color plotting requires the disk option and the firm's Versaplot color random software, which provides for eight line colors and 256 predefined area colors. Also supported is black-and-white plotting.

The disk option adds $13,500 to the price of a random-element processor or IBM plotting controller; add $1,500 for in-field upgrades to existing systems.

Versatec, 2710 Walsh Ave., Santa Clara, Calif. 95051.

GRAPHICS SYSTEMS

AUTOGRAPHIX, INC. Autographix 200

Autographix, Inc. has announced an on-site workstation and automated business software package developed to design and produce high-quality presentation graphics for business.

Autographix 200 is said to produce high-resolution 35mm slides, color overhead transparencies, 8- by 10-in. color prints, black-and-white or color hard copy and video, electronic boardroom visuals.

The system is based on IBM's Personal Computer XT microcomputer and can function as an independent graphics system or as the nucleus of a graphics network for IBM Personal Computers and Apple Computer, Inc. microcomputers, according to Autographix.

Standard features reportedly include Autographix Guideline and Polycurve software, a graphics display processor, a graphics tablet and interface for creative work, Epson America, Inc. printers and a Hayes Microcomputer Products, Inc. Smartmodem.

An option is the Matrix Instruments, Inc. QCR film recorder, which produces 2,000 to 4,000 pixel/line slides on-site.

Normal slide needs and slide overlands can be transmitted over telephone lines to Autographix production centers for delivery of finished slides in five to 24 hours, according to the company.

The system is available now. The basic system is priced at $35,500. The optional camera is priced at $32,000.

Autographix, Citicorp Plaza, W. Bryn Mawr Ave., Chicago, Ill. 60631.

CATRONIX CORP. Petcat

Catronix Corp. has introduced a stand-alone, turnkey engineering workstation for mechanical design.

According to the vendor, the Petcat desktop system is the first mechanical design workstation for computer-aided engineering that is not a superminicomputer or a remote terminal to a mainframe computer.

The workstation is built around the IBM System 9000, a laboratory-oriented microcomputer based on the Motorola, Inc. 68000 microprocessor, and three of the vendor's software programs: Catsolid, a three-dimensional solids-modeling system; Catfem, a finite-element modeler; and Catface, an interface to finite-element analysis programs, the vendor said.

The price is $26,500 for a system comprised of a System 9000 with 1M byte of memory, 20M-byte Winchester disk, 8-in. floppy disk, IBM graphics screen, 16-color raster display and Catsolid and Catfem software, a vendor spokesman said.

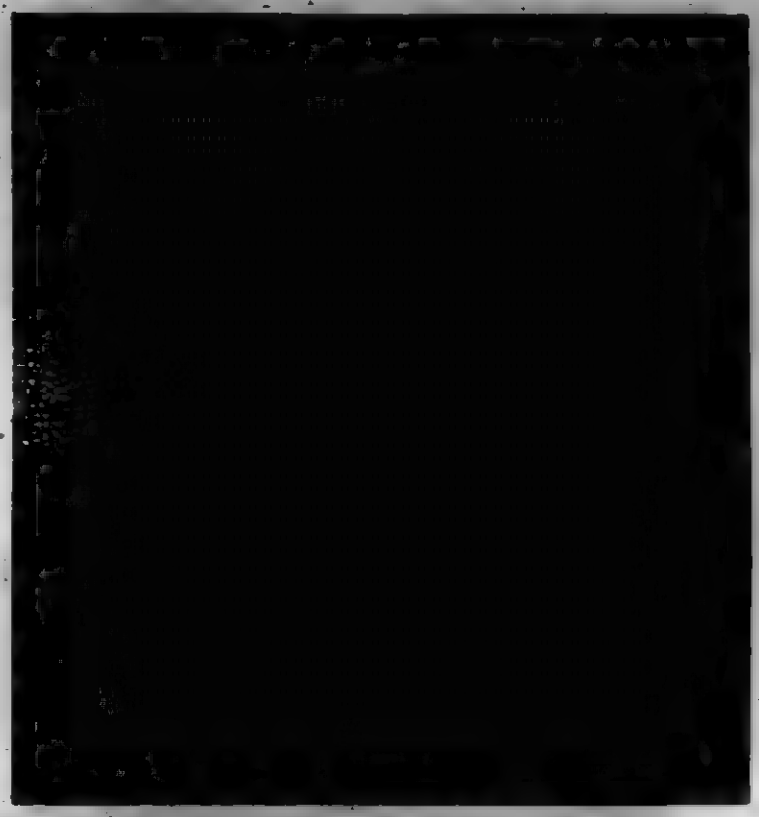
Catronix, 120 Ralph McGill Blvd. N.E., Atlanta, Ga. 30308.

RASTER TECHNOLOGIES, INC. Model One/80; Model One/10

Two enhancements to the Model One line of graphics systems were announced by Raster Technologies, Inc.

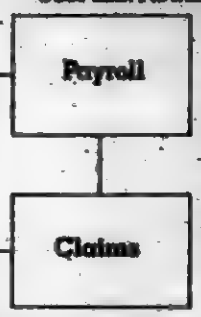
The Model One/80 graphics system features a 1,280- by 1,024-pixel resolution, a 60Hz refresh rate and a pixel

Continued on page 84



able. InSci started the HRS industry back in 1965, and we've led the field ever since. Our technical experts have provided you features unmatched by any other company.

Modularized Design For Easy Maintenance. InSci "Whole Person" software was designed from the top down and is highly modularized, providing maximum flexibility. A single module or subroutine supports each specific function in the system.



User Exit Routines. Strategic areas built into the InSci system allow exits to override the standard system routines. This means you can add your own programs without changing database system codes. InSci also gives you source codes so you can go into the system directly if you desire and still receive maintenance.

Preliminary or final processing mode. InSci systems let you select the most efficient operating mode for each processing task. All changes can be processed in real-time, so they become effective immediately. Preliminary processing allows for simulating situations such as a payroll run without affecting the database. And, of course, InSci systems provide state-of-the-art security precautions, complete maintenance support and training.

Write us. Or Call.

Continued from page 62

update rate of up to 8.7 msec per pixel.

The Model One/10 offers a 640- by 480-pixel resolution and a 60Hz refresh rate. Both products use the firm's proprietary very large-scale integration (VLSI) microprocessors, a spokesman said.

The Model One/80 combines a 16-bit microprocessor, a bit-slice processor and proprietary VLSI accelerators. It draws more than 70,000 one centimeter random vectors per second, and a double-buffering feature provides vector drawing rates up to 115M pixel/sec.

The unit was designed to operate with 32-bit workstations and processors. The unit costs $18,950 for a 1,280- by 1,024-pixel resolution system with eight planes of image memory, cabinet, monitor, keyboard and local firmware, the vendor said.

The Model One/10 uses a 16-bit microprocessor and proprietary VLSI processors to achieve a vector writing performance of 1M pixel/sec. VLSI hardware performs image memory refresh and timing, video refesh and hardware vector clipping and picking. The Model One/10 offers local display and Digital Equipment Corp. VT100 terminal capabilities. The unit costs $7,995 for 10 planes of memory, monitor, keyboard, all firmware, local display list and program development software, the vendor said.

The Model One/80 is available immediately, the Model One/10 will be available in April, according to the vendor.

Raster Technologies, Executive Park Drive, North Billerica, Mass. 01862.

ENGINEERING AUTOMATION SYSTEMS
EAS/700 Series enhancements

Engineering Automation Systems has announced enhancements designed to increase the on-line storage capabilities of its EAS/700 Series graphics system.

Enhancements include a 46.3M-byte Winchester disk drive and an increase in central processing memory to 1.5M bytes.

The EAS/700 is an engineering workstation featuring Microsoft, Inc.'s Xenix operating system and Engineering Automation's PCX printed circuit-board design software and OAK documentation software. The enhanced version is available now.

The color system is priced at $48,450, and the monochromatic system costs $40,750. A system with an eight-color plotter, matrix printer and 1,600 bit/in. magnetic tape drive costs about $84,000.

Engineering Automation Systems, 936 Silas Deane Highway, Wethersfield, Conn. 06109.

CASCADE GRAPHICS DEVELOPMENT, INC.
Cascade X

Cascade Graphics Development, Inc. has introduced a high-resolution computer-aided design and drafting (Cadd) system, the Cascade X.

In addition to the standard 12-in. monochrome CRT terminal, the Cascade X features a 19-in. nonglare monitor that reportedly provides 1,024- by 796-pixel resolution, dual monitors and Motorola, Inc.'s 68000 microprocessor. The system includes 756K bytes of random-access memory, which the vendor claims offers nearly instantaneous processing of graphics input. Up to eight workstations can be used in a network with the Cascade X, the vendor said.

The vendor said the Cascade X is compatible with older Cascade products, as the products are totally compatible.

The Cascade X system also includes a CPU, keyboard, tablet, joystick, 5M-byte hard disk storage expandable to 80M bytes and a double-sided, 5¼-in. floppy disk drive for inputting Cascade software and updating or storing drawings. A-size through E-size plotters and a dot matrix printer are optional.

The Cascade X costs $30,000.

Cascade Graphics Development, 1000 S. Grand Ave., Santa Ana, Calif. 92705.

POWER SUPPLIES

DYNAFIVE CORP.
Dynaswitch; system enclosure

Dynafive Corp. has announced a current-controlled switch and a system enclosure for Digital Equipment Corp. and compatible products.

Dynaswitch is designed to minimize interference and current surges, sense the on/off condition of ac power to the master outlet and control the ac power to the switched outlets.

The system enclosure is said to feature a 40A switch-power supply; an eight-slot quad backplane; six communications ports, mounting for a 5¼-in. Winchester disk drive; and dual or single 5¼-in. half-height floppy disk drives or backup tape.

Both products are available now.

Dynaswitch is priced at $133, although quantity discounts are available.

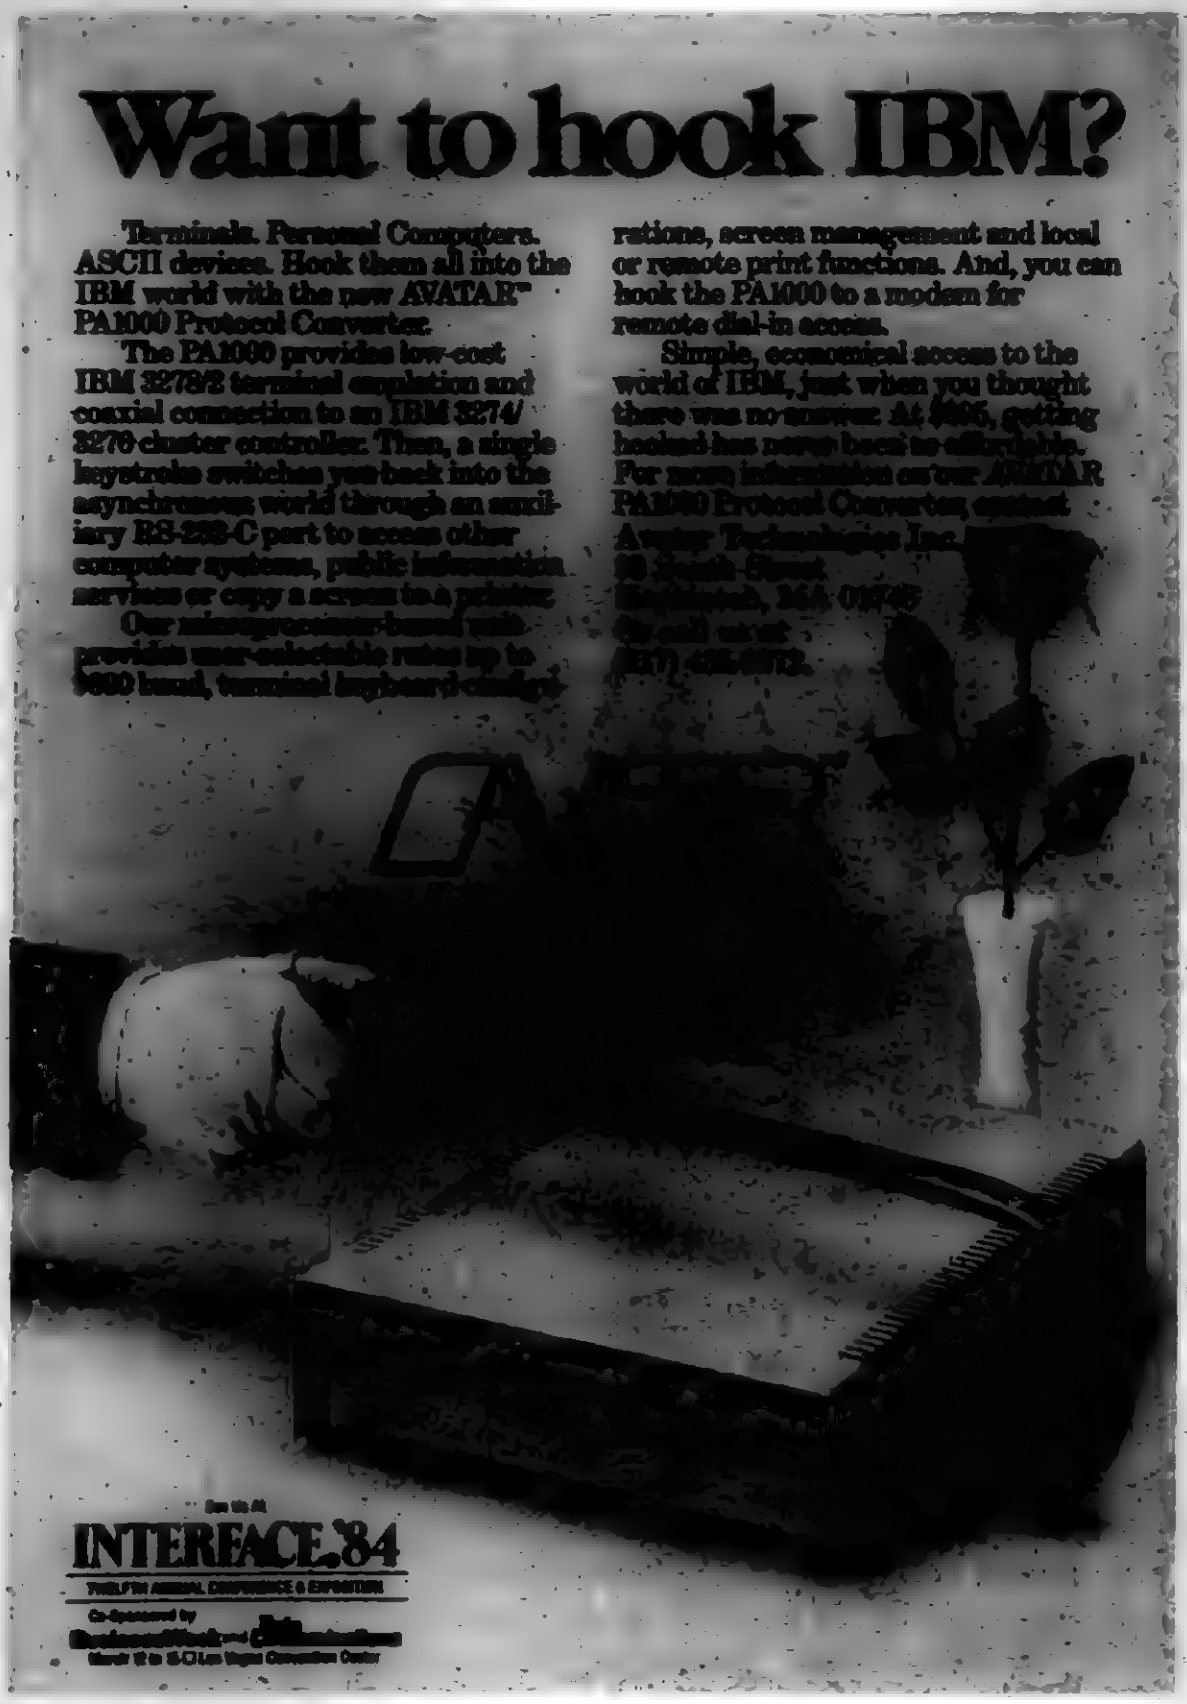
The enclosure is priced at $1,270 for a rack-mount model, $1,520 for a tabletop model and $1,770 for a pedestal model, with quantity discounts available for all three models.

Dynafive Corp., 12040 Western Ave., Garden Grove, Calif. 92641.

TOPAZ, INC.
Maximum Value Powercenter

Topaz, Inc. has announced the availability of its Maximum Value Powercenter (MVP) featuring its single-point grounding.

The MVP reportedly distributes



SYSTEMS & PERIPHERALS

power throughout a computer room while protecting computer circuitry from powerline noise. Features include flexible, watertight, shielded cables; 126 pole positions; digital system-status monitoring; secondary main-circuit breakers; a ground-fault interrupt; and a building-alarm interface package as standard equipment.

The units are reportedly 96% power-efficient and are available in power ratings of 100-, 125- and 150 kVA, the vendor said.

MVP units range in price from $12,635 to $14,770.

Topaz, 9128 Topaz Way, San Diego, Calif. 92123.

BOARD-LEVEL DEVICES

OMNIBYTE CORP.
OB68K/MMU

Omnibyte Corp. recently announced the OB68K/MMU, a large-system CPU board providing hardware memory management for multiuser systems and other applications requiring protected segments of memory.

The board features the Motorola, Inc. 68010 processor with temporary internal register storage and process retry upon receipt of a bus-error signal, delayed bus-error handling for error detection and correction and virtual memory capabilities.

The Omnibyte board provides from one to four Motorola 68451 memory management units partitioning physical address space into 32 to 128 segments.

System-support functions of the product include a real-time calendar/clock with battery backup, two RS-232 serial I/O ports, a software-definable bit/sec rate generator with 18 standard settings and one 240-bit timer.

The board is priced at $1,495 for a 32K-byte version and $1,995 for a 128K-byte version.

Omnibyte, 245 W. Roosevelt Road, West Chicago, Ill. 60185.

AUXILIARY EQUIPMENT

SCIENCE DYNAMICS CORP.
Act II

Science Dynamics Corp. has announced an access-charge measurement device designed for telephone operating companies to use in measuring, originating and terminating traffic on trunks and lines.

The Act II system reportedly features electronic metering of the number of in and out accesses and their duration for each time period, with front-panel controls for local readout and programming and security-code protection.

The company reports that two models are available. The ACT-LTER was designed for medium to large offices, accommodating up to 256 inputs, mixed lines, trunks and expansions in groups of 16. The ACT 16 terminal is offered for small- to medium-size offices and accommodates up to 16 line or trunk inputs.

The device is said to include data collection terminals and a remote data administration system (Rdas), a central processing unit that reportedly polls multiple terminal installations in accordance with the user's billing schedule, computes usage and formats the information to user-defined specifications.

According to Science Dynamic, the Rdas includes self-test, diagnostic and reporting capabilities.

Prices start at $1,940 for ACT 16, $9,150 for ACT-LTER and $22,215 for the Rdas. Delivery, according to the company, is 90 to 120 days after receipt of order.

Science Dynamics, 1919 Springdale Road, Cherry Hill, N.J. 08003.

SUMITOMO ELECTRIC USA, INC.
Personal Scanner Bar-Code

Sumitomo Electric USA, Inc. has introduced the Personal Scanner Bar-Code, a hand-held bar code reader.

The product reportedly reads different styles of bar code fonts, including NW-7, UPC, EAN and JAN fonts. The Personal Scanner Bar-Code interfaces with a number of products, including IBM terminals, the vendor claimed. The bar code reader is available as an integrated or stand-alone product.

The Personal Scanner Bar-Code is priced at $750.

Sumitomo Electric USA, 551 Madison Ave., New York, N.Y. 10022.

SENTEC, INC.
System II

Sentec, Inc. has announced a security system designed to protect computers from 14 environmental, power-line and security threats.

System II reportedly offers monitoring and reaction protection from overheating, transients, power interruptions, humidity, loss of phase, smoke and airborne particles, brownouts, power-line fluctuations, phase out of sequence and water.

The system was designed to cut power to the computer when dangerous conditions exceed manufacturer-specified parameters.

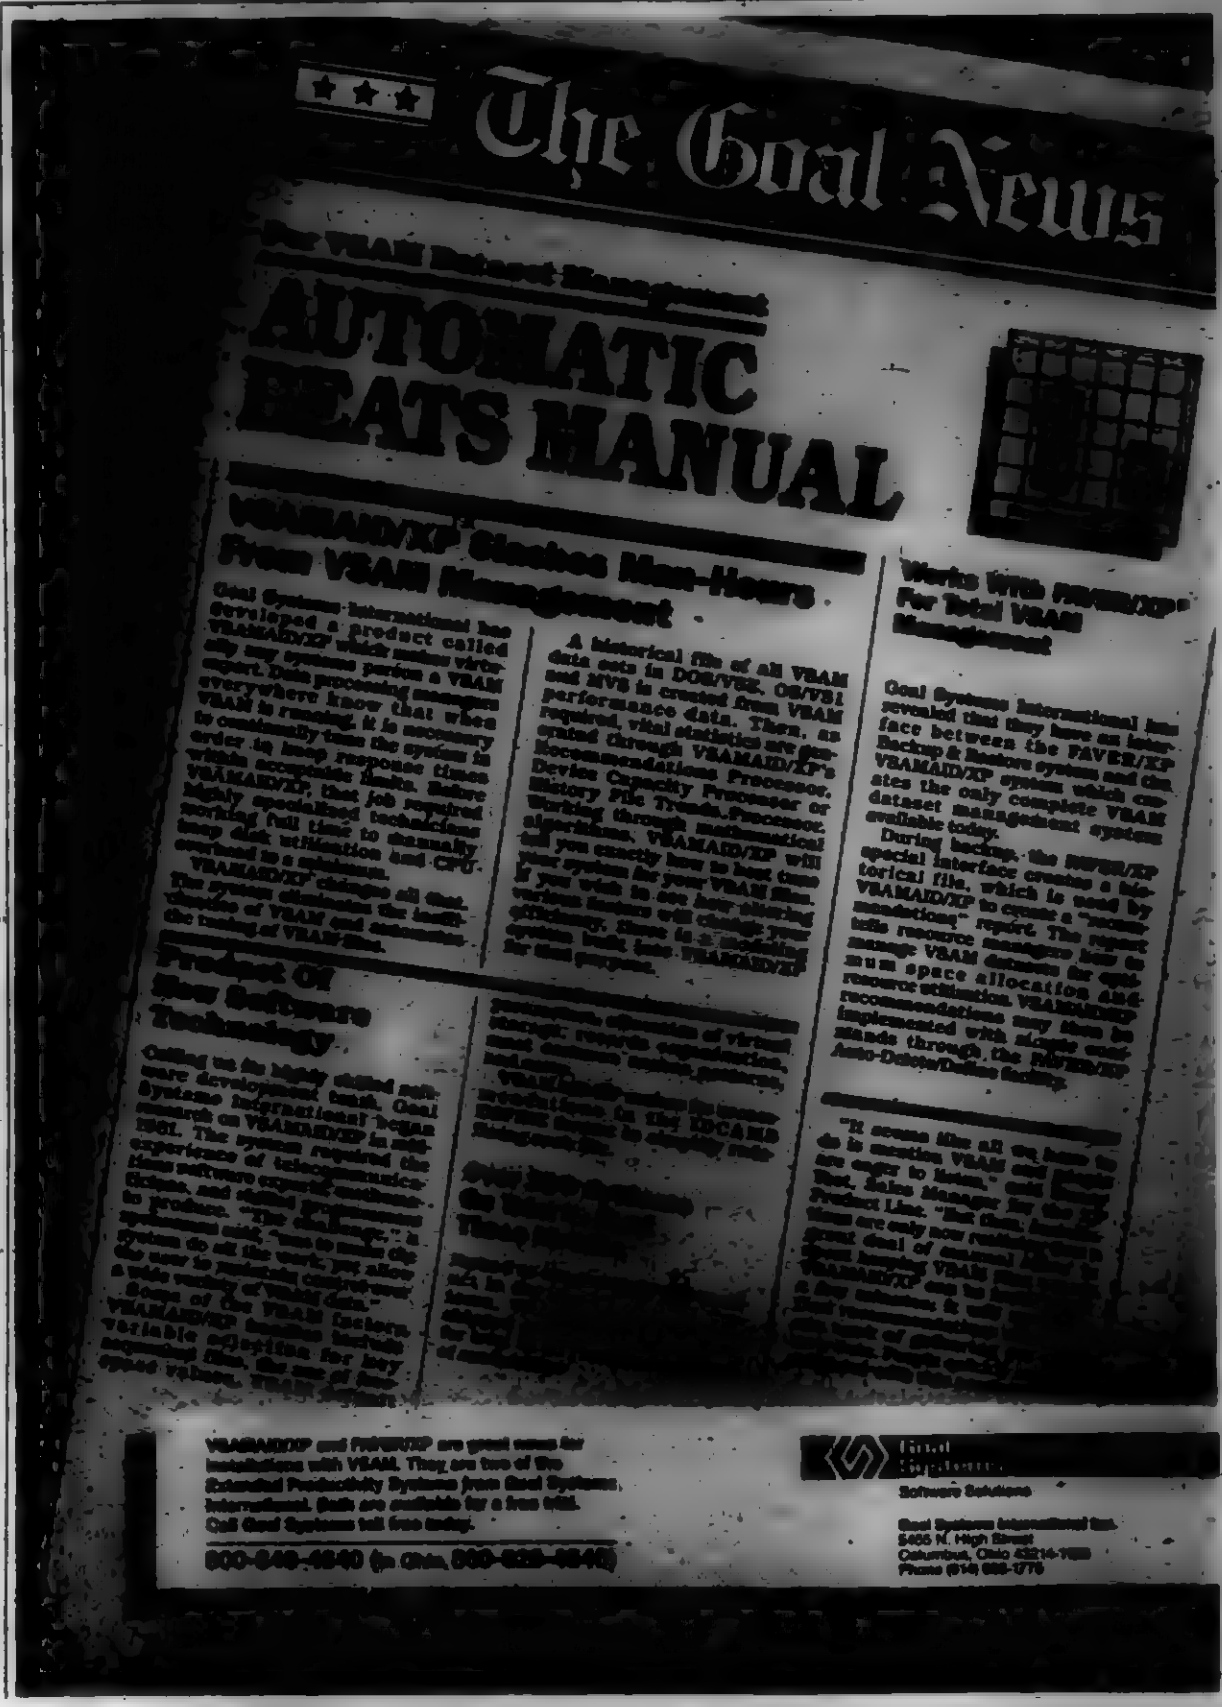
It is said to feature LED status indicators, audible alarms and a remote status-alarm module. That module is designed to allow personnel at a remote station to respond to fault conditions and alert support personnel.

It is said to allow interface with an automatic telephone dialer, which can dial preprogrammed numbers with status messages.

The System II is available now at prices starting at $13,600.

Sentec, 1955 N. Dutton Ave., Santa Rosa, Calif. 95401.

See AUXILIARY page 69



AUXILIARY from page 65

DISCWASHER
Clean Runner

Discwasher has introduced an interactive disk drive cleaner designed to lead the user step-by-step through the cleaning process.

The Clean Runner is said to be a combination program/cleaner that safely cleans disk drive heads, avoiding problems associated with contamination.

It utilizes a lint-free cleaning surface bonded to a polyester diskette and is a dry system.

Suggested retail is $24.95.

Discwasher, P.O. Box 6021, 1407 N. Providence Road, Columbia, Mo. 65205.

RECOGNITION EQUIPMENT, INC.
Bar-code reader

Recognition Equipment, Inc. (REI) has introduced a bar-code reader said to read and convert both human-readable OCR fonts and bar codes into computer-compatible information.

The hand-held input device is used to scan OCR and bar-code information interchangeably without operator intervention, according to the vendor. It reads fonts, such as OCR-A Alphanumeric, Multifont Numeric and bar codes such as UPC/EAN, Code 39 and 2 of 5 Interleave.

Suggested end-user price is $1,800 each, a spokeswoman said.

REI, P.O. Box 660304, Dallas, Texas 75266.

VENDORS from page 57

period. That is what IBM appears to be doing with its MVS/XA operating system. IBM created an environment which, it hopes, will allow users to run existing programs while converting frequently used applications to take advantage of the extended addressing offered by MVS/XA.

Burroughs Corp. also appears to be taking the same approach with its proposed A series of mainframe processors. The first model of the A series, the A 9, allows users to run existing programs developed for the B4900, B5900 or B6900 systems.

But this turtle-like transition period is occurring during a time when technology is whizzing past the older mainframe processors. Microcomputers, for example, started out as 8-bit systems that offered some rudimentary computing capabilities. Within two years, micros have developed into 32-bit systems that are already challenging the performance of low-end mainframes.

Mainframes are not going to die out, but the dramatic advances in microcomputers may erode their importance in corporations. More segments of companies appear to be bypassing the corporate mainframes in favor of smaller systems that better fulfill their specific processing needs. That trend may improve user productivity, but at what price? Many firms are already finding that control of corporate data is slipping away. There may come a day when the micro users come crawling back to the DP shop complaining they have lost all control over how employees are using their micros.

What happens then? Will it be possible to bring everyone back into the more controlled environment of mainframe processing? Will employees want to give up the independence found in microcomputers? Can a DP department handle all the processing needs of a big corporation?

As the world becomes more dependent on computers, the issues involved with managing information appear to be outpacing the technological developments that created them. The solution may be found back at square one, the mainframe processor. But this time, a mainframe is needed that does far more than just process information; it must manage an entire firm and cater to the needs of each individual within that firm. The task sounds impossible for a single machine.

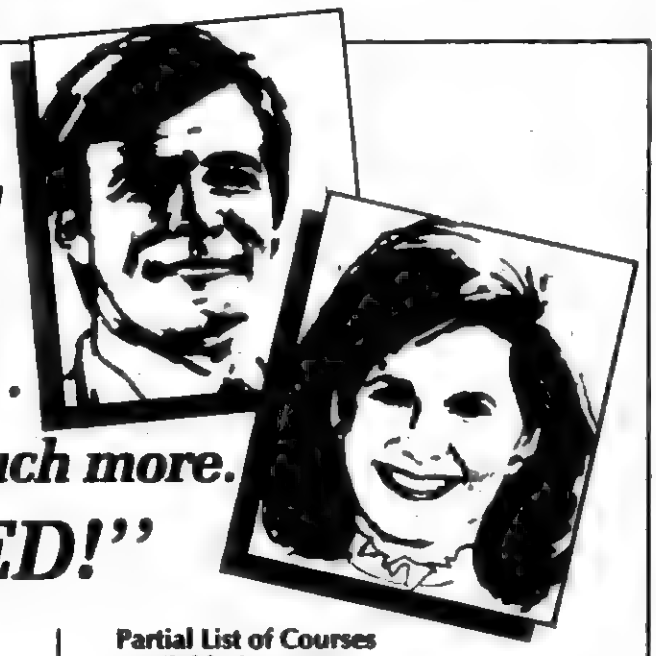
TANDEM from page 57

and similar applications in which constant manual activity hinders conventional data entry, the voice-recognition feature is implemented on a circuit board that contains enough memory to hold a vocabulary of 200 words.

Scheduled for first-customer shipment in April, the voice-recognition feature costs $1,800. The 6531 is priced at $2,100, the 6532 at $1,960 and Tandem's letter-quality printer costs $2,995. Both additions to the 653X terminal family will be available for delivery this month.

EM3270 can be obtained for a one-time, per-processor license fee of $500, plus a $20/mo maintenance charge per system. The capability is available from Tandem at 19333 Vallco Pkwy., Cupertino, Calif. 95014.

'Ms. Nesbit, this guide to tax regulations concerning small business computer rental expenses is well organized, concise and easy to read. You'll have to rewrite it.'



"All we wanted was a basic understanding... We got much, much more. Thanks, QED!"

This is one of the many good things you have said about QED courses. Thank you for your continuing support. We look forward to serving your data processing needs during 1984.

Here are just a few of the courses we will be teaching from February-June at our several regional learning centers, on a consortium basis, and in-house. QED has over 100 courses available in systems development, structured methodologies, data base, data communications, management and interpersonal skills, information resource management, CICS, IMS, VSAM, and other technical, software topics. You will find course descriptions in our new, free 1984 catalog. Call us for details, dates, and registration information...and ask about our IBM technical/software workshops. You, too, will say, "Thanks, QED!"

Strategies for implementing fourth-generation software

By Paul R. Hessinger

The speed and drama of technological innovation often creates confusion for a firm without a business-driven technology strategy. Part of the challenge is to separate marketing hype from technical reality. A specific new facility may be a major innovation. But does it warrant major modifications to a firm's inventory of computing resources, such as a change in an operating system?

Fourth-generation software is one of the most elusive new technologies. The term creates a gray area between major categories, such as systems and applications software. For example: Is Unix an operating system or a fourth-generation language? Die-hard technicians will suggest that even Cobol and RPG-II have a place in fourth-generation discussions. This "technocratic status quo" tendency is evidence of the necessity for a human factor orientation in an information systems technology plan.

People choose tools they are most comfortable with. They do *not* always choose the best tool for a specific task. Even the most competent "handyman" will continue to use a trusted tool rather than experiment. At the other end of the spectrum is the person who is always in search of an easier way, often confused with a new way. These psychological factors should be considered as fourth-generation languages are offered to "third-generation" programmers.

Powerful facilities for automated application development do exist. But even in the third generation, powerful facilities fell by the wayside — the result of indifference by technicians who were not encouraged to understand the new tools; and the result of outright rejection by users (DP and business) unwilling to play a different role in the information systems development process (for example, end users defining their requirements to an on-line dictionary facility).

Those responsible for a technology strategy must, at least for their own corporation, define: a) what a specific tool will involve in terms of processing facilities; b) what user group(s) will utilize the tool(s); and c) necessary and optional interfaces to other components of the overall technology.

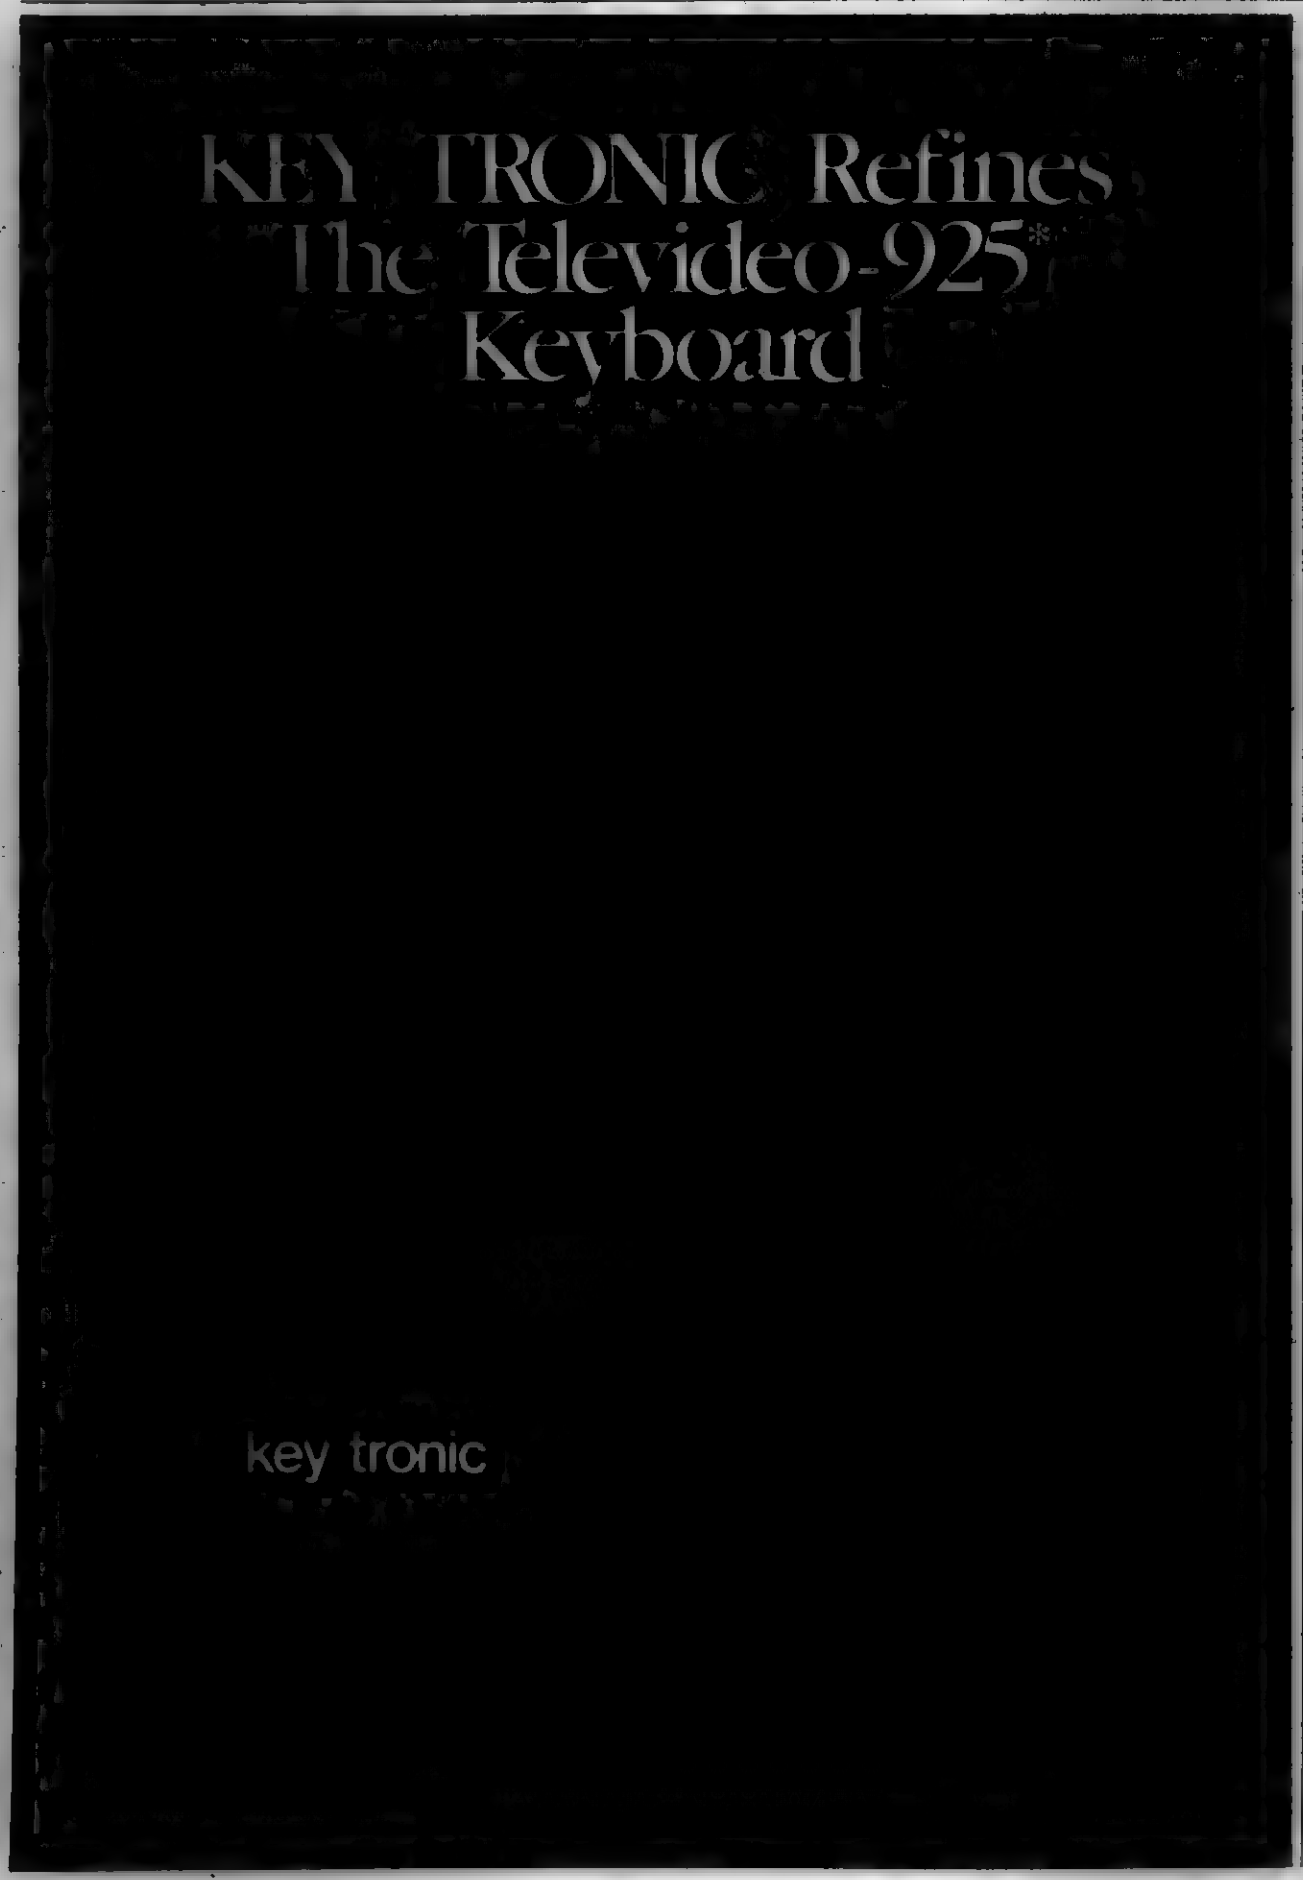
It is acceptable that within a broad

In reality, business objectives, human factors and technological integration are one in the same issue — a management strategy for fourth-generation tools. More accurately, it is a strategy for more productive information processing.

category, such as fourth-generation software, specific products will have overlapping facilities. This overlap must be identified before a firm ends up with several tools that breed confusion and unproductive competition among data processing personnel and users. The rationale that the initial purchase price for a fourth-generation product is relatively low often becomes a convenient escape from the responsibility of carefully selecting and implementing it.

It is unlikely that an industry standard will be adopted in the near future for facilities that qualify a product as a fourth-generation language. Marketing enthusiasts for specific products are already "plotting" the emergence of fifth-generation capabilities. In some cases, these claims are a legitimate extension of product development efforts. Others are attempts to promote tools that may be a little ahead of their time; our third-generation ignorance must be overcome relative to fourth-generation languages before we are ready for fifth-generation artificial intelligence systems.

A management strategy must control the temptation to take a quantum leap forward in applications development technologies. The strategy must involve a *pragmatic* migration to new tools, no matter how powerful they may be. "Revolution" and "cultural change" are alternatives *only* for those corporations hopelessly mired in second-generation "swamps" (for example, running OS/MFT on an IBM 370/158 with 1401 autocoder emulation and mainly RPG and BAL applications). The technologist must develop a management strategy that considers technical issues and human factors related to the technology.



General facilities

The following can be stated as general prerequisite facilities in a fourth-generation applications software product for a large system environment:

a) The primary command language is nonprocedural.

b) An information/data directory/dictionary controls overall use of the tool.

c) The system software environment (for example, the operating system and data base management system) is transparent.

d) The system was designed for interactive use with significant menu-driven, prompted processing.

e) The system can be used by nonprofessional DP personnel (the type of application to be built determines the necessity of this feature; for example, operational transaction — no, ad hoc query — yes).

Clearly, a broad range of products satisfies these requirements: National CSS, Inc.'s Nomad2; Oxford Software Corp.'s UFO; Mathematica Products Group's Ramis II; Applied Data Research, Inc.'s Ideal; Information Builders, Inc.'s Focus; Cullinet Software, Inc.'s ADS/O; Oracle Corp.'s Oracle; IBM's DB2; Software AG's Natural; and Informatics General Corp.'s Mark V. Each qualifies as a fourth-generation language.

Useful subdivision

A further challenge faced by those developing and implementing a fourth-generation strategy is to subdivide the languages into two categories:

1) Application (transaction processing) generators.

2) Information generators.

An application generator is intended primarily for developing structured, data base-oriented, inquiry/update transaction processing application programs.

An information generator is intended primarily for applications that are not fully structured. In addition, the target applications normally involve user-defined information requirements which, in turn, involve dynamic data access paths and reporting formats.

The subdivisions will possess common facilities. The type of applications to be built and the intended user are key factors in selecting a tool from one category or the other. Without this subdivision, the "technologist" will be frustrated by three general types of rejections.

The first is the inability to aim a tool at a specific business target. For instance, the use of an application generator (the tool) is intended to reduce backlog and control programmer head count

(target) through increased productivity.

Trying to build on-line transaction processing IMS capabilities with Focus leads to increased head count for Focus specialists and decreased productivity of other DP personnel (in IMS data base administration, for instance) who attempt to integrate the new tool.

Moral: Powerful tool, wrong utilization with little or no business benefit. Focus is an information generator, not an application generator.

The second major obstacle that occurs if fourth-generation languages are approached as a general class of software is a lack of ergonomic sensitivity.

From a technological perspective, the specific facilities of a given product must take into account the intended user. For example, an information generator (such as Ramis II, with its associated facility Relate) will be more user-friendly if it employs a relational view of the data to be processed in a specific application. An end user requires simple data structures.

If relational capabilities and other facilities are arbitrarily employed as evaluation criteria, it is entirely possible that pertinent human factors will be overlooked and users will resist a tool.

On the other hand, a transaction processing generator may be inhibited by relational-only views unless the generator is integrated with a full-function DBMS that provides for relational and other data structures (for instance, the automatic system facility with IDMS/R from Cullinet). Operational transaction processing applications often require complex data structures that are difficult to implement efficiently with relational structures. This difficulty can seriously impede the progress of data base administration and development personnel as they wrestle with the simplicity of relational structures for complex data base designs to support transaction processing.

If relational capabilities and other facilities are arbitrarily employed as evaluation criteria without the recommended subdivision, it is entirely possible that pertinent human factors will be overlooked and user resistance to a tool will result. Certain classes of end users, with the proper training and support, can be productive with semiprocedural languages, particularly those that are dictionary-driven and prompt-oriented. In other cases, users, for aptitude or business responsibility reasons, may be unable to use any language that requires more than pushing a button (full nonprocedural).

Case study

Suppose a firm's MIS manager dictates that only nonprocedural tools will be considered in an upgrade of application development facilities. Most "new" applications will be enhancements to existing operational systems. An nonprocedural "application generator" is selected, but it does not have a convenient interface to procedural languages, which are better suited to the structured portions of applications being implemented. Programmers become frustrated because they constantly must bypass the "applications generator" as existing Cobol applications require procedural changes. Eventually, programmers completely avoid the tool.

The tool is perfect for end-user information retrieval, but was not included in a search for information center tools because "It didn't have relational or graphics facilities." Although not installed at this site, options for both existed. The tool could be better classified as an "information generator."

The application requirements dictated a fourth-generation language with good procedural facilities. Because one was not chosen, the facility's programmers now reject fourth-generation languages in general.

A second case study

The third obstacle faced by the technologist will be technological disintegration. Consider a second example: An MIS manager focuses on a comprehensive fourth-generation tool with proven end-user capabilities. It has been employed to reduce significantly applications backlogs in other installations. The tool is promoted as a fourth-generation development workstation. However, the "application generator" operates only with that vendor's DBMS. Is it worth the cost of building interfaces to the currently installed DBMS and of retraining the development staff to support the implementation of end-user-oriented applications? Will the methodologies currently in place be modified to reflect the use of a new tool for operational systems?

Situations like this one often result in an investment of more resources in managing rather than applying the technology. A "new way" of developing operational applications may be a more comprehensive change than implementing an information generator primarily for end-user processing.

Obviously, the selection of a new tool must involve careful analysis of its facilities and the potential impact on how other tools operate. In addition, the selection should be driven by the composition of a firm's development backlog. When reporting applications dominate, an information

WHEN AMERICA'S TOP CORPORATIONS WANT TO CONTROL THEIR INFORMATION RESOURCES, THEY CALL HOLLAND.

Not so long ago, most companies believed that any information problem could be solved by adding another computer.

And another.

And another.

Inevitably, the legacy of that approach has been astronomical DP costs. Fragmented, redundant database systems. And untimely, inaccurate reports.

When those problems began to surface at some of the leading Fortune 1000 corporations, key executives all had the same response.

They called Holland Systems Corporation.™

Working with top people in each department, we helped develop a functional business model of the organization. We then created the framework for designing and implementing shared, integrated data and information systems. And we left behind dynamic guidelines for meeting short- and long-term corporate information needs.

While our top-down Strategic Systems Planning™ product (SSP™) may complement BSP™ and similar methodologies, it goes much further. By combining appropriate software, education and method, SSP allows companies to prioritize and control data and information systems development. Often for the first time.

If you're interested in making information more manageable, call us at 313/995-9595 and ask for Marketing Communications.

You'll be in good company.

Holland Systems Corporation
3131 South State Street S-303
Ann Arbor, Michigan 48104

BSP is a trademark of International Business Machines Incorporated.

HOLLAND SYSTEMS CORPORATION

Putting Information to Work.

generator will pay off. Technicians will not have to spend time building interfaces between Cobol programs and nonprocedural facilities.

The information generator should have its own "data base management" facilities. This will minimize the impact on a production DBMS, such as IDMS or IMS. The interfaces the tool might have to full-function DBMS can be used as a channel to pass necessary data from production to end-user applications. Data availability does not become an obstacle.

Reverse the situation and consider the impact if an information generator is selected when transaction processing applications dominate the backlog. Even with careful planning and controlled implementation, technicians will fight the technology. When the tool does not fit the type of information processing task being addressed, development personnel will attempt to build their own interfaces between the fourth-generation language and conventional tools. The "promise" of those languages begins to disintegrate.

Consider the impact if an information generator is selected when transaction processing applications dominate the backlog. Even with careful planning and controlled implementation, technicians will fight the technology.

Target users

Application generators are represented by products such as ADS/0, Ideal, IBM's ADF II (between the third and fourth generation?) and Natural.

Information generators include Focus, Artificial Intelligence Corp.'s Intellect (fifth generation?), Nomad2 and Ramis II.

In the background, the architecture of products such as IDMS/R, IMS/DB2 and Datacom/DB is a key parameter for effective technological integration of fourth-generation languages.

A specific organization considering fourth-generation tools could develop an expanded list of technical prerequisites for each category of these products. Relational views of data, graphics facilities, the ability to merge data with text and so on vary in relevance based upon the category being considered. For example, application generators probably do not need graphics but should have automated documentation, which is facilitated by text processing.

One Fortune 100 MIS organization used the following list of evaluation criteria as it searched for an applications generator:

General environment:

How does the product perform in respect to resource usage?
- Response time.
- Storage overhead.

How many customers are using it? How long has the product been around? What percentage of on-line application development is done with this tool?

Is 24-hour customer/technical support available?

Can this tool "talk" to the installation dictionary? Does it have its own?

How much education is available?

Is there a relational data base available that is integrated with the tool? Can this product be used without a relational data base?

Is user security adequate?

Is system security adequate?

Programming/technical concerns:

Any batch submission necessary?
- For screens.
- For test files.
- For procedural code (precompiler).

Is the end source language Cobol or tool-related? (Is maintenance done in current technology?)

Where is source stored?
- Installation library.
- Secure areas within the tool.

How is DBMS navigation handled? (Other access methods?) Are data base control blocks defined to the tool or to each application developed on the tool?

Are color CRTs supported? 132-character terminals?

Are PL/I or Cobol exits applicable?

How long does installation take? What kind of personnel resources does it take to install and maintain?

How much on-line documentation help is there? Are the manuals on-line? Are reference cards available? How long does it take for a programmer to become productive?

How flexible is the procedural code?

Can it be used for prototyping? Is the prototyping effort transferable to the production version?

How good are the editing facilities?
- Copy previously written code?
- Field/line/program easily modified?
- Copy/rename?
- Sequencing used or available?
- Scanning facilities?
- Temporary versions?
- Full-screen editing support?

System concerns:

How extensive is recovery from hardware failures?

What is the extent of ongoing maintenance and reorganization?

How and where does it run?

How are backup and restores handled?

IS YOUR COMMUNICATIONS NETWORK BREAKING UP?

Don't miss
"MANAGING THE COMMUNICATIONS NETWORK."
Exclusively from
Computerworld Reports.

How many vendors, how many different technologies does it take to make your network work? How many end users, how many decision makers can it take before something—or someone—cracks up? And does the telephone company break-up mean telecommunications tie-ups?

These are some of the critical questions posed by host John Gantz in "Managing the Communications Network," third in a lively, provocative series presented on 30-minute videocassettes and produced by DELTAK and CW Communications.

This month, you'll get the views of an industry expert, an MIS director, and a leading communications consultant. And be sure to stay tuned, because next month's Report will address another vital concern: the AT&T divestiture and its impact on information management. Watch for future Reports on subjects such as application development centers, artificial intelligence, end user training, the maturing information center, and more.

To learn all the signs of network break-up before your organization cracks up, order Computerworld Reports: "Managing the Communications Network." Call DELTAK order entry at (312) 369-3000; (416) 678-9222 in Canada.

IN DEPTH/FOURTH-GENERATION STRATEGIES

At the highest level from a human-factor standpoint, the subdivision provides the opportunity to select a tool well suited to the task. If end-user report generation is the task, let the end user evaluate a tool on a trial basis. Imagine an end user being asked to generate an application with ADP. That kind of situation has come up as MIS departments are caught in the fourth-generation language "gold rush."

The recommended subdivision, perhaps somewhat arbitrary, would prevent this situation. Applications generators are DP tools; information generators are end-user-oriented tools. At the very least, the recommended subdivision is a start for an organization trying to develop a fourth-generation language strategy.

While the workstation environment is also applicable to end users, it should be a prerequisite for a fourth-generation language geared to the professional systems developer.

From an ergonomic perspective, when end-user fourth-generation languages are being considered, perhaps defining "end user" in your corporation is a logical starting point.

There are two essential "human factors." First is the nature of the brain. Short-term memory is often used in information processing tasks, and long-term memory is used in analytical, information retrieval-oriented tasks. Consider the question: "Where would I look for a list of current customers?" Long-term memory is scanned as a person tries to remember where the information may be stored.

Preparation of a report is a processing-oriented task. If a fourth-generation language is to be used by an end user, the language must take into account a very limited short-term memory capacity. Psychologists studying human beings as a form of "information processor" have estimated short-term memory capacity as seven plus or minus two "chunks" of data. In a request for a report, an end user would probably need to define in his short-term memory at least the following:

- Name for the report.
- Where the data will come from.
- Basic fourth-generation language command(s) to be used to request the report.

If each item is considered as a chunk, the limits of short-term memory are not exceeded. If a user could enter "Report 'Current Customers' from Customer File," then this fourth-generation language would surely be user-friendly.

It is what happens next that determines if the product is ergonomically sound. If the fourth-generation language prompts the user for other parameters (for example, lines per page) and uses standard information (such as file layout for master files), then short-term memory capacity is efficiently used for processing tasks (defining specific fields of data required). It is not cluttered with items from long-term memory, which remains an analytical tool.

The technical facilities of the product must consider that a user will be involved in other tasks as he employs a fourth-generation language. A limited number of commands, an English-like syntax and short- and long-term memory "assists" (prompts, dictionary) are examples of favorable ergonomic capabilities in an end-user-oriented fourth-generation language.

The second major human factor, of course, is the user's interface to the fourth-generation language. Two extremes are desirable — English language and pushbutton. In the first, a user formulates a request as if he were talking to another human. (Intellect is a leading product on the market in this respect.) In the second, a user selects options from a menu by depressing a key or touching the screen. IBM's dialogue management facility is based upon this concept. An end-user-oriented fourth-generation language will benefit ergonomically from a combination of the two.

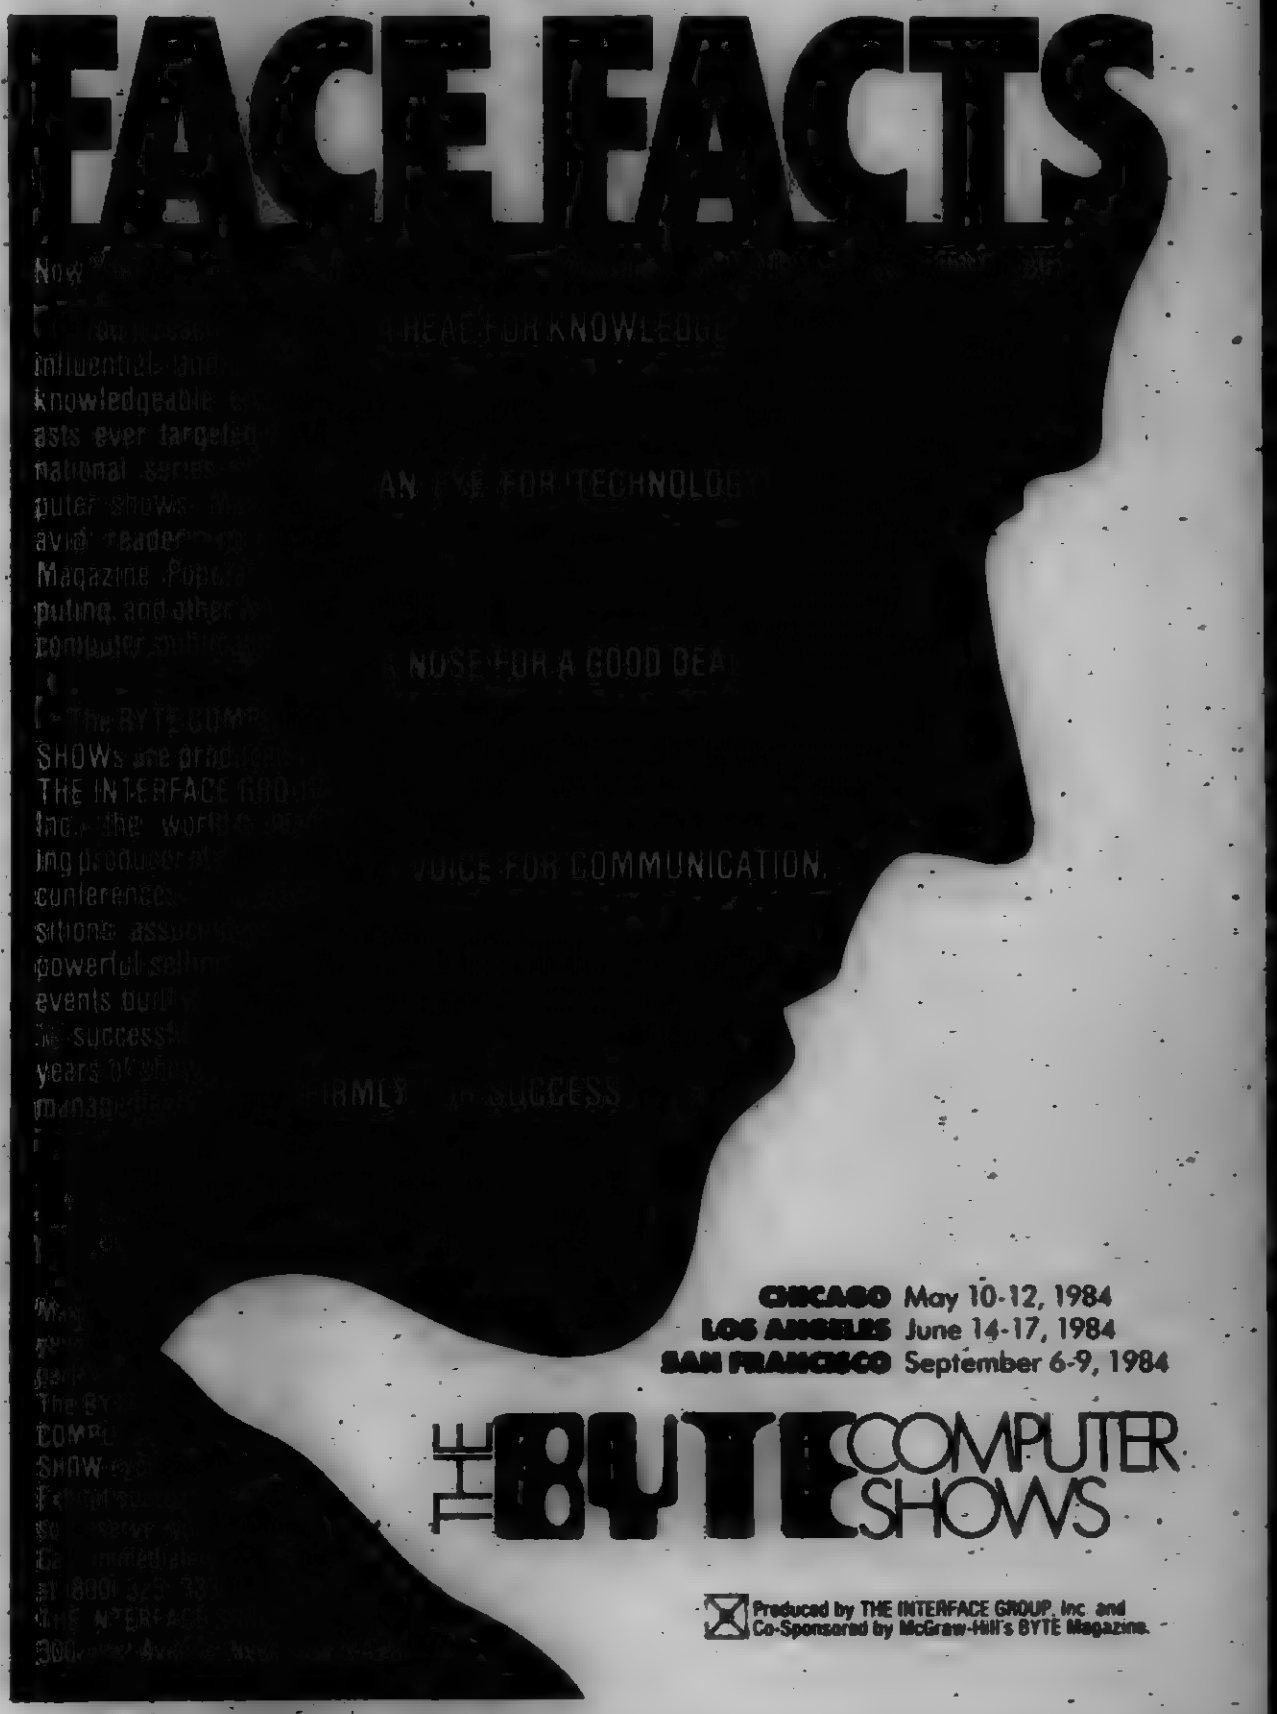
A user should not be expected to learn a new language (nonprocedural or otherwise) for defining the information he requires.

Fourth-generation languages for DP professionals — application generators — will benefit from architectural attention to the same human factors. In addition, the comparison of an application developer to an engineer identifies another key ergonomic factor. The development of an on-line transaction processing application involves a number of distinct tasks:

1) User requirements definition.
2) Initial screen format definition.
3) Data requirements definition.
4) Translation of 1 and 2 into "control blocks."
5) Procedural code generation.
6) Controlled interactive testing.
7) Installation into production environment.
8) Documentation.

The "application engineer" should be able to reference common components such as a data base segment layout from a "parts data base." The application generator should permit the developer to proceed through the various tasks without interruption. Ergonomically, fourth-generation language must provide a workstation environment. Ideal from ADR is a good example of this concept.

While the workstation environment is also applicable to end users,



IN DEPTH/FOURTH-GENERATION STRATEGIES

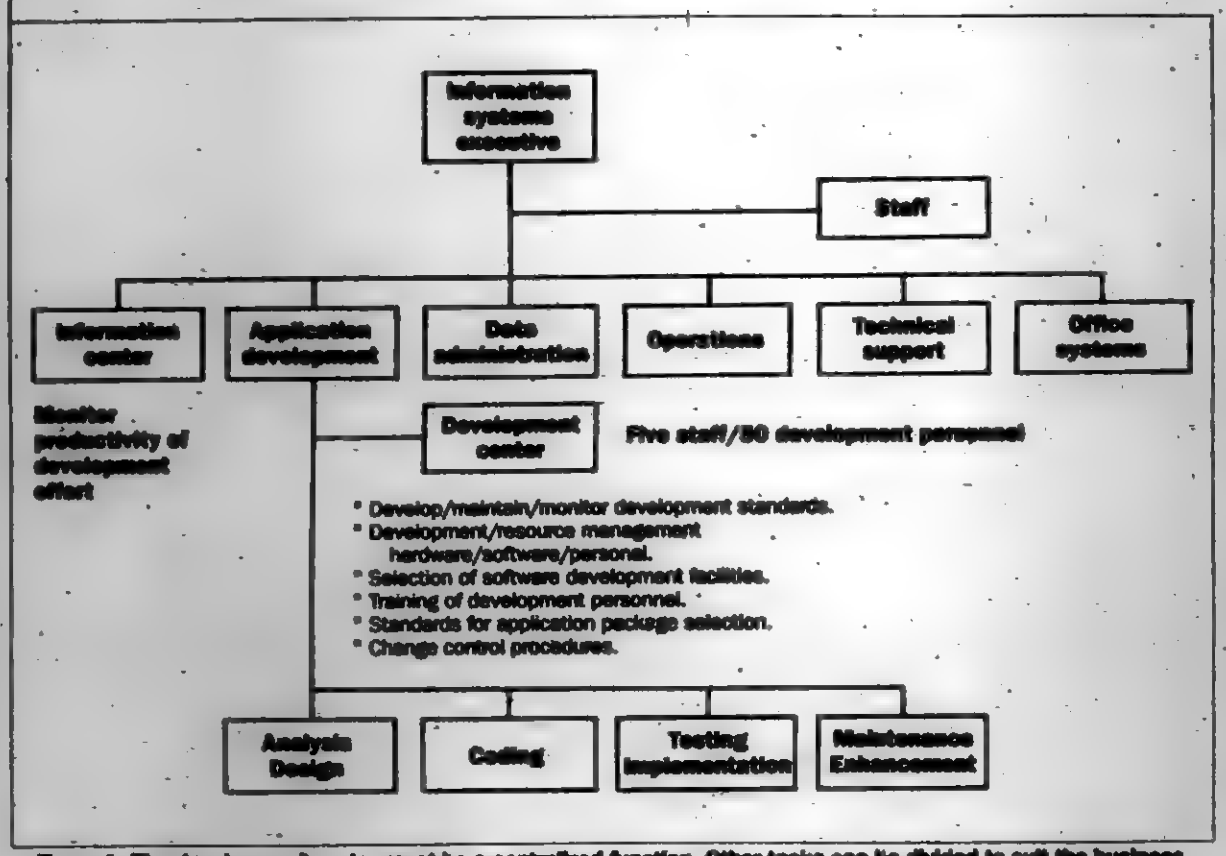


Figure 1. The development center must be a centralized function. Other tasks can be divided to suit the business.

it should be a prerequisite for a fourth-generation language geared to the professional DP developer.

In reality, business objectives, human factors and technological integration are one in the same issue: a management strategy for fourth-generation tools. More accurately, it is a strategy for more productive information processing activities.

A final case study demonstrates the interrelationship of business, ergonomic and technological issues. Senior management of a financial institution commissioned a corporatewide productivity improvement project. MIS was instructed to take the lead in the effort and focus attention on its own operation. A DP staff attitude survey indicated that development personnel felt severely underequipped to do their job. The battle cry was: "We need a fourth-generation language!"

In the background was an overall employee feeling of "occupational claustrophobia." In a corporatewide survey, 89% of all employees indicated the working environment was an inhibitor. It had become a business issue because of very high turnover. Fifty-six percent of management personnel indicated that availability and accuracy of information was a problem.

MIS management was convinced that a programmer productivity system was a necessity. A consultant was retained to perform a productivity audit and recommend a specific application generator.

The consultant reviewed the work habits of development personnel. A common problem surfaced. Design review meetings with end users were held in cramped conference rooms or in the cafeteria. Programmers had to travel long distances to find an unused terminal. In several areas, six to 10 terminals were located in one small room with little or no desk space. In most cases, the room had no windows (at least none were visible through the dense smoke).

The consultant's study concluded that the overall work environment must become more sensitive to human factors. Meeting areas were established specifically for design reviews. The technical staff's work area was redesigned. Gradually, a migration to an application generator and an end-user fourth-generation language was undertaken.

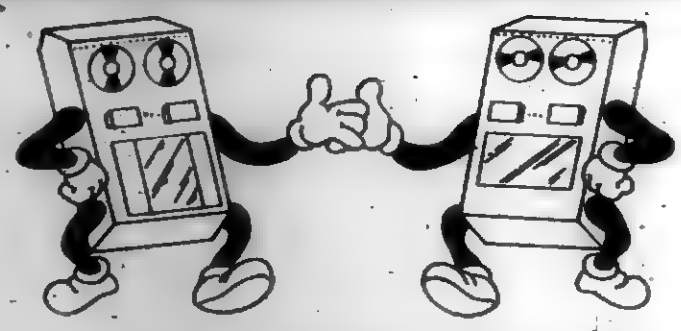
The environment is now ergonomically sound. The application generator selected is terminal-intensive. MIS management recognizes this fact, and in line with the environmental improvement program, the majority of development personnel have a dedicated terminal available.

End users are not particularly self-sufficient. An "end-user computing facility" (information center) has been built and staffed with full-time DP personnel trained in the use of the end-user fourth-generation language. The technicians help the users, being careful not to become a new breed of programmer.

The facility is located next to the data administration group. Data analysts were frequently involved in first-time consultations with users of the fourth-generation language. Data availability is addressed before commitments are made to a user and before a user begins to demand that which is not readily available.

A year after the migration began, the major problems identified in the

OUR SWITCHES MAKE YOUR IBM SYSTEMS WORK LIKE A TEAM!



If you have more than one IBM or plug compatible processor, Digital can help you get the most for your hardware investment. Our switches allow you to achieve backup and peripheral configuration flexibility at a fraction of the cost you're probably thinking.

Whether you have two processors or more, Digital has a switch to suit your requirements.

- Model 4101 The lowest priced matrix switch on the market.
- Model 3421 The only manually operated channel switch in the industry.
- Model 3403 A remote controlled channel switch designed for underfloor installation.

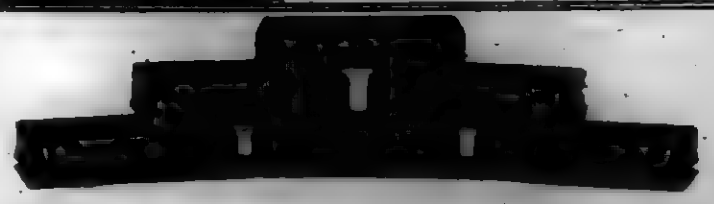
SWITCHING TERMINALS A PROBLEM?

WTI has a lineup of low cost solutions...RS232 Switching Devices!



A/B Manual Switch $69
End the hassle of plugging and unplugging data cables. Manual Switch lets you manually switch between two RS232 devices and a common device such as a Modem and a Printer sharing a Microcomputer.

T16-41 4 Port Push Button Switch $295
Switch ports electronically from the Terminal by pressing a button instead of flipping switches on a common A/B Switch box. Selectable, operating modes include—equal priority lockout, multiple and single port select.

CAS-41 4 Port ASCII Code Activated Switch $345
Your Computer may select one or any combination of up to 4 RS232 ports by a user selectable code sequence.

CAS-161 16 to 64 Port Code Activated Switch $795
Your Computer may select between any one of 16 ports by a two character ASCII code sequence. The unit is field expandable to 32, 48, or 64 ports.

SMRT-1 8 Port "Smart Switch" $695
This flexible microprocessor controlled 8 port switch allows a user on any port to communicate with an RS232 device on any other port. Up to 4 pairs of users can communicate simultaneously. "User Friendly" commands aid in port selection, port status and sign off. The unit's so smart, it even signals you when the port you wanted is no longer busy! Each port can be configured for DTE or DCE by pressing a button.

PSU-41 Printer Port Sharing Unit $395
Allows up to 4 CRTs to share one Printer automatically without software changes! The PSU-41 scans each CRT and locks on until that output has been sent to the Printer, then rotation resumes.

attitude survey have been overcome, as reflected in a new survey.

Backing up management

In addition to the technology being considered from a human perspective, a management strategy must also include clearly defined organizational responsibilities for fourth-generation tools. If the recommended subdivision of fourth-generation languages is applied, then application development centers and information centers become natural "homes" for each category of fourth-generation language.

Without the subdivision, the application centers may end up "competing" with information centers for new tools. Generally, application generators are best suited to the former environment, information generators to the latter (end-user oriented) environment.

These organizational entities are also essential in a human factor-oriented fourth-generation strategy. Application development center and information center "consultants" must realize that marketing the new tools is as important as, if not more important than, understanding the new tools.

A programmer will accept an application generator much better if the application development center consultant understands the tool and is sensitive to a programmer's uneasiness with the new technology.

As with any new technology in a business environment, an organizational entity must be assigned the responsibility for the ongoing support of new tools. Without this responsibility, a management strategy may be disabled by the very tools on which it is based.

Complementing technologies

It is often difficult to separate human factors from management strategies as fourth-generation languages are investigated. Simply being conscious of one may lead to the other. Another approach, if ergonomics and strategies have been overused in your environment, is to consider implementing techniques along with the new tools that together will define a fourth-generation methodology for information systems development.

Prototyping is perhaps the most publicized fourth-generation methodology. At its most fundamental level, it is a technique for more effective end-user information requirements definition. Successful implementation of the technique, however, requires a balanced emphasis on the three elements that have been the focus of this discussion — business orientation, ergonomic sensitivity, technological integration.

By definition, a prototype is the first thing or being of its kind, an original working model. Prototyping, then, is the development of the original, working model. Clearly, the development of a prototype requires at least three components:

- A statement of requirement — what is the model to do?
- "Manufacturing resources," which facilitate the engineering of the prototype.
- An environment for testing the "first thing or being of its kind" which approximates, if not duplicates, the working environment of the end product.

The development of simulations and prototypes is a design catalyst. The techniques result in tangible entities which translate concept into requirements into general design into detail production specifications. In a past implementation environment, the techniques are valuable control points for maintenance and redesign.

This process is an engineering life cycle. In theory, it is the way in which data processing systems are built. "Third-generation" system development life cycles suffered from too much preaching about and too little practice of:

- User-defined and approved system requirements.
- User participation in design reviews.
- Controlled development, for instance, program walk-throughs.
- Change control procedures to avoid unwarranted "corrective design."

In reality, technological and economic barriers inhibited the generation of simulations and prototypes in conventional operational business system development. The system development life cycle became more and more bureaucratic as organizations attempted to control the process better and assure a higher quality product.

In reality, technological and economic barriers inhibited the generation of simulations and prototypes in conventional operational business system development.

The system development life cycle became more and more bureaucratic as organizations attempted to control the development process better and assure a higher quality end product.

The promise of fourth-generation languages? A cost-effective means of implementing the simulation and prototyping concepts.

For the on-line components of a typical order processing application,

PICK UP WHERE IBM LEAVES OFF.

you pick up CORONA.
Because we give you everything you've ever wanted in an IBM[1]-compatible PC and more. For a great deal less.

COMPATIBLE AND MORE.

Our systems run all software that conforms to IBM PC programming standards. And the most popular software does.

We deliver twice the memory, with room for eight times as much.

We deliver a fast-access 320K floppy drive, a communication port and an improved IBM PC keyboard with indicator lights.

Our systems include high-resolution monitors (12" desktop, 9" portable) for crisper, cleaner displays, and both have built-in high-resolution graphics (640 x 325).

You get a complete system, ready to go to work.

MORE VERSATILITY.

With all the necessary features built into the main unit, the four expansion slots can be used for your special needs. For example, color or our optional 10MB hard disk.

software gives you ... porary disk-type storage that works many times faster than disks.

PLUS SOFTWARE.

Our systems come with the operating system: MS-DOS.[2] A programming language: GW BASIC.[2] A training course: PC Tutor.[3] A professional word processor: MultiMate.[4] Plus DOS utilities and demonstration programs. Or you can get the p-System[5] from N.C.I. and write or run portable Pascal packages.

ALL FOR A GREAT DEAL LESS.

Even with all the extra features and performance, our systems still cost significantly less than the equivalent IBM PC.

Drop by your nearest CORONA PC dealer for a very convincing demonstration. Or contact us at 31324 Via Colinas, Westlake Village, CA 91361. (213) 991-1144 or (800) 621-6746 toll-free. Telex 658212 WSLK, in Europe 76066 CDS NL.

The best is available and portable. At a price you can afford.

for example, a simulation should be developed to refine user requirement statements and to establish an initial architecture for implementing the application. The simulation is developed interactively, focusing initially on external capabilities and then proceeding to processing flow. User involvement in the simulation process is key.

However, there is a catch-22 to simulation. Users see what they want and they want it delivered quickly. But the simulation isn't a working system. Do you bore or intimidate your users with the necessity for detailed program specifications, data normalization and data base design? No — you move forward with the application engineering effort (see Figure 2).

Prototype development follows the simulation effort. The detail design of the application begins to take shape. But the prototype begins to deliver basic functionality to an end user. Once the prototype has been implemented and perhaps refined, a detail design can be "frozen." Production application development can then begin. This might involve fine tuning the current prototype. In certain cases, it might involve a major effort to produce an application that will operate efficiently in high-volume processing environments. The prototype typically will not involve integration with other major applications.

"Application engineering" is a reorientation of a third-generation development life cycle that incorporates the distinct techniques of simulation and prototyping. The benefits? Applications that can be engineered faster with fourth-generation languages, with a higher degree of end-user satisfaction and business impact as a result of the emphasis on user defined requirements.

Skepticism about the feasibility of these techniques arises from two major misconceptions. The first is that in a typical IBM mainframe environment, there is not a single software product that enables the implementation of the simulation/prototyping techniques. The second is that the techniques are not applicable to large on-line data base systems; the misguided assumption is that prototyping is a euphemism for end-user computing.

Products such as Ideal and IDMS clearly offer the promise of fourth-generation languages to major operational system development projects. Benefits will be attained based upon a carefully directed use of the technology. Prototyping in this context is a strategy for the successful use of fourth-generation products.

If you work in an IMS installation, don't despair. There are products that enable the implementation of these techniques.

The subdivision of "fourth-generation language" into applications generators and information generators is directly related to a successful implementation of simulation/prototyping. When functionality, efficiency and long-term viability are the dominant business design criteria for a major information system, a formal, rigorous approach is mandatory. Application engineering with a heavy dose of simulation and prototyping mixed with conventional techniques is such an approach. A fourth-generation language application generator will be the enabling technology.

When discussion of a new information system centers on "end-user involvement," "throw-away system," "decision support" and "ad hoc specifications," prototyping is not a miracle solution. An information generator will probably be the enabling technology. In this context, a rigorous methodology is not required and, if applied, probably would be an inhibitor.

Prototyping is synonymous with a management strategy for effective requirements definition for major business information systems.

If prototyping is casually embraced as a replacement for third-generation structured techniques and bureaucratic system development life cycles, then it will remain a mystery if not give way to mayhem. To be sure, the fourth-generation tool will be blamed if productivity does not improve: "The tool just wasn't the right one for prototyping — the end user couldn't figure out how to use it." The strategy for fourth-generation language must include a revised approach for requirements definition. Prototyping is a technique for that.

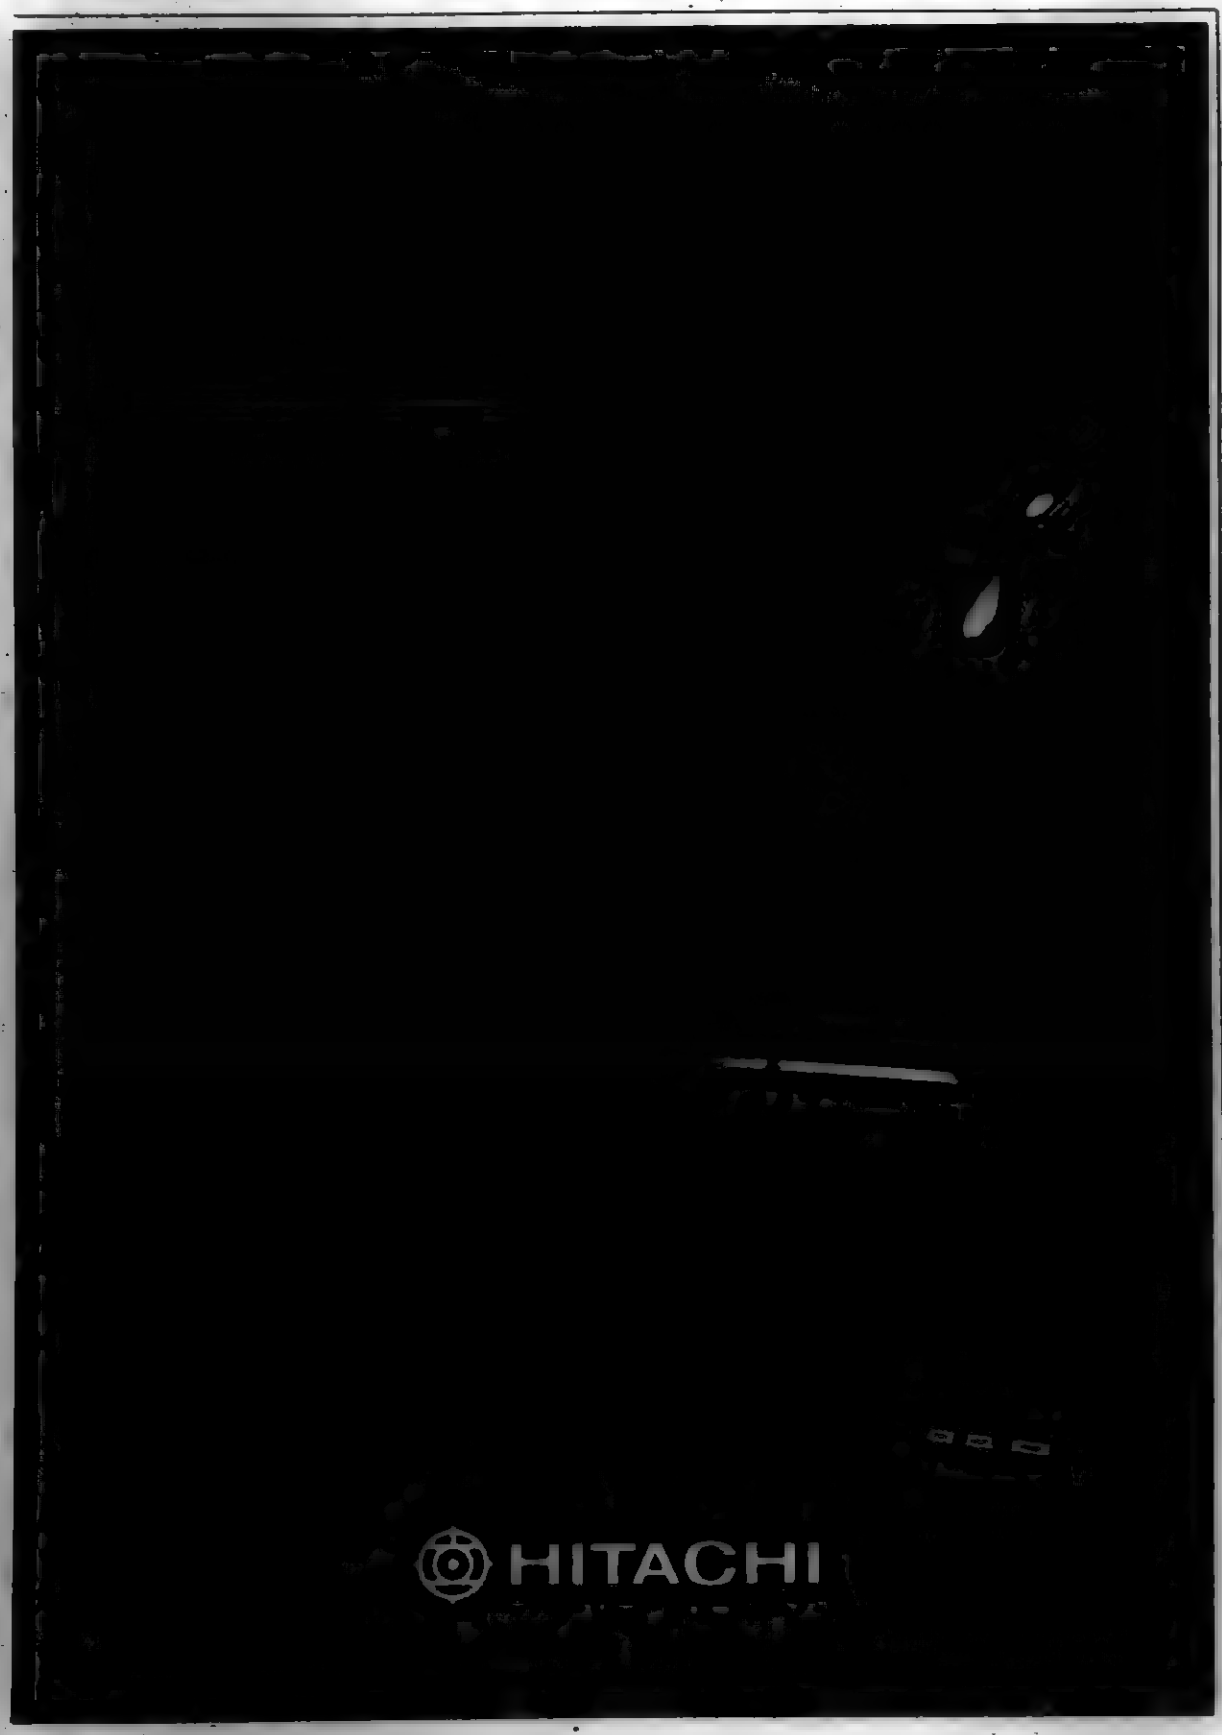
The ability to develop prototypes becomes another evaluation criterion. But prototyping will involve different characteristics in transaction processing vs. information-oriented applications. Seldom will an application generator produce prototypes for end-user-oriented applications. The reverse is also true.

Degrees of development

It must also be realized that prototyping will be used in conjunction with conventional approaches to systems analysis and design. In some cases, a developed prototype may deliver 95% of the required processing. In other cases, it will only scratch the surface. In the latter case, prototyping must be viewed as the tip of an iceberg — a fourth-generation systems development life cycle. In this context, "prototyping" is synonymous with a management strategy for fourth-generation languages.

What then are the keys to the resolution process that will translate fourth-generation tools into business benefits?

First, commit to the development of an information systems technology strategy. Establish at least one full-time resource (call the person



"director of technology assessment") with the ongoing responsibility for the strategy. The person will not be an expert in every area of technology, but through research, will identify technology alternatives and then look to specific areas within the MIS organization to assist in detail evaluations.

Second, classify and understand the technology. The primary technology focus of this discussion was on fourth-generation languages. Subdividing those languages into application generators and information generators permits a more manageable evaluation of the facilities and requirements of specific products.

Third, do not overlook the fact that the new tools may require new techniques to guide the initial and ongoing utilization. Techniques such as prototyping reinforce the subdivision of fourth-generation languages. Prototyping may be another base for end-user computing if the right tool is selected for information generation. In other cases, prototyping will require a transaction processing generator to facilitate requirement definition for production applications.

Fourth, and perhaps most important, consider the people who will use the application and information generators. Involve them in the selection, train them in the implementation and monitor and support their utilization of fourth-generation language. The application development center and information center are the functional areas that will translate the technology strategy into a tactical plan for the effective use of fourth-generation language.

Fifth and finally is an issue that has been transparent to the discussion thus far. In a specific organization, basic business data is relatively stable, while associations between data can be dynamic. New information requirements may involve different levels of summarization and/or different combinations of the basic data. The development of a data architecture for a business implements the data base concept in a very pragmatic way. The data architecture will identify what data is necessary for a business, where it is and how it is used and will assist in establishing controlled access to data from a wide variety of processing tools, including fourth-generation languages.

About the author

Paul R. Hessinger is director of Advanced Technology Research for Computer Task Group, Inc. in Buffalo, N.Y. He conducts approximately 125 professional seminars annually. Among those last year were "Programmer of the Future: Person or Machine," a featured presentation at the International Association for Systems Management Conference in Boston, and "The Fourth Generation Blueprint for a Data Base Environment," for the International Data Processing Management Association conference in Baltimore.

Hessinger lectures for organizations such as the Gartner Group on strategic planning and the future direction of information systems technologies.

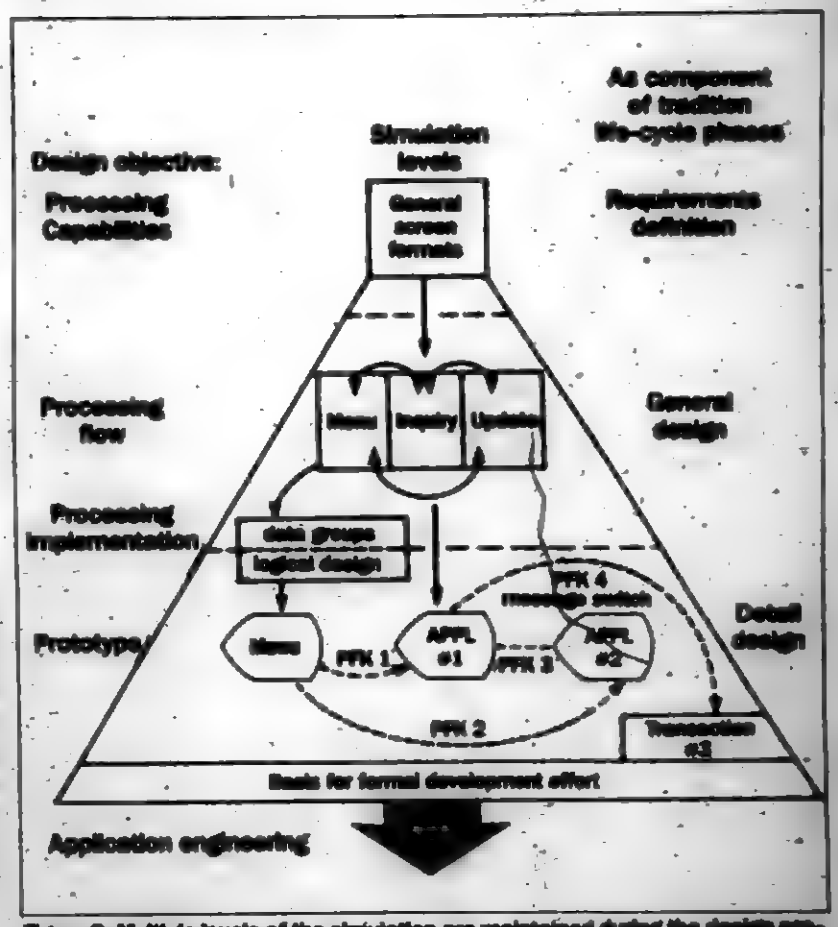


Figure 2. Multiple levels of the simulation are maintained during the design process. Throughout the development life cycle, any requested changes can be evaluated at the highest level to assess impact fully.

"If you want to do OEM computer business in the U.S., you'd better go to the Invitational Computer Conferences in Boston, Dallas, Minneapolis, Orange County, Washington, D.C., Los Angeles, Ft. Lauderdale, ...We do!"

Experienced marketing management knows that the best way to reach the technical decision maker/buyer is to meet him where he lives and works, demonstrate operating equipment and provide him with the technical information he needs. Over the past 12 years successful marketers have found the Invitational Computer Conferences to be the most cost-efficient, effective method of covering their U.S. computer industry customer base.

The exclusive, one-day, OEM conferences will be held in ten major market areas throughout the United States and are attended by a select, invited audience of OEM's, systems houses and quantity end users. Guests can attend a variety of technical seminars and view operating displays of the newest computer and peripheral equipment. The informal setting makes it easy to meet with potential customers one-on-one and the simple tabletop displays keep exhibit costs at a minimum.

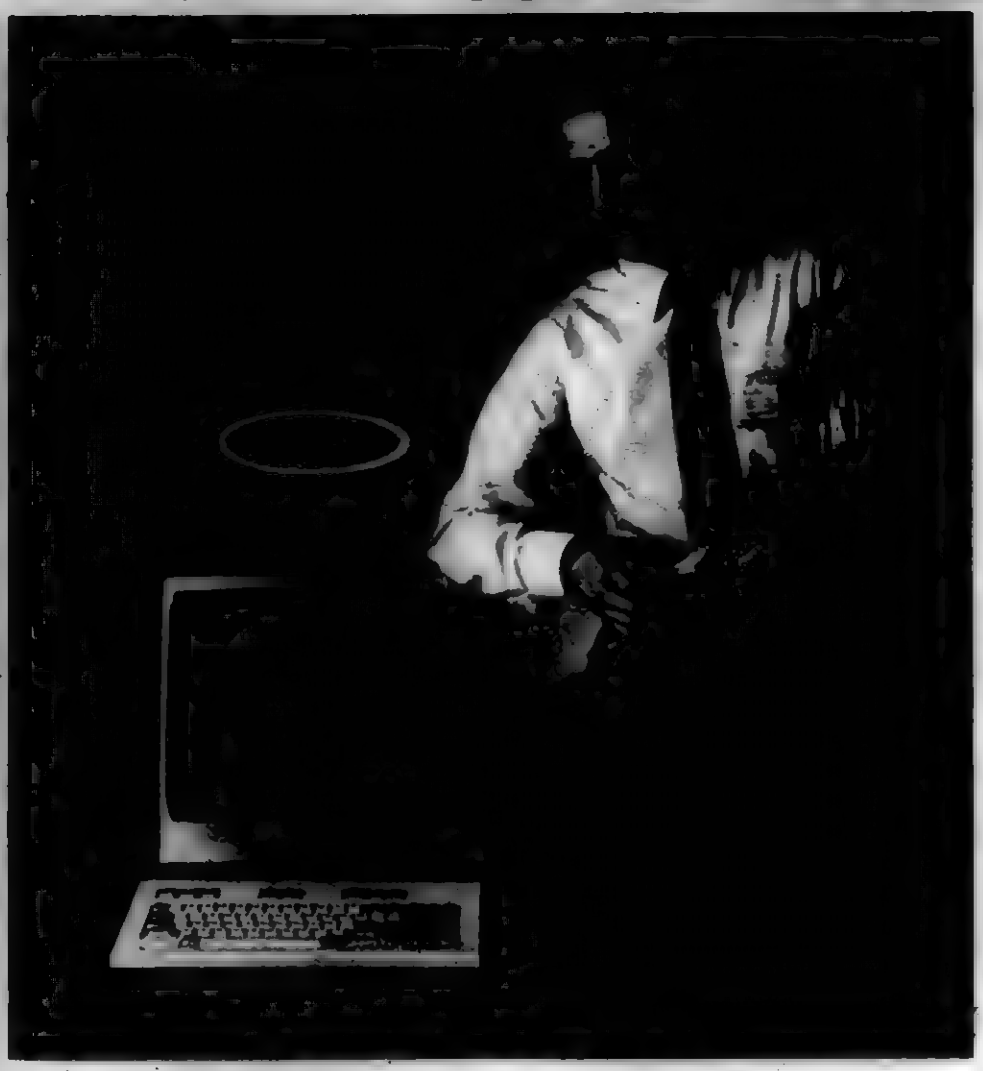
HOW THE TERMINALS THAT GIVE YOU SO FEW PROBLEMS CAN WIND UP GIVING YOU NONE AT ALL.



While we at Teletype Corporation like to talk about our terminals' remarkable record for reliability, we have to admit that every once in a while you just might have a problem with one.

But if you contract with Teletype's Product Service Organization, getting good service is no problem at all. That's because no one can service our full line of CRTs and teleprinters as well as our service technicians. Each one of them is a company-trained, job tested professional who must continually meet our expectations—and yours.

Help is never more than a phone call away since our technicians are on-call 24 hours a day, 7 days a week. And with our network of 100 offices nationwide, we're able to provide fast response time, even to remote areas. You can contract with us for response times as low as 2 hours, or less, as your needs dictate.

But at Teletype, we feel there's something more important than fast response time. And that's fast restoral. So when our technicians call on you, they'll have the necessary test equipment and original Teletype® parts to get your terminals up and running in no time flat.

We'll even help solve problems before they occur with scheduled preventative maintenance. You can also choose our installation service option that includes everything from getting your terminals on-line to user orientation. It's all a part of our Full Service Maintenance Agreement.

So to keep your problems from becoming big problems, write Teletype Corporation Product Service Organization, 2330 Eastern Ave., Dept. 2800-A Elk Grove Village, IL 60007. Or call toll free at 800-323-4226, ext. 300. (In Illinois, 1 800 942-4192, ext. 300.)

IN DEPTH

Roles DP managers must play

A manager must wear several masks — adopt roles — to be successful. He needs to improve his communication skills as if he were perfecting a hobby or sport. There are three masks he should learn to assume, as should any entry-level manager and probably senior executives as well.

By Marsha Sinetar

William James, considered by some psychologists a more accurate thinker than Freud in defining human behavior, wrote decades ago that if an individual wants to change his personality, he has to change his actions.

Similarly, a manager who wants a better chance at success will benefit from *acting as if* a given role were natural. Large rewards come from having an adaptable personality.

Successful managers communicate like natural, if not born, actors. However, most people trained in technical fields have not learned the finesse and authority of speaking, listening to or directing a group. Being "at home" with others is not necessarily an inborn trait. The technical professional must learn a new cluster of communication skills, which takes time, patience and a lot of practice.

Management communication, linked to the notion of life-as-performance, is not a new concept. However, as the qualifications for professional managers expand beyond just a financial strategic planning profile to include "people skills," the idea is receiving new attention. Now communication skills and management success are linked more tightly than ever.

Italian psychiatrist Robert Assagioli observed, "One of the most important and illuminating aspects of the analogy between acting and life concerns the relations between the personality of the actor . . . and the characters he sequentially impersonates, his 'mask' in a psychological sense."

Managers must play several roles in order to be successful. If their masks reflect only one side of their personality or falsely portray a warm, caring nature, they are miscast, distrusted; their attempts at communication fall flat. When employees feel the boss is a phony, his behavior is often a sign he is unsure of

IN DEPTH/ROLES MANAGERS PLAY

what role to play.

A manager needs to improve his communication skills as if he were perfecting a hobby or sport. In fact, there are three basic masks he should learn to put on.

Mask 1 — The manager as administrator. How well each department head orchestrates subordinates to achieve scheduled goals makes the difference between mediocre and outstanding performance in this role. Administration is the nuts-and-bolts mask, the technical, organizing, planning and budget management part a manager must play.

Managers must communicate about progress, priorities and schedules. These demands require precise communication, an ability to talk about how each person's job fulfills departmental commitments. This kind of discussion sets the stage for talking about productivity, how the group and/or individuals can accomplish team goals in a systematic and orderly way.

Most managers are pretty good at the technical and organizational aspect of their roles. Retired military officers wear administrative masks particularly well, as do others who are structured, rational and self-disciplined.

A close focus on details helps employees maintain direction — time cards, expense reports, delegation of authority, responsibility and so on. For the manager-as-administrator role, communication is relatively straightforward and objective. These messages can be put on paper, charted and graphed.

Because administrative communiques can be easily measured, the role requires an accurate reporter of facts.

Other key management roles may be more complicated, thus more easily botched. Rarely are administrative managers successful in senior management roles unless they are also adept at playing other parts. If, however, an administrative type owns the company, then everyone else must be a good actor.

Mask 2 — The manager as leader. Managers must not only be good leaders; they must also act like leaders. Few are gifted enough to play this role without training, but not many organizations provide such development opportunities. This lack probably accounts for many of the ills industry has experienced in the past decade — labor-management problems, high employee turnover and apathy, absenteeism, lack of team spirit and others.

To understand the manager-as-leader role requirements, it is helpful to know just what a leader is and does. Oddly, it is the leadership dimension of a manager's performance that industry has most frequently overlooked, underdeveloped and misunderstood. All too many companies promote people into supervisory positions and then into upper management roles without ever considering their leadership talents.

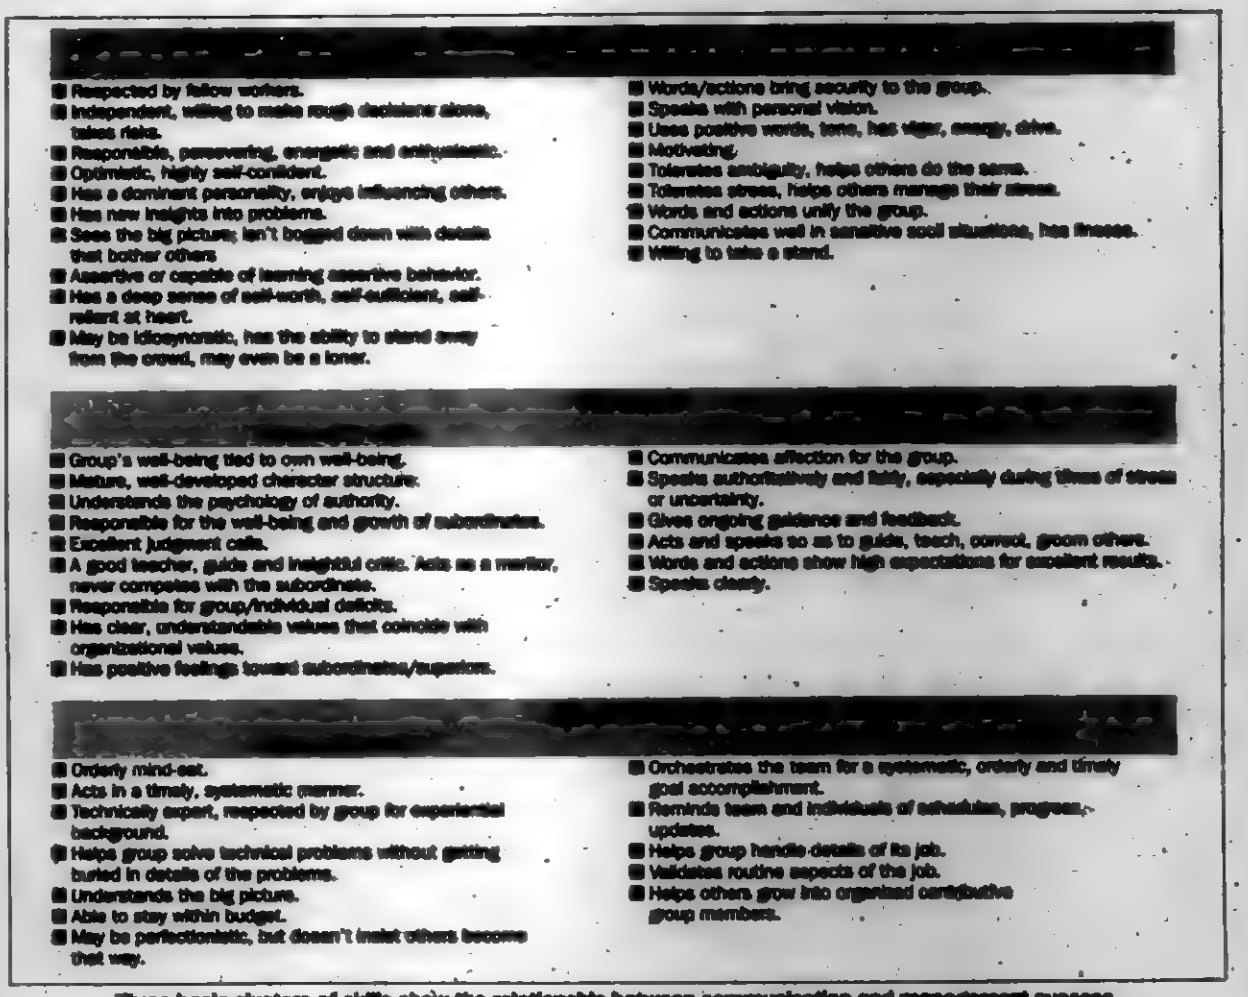
Seniority, technical expertise, politics and other irrelevant criteria are the usual factors in promoting people to "starring roles." I've often heard young enthusiasts from my corporate client organizations say they are "due a promotion" because they've been around a given period of time. Companies that market the "due-a-promotion" policy based on longevity are asking for mediocre managers.

There are at least 20 personality traits that go into a leader's character structure, involving maturity of thinking, interpersonal skills and outward behavior. Two years ago, I was on a select panel of social scientists and educators gathered by the California State Department of Education to see if we could identify the characteristics and behavior of leaders.

Leadership was determined to depend on both character structure and on the leader's situation. Leaders were identified as people whose actions and words brought solidity and cohesion to a group. Leaders were found to be skilled at pulling people together — nonleaders, on the other hand, had a disruptive effect. The nonleader increases the anxiety of the group and divides it. Anyone who has ever heard his superior communicate a new company policy in a lukewarm, apathetic or mechanical fashion understands how easy it is to separate a group from organizational goals or values.

To play the leadership role correctly, it is not enough to have a leader's personality. Because leadership is dependent upon the situation a manager is in, it is necessary to act and speak in leader-like ways in specific work-related arenas. Leading does not necessarily mean being popular (doing or saying the expected, approved-of thing). It does mean that managers who can act like leaders bring long-range unity and cohesion to all elements of their departments.

Executives possess varying degrees of talent when it comes to playing the leadership role. Some



Three basic clusters of skills show the relationship between communication and management success.

Here are a few good reasons why you should make Local Data your protocol converter company.

Local Data's comprehensive line of local and remote protocol converters have been used around the world to make async-to-IBM communications simple and economical.

DATALYNX™/3274.
DataLynx™/3274 remote async ASCII protocol converter supports SNA/SDLC or BSC protocols. 80 types of ASCII async terminals can emulate IBM 3278 display stations. RS-232C ASCII async printers can emulate IBM 328X printers.

DATALYNX™/3780.
DataLynx™/3780 async ASCII-to-IBM 3780, 2780, 2770 and 3741 protocol converter supports EBCDIC BSC protocol on one channel and async ASCII devices on the other two channels. Features include transparency, mini/micro support and free file transfer program.

INTERLYNX™/3278.
InterLynx™/3278 allows the attachment of low-cost ASCII CRT terminals or p.c.'s to 3274/3276/4701 and 43XX integrated adaptor Type "A" coax ports. InterLynx/3278 enables the user to use async CRT's on IBM systems and switch to async applications under terminal control.

FILELYNX™/3278.
For micro-mainframe file transfers.

INTERLYNX™/3287.
InterLynx™/3287 allows attachment of ASCII printers to IBM Type "A" coax ports or 3274/3276/4701 controller and 4321/4331 CPU's.

SNA LUI SCS and LU3 capability are standard with the InterLynx/3287. Features include parallel and serial ports and front panel set-up.

managers have departments beset with problems after the merger is announced. Others continue running a smooth, business-as-usual shop, even helping subordinates cope with uncertainty, ambiguity or the possible loss of a job. These people are, without exception, leaders.

Acting or talking as a leader means a willingness to be visible, authoritative and responsible. These traits are found only in people who have cut the umbilical cord with group opinion and who are able to stand alone when the going gets rough. It takes time to develop the latent leadership characteristics in the average manager's personality, especially if the manager lacks self-confidence.

Only a leader can develop leaders. Only a person who has pulled away from the crowd and has done the personal confrontation work that is a prerequisite to developing leadership skills can inspire these abilities in others.

Only a leader can develop leaders. Only a person who has pulled away from the crowd and has done the personal confrontation work that is a prerequisite to developing leadership skills can inspire these abilities in others.

Although American industry loves short workshops and one-day seminars because they are cost-effective and save time, it is highly doubtful that such sessions can develop leadership behaviors that stem from a strong sense of self. A developmental program conducted within an organization over a period of time is more likely to cultivate leadership talents, depending on who facilitates the program.

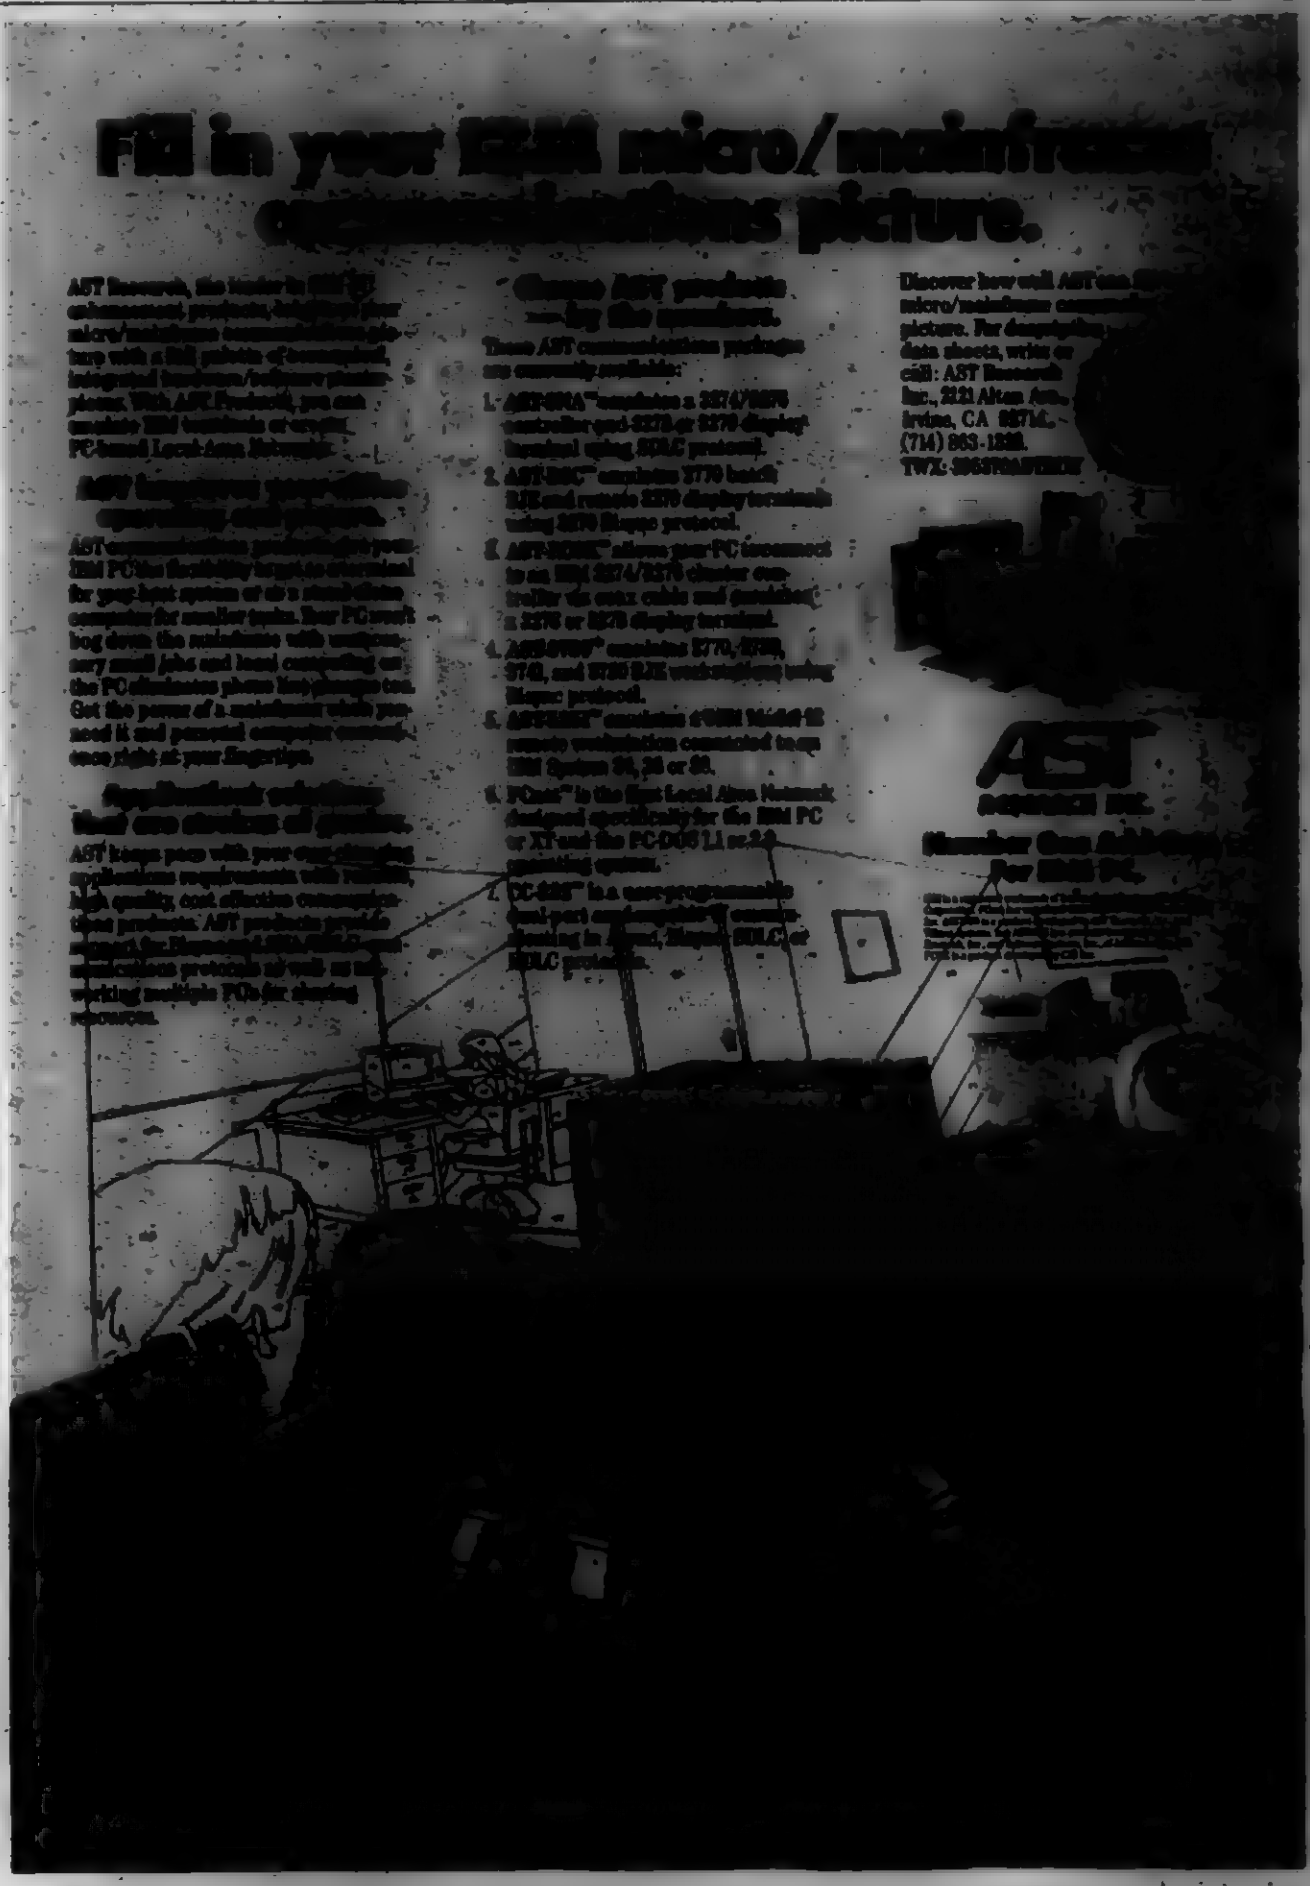
Many executives favor training programs because they are "safe." In a classroom situation — even if involved in team games or simulations — they can often camouflage their tendencies to avoid the rough issues. In the work setting, such camouflages are likely to be revealed over a period of time.

Mask 3 — The manager as parent. One of my more distinguished and intellectual clients said to me in a moment of utter frustration, "I don't want to be a parent to my staff! They're adults. But they're driving me crazy with their time-consuming bids for my attention and approval. They're acting just like my own kids, but I don't want to be their father."

This senior manager reluctantly came to understand that one of his key functions is to act as a parent authority figure on occasion. That management role is one of the masks he must wear if he is to be effective. When he needs to set standards, when he wants to correct or upgrade work or simply say how he wants a matter handled, he is, like it or not, stuck with a parenting role just like every other manager is. Like it or not, communication happens in the perceiver, and employees perceive managers as authority figures when certain types of communications are delivered.

The manager issues parental messages based on a right/wrong or teaching function. This part implies correction, appraisal, judgment, guidance and even nurturing. Reviewing performance, for example, is a routine part of management's job. But little, if anything, is said about the resulting parenting/teaching aspect involved in this procedure. Managers who have clear, understandable positions, who are willing to comment when work is marginal or when it is superior, can function successfully as parent figures.

Some managers, considered old-fashioned or even backward by peers, are successful because they firmly provide what their staff needs in the parenting domain. One of the most effective managers I've ever met is a woman with little or no formal education or management training. She also happens to be the mother of nine children who has realized on her own the connection between her role as a parent



AVOID DOWNTIME!
WATER *ALERT*
. . . FOR COMPUTER AREAS

Warns you of water leakage in sub-floor wiring areas.

- Produces a loud, intermittent alarm when activated by presence of water.
- Completely self-contained . . . no wiring, no connections.
- Early water detection (1/64" water film activates alarm) provides maximum time for corrective action.
- 24 hour per day monitoring.
- Options include remote indicator, remote flashing light, and automatic telephone dialer.

and what she does daily on the job with subordinates.

The manager who is unafraid of the parental role and who is adaptable to its communication requirements is the one who will probably avoid being victimized by subordinates. Employees respond to authority in much the same way they did to their parents. Office "complainers," for example, are typically people who received attention as children when they complained about little things. The office "star" learned in childhood that the surest way to get love and attention from adults was to excel.

Then there are the employees who simply detest any and all authority. Some of the most difficult employees to deal with are aggressive types or passive-aggressive types who hide their anger at authority figures but sabotage direction and correction. These employees hide so much anger that they defeat themselves and others, although on the surface they are compliant.

It boils down to this: Managers may not want to be parents on the job, but they are anyway by virtue of employees' response to authority. Managers can only be fully successful when they accept and understand the psychological aspects of the parent role and communicate accordingly.

More managerial roles

There are, of course, other roles to be played — the manager as mediator, for example. The manager with peacemaker abilities can be a star. Most managers, however, are not natural mediators. A growing number of companies retain executive mediators who can objectively help pull diverse perspectives into a whole as they solve problems. In the process, these mediators also act as role models for those who are involved in the mediation process.

Then there's the manager-as-coach role. (Like versatile actors, the manager who fits the leader/parent role would also fit well here.) A coach must be able to motivate his staff. The manager who has coaching ability can add color, vigor and vision to otherwise dull situations. Most companies, aside from sales organizations, are short of coach/manager types. This shortage is especially acute in engineering, high-tech companies and certain legal/health-care businesses where task-orientation is the focus of communication.

Organizations rarely make clear distinctions about the variety of roles and forms of management communication. Business schools have not focused enough attention on the psychological side of management. It has become increasingly difficult to translate the word "manager" into a comprehensive term with behavioral ramifications.

However, it is still possible to enlarge the conceptual framework of the management function. By visualizing the variety of roles and the many communication nuances each mask demands, managers can become more flexible in responding.

MICROCOMPUTERS

Software piracy: How serious is it?

MICRO BITS

THOMAS W. MADRON

Over the last two or three years, few issues in microcomputing have received more attention than software piracy. It is difficult to define the meaning of software piracy. A narrow and somewhat legalistic approach would suggest that software piracy is the duplication of copyrighted materials for resale. But a broader interpretation may also be acceptable, namely, the reproduction of copyrighted software for redistribution, regardless of whether it is for resale.

Aside from the ambiguity in its definition, the issue of software piracy is further confused by the software licenses implicitly accepted by those of us who buy microcomputer software. Those licenses typically stipulate that it is a violation of the license agreement to use the software on more than one machine, even if those machines are personally owned by the buyer and used by no one else. This is somewhat akin to the idea of a book publisher attempting to license a book to be read only in the front bathroom and not in the back bathroom.

It is apparent that the current copyright laws are not always relevant to computer software. This is because copyright laws come out of a tradition oriented to printed matter rather than electronic media.

For example, it is allowable under the copyright laws for small parts of copyrighted material to be reproduced for educational purposes. This is fine for printed material, but it is difficult to imagine a situation in which one could take and reproduce a small segment of machine language from a compiled computer program that would serve any meaningful purpose, educational or otherwise.

Clearly an author, or other holder of copyright, should have protection. But we have not yet arrived at a clear-cut answer to what that means in terms

Windowing seen gaining praise
But pundits question its usefulness

By Paul Hemenway
CW Staff

One of the hottest buzzwords in the microcomputer industry these days is multiple windowing. This feature allows users to monitor up to seven concurrent functions on a single CRT screen, often giving the user the ability to hop from one application to another and to share data among several related programs. But how useful is the feature? Microcomputer vendors will say you cannot live without it. But some industry watchers believe multiple windowing may be a passing fancy.

"Many vendors are designing windowing products, yet its usefulness hasn't been proven," noted Janice Antonellis, research manager for software and services at International Data Corp. in Framingham, Mass. "It may be useful for multitasking applications, but I am not sure it has many other practical applications."

In fact, some industry analysts contend windowing packages, like the environment offered with Apple Computer, Inc.'s Macintosh, are no better than integrated applications, which share data without requiring that a user change diskettes. The advantage is the integrated applications are all visible on one screen, requiring the user to press a function key to move from spreadsheet to word processing functions.

Other windowing software, such as Digital Research, Inc.'s Concurrent CP/M 3.1 and the package that works with Apple's Lisa system, offer multitasking capabilities. "The user can monitor one application's progress while using a different application," noted Gary Gysin, director of product marketing and manager of the Operating Systems Division at Digital Research.

"For example, a user could work on a spreadsheet while a data base sort is completed."

The number of windows offered by various packages typically runs from four to seven. But how many can the user use at one time?

"Most of our users monitor two or three

See WINDOW page 92

DM Data offers management aid

SCOTTSDALE, Ariz. — DM Data, Inc. has announced a management planning aid for scheduling estimated procurement costs for very large-scale integrated circuits.

Called the Computer-Aided Management Planning System (Campa), the planning aid consists of a workstation that utilizes an "expert" software package, which provides artificial-intelligence-like assistance for solving problems on a lap-type portable computer.

Campa follows English prompts and features a program checklist; suggested approaches; standard cost factors for planning, tooling, prototypes and circuits; projected standard time schedules; probability of success factors; and graphic comparisons of approaches.

A Campa package costs $2,850, including expert-system software (Camps I) preprogrammed in a briefcase-size portable computer; a set of instructions and notes; and a half-day seminar covering the system operations and applications.

More information is available from DM Data, located at Suite 700, 6900 E. Camelback Road, Scottsdale, Ariz. 85251.

Quality you expect, at a price you don't.

BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED $2.19 ea. / $2.79 ea. DOUBLE SIDED

Our message to you is simple. If you like the quality of Dysan, Verbatim, 3M, et al, you'll like the quality of Beck soft sector

5¼" flexible diskettes. The only major difference is cost. We're less expensive. In fact, a lot less expensive.

Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the jacket off other diskettes. We can do it because we (1) put our money into the product, not mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll free order line, so you get fast, door-to-door service efficiently.

What about quality and reliability?

At Beck we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards.
• Full 7 Year Warranty • 100% Certified, 100% Error Free • Satisfaction, Money Back Guarantee
• Meets or Exceeds ANSI Standards

Order Now Toll Free (in New Hampshire call 924-3821)

1-800-BECK-MFG

Door to Door in 48 hrs.

Corporate Accounts Welcome • Cash/Cash Only

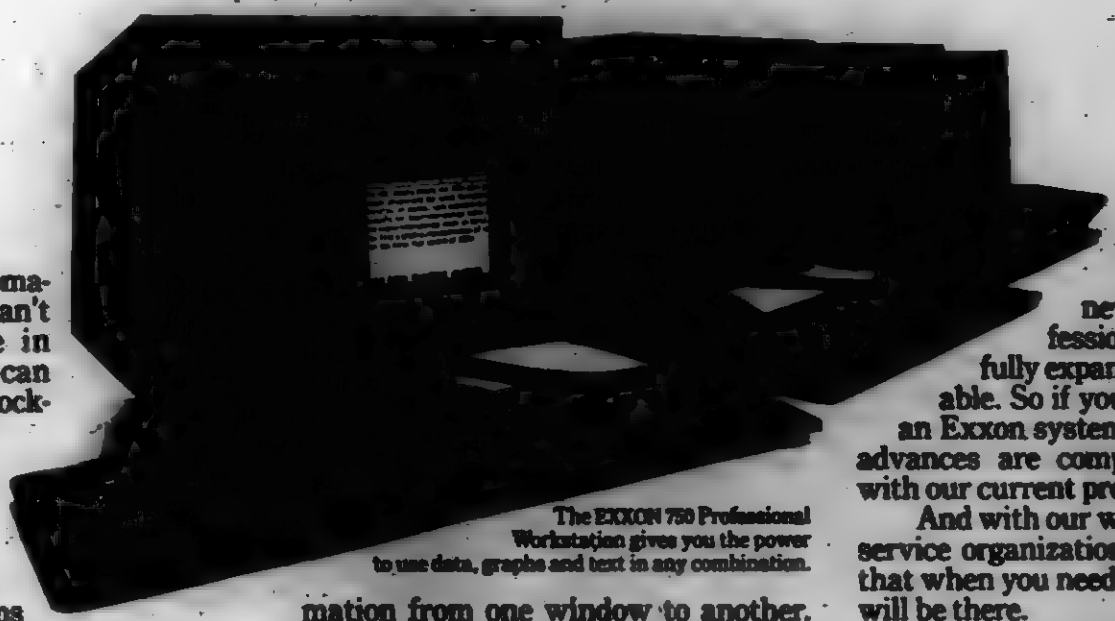
Order Toll Free 1-800-232-5834. Available in 25 pack only, plus freight. Double density, soft sector diskettes complete with hub reinforcing rings, Tyvek envelopes, color coded user labels, and nonmetallic write protect tabs.

P.O. Box 111, Main St., West Peterborough, N.H. 03468

"The office automation I bought for everyone in the corporation doesn't incorporate everyone."

Exxon stops the shock...with fully integrated office automation for everyone in the corporation.

Introducing the Exxon Business Support System.



The EXXON 750 Professional Workstation gives you the power to use data, graphs and text in any combination.

An office automation system that can't support everyone in your corporation can lead to some very shocking experiences.

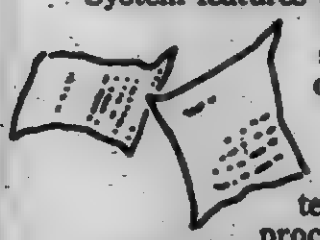
The right power to the right people

That's why Exxon Office Systems now offers more practical office automation solutions that help everyone in the corporation to be more productive. With the Business Support System, Exxon extends its fully integrated line of office automation products to support managers, professionals, and administrators, as well as secretarial staff.

Exxon puts it together for everyone with a fully integrated system — with full communications flexibility that lets you access outside data bases and interact with most mainframe computers. Without the complications. Without the shock.

Office automation for those who shape the corporation

The Exxon Business Support System features the new EXXON 750 Professional Workstation, specifically designed with powerful, integrated software that lets you move instantly from text to graphics to data processing — without changing programs.



You can divide the high resolution bit-map display into several windows and work in a number of functions simultaneously. You can shift information from one window to another. You can preview the page layout, and produce an integrated text/graphics document on our quiet EXXON 965 Ink Jet Printer. Or on a color plotter.

Best of all, the flexible design of our new Professional Workstation is ready for adaptation to the most popular operating systems and network interfaces.

Tying everyone together

At the core of the Business Support System is the EXXON 8400 Series controller. With its UNIX*-based operating system, it can integrate all levels of workstations to share information and programs. Everyone can keep track of schedules and meetings with time management and calendaring functions, whether their workstation is an EXXON 500 Series Information Processor or a new EXXON 750 Professional Workstation. And everyone can send and receive messages easily with transparent electronic mail.

An expandable, shockproof family

Exxon protects your office automation investment by making every workstation—from the EXXON 500 Series to the new EXXON 750 Professional Workstation—fully expandable and upgradeable. So if you've already begun an Exxon system, the latest Exxon advances are completely compatible with our current product line.

And with our worldwide sales and service organization, you can be sure that when you need assistance, Exxon will be there.

That's how Exxon incorporates everyone — in one shockproof family.

For more information

Call 800-327-6666, write Exxon Office Systems, P.O. Box 10184, Stamford, CT 06904-2184, or use the coupon below.

We'll be happy to demonstrate how the Exxon Business Support System can help your corporation move into the future ... without the shock.

The future...without the shock.

MICROCOMPUTERS

SYSTEMS

ELECTRO DESIGN, INC.
IMP-12

Electro Design, Inc. has announced the IMP-12, a microcomputer that uses IBM's PC-DOS 2.0 operating system and is compatible with the IBM Personal Computer.

According to the vendor, the 12-slot processor can handle up to two half-height drives, either floppy or hard disk.

The floppy disk drives are 5¼-in., double-sided, double-density with 500K bytes of unformatted storage, according to the vendor.

The hard disk drives are available with a 13.24M-, 26.70M- or 40M-byte capacity.

The IMP-12 CPU is Intel Corp. 8088 based and features a read-only memory resident Basic I/O that offers Microsoft, Inc.'s MS-DOS calling conventions, plus extensions for scientific and industrial applications, the vendor said.

The list price of the IMP-12 starts at $3,428.

Electro Design, 680 Rancheros Drive, San Marcos, Calif. 92069.

ET COMPUTER SYSTEMS
ET-2010

ET Computer Systems has introduced ET-2010, a microcomputer that uses a Zilog, Inc. Z80 microprocessor.

The computer features 64K bytes of random-access memory (expandable to 1M byte), a 9-in. monitor, a parallel port and a serial port, according to the vendor.

The system uses ETPM II, an enhanced version of Digital Research, Inc.'s CP/M Release 2.2 operating system. Word processing, spreadsheet, general ledger, accounts receivable, accounts payable and payroll with job costing applications are bundled with the system, the vendor said.

The system costs $1,349.

ET Computer Systems, 8161 Broadway, Lemon Grove, Calif. 92045.

ALSPA COMPUTER, INC.
MC-4010; MC-4020; MC-4035; MC-4050

Alspa Computer, Inc. announced four desktop microcomputers that can be tied into the firm's Alspa-Net local-area network.

The desktop units feature a Zilog, Inc. Z80A microprocessor, 64K bytes of random-access memory, two RS-232 serial ports, two parallel ports and an RS-422 network interface. Bundled software includes a proprietary operating system and an electronic mail package, the vendor said.

The MC-4010, with a 10M-byte hard disk drive, costs $4,495; MC-4020, with a 20M-byte hard disk drive, sells for $5,495; MC-4035, with a 35M-byte hard disk drive, costs $6,495; and MC-4050, with a 50M-byte hard disk drive, costs $7,495.

Alspa Computer, 477 Division St., Campbell, Calif. 95008.

APPLICATION INNOVATIONS
Point-of-sale system

Application Innovations announced a turnkey point-of-sale system based on the IBM PCjr.

The system features a 9-in. monochrome display, 128K bytes of random-access memory, a 40-col. printer, 370K bytes of disk drive, point-of-sale software and a cash drawer with change holder, according to the vendor.

A user can change product descriptions and prices, the vendor said.

The system costs $3,250.

Application Innovations, 1550 Old W. Henderson Road, Columbus, Ohio 43220.

MORROW, INC.
MD11 price increase

Morrow, Inc. has raised the retail price of its MD11 hard disk desktop microcomputer system from $2,745 to $2,995 because of what the firm said are unexpectedly high manufacturing costs.

"Manufacturing costs, particularly those associated with outside vendors, have been higher than anticipated," a spokesman said.

The MD11 is an 8-bit personal/business computer system based on Digital Research, Inc.'s CP/M operating system. Shipments began in November.

Morrow, 600 McCormick St., San Leandro, Calif. 94577.

PRINTERS/PLOTTERS/PERIPHERALS

FUTURENET CORP.
D1-Plot/HP

Futurenet Corp. has announced a pen plotter interface that allows engineers to plot schematics generated on Futurenet's IBM Personal Computer-based Dash-1 schematic designer on the Hewlett-Packard Co. HP 7580, 7585 and 7470 plotters.

According to the vendor, the interface was designed for producing schematics that require hard-copy output in sizes ranging from 8½ by 11 in. to 34 by 44 in.

There is a choice of roller-ball, fiber-tip or liquid drafting pens of various colors and widths, the vendor said.

The package includes the Bausch & Lomb DMP-41 plotter with pedestal and the Dash-1 driver software, according to the vendor.

Available now, the D1-Plot/HP is priced at $600.

Futurenet, 21018 Osborne St., Canoga Park, Calif. 91304.

Get big performance from your small computer for just $2.95!

Take this 5-volume Programming Library (a $76.65 retail value) for $2.95 when you join the Small Computer Book Club.

You simply agree to buy 3 more books—at handsome discounts—within the next 12 months.

1. THE BASIC HANDBOOK: Encyclopedia of the BASIC Computer Language. 2nd Ed.
By David A. Lien. Details virtually every significant BASIC word used by every BASIC-speaking computer in the world. It is the most complete collection of BASIC words ever with strategies programmers can use to convert the many different 'dialects' to their computers.
Publisher's Price: $19.95.

2. BASIC AND THE PERSONAL COMPUTER.
By Thomas A. Dwyer and Margot Critchfield. Learn to program in BASIC within eight hours. Includes: computer graphics, program development, data bases, and more. Also, many step-by-step examples of word processing, computer games, and computer simulations.
Publisher's Price: $16.95.

3. CP/M AND THE PERSONAL COMPUTER.
By Thomas A. Dwyer and Margot Critchfield. Down-to-earth explanations break CP/M into basic components for easy mastery of filing, debugging, editing, information flow, and more. Includes coverage of how to use popular commercial CP/M application programs.
Publisher's Price: $19.95.

4. THE LITTLE BOOK OF BASIC STYLE: How to Write a Program You Can Read.
By John Nevison. Challenges the reader to go beyond computer literacy to *fluency;* teaches how to write programs of less than one page, and encourages thoughtful program organization. Covers everything from algorithms to games.
Publisher's Price: $6.25.

5. DATA FILE PROGRAMMING IN BASIC: A Self-Teaching Guide.
By LeRoy Finkel and Jerald R. Brown. For both hobbyists and professionals who want to add data file programming to their computing capabilities. Includes: maintaining data files, modifying existing programs, and writing your own.
Publisher's Price: $12.95.

We'll keep you up-to-date with the rapidly growing and ever-changing world of computers... from the latest developments in software and improvements in hardware, to the newest innovations in programming techniques, and more.

A division of The Library of Computer and Information Sciences—the oldest, largest, and most respected computer book club in the world—the Small Computer Book Club gives you access to virtually every important computer topic.

MEMBERSHIP BENEFITS • In addition to getting the PROGRAMMING LIBRARY for only $2.95 when you join, you keep saving substantially on the books you buy. • Also, you will immediately become eligible to participate in our Bonus Book Plan, with savings up to 70% off the publishers' prices. • At 3–4 week intervals (16 times per year) you will receive the Book Club News, describing the Main Selection and Alternate Selections, together with a dated reply card. • If you want the Main Selection, do nothing and it will be sent to you automatically. • If you prefer another selection, or no book at all, simply indicate your choice on the card and return it by the date specified. • You will have at least 10 days to decide. If, because of late mail delivery of the News, you should receive a book you do not want, we guarantee return postage.

The Small Computer Book Club Y-AF2
(a division of the Library of Computer and Information Sciences)
Riverside, N.J. 08075

Please accept my application for trial membership and send me the PROGRAMMING LIBRARY (00555), billing me only $2.95. I agree to purchase at least three additional Selections or Alternates over the next 12 months. Savings range up to 30% and occasionally even more. My membership is cancellable any time after I buy these three books. A shipping and handling charge is added to all shipments.

No-Risk Guarantee: If you are not satisfied—for any reason—you may return the PROGRAMMING LIBRARY within 10 days and your membership will be cancelled and you will owe nothing.

Computerworld 2/20/84

When Computerworld delivers the goods on manufacturing systems this March 26th, you'll definitely want to be there.

Ad deadline is March 9th.

In response to the increasingly heavy involvement of DP/MIS people in computer-aided manufacturing (CAM) and computer-aided engineering (CAE), *Computerworld* is preparing a Special Report that focuses on CAM/CAE, manufacturing resources planning (MRP), robotics, inventory and shop floor control.

We'll also cover the effect these new technologies are having on traditional manufacturing operations. And on the delicate relationships between traditional DP departments and the factory automation specialists.

If you act before March 9th — your products or services can be represented. To reserve space in this issue, call one of the sales offices listed below or call Ed Marecki, National Sales Director at (617) 879-0700.

To: Ed Marecki, National Sales Director
CW Communications/Inc.
Box 880
Framingham, MA 01701

MICROCOMPUTERS

BOARD-LEVEL DEVICES

DY-4 SYSTEMS, INC.
DSTD-187 card

Dy-4 Systems, Inc. has introduced the addition of the DSTD-187 processor card to its line of STD bus products.

The DSTD-187 is an Intel Corp. 8088-based product incorporating the Intel 80130 RMX processor, two RS-232C serial channels and optional Intel 8087 math coprocessor, according to the vendor.

Both Zilog, Inc. Z80 and Intel 8088 bus architectures are supported. According to the vendor, 1M-byte memory addressing is supported.

The product costs $584.

DY-4 Systems, Suite 202, 1475 S. Bascom Ave., Campbell, Calif. 95008.

METRABYTE CORP.
Model PIO-12

Metrabyte Corp. has announced a parallel, digital I/O interface board, Model PIO-12, that plugs into the IBM Personal Computer XT.

According to the vendor, the PIO-12 provides 24 transistor-to-transistor and diode-to-transistor logic-compatible lines.

Other features include an interrupt input and external connections to the microcomputer's bus power, the vendor said.

The price is $89 in single quantities.

Metrabyte, 254 Tosca Drive, Stoughton, Mass. 02072.

NUMBER NINE COMPUTER CORP.
Revolution graphics board

Number Nine Computer Corp. introduced its Revolution graphics board for the IBM Personal Computer.

The board uses a NEC Information Systems, Inc. 7220 16-bit graphics coprocessor, the vendor said.

A display can use two modes: pixel and plane. With pixel mode, the user can modify a single pixel across 8-bit planes of random-access memory in one read or write operation, according to the vendor.

In plane mode, the user can modify eight pixels in a 1-bit plane, the vendor said.

The board costs $945.

Number Nine Computer, 691 Concord Ave., Cambridge, Mass. 02138.

HELIONETICS, INC.
APB-3000PC series

Helionetics, Inc. has announced a series of single-board array processors that is said to increase the computational speed of an IBM Personal Computer or look-alike.

The APB-3000PC series reportedly enables the Personal Computer to perform mathematical calculations up to 10,000 times faster than a Personal Computer not equipped with the device, according to the vendor.

It runs Fortran or Basic under IBM's PC-DOS operating system and is programmable. A high-level assembler and monitor package is also available for custom microcode development, the vendor said.

Prices start at about $2,000 for a 16-bit math integer APB-3000PC board and $4,250 for a 16-bit integer or 24-bit full floating-point board, a spokesman said.

Heliometics, 17312 Eastman St., Irvine, Calif. 92714.

AUXILIARY EQUIPMENT

DATA DECISIONS
Microcomputer service

Data Decisions has announced an information service for microcomputer hardware and software that reportedly was designed for corporate or institutional buyers of multiple systems.

Called Microcomputers, a key feature of the service involves the testing of major software products by the vendor's laboratory staff.

Areas covered by the service include microcomputers, software, expansion/extension cards, communications and peripherals, accessories and support equipment, according to the vendor.

A one-year subscription to the service includes two loose-leaf volumes updated monthly, 12 supplements, 12 newsletters and unlimited free telephone consulting. Charter subscriptions are available for a limited time for $625.

Data Decisions, 20 Bruce Road, Cherry Hill, N.J. 08034.

The Northern Telecom system. A benchmark in batch processing that keeps getting better.

Northern Telecom batch processing systems have proven themselves, in more than a decade of use in a variety of applications, to be among the most reliable, practical, cost-effective systems ever developed. They deliver more throughput per dollar than any competitive system.

Now, as solid evidence of our commitment to batch processing, we're improving these already-successful systems for even more productivity. For instance, we're introducing a new high-speed band printer with changeable type. Operating now with IBM's SNA, we've also added new, low-cost distributed data processing capabilities for more system versatility, and to provide for future growth toward the integrated office.

We're back

MICROCOMPUTERS

MICROPRO INTERNATIONAL CORP.
Startester series

Micropro International Corp. has introduced a line of training tools, the Startester series.

The on-disk interactive computer-aided instruction (CAI) tutorials include lessons for the firm's Wordstar (word processing) and Infostar (data base management system).

Videotape instruction is available for Wordstar and will soon be available for Infostar, Calestar (the firm's electronic spreadsheet) and Starburst (the firm's program that reportedly links the other products). The self-paced tape provides the trainee with interactive training, reinforced with graphics and animation.

Users who have Wordstar Version 3.3 for IBM's PC-DOS operating system can purchase the Wordstar Quick Lesson CAI for a handling charge of $6 each until Feb. 29. The extended lessons feature seven sessions, each approximately 30 minutes long. Each extended lesson CAI product is priced at $79.95.

Micropro's Wordstar Video Training Tape, in ½-in. VHS and ¼-in. Betamax formats, will be available in the spring for a suggested retail price of $89.95. The ¾-in. U-Matic format will be priced at $129.95, the vendor said.

Micropro International, 33 San Pablo Ave., San Rafael, Calif. 94903.

ADVANCED DATA SUPPORT SYSTEMS, INC.
Advanced Data Analyzer

Advanced Data Support Systems, Inc. has announced Advanced Data Analyzer, a hardware and software enhancement that monitors RS-232 asynchronous data communications.

The product taps into any line between two devices. It displays and stores data transmissions and allows the user to examine data, the vendor said. The data analyzer transmits user-defined character strings and can perform a byte/bit error rate test, according to the vendor.

The product costs $1,695.

Advanced Data Support Systems, Suite 1, 217 Mt. Vernon Ave., Bakersfield, Calif. 93307.

MICRO SOFTWARE

COMMODITY TRADING SYSTEMS
Cats

Commodity Trading Systems has announced the Cats computer-aided trading package for the IBM Personal Computer.

A vendor spokesman said Cats was designed as a tool with which commodity traders can collect real-time market data, analyze price and volume and generate a trade signal based on that information and the trader's financial position and objectives.

The spokesman said that, in addition to historical price and volume analysis, Cats also features a "what-if" simulator to determine the optimum trading parameters for each contract, an updated quote page, data base query and report generation and gross profit summary.

Cats is leased for $40,000/year, which does not include hardware.

Commodity Trading Systems, Suite 107, 11301 Richmond, Houston, Texas 77082.

HUMANIC DESIGN CORP.
MSP

Humanic Design Corp. (HDC) has introduced a human resource management package for the IBM Personal Computer XT. The Microcomputer Personnel System (MPS) was designed for organizations with 200 to 2,000 employees.

MPS reportedly supports all major human resource management functions, stores payroll information and can be linked directly to in-house or payroll services. In addition, MPS can provide complete word processing.

Continued on page 77

Your processing may be remote, but Northern Telecom service is on the spot.

With service and maintenance professionals located at 157 cities nationwide, we're able to provide prompt response to your call for service. How fast? Two hours in major metropolitan areas; four hours in most other areas of the country. And our multi-year maintenance agreements guarantee continuing, low-cost operation of your Northern Telecom system.

If your system lease expires within the next six months, *now* is the time to find out more about batch processing from Northern Telecom.

Time-proven performance with long-term savings.

Northern Telecom's aggressive pricing is more proof of our commitment to batch. Our discount structure offers long-term savings on multi-year leases. And at renewal time, you can save even more with discounts up to 30%.

Call our toll-free number: 800-331-3113. Or write Northern Telecom, Mail Station T-240, P.O. Box 1222, Minneapolis, Minnesota 55440. We'll show you how we can tailor a batch system to your specific needs. And save you money, too.

FIXED PRICE COMPUTING SERVICE

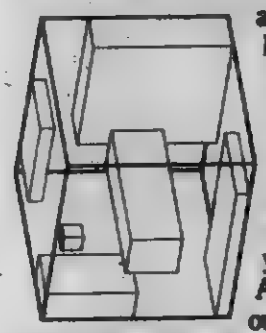
INTRODUCING SUBSCRIPTION SERVICE:

A Cost-Effective Alternative to Traditional Remote Computing Services or In-House Processing.

Now you can couple the benefits of a professionally managed remote computing service with the predictable cost associated with in-house processing. It's called Subscription Service, and it's available today from Martin Marietta Data Systems.

PREDICTABLE COST

Subscription Service is designed to keep your DP operation within budget. It curbs cost overruns by delivering a block of resources at an affordable ***fixed price***—almost like the in-house machine.



But, unlike the in-house machine, your service doesn't degrade at peak-use periods, just when you need it most. And, when you're out of gas, you can upgrade easily. No lease payout. No hardware moves.

NO MYSTERY PRICING

Subscription Service unbundles the remote computing service offering to take the guesswork out of prices. Resource capacity and support levels are clearly defined and easy to understand. You buy what you need. Nothing more—nothing less.

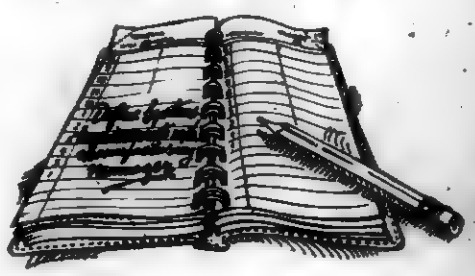
MORE TIME FOR YOUR USERS

It's a fact, a professionally managed computing service offers you ***freedom*** from day-to-day operational problems, giving you more time to focus on solutions to user problems. And, with an inventory of packaged solutions and productivity tools at your fingertips, the time and resource requirements to create a solution are greatly reduced.

COUPLE FREEDOM WITH AFFORDABILITY

Subscription Service is proof that you can get the best for less. All subscribers are linked to Martin Marietta's powerful host computers, providing the most up-to-date computing resources. You can depend on:

- ☐ Solid, stable, thoroughly-tested hardware, software and personnel
- ☐ Response time and throughput associated with IBM's fastest processors
- ☐ Access to hundreds of productivity tools and application systems
- ☐ Responsive technical consultants available around the clock



DISCOVER HOW SUBSCRIPTION SERVICE CAN WORK FOR YOU

If your budget for computer operations exceeds $20,000 per month for either remote computing service or in-house processing, then find out how much Subscription Service can save you. Or how much more service you can get for what you are currently spending. Or both! Simply return the attached coupon or call toll-free (800) 638-7080. In Maryland: (800) 492-7170.

Don't be undersold. Or sold a bundle. Get the precise level of resources you need with Martin Marietta's Subscription Service.

☐ Please send me your Remote Computing Services brochure.
☐ I'd like to have my subscription requirements sized. Have your representative call me.

mail list/merge and electronic spreadsheet capability.

A free-standing, menu-driven system with communications options, MPS requires a Personal Computer XT configuration of a 10M-byte fixed disk, plus 360K-byte capacity diskette drives and 256K bytes of memory.

MPS software is priced at $15,000 with optional rental and/or lease.

HDC, 307 Summit Ave., Mahwah, N.J. 07430.

APPLIED SOFTWARE TECHNOLOGY, INC.
Versaform Release 2.7

Applied Software Technology, Inc. has announced the Versaform Release 2.7 for Texas Instruments, Inc.'s Professional Computer.

Release 2.7, which runs under Microsoft, Inc.'s MS-DOS operating system, is also available for the IBM Personal Computer.

Data entered into the system creates a data base of form records. Data from the data base may be selected, sorted and written to an MS-DOS file for use by word processors, spreadsheets and other programs, the vendor said.

The suggested retail price of Versaform Release 2.7 is $389.

Applied Software Technology, 170 Knowles Drive, Los Gatos, Calif. 95030.

RADIO SHACK
Cobol instruction

Radio Shack has announced an educational software package designed to teach secondary and college students and adults the fundamentals of programming Cobol.

The package contains a comprehensive manual and a diskette with exercises that can be used with any Radio Shack TRS-80 Model II, 12 or 16 disk system with at least 64K bytes of memory.

Volume One is available for $49.95. Class notes are priced at $9.95 and are sold as an aid to instructors for use in the classroom.

Radio Shack, 1800 One Tandy Center, Fort Worth, Texas 76102.

SIGNUM MICROSYSTEMS, INC.
Documax

Signum Microsystems, Inc. has introduced Documax, an information management package for the Apple Computer, Inc. Apple II microcomputer.

Documax is a document-handling package that features word processing, electronic mail and other text files, the vendor said.

Documax runs on the Apple II, II+ or IIe with 48K bytes of memory. It also runs on the Apple III in Apple II emulation mode.

The product sells for $175.

Signum Microsystems, 190 Mountain Ave., Bloomfield, Conn. 06002.

IDEAWARE, INC.
Idea Processor

Ideaware, Inc. has introduced the Idea Processor, a software package for IBM Personal Computer users.

The Idea Processor combines a card-file-style, free-form file manager with word processing software and can incorporate graphics stored as file cards, the vendor said.

Minimum system requirements are an IBM Personal Computer or compatible machine with 192K bytes of memory. A printer is optional, the vendor said.

The Idea Processor sells for $295.

Ideaware, 295 Lafayette St., New York, N.Y. 10012.

ZOOM TELEPHONICS, INC.
Netmaster

Zoom Telephonics, Inc. has introduced Netmaster, a communications program for Apple Computer, Inc.'s Apple II microcomputers.

According to the vendor, Netmaster can be used with 300 bit/sec modems. The package will receive and transmit any file developed under Release 3.3 of Apple's DOS operating system, the vendor said.

Netmaster is priced at $70. It is sold with Zoom's Networker modem (including a free membership to The Source data base) for $179, the vendor said.

Zoom Telephonics, 207 South St., Boston, Mass. 02110.

DATAMEDIA CORP.
Exec

Datamension Corp. has introduced a feature for its Report Manager three-dimensional software, a command language called Exec. The package runs on IBM's Personal Computer.

Exec is a language that uses Basic-like commands or can capture and repeat sequences of keystrokes, the vendor said.

Minimum system requirements are 128K bytes of random-access memory and two disk drives.

The suggested list price of Report Manager is $360.

Datamension, 615 Academy Drive, Northbrook, Ill. 60062.

STONEWARE, INC.
DB Master enhancement

Stoneware, Inc. has enhanced DB Master to include a file converter.

DB Master's file converter reads files created with Software Publishing Corp.'s PFS:File and Visicorp's VisiFile programs into DB Master. It can use alphanumeric, numeric or data fields, the vendor said.

The data base costs $350 and runs on Apple Computer, Inc.'s Apple IIe.

Stoneware, 50 Belvedere St., San Rafael, Calif. 94901.

SOFTWARE SYSTEMS, INC.
Personal Computer Print Utility

Software Systems, Inc. (SSI) has announced a package that allows a report from an IBM System/34 or System/36 minicomputer to be printed on an IBM Personal Computer.

According to the vendor, the Personal Computer Print Utility converts spooled-print files on the host system to Personal Computer-formatted text files.

The utility was designed for users of SSI's 5251 Model 12 emulation and file-transfer utility to allow off-line storage and printing of spooled reports.

The product is available at a price of $75 for the System/34 and $90 for the System/36, including report program generator source code.

Software Systems, P.O. Box 1766, Jefferson City, Mo. 65102.

PROFESSIONAL MICROSYSTEMS, INC.
Bizplan

Professional Microsystems, Inc. has introduced Bizplan, a software template that enables users to create a business plan and analyze alternative sales strategies under changing conditions.

According to the vendor, Bizplan can run on any system running Digital Research, Inc.'s CP/M operating system. Systems must have a minimum of 48K bytes of random-access memory.

The suggested retail price of Bizplan is $195.

Professional Microsystems, Richardson Plaza, Rt. 309 & Richardson Road, Montgomeryville, Pa. 18936.

LIBRA LABORATORIES, INC.
Gantt-Pack Version 3

Libra Laboratories, Inc. has announced Gantt-Pack Version 3, a menu-driven project management software package for Radio Shack TRS-80 Models I/III and I/12 microcomputers.

According to the vendor, the product is a project control and resource management tool that enables users to store data on each project's requirements. Gantt-Pack can be used to automate drawings, create charts and sort data.

Gantt-Pack costs $395.

Gantt Systems, Libra Laboratories, 495 Main St., Metuchen, N.J. 08840.

GENASYS CORP.
Telico Version 2.0

Genasys Corp. has announced the release of Version 2.0 of its asynchronous communications package, Telico, for the IBM Personal Computer, Personal Computer XT and Personal Computer-compatible computers.

Telico operates at speeds ranging from 110 to 9,600 bit/sec through any smart, acoustic or dataphone-type modem hard wired to a machine or via a network. Its internal buffering is said to allow screen scrolling of at least 250 lines of data during communications. Any additional memory can also be used as a screen buffer, allowing scrolling of more than 250 lines.

Telico costs $119.95, including documentation.

Genasys, Microcomputer Products Group, 11820 Parklawn Drive, Rockville, Md. 20852.

ADDISON-WESLEY PUBLISHING CO.
Micro-DSS/Finance

Prices of Micro-DSS/Finance (DSS/F), a microcomputer financial modeling software package from Addison-Wesley Publishing Co., have been reduced by 33%.

DSS/F is an integrated package that combines financial modeling, graphics and reporting. It can be purchased through dealers or Addison-Wesley at the new prices of $795 for Apple Computer, Inc. versions and $995 for the IBM Personal Computer version, a spokesman said.

Addison-Wesley, Reading, Mass. 01867.

HUMAN SYSTEMS DYNAMICS
PC Statistician

Human Systems Dynamics has introduced a general statistics package for the IBM Personal Computer.

According to the vendor, PC Statistician provides a research data base. The prod-

MICRODATA INTRODUCES THE RELATIONAL OFFICE.

IT'S WHERE YOU'VE ALWAYS WANTED TO WORK.

MICROCOMPUTERS

uct also offers the graphics options of data set plots, bar graphs, scatter plots and curve fittings, the vendor said.

System requirements are an IBM Personal Computer with 128K bytes of memory, two double-sided, double-density disk drives and Release 2.0 of IBM's PC-DOS. A printer is optional.

The price of the package is $300.

Human Systems Dynamics, Suite 202, 9010 Reseda Blvd., Northridge, Calif. 91324.

I.P. SHARP ASSOCIATES, LTD.
APL/PC

I.P. Sharp Associates, Ltd. has introduced an implementation of the APL development language for the IBM Personal Computer.

Called APL/PC, the package is compatible with Sharp's mainframe software products. This is accomplished by basing the microcomputer product on a System/370 emulator.

Therefore, all APL constructs available in a mainframe environment are also available in the microcomputer environment. These include all primitive functions and operators and all data types, including packages and enclosed arrays, the vendor said.

The system runs as a user program under the IBM Personal Computer operating system PC-DOS Version 1.1 or 2.0. The package includes the interpreter, the file system, the session manager, several auxiliary processors and the utility software.

The price of APL/PC is $375.

I.P. Sharp Associates, Suite 1900, 2 First Canadian Place, Toronto, Ontario, Canada M5X1E9.

STRATEGIC SOFTWARE SYSTEMS, INC.
Bottomline V

Strategic Software Systems, Inc. has introduced Bottomline V, a financial modeling, planning and forecasting package.

The product operates with spreadsheet programs, such as Lotus Development Corp.'s 1-2-3 and Visicorp's Visicalc. The package runs on the IBM Personal Computer XT, the Xerox Corp. 820, Digital Equipment Corp.'s Rainbow and Apple Computer, Inc.'s processors. The package also runs on Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems.

The suggested retail price is $295.

Strategic Software Systems, Suite 200, 1300 Dove St., Newport Beach, Calif. 92660.

ZYLAB CORP.
Zyindex

Zylab Corp. has introduced Zyindex, an information search and retrieval package that finds information in any Ascii-based text files. The package runs on the IBM Personal Computer, Personal Computer XT and compatible systems.

According to the vendor, Zyindex stores information from documents created with a word processing package or obtained from other public data bases. Users retrieve information from their files by entering search requests on any topic.

Zyindex requires 96K bytes of memory and two disk drives.

The list price of the product is $295.

Zylab, 233 E. Erie, Chicago, Ill. 60611.

PERSOFT, INC.
Smarterm 100

Persoft, Inc. has announced Smarterm 100, a terminal emulation/file transfer package for the IBM Personal Computer and compatible systems.

The product is said to allow the Personal Computer to function as a Digital Equipment Corp. VT100, VT101, VT102 or VT52 CRT terminal and to transfer Ascii or binary files between the Personal Computer and a host computer system.

Smarterm 100 runs under any version of IBM's PC-DOS operating system and can be installed on hard disk, the vendor said.

It requires 128K bytes of memory, one double-sided diskette drive, an asynchronous adapter and either the monochrome display or an 80-col. color monitor, according to the vendor.

It is priced at $149.

Persoft, 2740 Ski Lane, Madison, Wis. 53713.

MICRO from page 79

DATA CONSULTING GROUP
PC File; PC Screens and Menus

Data Consulting Group has announced two utility products for the IBM Personal Computer running Microsoft, Inc.'s MS-DOS and compatible operating systems.

PC File Utilities is a series of programs designed to facilitate file management. According to the company, the programs allow the user to print, display or edit random files by entering the file name; print or display sequential files; and display data simultaneously in four formats: character, Ascii, hex and bit flag.

PC Screens and Menus is a menu and screen generator that creates Basic screens for data entry. Once the screen is drawn, it can be saved in a file and accessed by any program.

The utilities cost $50 each, require less than 64K bytes of memory, a monitor and one or two single- or double-sided diskettes.

Data Consulting Group, 12 Skylark Drive, Larkspur, Calif. 94939.

MYCROFT LABS, INC.
Mite/MS

Mycroft Labs, Inc. announced Mite/MS, a menu-driven communications program that runs under Microsoft, Inc.'s MS-DOS operating system.

Mite/MS features user-selectable options to capture text from or send to any asynchronous, Ascii, on-line system, according to the vendor. A user can define 10 programmable macro strings which can be invoked by a function key, the vendor said.

Mite/MS costs $195.

Mycroft Labs, Suite B188, 9639 N. Monroe St., Box 68, Tallahassee, Fla. 32303.

PHASER SYSTEMS, INC.
Vdam

Phaser Systems, Inc. announced Virtual Diskette Access Method (Vdam), a software tool that allows IBM Personal Computers to access and store IBM mainframe data.

With Vdam, the mainframe appears as an infinite set of diskettes to any program running on the Personal Computer, according to the vendor. The user stores and accesses mainframe data in a format identical to that on the Personal Computer.

The system operates under IBM's TSO.

The package costs $600 for mainframe software and $300 for each Personal Computer attached to the mainframe.

Phaser Systems, 24 California St., San Francisco, Calif. 94111.

DATA MANAGEMENT ASSOCIATES, INC.
Magic

Data Management Associates, Inc. has introduced Machine Generated Integrated Code (Magic), a programming language which the company claims increases programmer productivity tenfold. The package runs on microcomputers using Digital Research, Inc.'s CP/M operating system.

The language features internal data areas with variable buffers and dynamic allocation, screen formatting and editing, the ability to mix assembler language anywhere in Magic source code, string manipulation capability and control-conditional compilation of source code, according to the vendor.

Magic for CP/M costs $795. It costs $995 for microcomputers using CP/M 86 or MS-DOS, an operating system from Microsoft, Inc.

Data Management Associates, P.O. Box 4340, Wilmington, Del. 19807.

INFORMATION BUILDERS, INC.
Focus for IBM XT/370

Information Builders, Inc. has announced the availability of its Focus nonprocedural data base and information management package for the IBM Personal Computer XT/370.

Focus, operating under the IBM VM/CMS environment, reportedly combines a relational data base and screen management facilities with an English nonprocedural language for queries, formal reporting, graphics, statistical analysis and financial modeling.

Information Builders reports that users of the desktop XT/370 using IBM's VM operating system on mainframes can access their information centers with Focus. The users reportedly can use English commands to analyze files on their CMS minidisks.

Focus on the XT/370 is licensed as a rider to a user's existing mainframe license. The purchase price for one to eight XT/370 machines is $3,400, and the lease price is $375 per month.

Information Builders, 1250 Broadway, New York, N.Y. 10001.

COLLINS & ASSOCIATES, INC.
Cpert; File-It; Plot-It; LC Data

Collins & Associates, Inc. has introduced four business programs: Cpert, File-It, Plot-It and LC Data.

According to the vendor, all the programs were designed to run on either the Hewlett-Packard Co. HP 86 or HP 87 microcomputers, with memory requirements ranging from 64K bytes to 160K bytes, depending on the program.

Cpert was designed for managers to use in planning a project. It enables the user to focus attention on the plan, measure progress and take corrective action. It requires 160K bytes of memory, according to a spokesman for the vendor.

File-It is a data file management package with a capacity of 65K bytes of memory, according to the vendor spokesman. Records can be sorted on any field for the whole file or selected parts of the file. In displaying or printing records, the fields can be arranged in any order, and the display can be vertical or horizontal. It requires 128K bytes of memory, the spokesman said.

Plot-It is a program for plotting single or multiple line curves and performing linear regression curve fits of curve data. The program is menu-driven. Manipulation of data can be performed, and statistical analysis

"We contracted out. But with a Kodak Komstar 200 we saved $30,000 by doing it ourselves.

When a major do-it-yourself tool company needed to keep up with ever-increasing forms and records, they turned to Kodak.

Our Komstar 200 microimage processor took over the job. And saved over $30,000 in outside costs just six months later.

Find out how Komstar equipment can help you tool up in-house, for less. Send in the coupon today. Or call toll-free: 1-800-44EKODAK (1-800-445-6325), Ext. 303.

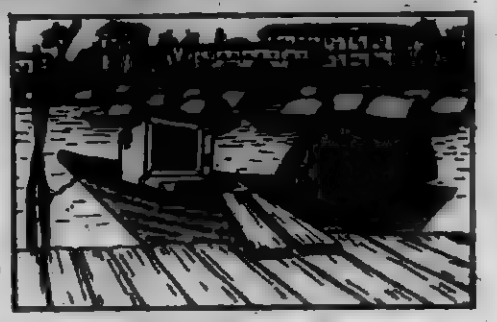
Asian Computerworld reaches the fastest growing computer market in the world.



Introducing *Asian Computerworld.*

Asian Computerworld is *Computerworld's* sister publication covering the Southeast Asian marketplace. The editorial (written in English) keeps company executives, computer users, potential users and people in the computer industry up-to-date.

Southeast Asia is considered the fastest growing computer market in the world with a total value of $1.8 billion and annual growth rates for small business systems and micros over 50%. The average annual growth rate is approximately 30%.

Asian Computerworld is published in Singapore and printed twice a month on Thursdays. The total circulation is 8,000. And the geographical distribution is as follows; Hong Kong, Singapore, Philippines, Malaysia, Indonesia and Thailand.

CW International Marketing Services makes it easy for you to advertise in countries all around the computer world. For more information on *Asian Computerworld*, just fill out and return the coupon below.

MICROCOMPUTERS

can be done to give the mean, variance and coefficient of variation. It requires 96K bytes of memory.

LC Data is a learning curve program that provides a tool for production, marketing and general management users to make decisions on manpower, prices and materials. The program can calculate production costs or hours and then forecast future unit- and lot-production hours and costs. It requires 64K bytes of memory.

Programs are supplied on 5¼-in. floppy disks. Prices are $175 for Cpert, $100 for File-It, $150 for Plot-It and $95 for LC Data.

Collins & Associates, 187 Flying Mist Isle, Foster City, Calif. 94404.

BUSINESS SOLUTIONS, INC.
Jack2

Business Solutions, Inc. has introduced Jack2 for the Apple Computer, Inc. Apple IIe. The Jack2 is an integrated software package that does word processing, spreadsheet analysis, charting and data base management tasks on the same screen without windows.

According to the vender, Jack2 was originally designed for the IBM Personal Computer.

Jack2 features commands displayed on a two-line area at the top of the screen, handles multiple columns of text on the same page and can hide confidential information in the middle of the text.

All screen information, including the spreadsheet and the bar chart, is printed out on a single page the same way it appears on the screen, the vendor said.

Jack2 is priced at $395, according to the vendor.

Business Solutions, 60 E. Main St., Kings Park, N.Y. 11754.

STAR ENTERPRISES, INC.
Stardriver-I

Star Enterprises, Inc. has introduced Stardriver-I, a package that enables the Hewlett-Packard Co. HP 9000 Model 20 microcomputer to support multiple users in Basic.

According to the vendor, multiple users may interact via remote terminals for graphics as well as program development and execution.

The software is priced at $1,045, the vendor said.

Star Enterprises, 310 Crestwood Drive, Selma, Ala. 36701.

SOFTLOGIC SOLUTIONS
Doubledos

Softlogic Solutions has introduced Doubledos, an operating system enhancer that lets the IBM Personal Computer and Personal Computer XT microcomputers perform two simultaneous functions. It does not require any software modification.

According to the vendor, Doubledos acts as an extension to the capabilities of IBM's PC-DOS, either Release 1.1 or 2.0.

Doubledos can run on systems with as little as 128K bytes of memory, depending on the application, though 192K bytes of memory are recommended by the vendor. There is no need for the user to buy additional hardware, terminals or cables, the vendor claimed.

According to the vendor, Doubledos works by dividing a system's memory into two areas, one for each program running. The memory can be divided in any way the user chooses.

The price of Doubledos is $299, the vendor said.

Softlogic Solutions, 530 Chestnut St., Manchester, N.H. 03101.

OPUS CORP.
Workstation Emulator

Opus Corp. has introduced the Workstation Emulator, which allows an IBM Personal Computer or Personal Computer XT to act as a Hewlett-Packard Co. HP 250 workstation.

According to the vender, HP 250 software features such as screen-labeled soft keys, forms and video enhancements are emulated. Several additional features extend the emulator's applicability, including an Ascii-Ansi mode for autodial modem control, data logging to disk files and local printer support.

The product costs $600, according to the vendor.

Opus, 20251 Century Blvd., Germantown, Md. 20874.

BAILEY & ROSE LTD.
Compact

Bailey & Rose Ltd. has added a prototyping tool for the IBM Personal Computer to its Act/1 family of productivity software.

Called Compact, the product was designed to facilitate the development of prototypes and allow the user to test design concepts and specifications, as well as demonstrate working models. It includes screen development functions and logic plan facilities.

Compact requires an IBM Personal Computer or compatible system with 256K bytes of memory, two double-sided, double-density diskettes or one hard disk, IBM's PC-DOS operating system, Release 1.1 or 2.0 and a color graphics board or monochrome adapter. It costs $1,500.

Bailey & Rose, 620-1033 Davie St., Vancouver, B.C., Canada V6E 1M7.

NEW MEDIA GRAPHICS CORP.
Graphover Listing

New Media Graphics Corp. has offered a free listing of specific features its Graphover 9500 software driver that runs under IBM's PC-DOS operating system.

The graphics driver allows color graphics to be controlled by the IBM Personal Computer, and the graphics

NCR

From the cutting edge of NCR software engineering comes NCR/SNA Systems Network Architecture

If you are a computer manufacturer, or an OEM, there are two ways that you can implement SNA or X.25 on your systems:

- Do it yourself.
- Call NCR.

NCR systems engineers have developed portable communication products which can be easily implemented on a variety of processors and operating systems. These products allow for SNA communications, SNA network management and communication using X.25. Many of the products are immediately available, and could be ported onto most processors with minimum effort. And that's not all. NCR/SNA is backed by the resources and experience of an international company with a long background in data processing, and with the engineering technology that will keep it among the leaders.

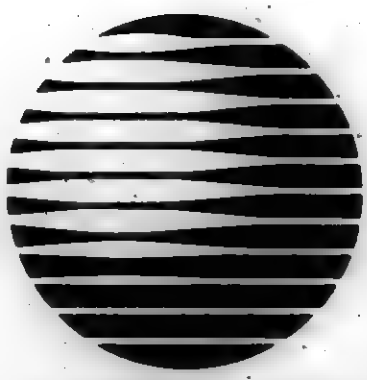
In 1984, NCR is 100 years young. If you are going to make a major investment in a strategic product, you'll want the innovative technology and service for which NCR has long been famous.

If you are a computer manufacturer or an OEM, and would like more information contact:

NCR Corporation
11010 Torreyana Road
San Diego, California 92121
Phone (619) 452-1626

TELETYPE CORPORATION.

WHAT'S NOW IN FRONT OF OUR NAME IS ALSO BEHIND US.



AT&T
Teletype Corporation

At Teletype Corporation, we've changed our logo. But as a part of the AT&T family, our commitment to supplying you with the latest in communications products and services hasn't changed.

With our own sales and marketing force, service organization, manufacturing facilities and distribution network, we're in an ideal position to meet all of your needs. And with the ingenuity of our expanding R&D, we're developing the kinds of terminals and systems the Information Age demands.

Today, our full line of printers and CRTs fit a wide variety of applications—from simple message transmission to sophisticated programming. Each and every terminal boasts user-friendly features that exemplify traditional Teletype Corporation quality.

We're also actively branching out into new areas such as intelligent terminals. Our 5620 intelligent graphics terminal, for example, is indicative of the kind of terminals you'll be working with in the future. It's a UNIX*-based CRT that can perform up to six functions simultaneously.

But while we're exploring new areas, we're also improving the products that have earned Teletype Corporation a strong reputation for value. Take our 5540 line of terminals. It represents our third generation of 3270-compatible devices. And we're continually adding to it, developing new displays, printers, keyboards and controllers to enhance the cost-effectiveness of your system.

Now that you've seen our new logo, it's time you took a closer look at what we can do for you. To find out more about our products and services, write Teletype Corporation, Dept. 3223-F, 5555 Touhy Ave., Skokie, IL 60077. Or call **1-800-323-1229, ext. 932.**

MICROCOMPUTERS

Continued from page 81

can be overlaid on video coming from videodisk, videotape or TV cameras. The combined pictures can be displayed on any monitor or recorded on videotape, the vendor said.

New Media Graphics, 279 Cambridge St., Burlington, Mass. 01803.

VIKING ASSOCIATES
Firefile; Nativelinx

Viking Associates has introduced Firefile and Nativelinx communications packages for users of Apple Computer, Inc. Apple II+ and IIe microcomputers.

Firefile allows the user to transfer files between micros at speeds up to 38,400 bit/sec, or approximately 90 page/min, the vendor said.

The Nativelinx 3270 system provides an emulation of a remote IBM 3270 display terminal system with the Apple II+ or IIe. The package operates at line speeds of 1,200 to 9,600 bit/sec in a half-duplex mode over full-duplex facilities, the vendor said.

The Firefile package is priced at $250. The Nativelinx package is priced at $845.

Viking Associates, P.O. Box 353, Colorado Springs, Colo. 80901.

ADDISON-WESLEY PUBLISHING CO.
Micro-DSS/Analysis

Addison-Wesley Publishing Co. recently announced an analytical software package for the IBM Personal Computer that is said to bring decision support analysis to managers' desks.

Micro-DSS/Analysis reportedly provides statistics, report writing, graphics, data base management facilities and the ability to perform ad hoc analysis.

The package costs $495.

Addison-Wesley Publishing, Reading, Mass. 01867.

DUNBAR-RIDGE CORP.
Filedriver

Dunbar-Ridge Corp. has introduced Filedriver, an integrated set of utilities for Digital Research, Inc.'s CP/M or MP/M and Musys Corp.'s Turbodos operating systems.

Filedriver operates on any file and accesses files independently of user area or attribute-flag status, according to the vendor. Utilities can be accessed in five ways: file selection, file processing, user interaction, file protection and on-line display.

Filedriver costs $85.

Dunbar-Ridge, 103 Sterling Court, Syosset, N.Y. 11791.

AMERICAN PLANNING CORP.
Megabasic

American Planning Corp. announced Megabasic, a programming language that reportedly can address 1M byte of random-access memory.

Megabasic features an execution speed reportedly six times faster than Mbasic from Microsoft, Inc. Other features include variable names, which can be 255 characters long, and a trace-and-edit capability, according to the vendor.

Megabasic runs under MS-DOS from Microsoft and the CP/M 86 operating system from Digital Research, Inc. The programming language costs $400.

American Planning, Suite 403, 4640 Duke St., Alexandria, Va. 22304.

DCD CO.
Job Shop Control version

DCD Co. announced an IBM Personal Computer XT-compatible version of its Job Shop Control package.

The package includes job costing, payroll, accounts payable, accounts receivable and general ledger applications, the vendor said. The job costing module features job status reports, daily production figures, monthly statistics, efficiency figures, job costs and due dates for jobs.

The job-costing application costs $2,000; the other four packages cost $900 each. Together, the five applications cost $6,000.

DCD, 1601 W. River Road N., Minneapolis, Minn. 55411.

BELLESOFT, INC.
Entry System for Programs

Bellesoft, Inc. has introduced a language-oriented editor for computer-aided programming on IBM's Personal Computer using the Pascal and C languages.

Entry System for Programs is said to check programs for syntax errors and automatically format code for readability, saving compiling and debugging time.

ES/P is priced at $249 for Pascal on a single-machine license and $349 for Pascal and C.

Bellesoft, Suite 150, 2220 Northup Way, Bellevue, Wash. 98004.

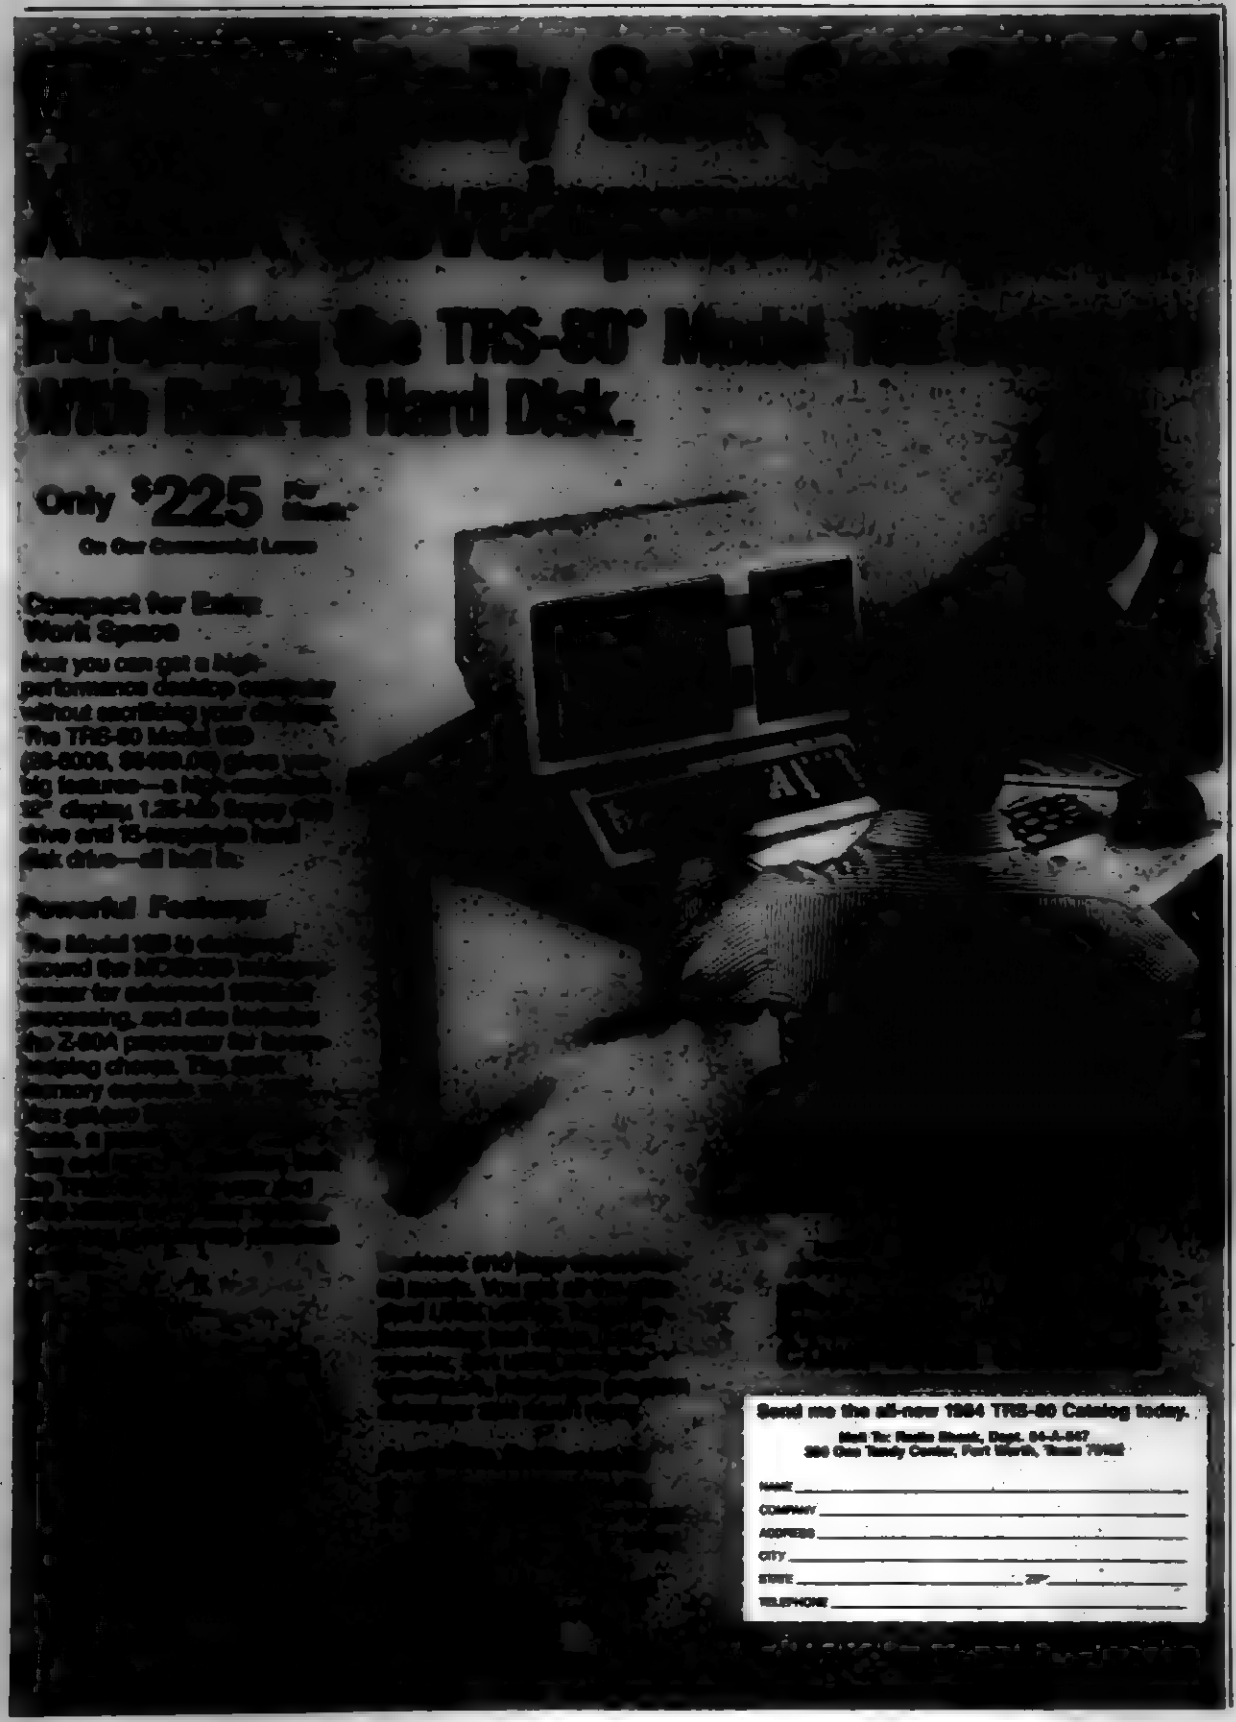
REMROL COMPUTER SERVICES, INC.
Screen.cob Version 2.0

Remrol Computer Services, Inc. has announced Version 2.0 of its Screen.cob Cobol screen code generator for use with Microsoft, Inc.'s IBM Personal Computer Cobol package.

According to the vendor, Screen.cob is a utility program that writes Cobol code for screen set-up in a standard Ascii file text editor.

Screen.cob can also overlay multiple screens and set up a series of screens at one time. The package reportedly will operate on any microcomputer that can run Microsoft's IBM Personal Computer Cobol package. Version 2.0 of Screen.cob is priced at $49.95.

Remrol Computer Services, 215 Brighton Ave., Boston, Mass. 02134.



MICROCOMPUTERS

STOK SOFTWARE, INC.
Backrest enhancements

Stok Software, Inc. has announced enhancements to Backrest, its hard disk backup program.

According to the vendor, Backrest runs on Muxys Corp.'s Turbodos, Microsoft, Inc.'s MS-DOS, IBM's PC-DOS and a variety of local-area networks.

Enhancements include the ability to select predefined backup routines, password-protected file backup and restore, repeated backup to the same hard or floppy disk, improved error handling, optional use of screen color attributes and a German language version with European date format.

Backrest is also available for Digital Research, Inc.'s CP/M, MP/M, CP/Net, CP/M 86, MP/M 86 and concurrent CP/M at a retail price of $180.

Stok Software, 17 W. 17th St., New York, N.Y. 10011.

LOGICAL SYSTEMS, INC.
LS/Host/Term

Logical Systems, Inc. has introduced LS/Host/Term, a host-terminal package developed for use with the Radio Shack TRS/DOS operating system on the TRS-80 Model 4 microcomputer.

The package includes a host system that works in conjunction with the terminal portion of the package. The terminal is designed to emulate an Applied Digital Data Systems, Inc. Adds-5 terminal.

LS/Host/Term is available for $199.

Logical Systems, P.O. Box 23056, 8970 N. 55th St., Milwaukee, Wis. 53223.

COMPUTER TECHNOLOGY GROUP
Unix courses price changes

Computer Technology Group has changed the rental rates for its Unix video tape training courses. Three training courses are available: Unix Overview consists of six modules and costs $2,100, Unix Fundamentals with 15 modules sells for $5,250 and C Language consists of 16 modules and sells for $5,600.

For the first month, the rental prices for any module have been lowered to 20% of purchase price, the vendor said.

In the second month, the rental cost has been lowered to 15% of purchase price. After the second month, rental prices become 10% of the purchase price, according to Computer Technology.

Computer Technology Group, 310 S. Michigan Ave., Chicago, Ill. 60604.

AGS COMPUTERS, INC.
Smart-C

AGS Computers, Inc. has announced Smart-C, a software development tool for any mainframe, mini or microprocessor that supports a C compiler.

According to the vendor, Smart-C is a full screen intelligent editor for constructing C programs. As a structural editor, Smart-C is said to encourage standardization of software layout and style.

The initial version of Smart-C for the IBM Personal Computer will be available in the second quarter of 1984. Pricing will be between $400 and $500.

AGS Computers, 1135 Spruce Drive, Mountainside, N.J. 07092.

ELITE SOFTWARE
Elite-File

Elite Software has introduced a relational data base manager for the Radio Shack Color Computer.

According to the vendor, Elite-File is an all-machine language that allows users to define their own data record structures. It was written by the author of Elite-Calc, Bruce Cook, and uses the same 6809E microprocessor.

The product is compatible with Elite-Calc and Elite-Word.

The program is available on disk and requires 32K bytes of memory and Disk Basic.

The price is $74.50, plus shipping and handling charges.

Elite Software, Box 11234, Pittsburgh, Pa. 15228.

MICROSOFT, INC.
Word merge facility

Microsoft, Inc. has introduced a form letter (merge) facility for its Word word processing software.

According to the vendor, the facility will allow users to produce custom form letters by merging variable information with a standard letter. It is also possible to merge a primary document with data stored in another document or Ascii file, the vendor said.

An expanded printer driver format offers the facility to support all standard printers, including most dot matrix and daisywheel units.

Available the first quarter of this year, the product sells for $25.

Microsoft, 10700 Northup Way, Bellevue, Wash. 98004.

A.B. DICK CO.
Supercalc2

A.B. Dick Co. has announced Supercalc2, a financial spreadsheet software package for use with its Magna III and Magnawriter information processing systems. The systems use Digital Research, Inc.'s CP/M operating system.

According to A.B. Dick, Sorcim Corp.'s Supercalc2 is an enhanced version of Supercalc. New features include a sort facility to rearrange columns and rows, line-item consolidation of spreadsheets, enhanced display and print formatting.

Supercalc2 costs $295. An upgrade to Supercalc2 costs $125.

A.B. Dick Co., 5700 W. Touhy Ave., Chicago, Ill. 60648.

See MICRO page 88

Your Data Center Doesn't Have to Look Like This!

Use Johnson Systems' APEX!

APEX—Automated Production Control System. APEX is the most comprehensive production planning and workload management system available in today's market. APEX eliminates card handling and reruns due to setup errors, assures correct job sequencing, allows viewing of output before it's printed, and provides immediate up-to-date status of all production processing. Some of APEX's powerful features include . . . Flexible Scheduling • Interactive Job Setup • Automatic Job Submission • Automated Restart/Recovery • Online Output Review • Management Reporting • Single Source of Production Information for IBM 370, 303X, 43XX and all PCM's, MVS, VS1 Environments.

If you're looking for ways to avoid the turmoil in production processing, then put APEX to work for you.

Johnson Systems

8300 Greensboro Drive, McLean, VA. 22102 1-800-368-1019 or (703) 821-1700
NATIONAL OFFICES: Chicago (312) 655-3400 San Francisco (415) 982-4616 Dallas (214) 247-3252

MICRO from page 85

HUNTER & READY, INC.
VRTX C Interface Library

Hunter & Ready, Inc. has introduced the Lattice C Compiler for its VRTX Interface Library for IBM's Personal Computer.

The VRTX C Interface Library reportedly enables programmers using the vendor's VRTX/86 real-time operating kernel to use the compiler to write real-time applications code in C language for any Intel Corp. 8086-based system.

The VRTX C Interface Library is available on 5¼-in. floppy diskettes with documentation for $750.

Hunter & Ready, 445 Sherman Ave., Palo Alto, Calif. 94306.

OMNI COMPUTER SYSTEMS, INC.
Flash-Com

Omni Computer Systems, Inc. has introduced an integrated electronic mail package that operates on the IBM Personal Computer and PCjr, Apple Computer, Inc.'s Apple II, Radio Shack and other microcomputers.

Flash-Com is said to enable users to implement the U.S. Postal Service's electronic computer-originated mail (Ecom) service.

Features include a mailing list management capability. It also features an Ecom accounting and billing analysis capability, menu screens, help messages and a glossary of Ecom.

The product can interface with software packages, such as Micropro International Corp.'s Wordstar; Professional Software, Inc.'s Wordplus-PC; Lifetree Software, Inc.'s Volkswriter; Perfect Software, Inc.'s Perfect Writer; Ashton-Tate's Dbase II; and Lotus Development Corp.'s 1-2-3.

The product retails for $200.

Omni Computer Systems, P.O. Box 162, Chestnut Hill, Mass. 02167.

MASTER COMPUTER SYSTEMS, INC.
Fornix

Master Computer Systems, Inc. has announced a software development tool for the IBM Personal Computer and compatible systems.

According to the vendor, Fornix consists of two related components operating under IBM's PC-DOS and Microsoft, Inc.'s MS-DOS operating systems. One is a runtime executive to manage data traffic between the end user and the application program. The other is a set of interactive screen-forms development tools.

Minimum hardware requirements are 64K bytes of main memory and one disk drive.

The product is available now for a single-license price of $495 for the Basic version. Compiler language interfaces are available for a one-time charge of $495.

Master Computer Systems, 9531 W. 78th St., Eden Prairie, Minn. 55344.

MARK OF THE UNICORN, INC.
PCjr compatibility

Mark of the Unicorn, Inc. recently announced that its entire software product line will now operate on the IBM PCjr.

The vendor's products are The Finalword, a word processing package; PC/Intercomm, a communications program; and Mince, a screen-oriented text editor.

The programs for the PCjr require 128K bytes of memory and one disk drive, according to the vendor.

Prices for the PCjr programs are: The Finalword, $300; PC/Intercomm, $99; and Mince, $175, the vendor said.

Mark of the Unicorn, 222 Third St., Cambridge, Mass. 02142.

DATAMENSION CORP.
Exec on Report Manager

Datamension Corp. has announced the addition of a built-in command language to its Report Manager three-dimensional spreadsheet package for the IBM Personal Computer.

Dubbed Exec, according to a vendor spokesman, the command language uses Basic-like commands and can capture and repeat sequences of keystrokes. Thirteen of Report Manager's built-in features are pre-programmed Exec functions. These front-end applications involve loan payments, future and present value, effective interest, amortization and linear regression, the firm said.

In addition to the Exec functions, the package offers more than 40 pre-programmed functions including logarithms, trigonometric functions, inverse trigonometric functions, exponents, square roots and standard deviation, according to the vendor.

The Report Manager package with the Exec command language is priced at $399 for the IBM Personal Computer with 128K-bytes random-access memory and dual disk drives, the firm said.

Datamension, 615 Academy Drive, Northbrook, Ill. 60062.

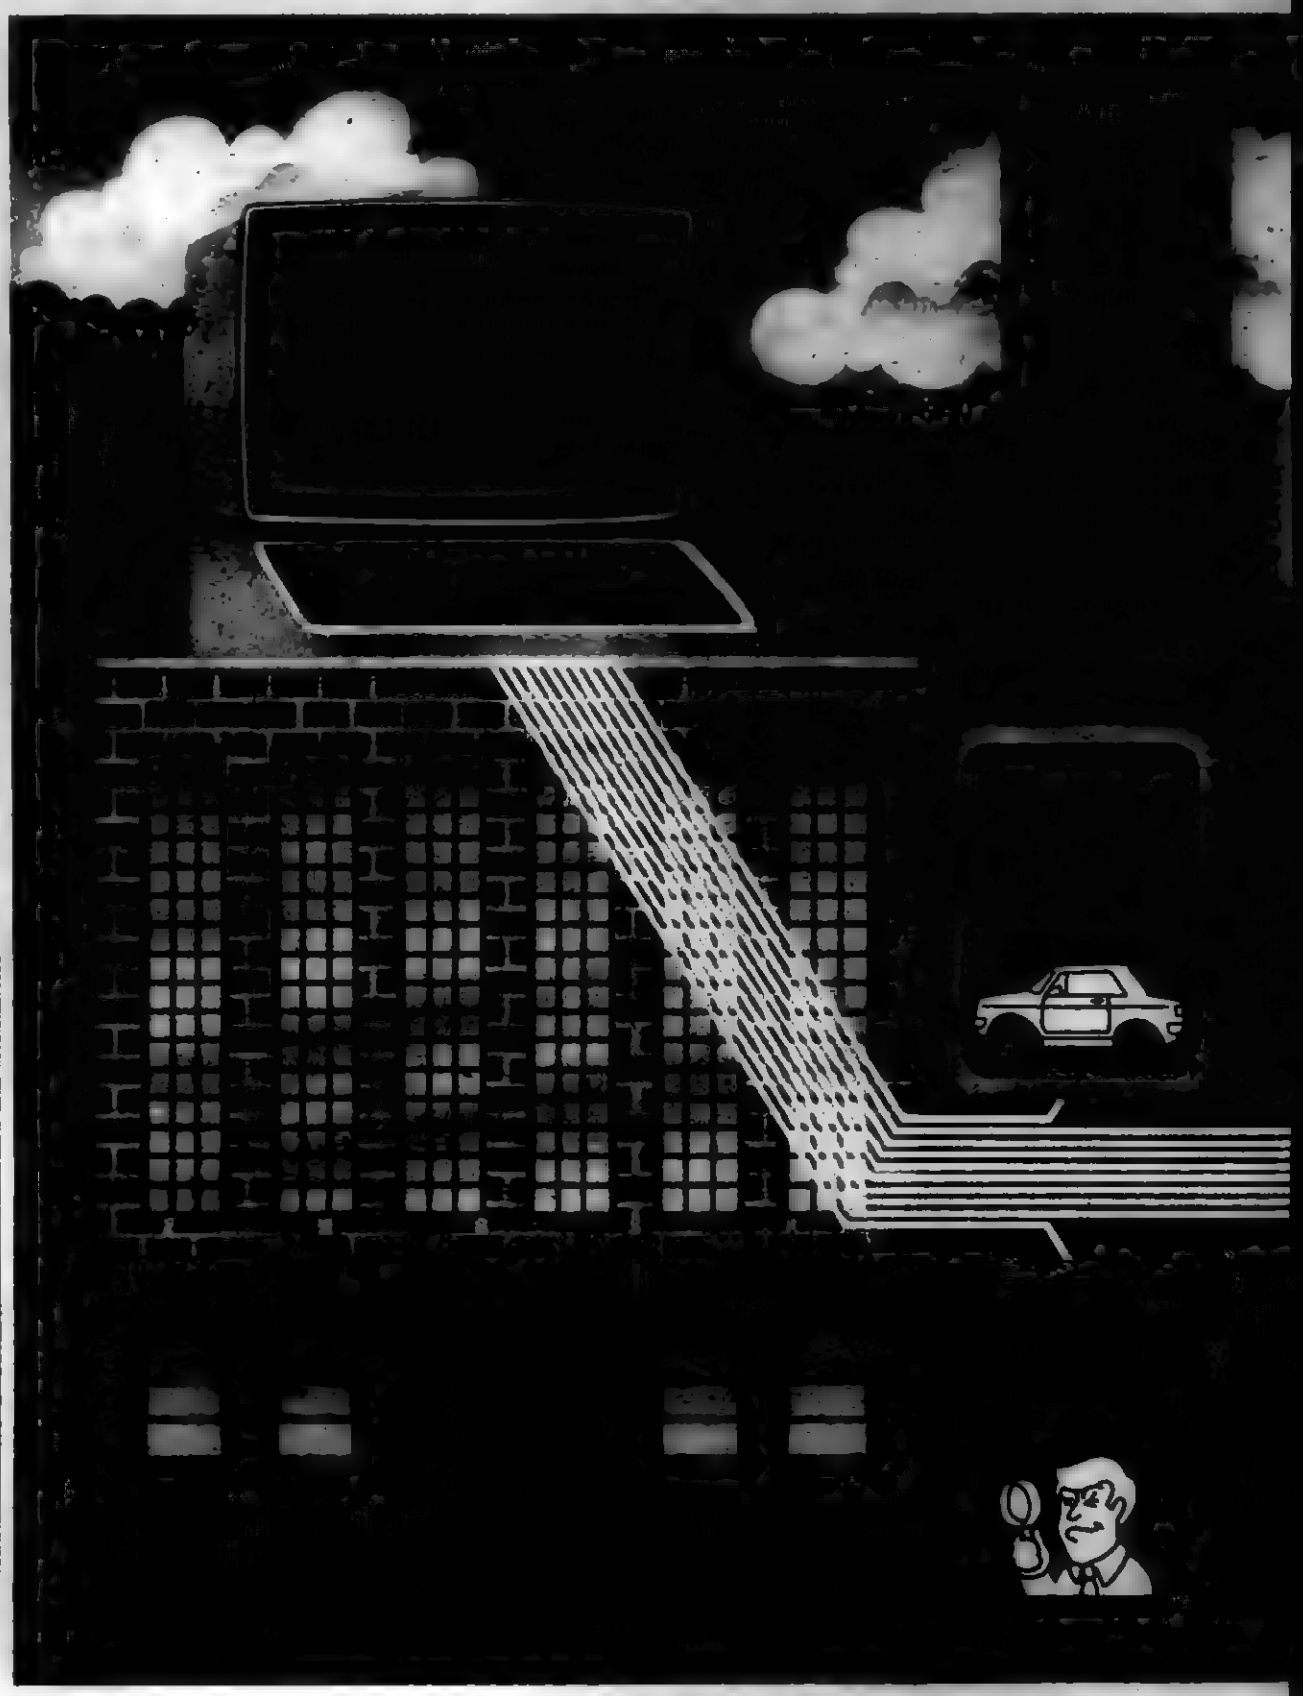
ASSOCIATED TECHNOLOGY CO.
Software Resources

Associated Technology Co. has introduced Software Resources, an artificial intelligence program for the IBM Personal Computer.

The program allows the user to perform "what-if" analysis to determine the effects of various schedules, staffs, programs, documentation, coding techniques and testing conditions, the vendor said.

The program costs $30.

Associated Technology, Rt. 2, Box 448, Estill Springs, Tenn. 37330.



MICROCOMPUTERS

MARTIN MARIETTA DATA SYSTEMS, INC.
Writit

Martin Marietta Data Systems, Inc. has announced a word processing package for IBM microcomputers.

Writit is a private-label version of Softword Systems, Inc.'s Multimate package, Martin Marietta said.

Writit reportedly provides keyboard procedures for insertions, deletions, cursor movement and block manipulation.

The package reportedly allows the user to type Ascii characters into documents for special printer commands and features a 80,000-word spelling checker.

Writit costs $500.

Martin Marietta Data Systems, P.O. Box 8282, Princeton, N.J. 08540.

STRATEGIC SOFTWARE SYSTEMS, INC.
Bottomline-V

Strategic Software Systems, Inc. has announced a corporate financial planning applications system for a variety of microcomputers.

Bottomline-V reportedly allows the user to input basic data variables into a 12-month budget. It then produces five-year pro forma profit and loss, balance sheets, changes in financial position and financial ratio analysis.

The system was designed to run on the IBM Personal Computer and Personal Computer XT, Digital Equipment Corp.'s Rainbow and Kaypro Corp., Apple Computer, Inc. and other microcomputers using Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems.

The suggested retail price is $295.

Strategic Software Systems, Suite 300, 1900 Dove St., Newport Beach, Calif. 92660.

HEWLETT-PACKARD CO.
PFS library; Personal Business Calculator

Hewlett-Packard Co. has announced that the Personal Filing System (PFS) software library from Software Publishing Corp. and HP's Personal Business Calculator package will be added to the software library for the HP 150 touchscreen microcomputer.

The PFS software family includes PFS:File, PFS:Report, PFS:Write and PFS:Graph. PFS:File and PFS:Report will be available for the HP 150 in the first quarter of 1984, while PFS:Write and PFS:Graph will be available in the second quarter.

The Personal Business Calculator is said to provide the functions of an HP-12C calculator on the HP 150. Users can touch the numbers and functions on a screen that resembles the HP-12C to make calculations. The PFS library for the HP 150 is priced at $295. The Personal Business Calculator package is priced at $75 and is available immediately.

HP, 3000 Hanover St., Palo Alto, Calif. 94304.

INSOURCE CORP.
Prestel Terminal Emulation diskettes

Insource Corp. has introduced its videotex family of Prestel Terminal Emulation communication diskettes for the IBM Personal Computer, Apple Computer, Inc. micros and Commodore Business Machines, Inc. Commodore 64.

According to the vendor, the full-color videotex software features an automatic dialing technique and a stored account number and password that allows for simplified login at 300 or 1,200 bit/sec to Insource or any other videotex system operator using Prestel.

The videotex software sells for $199.

Insource, 110 Heritage Sq., 4525 LBJ Freeway, Dallas, Texas 75234.

IDEAWARE, INC.
Grafix Idea

Ideaware, Inc. has introduced the Grafix Idea, a system of three software packages that allows business users to use IBM Personal Computers and compatible microcomputers to act as slide or overhead projectors.

According to the vendor, the slide shows can contain not only graphics images, but also images of text screens such as spreadsheets.

In addition to labeling and titling capabilities, the sketch pad can draw illustrations and flowcharts, with numerous choices of background color, text size and orientation on the screen.

The suggested retail price for the package is $79.95.

Ideaware, Suite 712, 225 Lafayette St., New York, N.Y. 10012.

TERRAPIN, INC.
Logo Version 2.0

Terrapin, Inc. has introduced Version 2.0 of its Logo language for the Apple Computer, Inc. Apple II, II+ and IIe.

Enhancements over the current Version 1.3 include improved "garbage collection" capabilities, support for all four cursor keys on the IIe and the ability to read program files created under Logo.

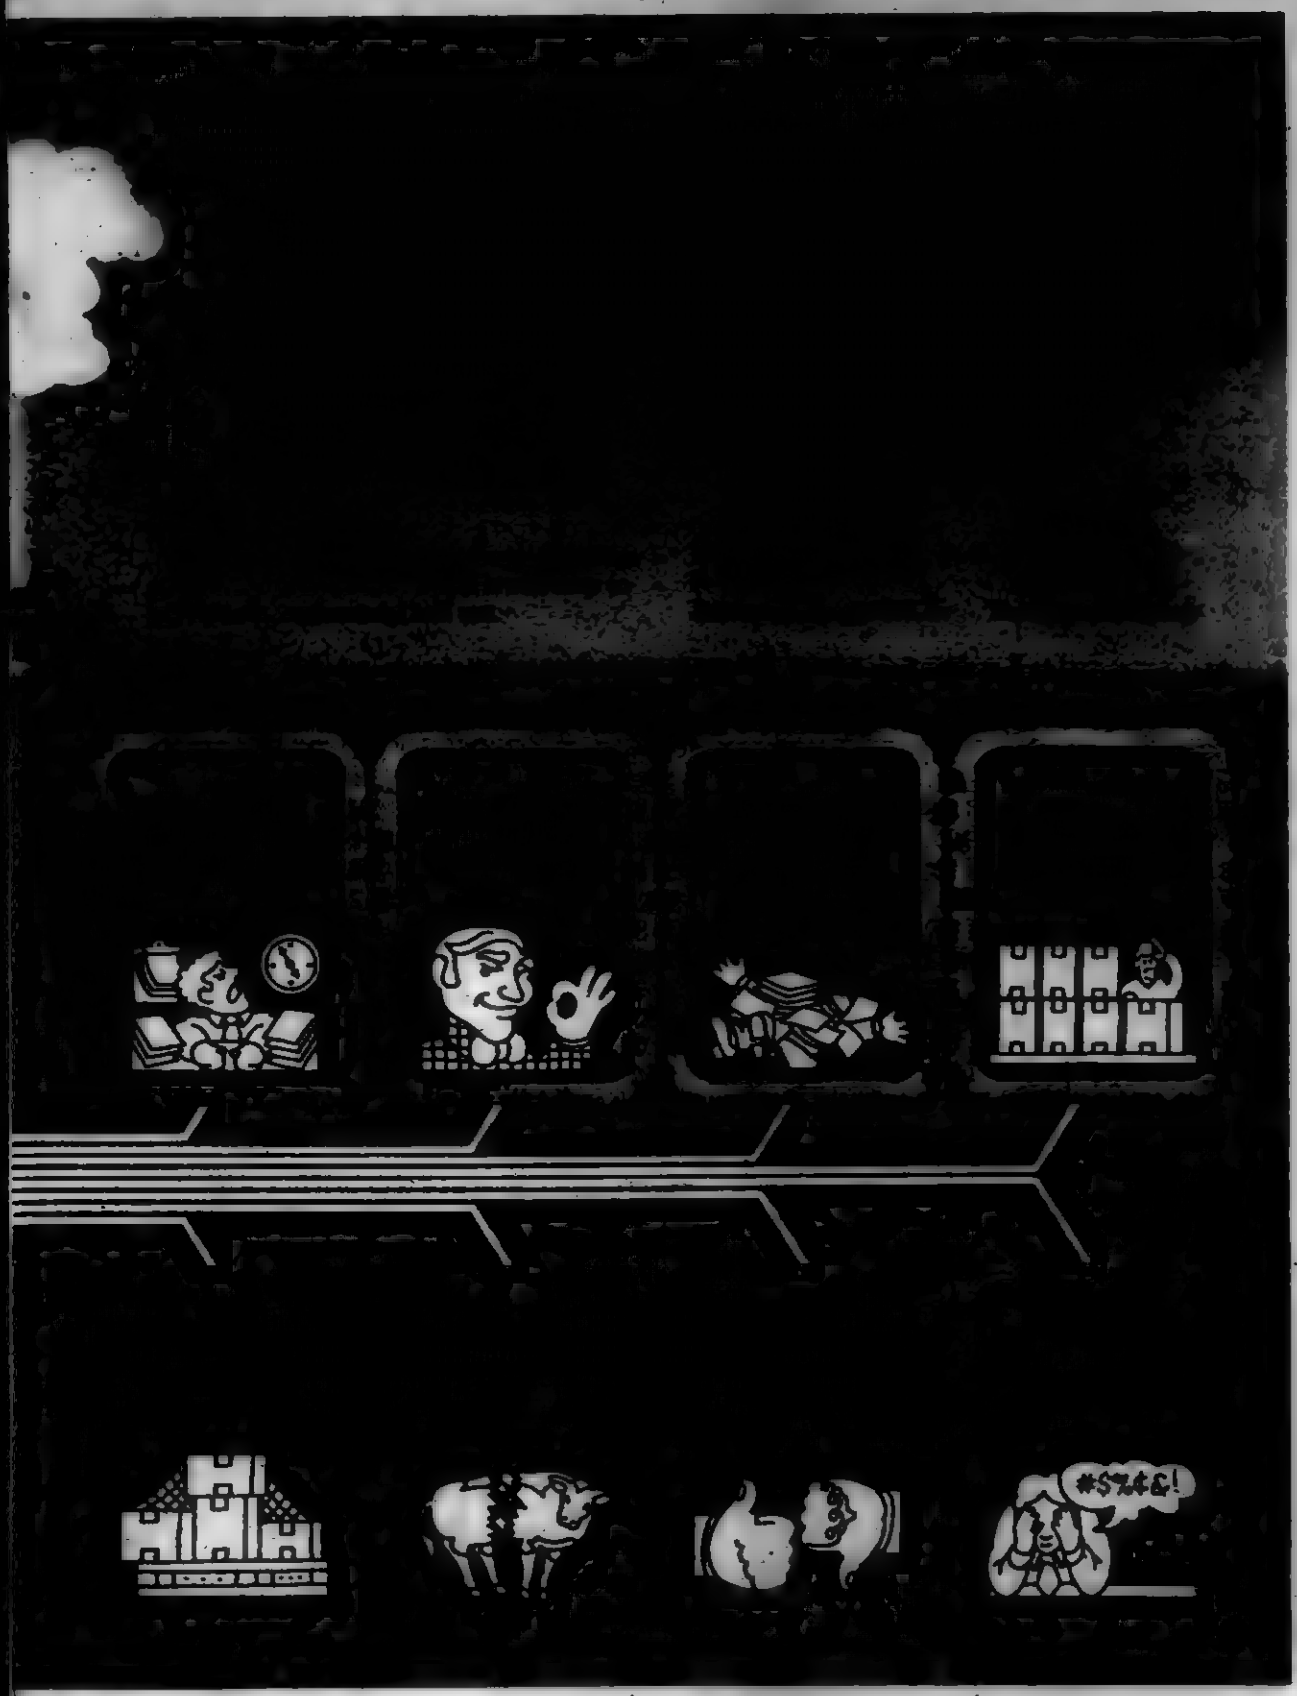
Terrapin has also announced enhanced documentation with a "Words and Lists" chapter in the Logo manual, including recursion, interactive graphics, quizzes, word games and artificial intelligence programming.

The price for the Logo package is $149.95. The "Words and Lists" chapter is priced at $12.50.

Owners of Version 1.3 may update to Version 2.0 for $20 and obtain the "Words and Lists" chapter for $5, the vendor said.

Terrapin, 380 Green St., Cambridge, Mass. 02139.

See MICRO page 38



MICROCOMPUTERS

MICRO from page 87

OPUS CORP.
WS250

Opus Corp. has introduced a workstation emulator that allows an IBM Personal Computer or Personal Computer XT to act as a Hewlett-Packard Co. HP 250.

The WS250 features screen-labeled soft keys and emulation of HP forms and video enhancements. Also included is an Ascii and Ansi mode for autodial modem control, local printer support and logging and sending data to disk files.

The single-quantity price of the WS250 is $500.

Opus, 20251 Century Blvd., Germantown, Md. 20874.

COMPUVIEW PRODUCTS, INC.
Vgraph

Compuview Products, Inc. has introduced Vgraph, a package that is designed for industrial and engineering sites as well as for computer-aided design and manufacturing installations.

According to the vendor, Vgraph emulates a Tektronix, Inc. 4010 graphics display terminal.

It supports the Zenith Data Systems Corp. Z100 and Victor Technologies, Inc. Victor 9000 microcomputers, the vendor said.

The Vgraph disk and manual are priced at $120, according to the vendor.

Compuview Products, Suite 300, 1955 Pauline Blvd., Ann Arbor, Mich. 48103.

ASSOCIATED TECHNOLOGY, INC.
Software Resources

Associated Technology, Inc. has introduced Software Resources, a package that computes optimum resource levels for development projects on IBM Personal Computers or compatible microcomputers.

According to the vendor, the software manager can perform "what-if" studies to determine varying schedule lengths, staff levels, peak staffing, program size, documentation, coding environments, testing environments and 12 other development parameters.

The tool can provide project optimization for software projects requiring 10 to 5,000 man-months of effort, the company said.

The system is described in a user manual that costs $30. The program and manual are available for $175.

Associated Technology, Rt. 2, Box 448, Estill Springs, Tenn. 37330.

MICROTEC RESEARCH, INC.
Paragon enhancement

Microtec Research, Inc. has announced that its line of Paragon cross-assembler systems for microprocessor developers is now available for use on the IBM Personal Computer.

According to the vendor, each assembler includes a library and download utilities. It contains a macro facility, conditional assembly options, list-control operators and cross-reference listing.

Assembler systems are available for most 8-bit and 16-bit microprocessors.

The products require IBM's PC-DOS or Microsoft, Inc.'s MS-DOS Release 1.1 or 2.0 with 128K bytes of random-access memory.

Individual CPU license prices are $600 for 8-bit processors and $900 for 16-bit processors.

Microtec Research, No. 525, 505 W. Olive, Sunnyvale, Calif. 94086.

MONUMENT COMPUTER SERVICE
Report Writer Jr.

Monument Computer Service has introduced Report Writer Jr., a word processing package for the IBM PCjr.

According to the vendor, the program was designed for those who wish to use a PCjr away from the office and later transfer the data directly to an IBM Personal Computer. The program is compatible with many word processor programs and can be used with standard IBM PC-DOS-oriented spelling check programs, the company said.

The Report Writer Jr. requires an IBM PCjr with 128K bytes of memory and a single disk drive. Both IBM graphics and thermal printers can be used with the system, but are not required.

The price of Report Writer Jr. is $80.

Monument Computer Service, P.O. Box 603, Joshua Tree, Calif. 92252.

SOFTWARE SOLUTIONS, INC.
Dataease Version 2

Software Solutions, Inc. has introduced Version 2 of its Dataease relational data base management system for the IBM Personal Computer using IBM's PC-DOS Release 2.0 operating system.

According to the vendor, the product can be menu-driven for novices or worked in the program's expert mode.

It allows the user to obtain information from a large number of files and derive data fields based on information in other fields. It can be used to interpret and manipulate large data bases, the company said.

The product was originally designed for use with Microsoft, Inc.'s MS-DOS Release 2.0 operating system and is also available for Digital Equipment Corp.'s Rainbow, Wang Laboratories, Inc.'s Professional and Texas Instruments, Inc.'s Professional microcomputers. The package costs $595, the vendor said.

Software Solutions, 305 Bic Drive, Milford, Conn. 06460.

SALVO Shatters The Information Barrier!

At last. Create your own applications in a fraction of the time compared to BASIC, COBOL or *any* data base language. You know exactly what you want. Now, let your personal computer generate that information by using SALVO, the fourth generation information manager from Software Automation, Inc. It's Better. Faster. And Easier to use.

Natural Language Interpreter. Unique to SALVO, this allows you to enter the following type command, "List my customers and their orders." Watch as SALVO generates the application. *It truly shatters the information barrier.* In minutes you get what you want, the way you want it. Inventory, Accounting, Mailing Lists, Sales Reports and more.

Fourth Generation Language. SALVO is a powerful nonprogrammer's language combined with a true relational DBMS. This method increases your productivity 10 to 20 times normal! People in all professions can benefit from SALVO. Regardless of their level of expertise.

Applications Development Package. SALVO is a complete tool for information management. Develop your own applications. Maintain your data base. Retrieve information using natural language. All of these functions can be performed *by nonprogrammers.* SALVO is also a complete application generator for advanced users and professional programmers. SALVO's secret is simple. Technological innovations including artificial intelligence (expert systems, natural language processors) combined with relational data structures.

SALVO runs on most personal computers. Compatible with MS-DOS, PC-DOS and CP/M. SALVO requires only 64K memory. SALVO is available at your local computer store or you may contact us for information on how to get your own personal preview copy.

WINDOW from page 60

while a data base sort is completed."

The number of windows offered by various packages typically runs from four to seven. But how many can the user use at one time?

"Most of our users monitor two or three windows concurrently," Gysin said.

"We found that a person has trouble monitoring more than two or three functions," said Joseph Brophy, senior vice-president of data processing at Travelers Insurance Co. in Hartford, Conn.

Users who try to monitor six or seven windows often find their productivity deteriorating rather than improving. "There has to be a point where too many windows detracts from its usefulness," Gysin said.

While it is fairly easy to share data among windowed microcomputer programs, when mainframe data is incorporated into the windowing process, the task becomes more complicated. Only one of the current windowing software offerings, the one used in IBM's 3270 Personal Computer, offers windows that directly access mainframe data.

"With the 3270 Personal Computer, a user can access mainframe data, but it is not easy to use that data with Lotus Development Corp.'s Lotus 1-2-3 or other microcomputer applications," said Ron Goldfarb, manager for office automation at Pratt & Whitney Aircraft Co., based in Hartford. A complicated cut-and-paste procedure is needed to use mainframe data with a microcomputer application, he added.

"While these products are designed for professional managers, I am not sure they spend enough time with a personal computer to benefit from windowing capabilities," Antonellis said.

Managers may not like other windowing features. Many windowing applications use icons to represent functions. For example, a picture of a notepad might be used to represent a buffer. "Icons are useful for some users," Gysin said. "Other users may find them insulting.

"Windowing will prove to be viable for some applications," he said. "Currently, it is the focus of almost every manufacturer's and independent software vendor's development. As other technologies mature, this trend will taper off, but windowing will not disappear."

PIRACY from page 60

of software for microcomputers. Some questions, such as whether software can be rented or loaned (in the case of libraries) will probably have to be settled in court unless Congress is willing to bite the bullet and come up with a legislative solution.

In order to inhibit unauthorized copying, software houses are using various techniques to copy-protect their programs. This approach to the problem is particularly annoying when attempting to produce an integrated set of software in an organizational environment. It obviously becomes difficult, or impossible, to integrate various programs with menu or windowing systems. This problem is subject to market pressures, however. If consumers, whether individual or corporate, will refrain, as a matter of policy, from buying copy-protected software, software houses will soon see the error of their ways.

After all is said and done, software piracy may not be as significant as some software houses would lead us to believe. It is a problem because of the moral and ethical implications involved (although these are neither neat nor clean). But in attempting to deal with the issue, we should beware of oversimplifying the problem and dealing with it in inappropriate ways.

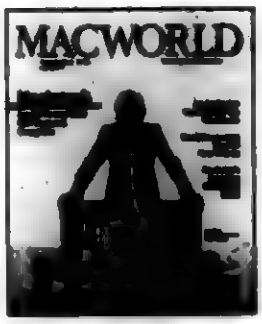
Finally, software houses must meet the challenge of the software needs of large organizations. Such organizations are often willing to pay a substantial fee for a site license if one is available. And quantity or educational discounts probably do not serve the same purpose as site licenses. When dealing with large organizations, software houses must come up with creative marketing techniques. The alternative is for those organizations, as policy, to buy only software from manufacturers which have such policies, or in the worst case, for individuals within such organizations to obtain unauthorized copies of the software in the mistaken belief that they are saving the organization money.

Madron is manager of Computer Services at North Texas State University, Denton, Texas.

Introducing

MACWORLD

The Macintosh Magazine



The Exciting New Magazine for the World's Most Creative Personal Computer—*the Macintosh*

At Special Charter Subscriber Rates
Save Up to 54% Off the Newsstand Price*
(*when you subscribe for 3 years)

Personal computing took a giant leap into the future when Apple introduced the Macintosh. We've created *Macworld* as your passport into this incredible new realm of computing. Each issue we'll bring you everything you need to explore and get the most out of your Macintosh. From the latest product news to innovative business applications, from amazing graphics to personal productivity tools and games, each issue of *Macworld* will be packed with interesting, practical, readable information written by skilled, perceptive writers.

Each month we'll be creating a *Macworld* community, sharing ideas, problems, and creative solutions while we explore the world of Macintosh together.

So why take a chance on missing a single exciting issue? For a limited time only you can subscribe to *Macworld* at special Charter Subscriber rates of only

$24 for 1 year (12 issues)
That's a savings of 20% off the regular $30 subscription rate and 50% off the newsstand price!

And you can save even more by subscribing for 2 or 3 years at Special Charter Rates. Don't Wait...Subscribe Today and Save! Call Toll-Free 800/247-5470 (In Iowa 800/532-1272)

MICRO from page 86

INTEL CORP.
K286

Intel Corp. has announced a general-purpose operating system kernel for its supermicrocomputer, the IAPX 286.

Dubbed the K286, the kernel reportedly gives operating system designers an interface to all the architectural features of the IAPX 286, such as multitasking capabilities, memory management and protection and 1G byte of virtual memory.

The K286 was reportedly designed for real-time industrial automation systems, communications systems such as automated private branch exchanges and business systems.

The product will be ready for release in July. It costs $27,000 for a one-time license fee, including one year of factory support.

Intel, 3065 Bowers Ave., Santa Clara, Calif. 95051.

COMPUTER INDUSTRY

Lotus: Expected to hit No. 2 spot

OUTSIDE LINES

PETER BARTOLIK

With the scheduled announcement last week of the successor to 1-2-3, Lotus Development Corp. has enhanced its formidable market position and is projected to ride success to No. Two on the ladder of top software companies. That's No. Two among all software companies, not just vendors of micro products.

The investment firm of L.F. Rothschild, Unterberg, Towbin recently predicted that Lotus in 1984 will bring in revenues of $165.7 million, topping Cullinet Software, Inc. and Microsoft, Inc. and coming up just short of Management Science America, Inc.

Without a doubt, Lotus is the prime example of how the marketplace establishes a standard and the potential riches that can come to those who successfully ride the dynamics of the exploding microcomputer market.

The company raised $1 million in financing in early 1982 and introduced its product in October of the same year, actually shipping the product in January of last year. Less than two weeks ago, Lotus released its annual report showing profits of $14.3 million on revenues of $53 million.

Keys to success

The keys to success were: a solid, state-of-the-art package beating anything then in the field, reliability, canny marketing, timely delivery and solid management.

With IBM expected to ship in excess of two million micros in 1984, and IBM-compatibles adding another solid contribution, plus the potential of Apple Computer, Inc.'s Macintosh, Lotus is in fine shape and serves as a mentor to many other would-be overnight success stories.

There will be problems, however, for the new entrepreneurs.

Foremost, where Lotus established a standard by shipping 90,000 packages in

Bank software firms see red

Data base task too complex?

By Paul Kozaniecki
CW Staff

For some application software developers, the road leading to the kingdom of on-line, integrated, central data base systems is scarred with huge potholes.

One case in point is Anacomp, Inc., the Indianapolis-based company that is developing the Continuous Integrated System (CIS), an on-line, data base system for banks. The month of January represented the company's high and low points; in the space of that month, it delivered both a pilot version of CIS to the Provident National Bank in Philadelphia and defaulted on a $45 million lending agreement with five banks.

The default was attributed to CIS cost overruns and missed deadlines by Anacomp, which expects to report quarterly losses through the first nine months of 1984. Provident National Bank officials refuse to comment on the pilot project.

But Anacomp's problems are hardly unique. Other vendors have also missed delivery dates, raised prices and rewritten specs during the development of their data base systems.

Insurance Service of America, Inc. (ISA), for example, attempted to develop an on-line data base system for commercial insurance policies. After cost overruns and missed deadlines and before the project's completion, the system was sold to Advanced Technology, Inc., a division of Maryland Casualty Co.

A promise of the '70s

The desire for large on-line data base systems emerged in the mid-1970s. The systems promised to make complete, up-to-the-minute customer information instantly available. "The customer wants one statement with checking, Visa and mortgage information," said William Conklin, an independent consultant in Boston.

Major data processing shops, among them those in financial institutions, began looking at these systems. "A company must develop this type of system to keep pace with its competitors," said Ronald G. Ross, editor of "Data Base News," a Marblehead, Mass., publication. "Any com-

Six indicted in alleged Apple scam

By Patricia Keefe
CW Staff

PHILADELPHIA — A federal grand jury here recently returned two separate indictments against six individuals and five companies, charging them with criminal conspiracy and smuggling of computer parts into the U.S. from Taiwan. Those parts are alleged to be counterfeit Apple Computer, Inc. Apple II components.

Information from the year-long Philadelphia investigation was funneled through U.S. Customs' Operation Tripwire, resulting in seizures of smuggled, allegedly counterfeit Apple computers in New England, San Francisco and Los Angeles, according to David E. Warren, special agent-in-charge of U.S. Customs Service here.

Operation Tripwire seeks to stop the importation of foreign-manufactured goods that infringe upon U.S. copyrights and trademarks. Warren explained that Customs believes there is a link between these operations, and that it is possible several of the six indicted here may be ring leaders.

The indictments marked "the first time a case has been brought for a customs violation [smuggling] in connection with the importation of computers that are copies of computers manufactured in the U.S.," according to the U.S. District Attorney's office here. (Although U.S. Customs officials raided three California companies last month, netting 1,000 Apple II look-alikes, no charges have been filed as yet.)

Although "there can be no doubt" that the Philadelphia defendants were importing counterfeit Apple II components, the U.S. District Attorney's office here does

Instant Cure for Computer Indigestion

John Beall & Company, Inc.

MSA division to distribute micro software

By Jeffry Beeler
CW West Coast Bureau

LOS ANGELES — Management Science America, Inc. (MSA) has opened an additional sales division in a move designed to aid information systems directors in stemming the spread of incompatible microcomputer programs within large corporations.

MSA's Micro Distribution Division (MDD) will serve as an additional sales arm both for the company's own Peachtree Software, Inc. subsidiary and for many rival publishers of microcomputer applications as well, the company said.

MDD, headquartered here, will evaluate a host of programs representing each of the major generic categories of commercial personal computer applications — spreadsheets, word processing, graphics, communications, accounting, data base management, project scheduling and windowing. The ultimate aim of the exercise is to identify the top three or four big-business-oriented packages in each category, according to the company's senior vice-president, Howard Smith Jr.

Although at least a few of the chosen applications will undoubtedly bear Peachtree's label, the majority will be supplied by other vendors, Smith said. All the packages, however, will be required to run on IBM or IBM-compatible personal computers.

Once a particular product has won MSA's final approval, MDD will buy and warehouse multiple copies of the program. Through its own independent sales staff, the division will then approach large corporations throughout the U.S., offer to analyze their total systems environments and supply the right combination of micro software packages to meet their individual needs.

To take advantage of MDD's services, however, clients will have to commit to buying at least $100,000 worth of personal computer applications per year. "Companies that spend less than that amount for microcomputer software will probably continue to buy through traditional sources like retail stores," Smith said.

In addition to selling a wide variety of personal computer packages, the division will serve as a liaison between its customers and its cooperating publishers' support staffs. MSA is thus striving to offer big business a much needed single source, not only for all its microcomputer software, but also for all its maintenance and user training, Smith said.

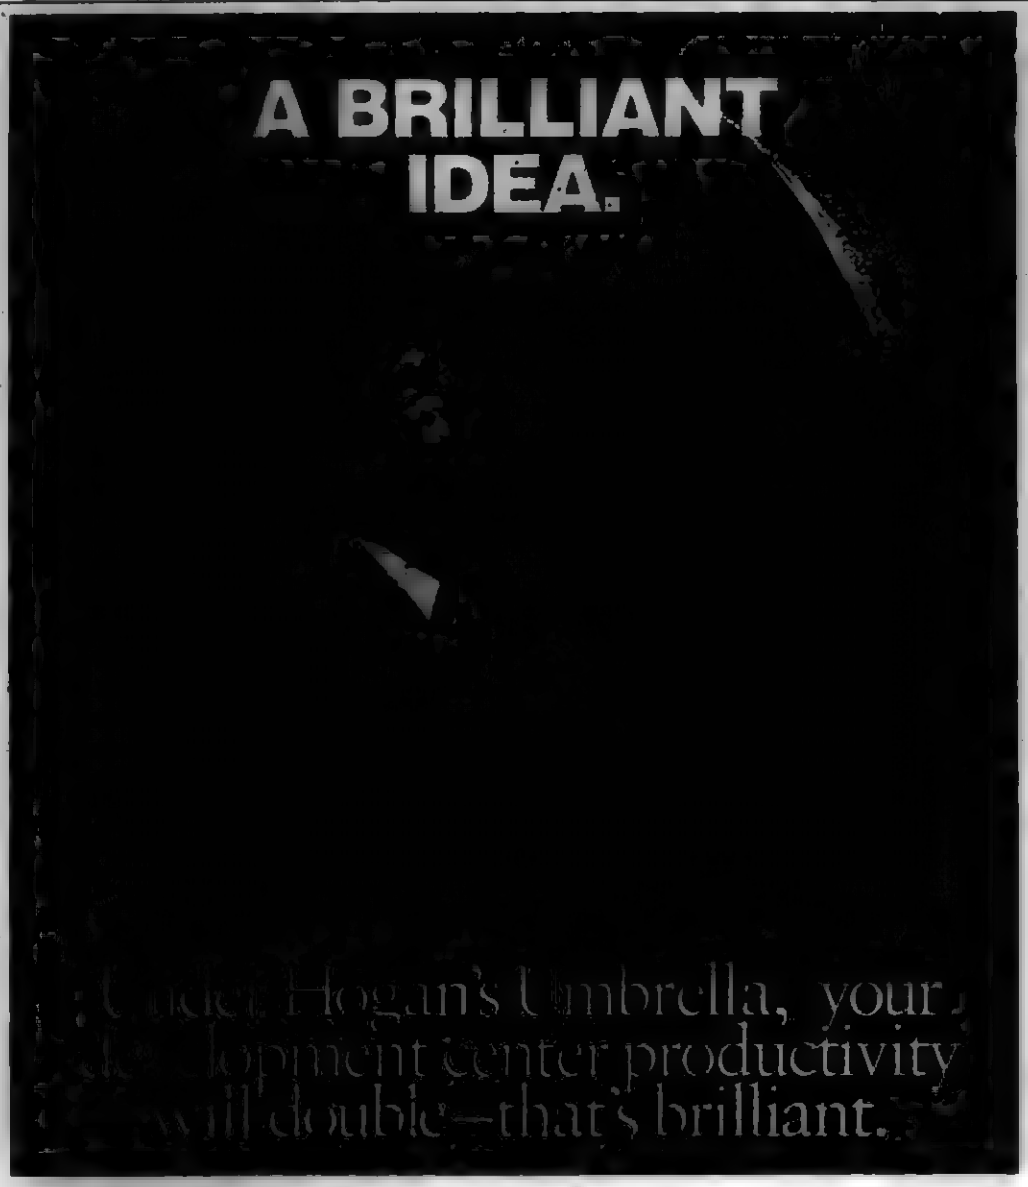
Single sourcing, in turn, will enable MIS managers to control tightly their companies' software purchases, avoid the installation of incompatible systems and, therefore, promote the adoption of effective personal computer standards, he added.

MDD will also provide large corporate accounts with several other software-related services, including:

- Pricing discounts typically ranging from 15% to 30%.
- A series of nationwide, quarterly forums that will give customers an opportunity to discuss their personal computer applications needs with many of the industry's leading program publishers.
- An IBM Personal Computer-compatible add-on board with a prerecorded tutorial and a voice-synthesis unit that together will teach microcomputer operators how to use each MDD-supported application.

Formation of MSA's latest division follows the completion of a recent survey in which MSA sought to analyze the microcomputer installations and needs of the 2,000 largest corporations in the U.S. The study reportedly uncovered a widespread dissatisfaction with traditional methods of acquiring microcomputer software.

"Many big companies still buy most of their microcomputer programs through their local computer stores, but they're not entirely pleased with that arrangement," Smith said. "They dislike having to deal separately with five or six different vendors and would much rather get all their software, service and support from the same source."



Under Hogan's Umbrella, your development center productivity will double—that's brilliant.

Imagine. A fully integrated development center system capable of upgrading and increasing output throughout the life cycle of both major and minor on-line and batch applications.

This completely automated approach to interactive development was critical in the development of our own highly successful line of applications software. That included design, management, programming, implementation, and maintenance of both on-line and batch applications. The Umbrella weathered well.

So well, in fact, users tell us that, "we beat our estimates by 50% on our very first major on-line application and that included our education time on the Umbrella."

There's a lot more the Hogan Umbrella can do. Just ask any Umbrella user...various combinations of DOS, VS, MVS, IMS, VSAM, CICS, IDMS. And ask Ed Lomax, Vice President, at (214) 386-0820. Make a brilliant decision today.

Send me more information on your UMBRELLA System.

Harris strategy to target Lanier

MELBOURNE, Fla. — Harris Corp. announced recently that its strategy in the word processing market will focus on the products of its recently acquired subsidiary, Lanier Business Products, Inc., and that Lanier's One-Step software package will be the companywide word processing standard for all Harris information systems.

Harris will also present its Harrisnet local-area network architecture as the standard networking architecture for all Harris and Lanier information system products. That architecture, according to the company, will be applied first to the Lanier

Semi bookings for U.S. mart forecast to slip

By Robert Stitt
CW West Coast Bureau

NEWPORT BEACH, Calif. — After reaching record levels in the fourth quarter of 1983, semiconductor bookings for the U.S. market will decline by 12% in the first three months of this year, according to In-Stat, Inc.

In a report presented to the Seventh Annual Information Services Seminar, sponsored by the Semiconductor Equipment and Materials Institute, Inc., In-Stat said bookings for the U.S. market will decline from a total of $8.1 billion in the fourth quarter to $7.7 billion in the current quarter.

Addressing the seminar, Jack Beedle, president of the Scottsdale, Ariz.-based market research firm, said the "splurge" in the last three months of '83 witnessed many manufacturers becoming increasingly gun-shy about product shortages, placing annual purchase orders in an effort to ensure sufficient products to meet rapidly increasing sales forecasts for 1984.

Semi bookings jump

December semiconductor bookings, he claimed, leaped by $1.90 million over November levels to $3.1 billion, while sales moved up to $4680 million.

While there will be a relative downturn in the first quarter of 1984, Beedle predicted that semiconductor bookings will still increase by 20% for the year, after increasing 68% in 1983.

He said a smaller book-to-bill ratio this year will allow both suppliers and end users to schedule products more effectively.

At a press conference following the seminar, Beedle claimed 1984 should be a strong year for U.S. semiconductor manufacturers as compared with their Japanese counterparts.

"The Japanese manufacturers have serious problems at the moment...They are hard pressed to supply their own clients due to the vertically integrated nature of their organizations and because of the tremendous amount of Japanese chip manufacturers that are trying to enter the lucrative computer industry," he claimed.

More good news

Citing more good news for U.S. vendors, Beedle asserted that domestic suppliers are now mounting a viable challenge to Japanese dominance in the 64K-byte dynamic random-access memory (RAM) market. A prime example, according to Beedle, is Mostek Corp., which "came from nowhere to become the world's third-largest manufacturer of 64K dynamic RAMs."

Remarking on the state of the industry, James Webster, director of product program management at IBM's General Technology Division, said the biggest single force in improving price/performance in the computer industry is the march of technology.

That IBM has been able to make price/performance improvements in the region of 20% a year is due almost entirely to the fact that semiconductor technology is growing at an even faster rate than the DP industry itself, he asserted.

But Dan Ross, president of the Los Altos, Calif.-based consulting firm Ross Associates, Inc., told attendees at the post-seminar press conference that a string of recent economic indicators heralds the possibility of a downturn in the economy at a time of record bookings for chip manufacturers.

The expectations of spectacular growth in the industry during the next four years may therefore turn out to be premature, according to Ross.

HARRIS from page 94

5000 series and a new family of Harris distributed data processing systems and later to Harris superminicomputers, interactive and remote job-entry terminals as well as to a new generation of integrated voice and data private branch exchange products.

John T. Hartley, president of Harris, said the company has refined its market focus to take advantage of Lanier's installed base of 55,000 stand-alone word processing units and will concentrate on the recently released Lanier Business Processor 1000 and the Business System 5000 clustered network as its building blocks in the word processing market.

Harris also announced its Distributed Office Systems Division will be separated into its original two components: the Harris Distributed Products Division, to be headquartered in Dallas and managed by J. Whitney Haney, who was previously responsible for the Distributed Office Systems Division; and the Word Processing Division, based here under Lanier Business Products and reporting to William J. Kelly, vice-president of research and development for Lanier.

CUT YOUR COBOL TEST AND DEBUG TIME... AND YOUR COST!

XPF/COBOL is the first full-screen, interactive, SPF-like debugging tool on the market. It delivers a complete window into COBOL programs.

XPF/COBOL enables the user to:
- Watch the programs execute—forward or backward.
- Find and change COBOL data in COBOL format.
- Debug MS programs.

XPF/COBOL:
- Slashes test and debug time.
- Increases programmer productivity.

'Visicalc' lawsuits proliferate

BOSTON — Lawsuits between Software Arts Products Corp. in Wellesley, Mass., and Visicorp in San Jose, Calif., have proliferated in recent weeks, as a long-standing disagreement between the two firms has heated up.

On Feb. 10, Visicorp was denied a temporary restraining order that would have prevented Software Arts from using the trademarks "Visi," "Visicalc" and "Visicalc Advanced Version."

Visicorp's suit was filed in response to an answer and counterclaims filed by Software Arts on Feb. 7. This answer amended a countersuit Software Arts filed here last fall and charged Visicorp with breach of contract, while seeking to terminate an agreement that allows Visicorp to market Visicalc.

The agreement, signed in 1979, allowed Visicorp to market Visicalc, a spreadsheet program developed by Software Arts. In 1979, the program ran only on Apple Computer, Inc.'s Apple II microcomputer. Under the agreement, Software Arts was responsible for enhancing Visicalc and tailoring it to other microcomputers.

Last September, Visicorp filed suit in a California court claiming that Software Arts was late delivering new versions of Visicalc for a number of microcomputers, including the IBM Personal Computer. Visicorp accused Software Arts of using money earmarked for Visicalc enhancements to develop TKSolver, an equation processor.

Software Arts denied the charges and countersued Visicorp for nonpayment of royalties, not promoting Visicalc to the best of its ability and developing Visioncalc, which runs under Visicorp's Visi-On. Software Arts claimed that Visioncalc is an enhanced Visicalc — so Visicorp should have offered Software Arts the opportunity to develop the program — and that Visicorp should pay Software Arts royalties for the product. However, Visicorp claimed that the product was developed from scratch.

Software Arts has indicated that it plans to market Visicalc with its own trademark. "One of the bylaws in the 1979 agreement states that if a breach of contract occurs, the Visicalc trademark reverts to Software Arts," said Thomas Moffei, a lawyer for the Boston firm of Choate, Hall & Stewart, which is representing Software Arts.

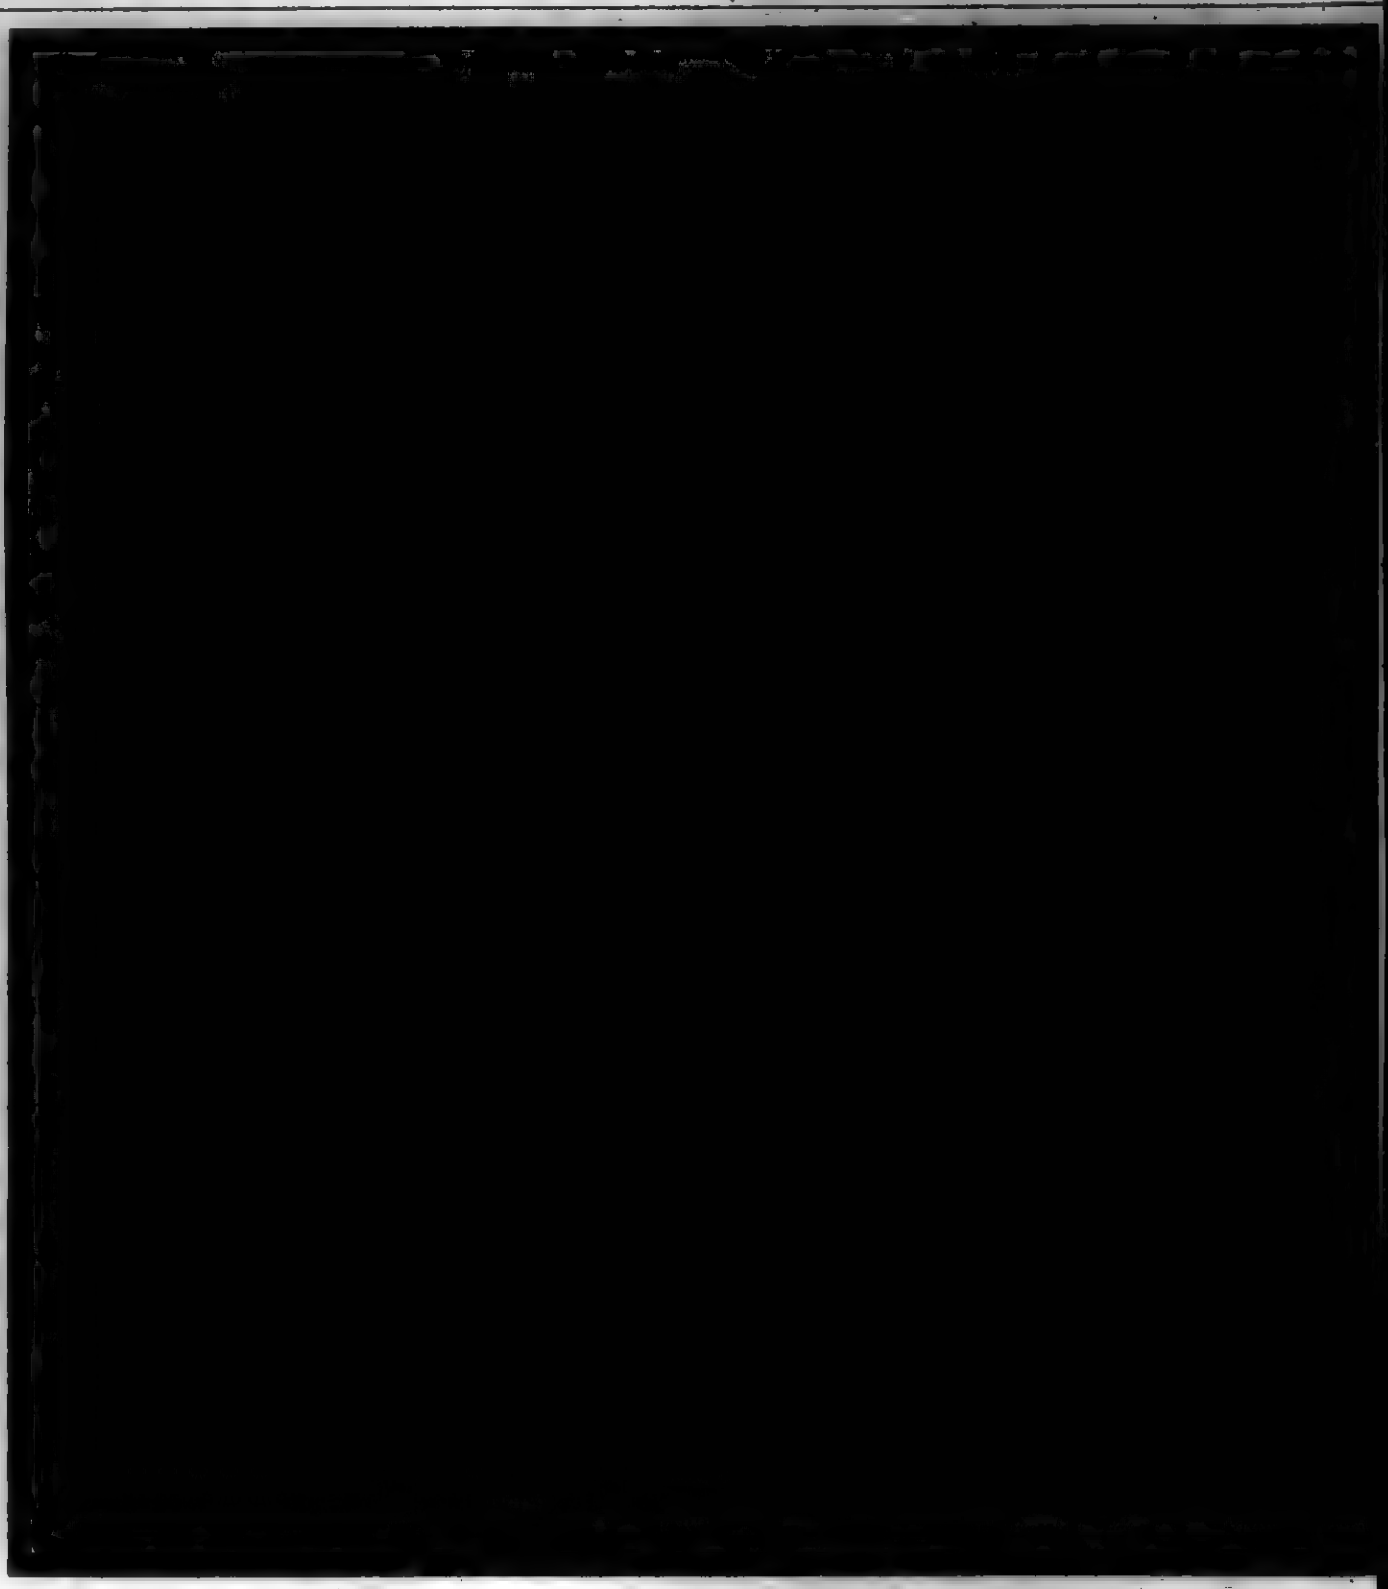
M&D to market Software International's

NATICK, Mass. — In a move intended to skirt an injunction that has frozen international sales of McCormack & Dodge Corp.'s (M&D) G/L Plus general ledger package, M&D last week entered into an agreement with Software International, Inc. of Andover, Mass., for international marketing rights to Software International's The System report writer subsystem.

The System is substantially similar to Fast, a report writer developed by ABC Management Systems, Inc. of Bellingham, Wash., and sold by M&D as part of G/L Plus.

M&D has been enjoined from selling Fast internationally as the result of a suit brought by ABC last year. In November, a superior court judge imposed the injunction and awarded $2.5 million to ABC [CW, Dec. 5]. The judge also awarded $300,000 to Software International for reimbursement of expenses incurred in fighting a countersuit by M&D against ABC and Software International. On Feb. 1, a state appeals court upheld the injunction against M&D.

An M&D spokesman said the agreement with Software International, which is valued at over $1 million, will effectively settle all claims between the two vendors. However, an appeal by M&D



Power. That's the key to CDI/100. It's a new concept in PC operating system environments so powerful, so personal and so remarkably flexible, that it can be tailored to the dimensions of any size operation.

We've integrated the best generic features of the minicomputer world with the convenience of Microsoft's MS-DOS.

The learning process is traversed as quickly and easily as an open door. What it brings to your IBM PC is a new generation of data base management capabilities in a system that becomes as personal as your fingerprint.

For virtually limitless application in a system that will

'The System' in effort to avoid 'Fast' injunction

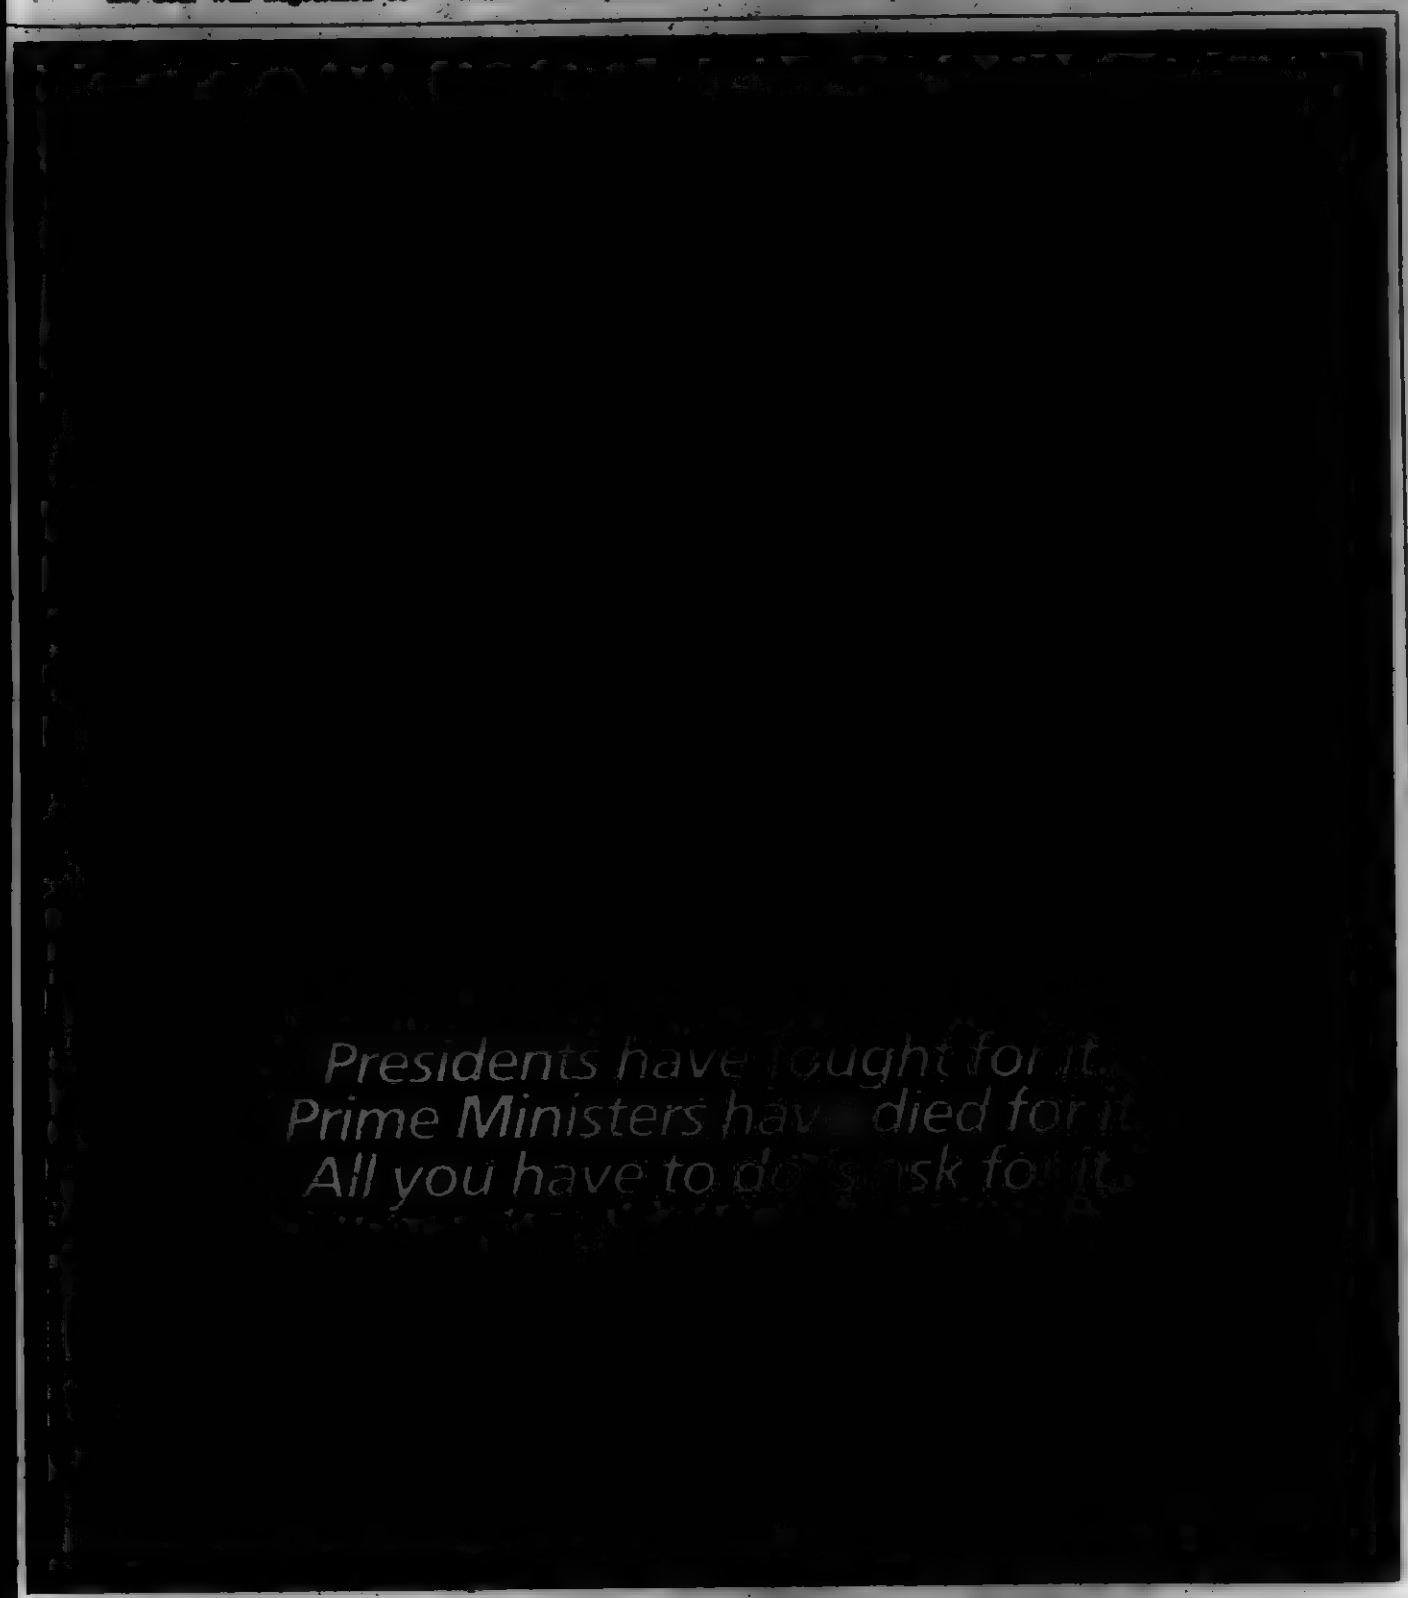
is still pending in its litigation with ABC.

If the agreement is approved by the court, M&D will offer The System as a subset of G/L Plus. However, the software must undergo modifications, a process which could take several months. The spokesman said the deal was negotiated so that M&D international sales representatives could continue to market G/L Plus with the promise that a Fast lookalike would be available soon. M&D has also pledged to replace the Fast subsystem with its own report writer sometime in the third quarter of this year.

M&D Chairman James M. McCormack said the deal was negotiated after attempts to reach an out-of-court settlement with ABC had failed. "It became clear after extensive negotiations that there was no interest from ABC Management Systems in a reasonable settlement of this dispute," he said.

"That's an absolute lie," commented Vernon Ruskin, president of ABC. "We offered them a settlement over a month ago, and we haven't heard from them since. They haven't negotiated seriously." The M&D spokesman would not comment on Ruskin's countercharge.

Ruskin estimated it would take six months for M&D to modify The System, which is based on a later version of the ABC report writer, for use with G/L Plus. "I don't see how they could market [The System] without making those changes," he said. Ruskin added that ABC lawyers believe the agreement between M&D and Software International is "not feasible."



grow just as far and just as fast as you do, ask for CDI/100, coming soon, wherever you buy your software. And look for us at SOFTCON, Booth L4077. Because personal power has never been this simple.

IBM aiming to reassure bondholders

ARMONK, N.Y. — Despite its rapid and profitable domination of the microcomputer market, IBM's "large systems still account for a substantial portion of revenue," the company reported in a just-released annual report aimed at reassuring shareholders of a continued conservative management style.

"Management is mindful of the risks inherent in high technology, the growing scope and quality of competition and uncertain economic conditions," IBM's report said. A major consideration of management is conservation of capital. In 1983, according to the report, IBM increased its cash on hand and marketable securities to $5.5 billion, up from $3.3 billion in 1982, and at the end of the year had accumulated total working capital of $7.7 billion, up from $4.8 billion at the end of 1982.

Along with that increase in liquidity, the company continued to decrease its investment in equipment for rentals, "consistent with the changing character of our business," decreasing that portion of its assets before depreciation to $13.4 billion, down from $16.5 billion in 1982. Revenues from rentals declined about 17% to $8.2 billion.

A key management strategy, according to the report, is cost control through maximized productivity, and IBM held increased investment in plant and other property to 6% over the previous year, as general and administrative expenses climbed 14% and research and development expenditures climbed 17%.

A further indication of IBM's strategy of keeping its assets liquid was the disclosure that IBM Credit Corp. increased its purchases of installment payment agreements from the parent company to $848 million in 1983, up from $682 million in 1982, and purchased $334 million of IBM products for term lease customers, up from $67 million in 1982.

Computer counterfeiters gaining in numbers

During fiscal 1983 and the first quarter of fiscal 1984, over $9.2 million of counterfeit computers were seized by U.S. Customs Service officials throughout the U.S., estimated Special Agent-in-Charge David E. Warren of the Philadelphia office of the Customs Service.

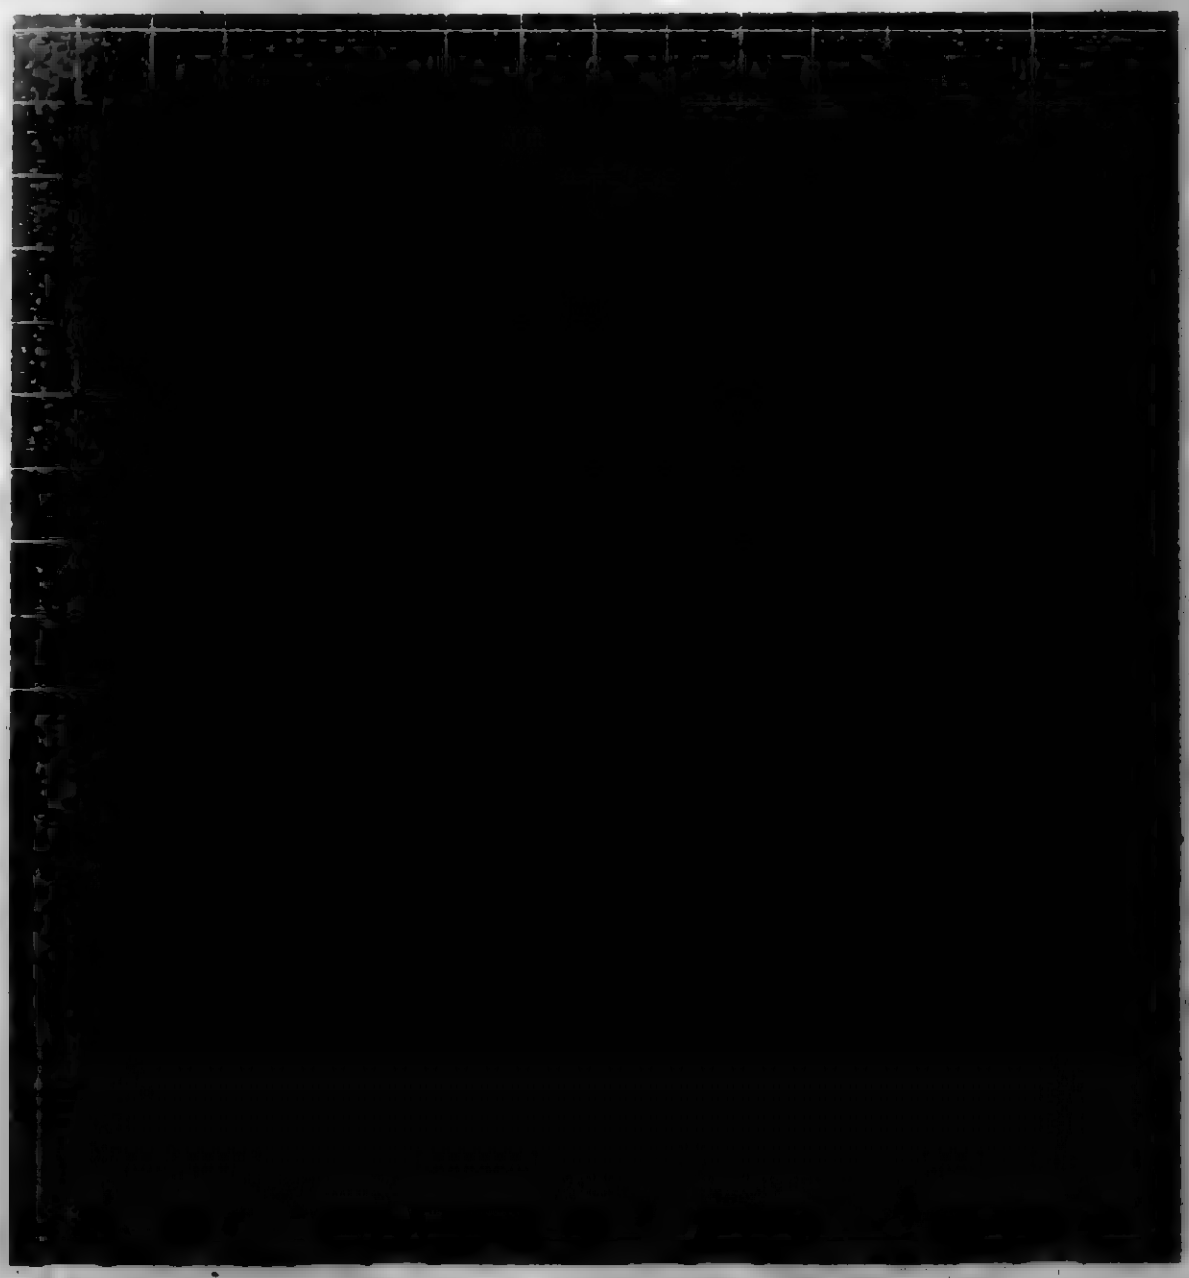
Apple Computer, Inc.'s Apple II and II+ and video games have been among the primary targets of computer counterfeiters. Even industry giant IBM is beginning to experience problems and has recently registered some copyrights with Customs, according to Gary Hecker, a copyright and patent attorney representing Apple.

In Taiwan alone, there are five to 10 major companies manufacturing counterfeit computers and literally hundreds of smaller manufacturing and trading companies as well, Hecker estimates.

Counterfeiters are so numerous that fake Apples actually outsell the real thing 10 to one in Taiwan, the attorney said.

Among the variety of ways counterfeiters are attempting to evade detection by the Customs Service:

- Concealing components in shipments of other goods, like heavy machinery.
- Sending computer components in separate packages, via air mail and air freight, to private residences or separate addresses.
- Falsifying package labeling as to contents and value or falsifying cargo documentation.
- Shipping completed computers minus printed-circuit boards or read-only memories, which are shipped under separate cover.



APPLE from page 98

not intend to pursue the issue of copyright infringement, according to Ewald Zittlau, an assistant U.S. district attorney handling the case. Instead, Apple will have to decide whether to pursue any alleged copyright violations through civil litigation, he said. An Apple spokeswoman said the vendor is considering such action.

However, Zittlau said "there is no question that they [the defendants] had it in mind that they could not get these components into the U.S. unless they concealed them in other shipments or by mislabeling packages and, in some cases, addressing these packages to their homes." Zittlau noted that when "you turn the [assembled computer] on, it says 'Apple.' " And, he added, the parts are so similar, that when placing their orders, the defendants asked for Apple II parts.

An initial tipoff from Apple about illegal sales in the area included one company that was already under investigation for other customs violations, Warren said. Four of the six in Philadelphia were nabbed via a sting operation involving local police, customs officials and some technical assistance from Apple.

The first indictment concerns Alberto K. Chua and Alfonso D. Koh and their three import companies. The two men are each charged with four counts of smuggling and one count of conspiracy. Specifically, they are accused of smuggling counterfeit Apple II parts into the U.S. and selling them to Joel M. Isadore and Daniel Ryan.

Chua and Koh each face a maximum prison sentence of 25 years and a maximum fine of $50,000. Their three companies are each charged with one count of conspiracy; two of the three are also charged with two counts of smuggling and face a maximum fine of $30,000, and the other faces a maximum fine of $10,000.

Isadore is also charged with conspiracy in the second indictment, which concerns the alleged activities of Robert Ellis, his two import companies and his son David. The senior Ellis is charged with four counts of smuggling and one count of conspiracy and faces the same penalties as Chua and Koh.

Ellis is alleged to have asked Taiwanese manufacturers to send fake Apple II parts via air-mail parcel post in mislabeled packages, such as "electric part samples, no commercial value." The indictment further alleges that the three men received counterfeit Apple parts and assembled look-alike computers from February to April 1983.

LOTUS from page 93

the first quarter of 1983 and 160,000 in the second quarter, the newcomers are going to have to ship in the hundreds of thousands, and do it quickly in able to corner the marketplace before new developments overtake them.

Secondly, as the competition heats up it's going to take many more millions of dollars to market a new product successfully.

So there are likely to be few Lotuses in the future and more and more software developers signing up to established muscle, like Microsoft, and maybe even Lotus itself.

COMPUTER INDUSTRY

NICKELS & DIMES

Compaq Computer Corp. posted a yearly profit of $4.7 million, or 24 cents per share on sales of $111 million during 1983, its first year of operation. Profit in the fourth quarter totaled $5.3 million on sales of $52 million.

■

Vector Graphic, Inc. announced its results for the second quarter, posting a $1.9 million loss on sales of just $3.3 million, compared with a profit of $107,000 and sales of $11.9 million posted during the same period a year ago.

■

The Ultimate Corp. has announced third-quarter revenues of $18.5 million and earnings of $2.7 million, or 28 cents per share, up 75% and 116%, respectively, over the same period last year.

■

Computer Task Group, Inc. has reported revenues for 1983 of $54.2 million, up from $40.1 million a year ago. Earnings increased 27% to $1.5 million.

■

Perkin-Elmer Corp. recently reported second-quarter profits of $14 million, or 32 cents per share, up 38% over the same period a year ago, on revenues of $288.7 million, up 6% over the year-earlier figure. Profits for the first six months of fiscal year 1984 were up just $1.5 million over the previous year, reflecting a poor first quarter in 1984 when profits were $8.6 million, down $2.3 million from the year-earlier benchmark, on revenues of $248 million.

■

Computer Consoles, Inc. has reported that revenues for 1983 rose 31% to $103.6 million, up from $79.1 million for 1982. Net income was $10.4 million, or 87 cents per share, up 40% from $7.4 million, or 66 cents per share, in the prior year.

Cray Research, Inc. has reported revenues of $82.8 million and earnings of $19.2 million, or $1.31 per share, for the fourth quarter ended Dec. 31, compared with revenues of $52.6 million and earnings of $12.2 million, or 87 cents per share, for the comparable period last year.

■

Electronic Data Systems Corp.'s earnings per share for the second quarter of fiscal year 1984 were 31 cents per share, up 24% from the same period last year. Quarterly revenues rose 22% to $189.6 million, and profits were up 24% to $17.5 million.

■

Prime Computer, Inc. recently announced it had successfully renegotiated its $100 million line of credit with six major banks, extending the initial agreement through 1991 and reducing borrowing costs and compliance requirements.

ON-LINE from page 98

pany using technology must incorporate the latest technical developments into its operation."

Realizing how complex on-line data base systems are, some companies joined forces with application vendors to design these systems. But few banks, insurance or financial companies had any experience designing and implementing data base systems. They underestimated the cost and complexity of the projects.

"Millions of dollars were thrown away developing elaborate on-line data base systems that were never delivered," said Michael Salzberg, principal at the Plagman Group, Inc., a New York consulting firm specializing in data base technology. "Problems arise when users with diverse needs access the same data."

Design methods, not technical limitations, create problems. "Some vendors and data processing departments undersold the difficulty of designing these systems," Ross said. "Even with technical advances, companies must take a comprehensive analytical look at system needs, set realistic expectations and be totally committed to the system.

"The technology can be improved, but problems surface from the scope and design of the system. Many companies do not have the proper administrative structure in place to design and implement these systems."

In some cases, project control slipped away. "These are huge systems, too large for one person to design," Ross said. "Since this is the nature of the beast, conventional design approaches won't work. Implementation has to be different. Each module has to fit into the system. There has to be division of labor to ensure that the system is well designed."

Conventional programmers often do not have the proper tools to design these systems. "Data processing managers have to retrain their people," said Dan Nolan of Heuristic Development in Annandale, Va.

"Data processing departments must invest in their people. No one works with hexadecimal anymore. They must stop programming in Cobol and other languages and work with the new natural languages," he said.

Another problem is that vendors often build too many features into the system. "There were features in the [Anacomp] CIS system that were not needed," said Conklin. "It had features like simultaneous batch and on-line processing, which a bank doesn't need. Anacomp built the system so that it was easy to sell and maintain."

Hogan Systems, Inc. in Dallas succeeded where Anacomp failed. Its on-line banking system, less ambitious than the Anacomp system, is up and running.

Grandiose design also haunted Insurance Systems of America, Inc.'s system. After purchasing the system, Maryland Casualty changed system specifications and delivery dates. "Since the sale, there has been an improvement in meeting delivery dates," said Lawrence Bacon, second vice-president of data processing at Travelers' Insurance Co. "The quote portion of the general liability system is up and running in 78 Travelers' service offices."

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Services (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in seven magazines devoted exclusively to supplying information to microcomputer users in: Australia *(MicroWorld)*, Brazil *(Micro Mundo)*, Denmark *(Micro Verden)*, Finland *(Mikro)*, France *(Golden)*, Japan *(PersoCom World)*, Norway *(Mikro Data)*, Sweden *(MicroDatorn, Min Hemdator)*, Spain *(Micro Sistemas)*, The Netherlands *(Micro/Info)*, West Germany *(MicroComputerwelt, PC Welt)*. And, your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of our 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

SUPERSHORTS

Reynolds & Reynolds Co. has announced an agreement with **NCR Corp.** in which NCR will provide advanced computers as new additions to Reynolds' line of VIM/NET Systems. Under the two-year agreement, Reynolds will purchase approximately $20 million in enhanced models of NCR's Tower 1632 data processing units. Reynolds will market the units as part of a configuration for very large vehicle dealers.

■

Dr. John McCarthy, creator of the Lisp programming language, and **Dr. Douglas Lenat**, professor of Computer Science at Stanford University, have been named to the newly formed Scientific Advisory Board at **Inference Corp.**, an artificial intelligence company.

■

Western Union has been awarded a contract by **Eastern Airlines** to provide its Easylink electronic mail service to subscribers to Eastern's automated reservations and ticketing system, the System One Direct Access System, over a three-year period beginning this spring.

■

Warner Software, Inc. has acquired all publishing, marketing and licensing rights to The Desk Organizer, a desk management software product for the IBM Personal Computer, developed by Conceptual Instruments Co.

■

AT&T Information Systems, Inc. and **United Technologies Building Systems Co.** have announced an agreement in principle for forming a joint venture. The new venture will offer information services to the tenants and the owner/managers of multi-tenant commercial buildings.

■

AT&T Information Systems, Inc. and **Hewlett-Packard Co.** have completed joint certification testing of HP 3000 Business Computers, HP 150 Personal Computers and HP data terminals to ensure compatibility with AT&T Information System's Dimension System 85.

POSITION ANNOUNCEMENTS

Salt Lake City
Programmer/Analysts

We are looking for highly qualified professionals to assist us in meeting the challenges of supporting major LDS Church programs. We need computer analysts and programmers with experience in commercial systems development and support. Background in large mainframes (IBM/3081 using MVS, ADF,COBOL and MARK-IV), minis (IBM-Sys/38 using RPG III; ALTOS using OASIS, CONTROL), micros (IBM PC and XT using MS-DOS, DBMS, BASIC) and other high-level languages.

Knowledge of and adherence to the major principles and programs of the Church is necessary. High motivation and desire to contribute to the efforts of the Church is a must.

For an application please fill in this coupon and mail it today to:

William Hansen, 14th floor, The Church of Jesus Christ of Latter-day Saints, 50 E. North Temple St., Salt Lake City, Utah 84150 cw

THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS

MANAGER - ACADEMIC COMPUTING

The Manager of Academic Computing provides leadership and direction to faculty and students in the use of computing facilities. The manager will consult with faculty concerning application of computer technology relating to current and future curriculum. Duties include: develop and maintain public user library of applications software packages, supervise and directs computing staff and develop plans to satisfy future academic computing needs. Qualifications: Bachelor's degree required and advanced degree preferred. Knowledge of instructional uses of computers at college levels. Strong communications skills and leadership potential. Salary commensurate with qualifications and experience. Females and minorities especially encouraged to apply.

The Trinity University computing environment consists of IBM 3/Model 10 with VM/HPO/CICS/ROMULAN, Apple IIs, networked IBM PCs and PDP 11/34.

The position is available June 1, 1984. Deadline for receipt of applications is March 31, 1984. Send nomination for application and inquiries with three references to:

Dr. Jane S. Vinson
Vice President for Academic Affairs
Trinity University
715 Stadium Drive
San Antonio, TX 78284

Trinity University is an Equal Opportunity/Affirmative Action Employer.

Software Design Engineers

If you like technology, you'll love Texas Instruments in Dallas or Lewisville.

Join the Equipment Group of Texas Instruments in the design and production of state-of-the-art electronics systems and subsystems such as radar, missile guidance, electro-optics, communications, navigation and intelligence systems. Our continued innovation in every realm of the government electronics business has made Texas Instruments a leader.

As a result, we're creating new career opportunities for qualified software design engineers. You'll work with a team that works on complete systems — not just components. You'll have the chance to broaden your technological capabilities and be recognized and rewarded for your accomplishments.

Right now, we have immediate openings for experienced software design engineers in the following areas:

- Real-time electro-optics projects (mid-level positions)
- Tool and language development (ADA and Pascal experience preferred; mid-level positions)
- Artificial intelligence software design
- Systems analysts for VAX/VMS operating systems
- CAD/CAM programmers
- Speech recognition applications designers

All positions require U.S. citizenship, a four-year technical degree and at least two years of related experience.

Now is your chance to make your career move to the dynamic Sunbelt and enjoy the Texas environment and lifestyle. Dallas and Lewisville (just outside of Dallas) have year-round recreational activities, lakes, major league sports, museums and theatre. The Dallas area boasts one of the lowest costs of living of any major metropolitan area in the nation and Texas has no state or city income taxes.

For immediate consideration, send your resume in confidence to: Ed Haynes/ Texas Instruments/P.O. Box 226015, M.S. 3186/Dallas, Texas 75266.

U.S. citizenship is a firm requirement for all Equipment Group positions.

An Equal Opportunity Employer M/F

IDMS ADMINISTRATOR

Southern California

Mellonics Information Center, a major computer service company located in Sunny So. California, is currently seeking an IDMS Data Base Administrator. This individual will assist a rapidly increasing customer community in Systems and Technical Support.

The ideal candidate will have a minimum of 3 years experience with the following family of Cullinet software: IDMS-DC/UCF, Culprit, ADS/Online, ADS/Batch, OLQ, OLM and IDD as well as experience with BAL, PL/1 or COBOL. The administrator will be responsible for establishing data bases, installing system software, data base tuning and establishing standards and procedures for the usage of IDMS. This year's plan also includes the installation of IDMS/R.

Mellonics also offers the advantage of exposure to an even greater array of state-of-the-art software and hardware. MIC is conveniently located in suburban Canoga Park, just 20 miles from metropolitan Los Angeles, yet without the traffic and congestion of the city, and provides competitive salaries, an outstanding benefits package and exceptional career potential. PROGRAMMER/ANALYST

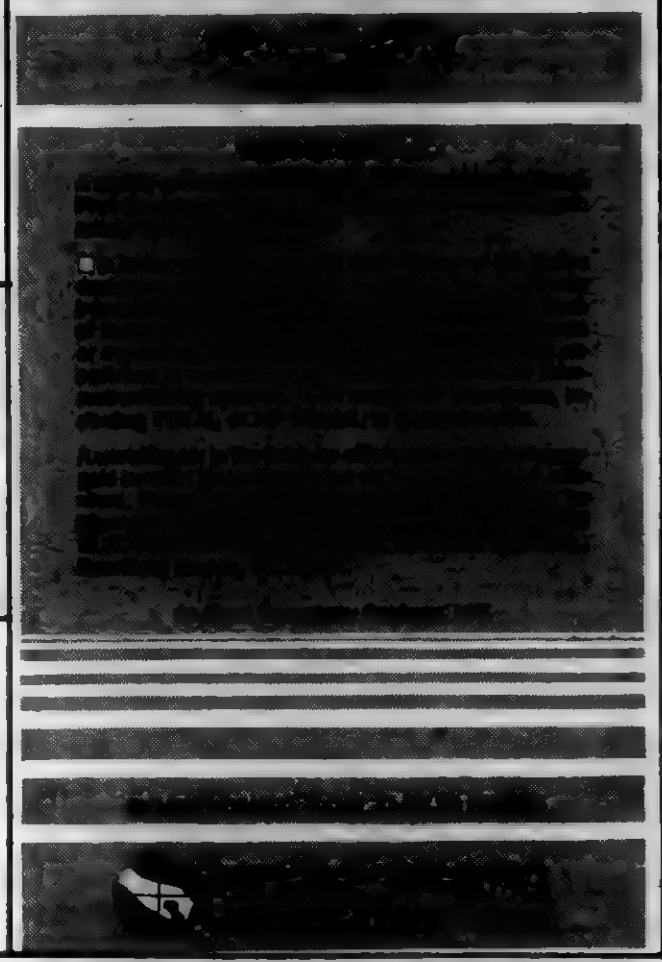
Excellent opportunity available in the Sunbelt for an experienced Programmer. Our rapidly expanding savings and loan has an immediate opening for an individual with 2-3 years direct programming experience. Familiarity with COBOL, Burroughs B2000 series and TranX financial systems preferred. College degree a plus.

We offer an excellent benefits package and salary commensurate with experience. Please send resume with salary history to: South Savings and Loan, P.O. Box 999, Slidell, LA 70459, Attn: Gail Simpson.



SAS Institute... setting the pace

At SAS Institute, we are committed to providing the best in software and service. We offer a complete line of Institute Program Products for data management, statistical analysis, report writing, color graphics, forecasting, and data entry. We support these products through ongoing research and development, a complete library of documentation, and a comprehensive training program. Currently, we have openings for:

Software Sales Representative will license software products to new sites and current sites via telemarketing. Applicants must have experience in software sales and knowledge of the applications software industry, specifically in mainframe and minicomputer markets. Telemarketing experience is a plus. A bachelor's degree, preferably in business, statistics, or computer science is required. Travel is minimal.

Technical Support Supervisor will maintain and support the SAS supervisor and related components for the IBM OS/VS and MVS/XA environments, and interface with customers on problems that require an in-depth knowledge in the related areas. The Technical Support Department interfaces with SAS installations, interpreting documentation, explaining error messages, and investigating and documenting reported problems with the SAS System. Applicants must have experience with IBM 370 Assembler and exposure to IBM MVS supervisor and data management services macros. Excellent verbal communication skills and a bachelor's degree, preferably in computer science, are required. Familiarity with operating system concepts, compiler design and implementation, PL/I, and the SAS System are significant assets. Knowledge of the VM/CMS environment, and experience supporting large software systems and using IBM service aids, such as IPCS, are desirable.

Quality Assurance Analyst will work with various Institute departments to test the SAS System. Specific responsibilities include development and maintenance of systems for tracking software through development, testing, and release; development of testing tools; documentation and testing of SAS procedures; and coordination of product testing. Applicants must have knowledge of SAS software, extensive knowledge and experience with an operating system, willingness to work with other operating systems, and good written and verbal communication skills. A quantitative degree is required.

OS/VS Systems Software Developer will develop and maintain the SAS supervisor and related components for the IBM OS/VS and MVS/XA environments. Use of IBM 370 Assembler as a programming language and exposure to OS/VS supervisor and data management service macros are required. Experience with the development and support of large software systems and the use of IBM service aids is desirable. Familiarity with operating system concepts, compiler design and implementation, PL/I, and the SAS System are significant assets. A bachelor's degree, preferably in computer science, or equivalent is required.

Compiler Systems Developer will be responsible for the design and implementation of a PL/I-like compiler. Applicants must have a MS in computer science or mathematics and a strong background in block structured languages, preferably in PL/I. Experience in design and construction of state-of-the-art compilers and familiarity with optimization and code generation issues are required.

Communications Systems Software Developer will develop and maintain the SAS supervisor components for the IBM MVS, VM/CMS, and VSE environments that interface to communications terminals and access methods, such as the 3270, 3287, 3288, and ACF/VTAM. Use of IBM 370 Assembler as a programming language and knowledge of SNA protocols, 3270 data streams, and MVS or CMS supervisor services macros are required. Experience with the development and support of large software systems and the use of VTAM/NCP service aids is desirable. Familiarity with PL/I and the SAS System are significant assets. A bachelor's degree, preferably in computer science, or equivalent experience is required.

Microcomputer Software Developer will design and develop the SAS System for microcomputers. Applicants must have in-depth knowledge of 8086 Assembler language, C language, and IBM PC-DOS BIOS. A bachelor's degree in computer science or equivalent experience is required. Experience with full-screen and graphics drivers is highly desirable. Applicants must provide samples of related work experience.

UNIX Minicomputer Developer will be responsible for helping develop SAS software to run under UNIX. Applicants must have 3 to 4 years of experience with C language and UNIX. A bachelor's degree in computer science or a related field is required. Experience with minicomputers, knowledge of PL/I, and SAS software is highly desirable.

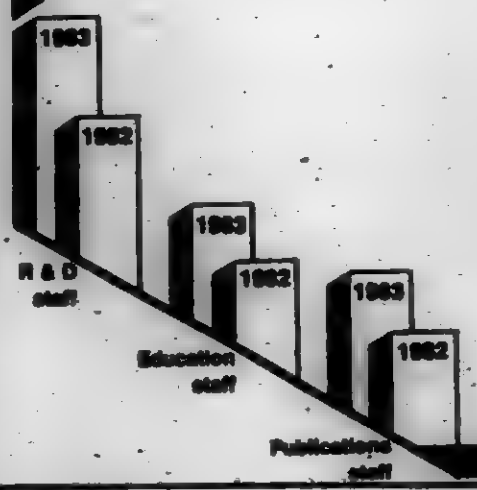
VAX/VMS Systems Programmer will assist in development of host routines and SAS interface routines for Digital VAX systems. Applicants must have at least two years' experience with VMS and Macro-11. PL/I programming experience is a significant asset.

Systems Developer will assist the development of the SAS System on various minicomputer systems. Applicants must have a minimum of two years' PL/I programming experience and working knowledge of SAS software. Experience with one of the following minicomputer systems: Digital VAX under VMS, DG MV under AOS/VS, or Prime under PRIMOS is desirable. A BS in computer science is required. Knowledge of SAS/GRAPH and SAS statistical procedures is desirable.

Testing & Documentation Systems Programmer will perform source code management functions, including documentation of procedures and consultation for SAS system developers working with various minicomputers. Applicants must have 1-2 years' data processing experience, with a working knowledge of PL/I and SAS software. Candidates should have experience with IBM under TSO or VM/CMS, or one of the following systems: Digital VAX under VMS, DG MV under AOS/VS, or Prime under PRIMOS. One to two years' VMS experience is desirable. A BS degree in computer science or equivalent is required.

Minicomputer Programmer will develop the SAS System for various minicomputers. The individual will write and maintain code and documentation, transport code, prepare master tapes, and educate users. A BS degree, preferably in computer science, and PL/I knowledge are required. Minicomputer experience, knowledge of SAS software, and Assembler language experience are preferred.

DG Minicomputer Programmer will be responsible for developing the SAS System for the Data General ECLIPSE. Responsibilities include writing and maintaining machine-dependent code, reviewing documentation, transporting code from the VAX to the ECLIPSE, and assisting in educating users. Applicants must have knowledge of PL/I and a BS degree, preferably in computer science. Experience with Data General minicomputers, knowledge of SAS software, and Assembler language experience is preferred.



SAS Institute offers competitive salaries and excellent benefits. The attractive, 100-acre lakeside campus in Cary, North Carolina—adjacent to the prestigious Research Triangle Park—provides a people-oriented atmosphere, conducive to personal productivity and inventiveness.

If you think you can meet the challenge at SAS Institute, send a detailed letter or resume to Department 0220 by February 29, 1984.

SAS Institute Inc.
Box 8000
Cary, North Carolina 27511

Aircraft Division

The People Behind Our Programs Include Programmers.

Behind the innovative design techniques employed by our Engineers are dedicated software professionals who, working closely with Engineering design teams, develop Northrop's NCAD/NCAM systems. Behind our efficient manufacturing processes are Automated Management Systems Specialists who design programs which integrate the full range of Manufacturing and Materiel functions. And as our business operations continue to grow, our Business Systems Analysts enhance the division's project management and contract systems.

Experienced Programmers and Systems Analysts with expertise in the areas listed below should investigate current opportunities to get behind the programs at Northrop Aircraft Division.

Manufacturing & Materiel Systems
COBOL Programmers with 3-10 years of experience utilizing TSO, preferably with IMS/DC experience will develop, maintain and plan new systems ranging from MRP through work-in-process to configuration documentation systems.

Financial/Contract & Pricing Systems
COBOL Programmers with 3+ years of experience including IMS DB or DC will develop and maintain divisional financial, contract reporting and automated proposal systems. Senior Programmers with IBM 8100/CPU Host integration experience are of special interest.

Graphics & NCAD/NCAM Systems
FORTRAN/IBM Assembly Language Programmers with 3+ years of experience, preferably with a BSCS or BSME will integrate into the scientific computing systems group where they will develop interactive 3-D graphics, structural dynamic analysis and other engineering support systems.

If you're experienced in any of these areas, we welcome your inquiry. Please forward your resume with salary history to:

OVERSEAS

Saudi Arabian Airlines, national flag carrier of the Kingdom of Saudi Arabia, is seeking qualified personnel for the following positions:

SUPERVISOR RELIABILITY PROGRAMS

Monthly Salary $3500 U.S. Dollars

DUTIES

Liaise with users and develop and maintain computer programs for aircraft reliability, fleet statistics and computerized engine testing and maintenance. Collect statistics on component removals, target and alert incidences, implement recommended changes in maintenance programs and monitor improvements as a result of such changes.

REQUIREMENTS

Degree in a computer related field and at least 3 years experience in design and development of real-time software systems for engineering applications using Fortran and Assembler on mini computers. Experience on HP-1000 with RTE-IVB/6 operations systems a definite asset. Airline background preferred.

SENIOR PROGRAMMER

Monthly Salary $3500 U.S. Dollars

DUTIES

To develop and maintain computer programs for aircraft reliability and fleet statistics.

REQUIREMENTS

Degree in computer related field and at least 3 years experience in design and development of real-time software for engineering applications using Fortran and Assembler on mini computers. Experience on HP-1000 with RTE-IVB/6 operations systems would be a definite asset.

The salary shown above in U.S. dollars per month has been converted from Saudi Riyals at the current rates of exchange which are subject to fluctuation.

BENEFITS

Free furnished air-conditioned housing and utilities • Paid medical and group life insurance • 30 day vacation-travel time to and from domicile • Free or reduced rates on Saudia and other airlines • Retirement program (social insurance after 15 years service) • Additional household shipment from domicile to Saudi Arabia and back • K-8 schooling for children — out of Kingdom financial assistance for other grades • Annual service increase and eligibility for yearly merit bonus based on performance.

Position is offered on a two-year (renewable) contract.

Send resume to:

"Whatever It Takes."

Brian Bish began working for Cincom Systems in 1977 as a programmer. Initiative and sound thinking have served Brian well. Today he is a Cincom Technical Service Center Manager and an authority on the support and service of leading edge software products. From a recent interview here are Brian's thoughts on support, software and a career with Cincom Systems.

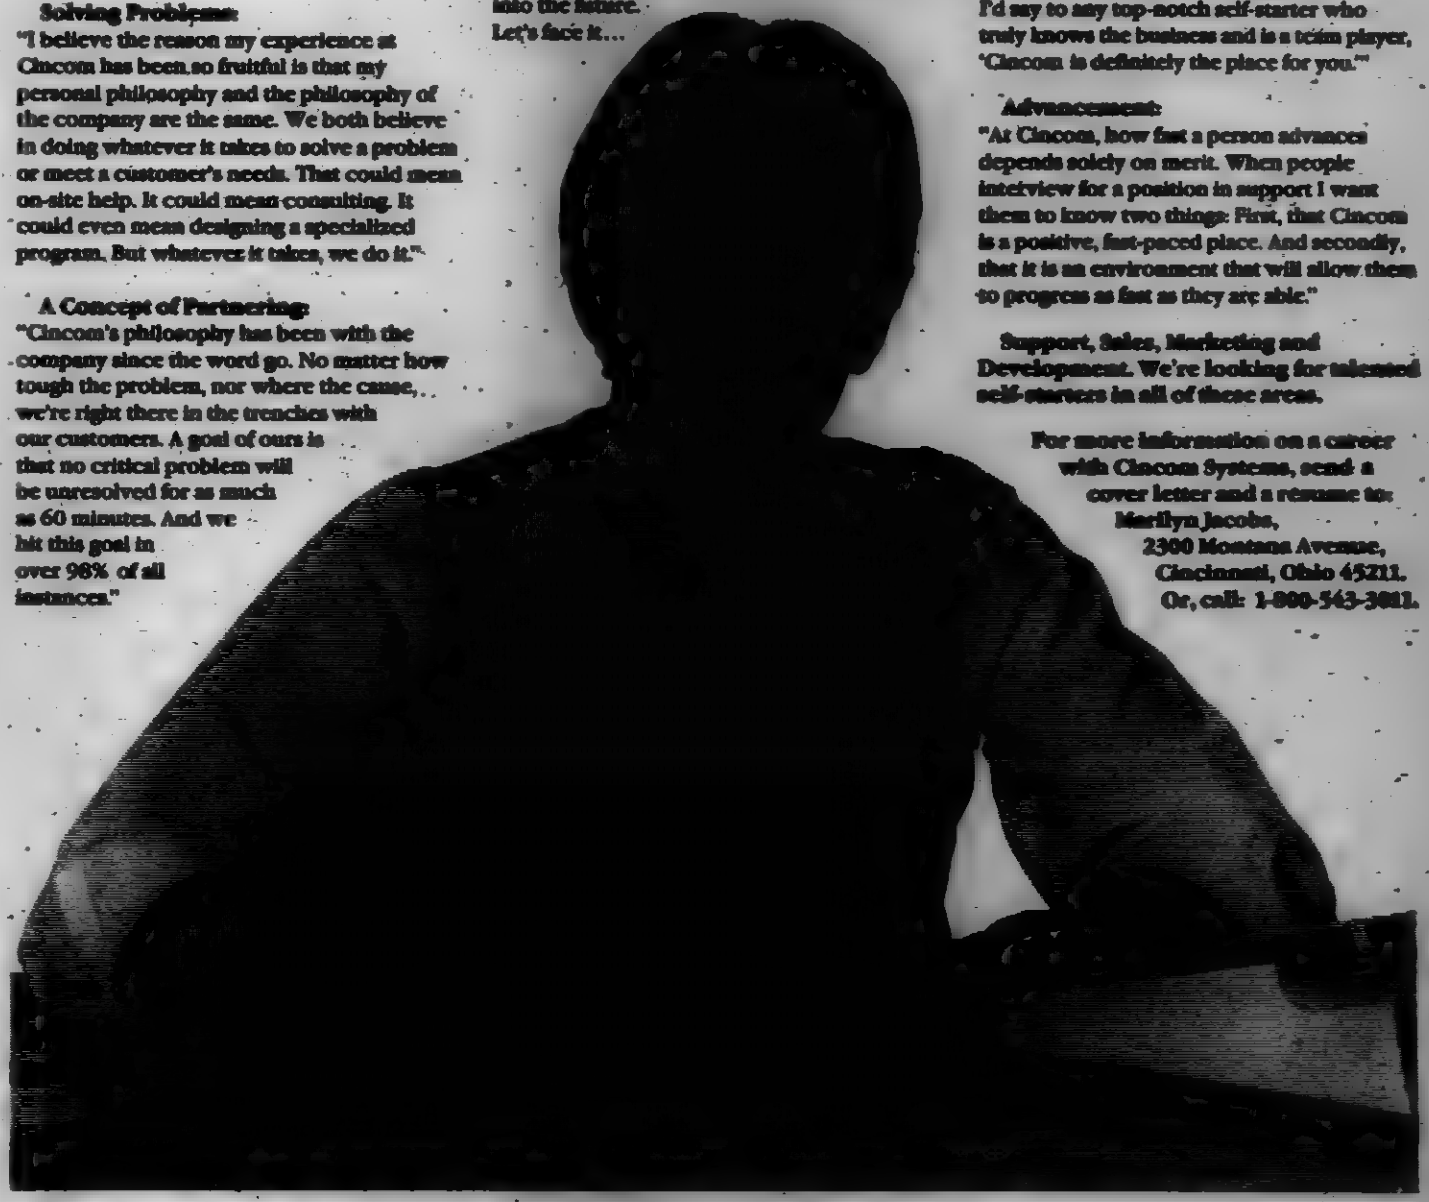
The Role Of Service And Support:
"Bottom line, the role of service and support is to help Cincom's customers become more successful. As our customers become more successful, Cincom becomes more successful."

Solving Problems:
"I believe the reason my experience at Cincom has been so fruitful is that my personal philosophy and the philosophy of the company are the same. We both believe in doing whatever it takes to solve a problem or meet a customer's needs. That could mean on-site help. It could mean consulting. It could even mean designing a specialized program. But whatever it takes, we do it."

A Concept of Partnering:
"Cincom's philosophy has been with the company since the word go. No matter how tough the problem, nor where the cause, we're right there in the trenches with our customers. A goal of ours is that no critical problem will be unresolved for as much as 60 minutes. And we hit this goal in over 98% of all instances."

Leading Edge Technologies:
"Support people are like anyone else in the computer business; they thrive on challenge and they want to work with the leading technology. TIS™, ULTRA™, MANTIS™, MRP5™, MANAGE USER SERIES™, PC CONTACT™...these are some of the newest and most advanced systems in the software industry. And these are the products our people are working with everyday. By working with challenging, leading edge products, people develop a strong personal commitment to leadership and to quality."

Excellence in Software Technology:
"To me, excellence in software means having the sense to look beyond the present and into the future.
Let's face it...the computer business is changing as fast as any business ever has. Anticipating a customer's needs takes vision. In my opinion, no one else comes close to Cincom's vision. That's why we are producing the truly excellent software technologies in our field."



People:
"I don't know about other software vendors, but at Cincom some of the most talented people in the company work in support. They have to. We deal with Fortune 500 companies who are striving to advance the state-of-the-art. Often we work directly with the top DP person within the company. So, our people have to be of the same top-notch caliber to be effective. Leading edge companies need leading edge people. And, I'd say to any top-notch self-starter who truly knows the business and is a team player, 'Cincom is definitely the place for you.'"

Advancement:
"At Cincom, how fast a person advances depends solely on merit. When people interview for a position in support I want them to know two things: First, that Cincom is a positive, fast-paced place. And secondly, that it is an environment that will allow them to progress as fast as they are able."

Support, Sales, Marketing and Development. We're looking for talented self-starters in all of these areas.

For more information on a career with Cincom Systems, send a cover letter and a resume to: Marilyn Jacobs, 2300 Montana Avenue, Cincinnati, Ohio 45211. Or, call: 1-800-543-3011.

GENERAL EMPLOYMENT ENTERPRISES, INC.

Data Processing Divisions

A network of Professionals To Service your Local or Relocation Career Desires.

VICE PRESIDENT DATA PROCESSING
$60-65,000
Operate in a data communications network environment. Draw on your assembler and associated languages. EDX, EDL for IBM services is a plus for the individual ready to move up.

TECHNICAL SERVICES MANAGER
$40-$45,000
Strong in supervision knowledgeable in systems. A creative talent that can give directions and advice in software systems! Open and potential!

SOFTWARE DEVELOPMENT DIRECTOR
$55,000-$65,000
An executive opportunity with an international flavor! Be involved with software feasibility and marketing studies. The key term is management and marketing expertise not hardware background! Respond now!

NETWORK MANAGER
$35,000-$45,000
Attention project leaders! A personal challenge to move up! Capitalize on your "on line" and assembler experience! Reward your management skills.

MANAGER CUSTOMER SERVICES
$30,000-$40,000
Specifically for the support specialist with broad IBM equipment background and supervise. Take this step to regional management! It leads to V.P.!

ASSISTANT OS SYSTEMS DEVELOPMENT DIRECTOR
$35,000-$50,000
Be involved in advanced development of software for automated microprocessor business oriented systems. Familiarity with minis and knowledgeable in PASCAL, "C", ALGOL or FORTRAN itself!

PROGRAMMER SYSTEMS TRAINEE
$27,000-$32,000
An entry level system "Plum". You can make your experience on large scale IBM equipment. Your career stepping stone now!

PROGRAMMING CONSULTANTS
$40,000-$45,000
A national firm with country wide opportunities! The keys are systems background and good communications skills! Challenging positions with either, COBOL or OS/MVS exposure.

SYSTEMS SOFTWARE HARDWARE SPECIALISTS
$35,000-$40,000
Career building openings with a wealth of potential! Be involved in corporate networking. Ideal for VTAM background.

SYSTEMS TROUBLESHOOTER
$32,000-$40,000
Be a corporate company ambassador. Follow up with clients! Solve problems! Utilize your basic assembler and "C" languages for coding activity only!

VICE PRESIDENT STAFF ASSISTANT
$30,000-$37,000
A bright future for the individual with technical expertise in CICS and VSAM coupled with COBOL and ASSEMBLER. The systems analyst with a management flair will prosper here!

PROJECT MANAGEMENT INTERNATIONAL
$35,000-$60,000
4 opportunities! Be the #1 on foreign assignment! Supervise a native staff involved in coding and modifying software. Capitalize on your MICROS, PCIM, MS/DOS, Z80 and 8086 Assembly! A rare opportunity!

SOFTWARE DEVELOPMENT "PRO"
$30,000-$50,000
An exciting expanding start-up! Take on the development of production quality compilers! Make for end users of IBM MVS mainframes!

PROGRAMMERS MGR. SECRETARY
$27,000-$30,000
Ideal for the FORTRAN professional. Be a member of the "THINK TANK" Department Teams! Investigate, recommend, implement new enhancements for the software and users! A position for growth and recognition!

Join The Team That Created The Elegant NS16000

An elegant approach led to a very elegant solution — National's NS16000 microprocessor and its product family. The revolutionary top-down architecture delivers 32-bit power, and memory management capabilities on par with the latest mainframes. The upward-compatibility will accommodate a shift from 16- to 32-bit hardware. In essence, the NS16000 performs more like a computer than a chip, and we think that's a very elegant package.

A "Software-Intensive" Effort.

The NS16000 microprocessor is the spring-board for an entire family of products currently being developed at National's Microprocessor Systems Division. The key to their success lies in the development of software that enhances the NS16000 family's performance, applicability, and elegance. From development through marketing, our "software-intensive" effort is rapidly gaining momentum as we develop demand-paged UNIX® systems based on Berkeley 4.1bsd and 4.2bsd for National's NS16032 and NS32032 microprocessors. We are also working with Bell Labs to define a version of SYSTEM V, . . . ,etc., for NS16032 and NS32032. These developments are creating opportunities for software professionals with UNIX and IBM PC® experience to join us in the following areas:

Sr. Software Engineers: Compiler Development

You will be involved in developing compiler code optimizers for "C", Pascal, FORTRAN, etc., to take advantage of NS16000 elegant architecture. Your background should include two to five years' experience in compiler development; UNIX experience is desirable.

Sr. Software Engineers: Language Tools Development

You will be involved with developing assembler, linker, or debugger. Requirements include two to five years of language tools development experience, including knowledge of "C", Pascal, FORTRAN, and UNIX.

Sr. Software Engineers: UNIX System Architect

You will be involved in defining the future UNIX system products for NS16032 and NS32032. Two to five years' experience in UNIX kernel and system development is desired.

Sr. Software Engineers: UNIX Kernel Development

You will work on porting Berkeley 4.2bsd to NS16032 and NS32032 based microcomputer systems (including a popular PC configuration with NS16032 and NS32032 add on board). Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: Networking

You will work with developing/porting networking software under Berkeley 4.2bsd on NS16032 and NS32032 based microcomputer systems. Two to five years' experience in networking protocol design and development is desirable.

The Rewards Of Elegance.

The elegance and power of the NS16000 will become evident as more software is developed for it. And those who develop that software will reap the rewards, personally and professionally. That's definitely something to think about if you're ready to take on the challenge of our opportunities.

To learn more about National's Microprocessor Systems Division, send your resume to National Semiconductor, Dept. MS, P.O. Box 62499, Sunnyvale, CA 94088. We are an equal opportunity affirmative action employer. Principals-only please.

SYSTEMS ANALYSTS

For a handpicked team.

Here's an excellent opportunity to enjoy the invigorating pace of a small, handpicked organization; the benefits and extensive career path of a major corporation; plus the stimulation of diverse assignments such as personal productivity services, documentation distribution, library services, text transformation, education and training. You will work with users tailoring systems development and integrating existing software.

Rapidly expanding Boeing Computer Services has openings for Systems Analysts with 1-2 years' experience in an IBM environment, specifically on IBM 8100 with DPCX/DOSF. A familiarity with TSO would be helpful. Exposure to Wang and Xerox word processing systems is also desirable. Experience with SNA, DIA and DCA is an added plus. BS/BA degree or equivalent experience and training is required.

For immediate consideration, send your resume and salary history to: Walt Sanderson, Boeing Computer Services Company, 7980 Gallows Court, Dept. CW-4, Vienna, VA 22180. An Equal Opportunity Employer.

BOEING COMPUTER SERVICES

A Division of The Boeing Company

Project Manager

One of the foremost names in the management consulting field is offering an outstanding opportunity, in the Dallas area, for a senior level project manager to become a part of one of the world's most prestigious organizations. As a manager with this firm, you will be involved with a multi-year project and will be responsible for the development and installation of a major applications system. This position also involves the use of systems development life cycle methodologies, system documentation standards and state-of-the-art development techniques.

You should possess effective interpersonal skills, excellent verbal and written communications skills along with a technical degree and extensive business and data processing experience. The successful candidate must also have experience in the following:

- **Management of large scale development projects**
- **Large scale IBM (IMS DB/DC environment)**
- **Banking system experience**
- **Planning, development and installation of multi-team/multi-projects**
- **Software configuration management**

For immediate consideration send your resume, in confidence, to:

CW-84888, Computerworld
Box 880, Framingham, MA 01701

The Future Is Here!

Pacific Bell is facing an exciting future, with a new identity and new goals! Now you can be among the first to work in our exciting, new state-of-the-art center in San Diego.

STAFF ANALYST

As an integral part of our time-sharing organization, you will be responsible for systems software maintenance, systems gens and performance. You will also be involved with programming and some assembler utility routines. You will qualify if you have 2-3 years' VM/CMS systems programming experience. A BS or Computer Science degree would make you especially competitive as would strong oral/analytical communication skills. This job may require some overtime and travel. One major highlight of this position is that you will have the professional freedom to work in an unsupervised, unstructured environment. Salaries for this position can range from mid to high thirties (depending on qualifications) and our benefits are outstanding.

If making your imprint on a dynamic, new company appeals to you, send your resume to Pacific Bell, Management Personnel, 1021 Wilshire Blvd., Suite 300, Dept. EG-19, Los Angeles, CA 90017. Relocation not provided. Principals only, please. We are an equal opportunity employer.

E-SYSTEMS GARLAND DIVISION

FACT 1: E-Systems Garland Division as a pioneer in the field of engineering has been revolutionizing electronics systems technology for decades.

FACT 2: In the most recent Fortune 500 rankings, E-Systems stands Number One in return on investment and 355 in sales.

FACT 3: E-Systems offers a professional working environment with a pacesetting benefits plan, FLEXCOMP, and an employer's stock ownership plan.

FACT 4: E-Systems objective is to become the world's largest producer of high technology, non-consumer electronics. If you are looking for a high-tech company with a strong financial future, you are invited to explore membership in our family by sending your resume.

Project Leaders
BSCS, EE or Math with 5 years experience in software project planning, procedures, Unit Development Folders, proposal writing and cost estimating of government-type programs. Experience with VAX, IBM mainframe, Gould SEL or TANDEM computers preferred. VLSI and VHSIC experience a plus.

Senior Software Engineers
BSCS, EE or Math with 5 plus years experience in definition, design, development and delivery of software systems utilizing DEC (VAX), IBM mainframe, Gould SEL or TANDEM computers. Required fluency in PASCAL, structured Fortran (Fortran-77), Assembly, ADA or TAL languages. Proficiency with VMS, UNIX, MVS or SYSGEN O/S expected.

Software Engineers
BS (MS) CS, EE, Physics, or Math with experience in program development, design and analysis for real-time, hierarchically distributed systems utilizing IBM (mainframes), DEC (PDP/VAX), Gould (SEL), TANDEM or Motorola (6800, 68000) computers. Proficiency in structured Fortran (Fortran-77) PASCAL, PL-1, TAL, MACRO-11 or Assembly languages required.
Electronic Warfare, C³, Reconnaissance, data base applications, operating systems, I/O interfaces and/or communications backgrounds preferred.

Senior MIS Specialist
BSCS with 8 plus years experience on IBM mainframe as MVS-internalist, *ACF II* and *CICS* background highly desirable. Manufacturing environment background a plus.

Software Test Engineers
BSCS, Math, EE with 3 plus years related experience to include the definition of software test requirements, generation of test plans/procedures, test execution and reporting. Related computer system and language background necessary.

Project Analyst
BSCS or related degree with 7 plus years experience (at least 3 as Project Leader) utilizing IBM mainframes. MRP experience required; CICS or database management a plus.

Communication Specialists
BSEE, Math or CS with 5 plus years experience with bit, byte and asynchronous protocols in the design of communications-based systems (computer to computer, device to computer) using Tandem computers with GUARDIAN operatone system. Proficiency in TAL required.

Data Base Administrators
MSCS/Math or EE with 5 plus years experience building and managing large data base systems. Must have working knowledge of structuring, distribution of algorithms and fail safe techniques. Must be capable of supervising total project resources. VAX or TANDEM systems required with PASCAL or TAL fluency.

Artificial Intelligence Specialists
Ph.D. or equivalent in Math, EE or CS with 5 plus years related experience applying knowledge-based engineering systems to electronic (turnkey) systems. *LISP* proficiency expected. Researchers will have access to personalized AI workstations operating the *INTERLISP-D* programming environment and *SMALLTALK-80* systems.

Senior VMS Specialist
BSEE (MS) or CS with 10 plus years related experience with VAX systems in PASCAL fluency. Must be VMS internalist within I/O driver systems. Defense environment background a plus.

Ann Olson, E-Systems, Inc., Garland Division, P.O. Box 226118, Dept. 41, Dallas, Texas 75266.

UNIX WIZARDS...

We can use your magic!

No other company in management and technology consulting can offer you the degree of challenge, diversity and opportunity we can. We are Booz-Allen & Hamilton, one of the most widely respected firms in the field.

We are looking for a select group of professionals. We are in search of individuals who are skilled in UNIX. These positions offer the opportunity to participate in a major project with national implementation and using a variety of hardware. Combine your technical wizardry with our fast paced data processing environment and enjoy the rewards of professional and personal satisfaction.

As a successful candidate, you must have a college degree, preferably in a technical discipline and excellent communications and interpersonal skills. These opportunities include both mid and senior-level positions. In addition, you should have 2 to 10 years experience with some of the following:

- UNIX and micro-processor development-based systems
- Mini and micro computers
- Structured program design techniques
- Data base design
- Software integration, migration and transportation
- Quality assurance/ configuration management
- Knowlege of "C", PASCAL, or higher order languages
- Systems programming

A more fulfilling professional opportunity will be hard to find . . . work your magic with a leader and realize your complete potential.

For more information and immediate consideration, send your resume, in confidence, to: Ms. Judy Merkel, MISD, Booz-Allen & Hamilton, 4330 East West Highway, Bethesda, Maryland 20814.

EDP Professionals

Middle South Services has one of the South's largest data processing centers serving one of the nation's largest power systems. Middle South Utilities, our parent company, is a major electric utility. Our hardware environment includes two IBM 3081s, and IBM 4341 and Tandem mini 16s. If you are a career-minded EDP professional, we have the following opportunities available:

PLANNING AND CONTROL ANALYST A current opening exists in our Planning and Control section for an Analyst to work on the implementation and training of a systems development methodology package. The ideal candidate will have a B.A. in Business and 2-3 years experience in a computerized environment monitoring compliance with systems development standards, with an emphasis on planning and control. Experience in development of methodology is a strong plus with experience on methodology software packages.

PROJECT LEADER With strong leadership skills needed to coordinate the enhancement/maintenance and program performance effort of our power plant maintenance information systems. Previous experience as a lead analyst or project leader in power plant or maintenance systems is required. Experience on large IBM mainframe is needed and exposure to IMS DB/DC is a plus.

ANALYST/PROGRAMMER (DATA SECURITY) An experienced computer professional is needed to work with the development and support of data security requirements for on-line systems. The ideal candidate will have previous applications programming experience utilizing IMS DB/DC along with a desire to develop technical and analytical skills pertaining to security issues. Previous data security experience preferred, especially heavy usage of ACF 2.

SR. ANALYST/PROGRAMMERS (APPLICATIONS) Several positions are currently open for experienced IMS DB/DC Analyst Programmers. Experience with COBOL or PL-1 in plant maintenance or business applications is needed.

SYSTEM ANALYST With experience in on-line corporate data base design and/or information systems planning is needed to work in an information resource management section. The ideal candidate will have at least one year experience in logical data base design along with 2 or more years of IMS experience or other data base management systems.

Due to our size and scope of operation, we offer access for advancement, career stability and an excellent salary with major benefits. For more information, call our number below or to apply directly, send your confidential resume to Byron Heath or Richard Jackson, MIDDLE SOUTH SERVICES, INC., P.O. BOX 61000, NEW ORLEANS, LA 70161.

If you want to build a new software division capable of providing total life cycle support...

Harris Can Make It Happen

If you want an aggressive entrepreneurial setting—then the Software Operation of Harris Government Information Systems Division could be the place for you. We are developing and using state-of-the-art methodologies, and have the opportunities for you to achieve the recognition you deserve. Positions are available in our Florida, Colorado Springs, and Washington D.C./Baltimore facilities. Requirements: BS in CS, EE or related technical disciplines. MS or PhD desirable. Experience in the government contracting environment helpful.

SOFTWARE SYSTEMS ENGINEERS
System-level design experience desired in some of the following: CPI Systems, Large Scale Databases, Local and Wide-Area Networks, Real-Time Data Acquisition, Interactive Graphics, Modeling and Simulation, Man-Machine Interface, Advanced Software Methodologies and Software Tool Development. Experience desired with Requirements Analysis Languages, Subsystem Definition, Proposal Preparation and Software Costing Models.

SOFTWARE DEVELOPMENT ENGINEERS
Experience sought in the design and implementation of software using structured languages (and programming techniques) including PASCAL "C," ADA, FORTRAN 77 with DEC, DATA GENERAL, or HARRIS 800/500-Systems. Exposure to modern design methodology (such as PDLs) and structured development (team concept/structured walkthroughs) of medium to large scale software systems desired.

We are part of the Fortune 200 Harris Corporation, Florida's largest industrial employer. We offer an excellent compensation and benefits package, a formal merit review program, and outstanding advancement opportunities.

If you feel that your present position doesn't offer the kind of challenge and recognition you really want, call Julian D. Kaufmann, COLLECT, Monday thru Friday, 8 am-5 pm, EST at (305) 676-6467, for more information. Or send a resume to his attention at Harris GISD— Software Operations, Dept. CW, 160 Wickham Road, Melbourne, Florida 32901-1132. For further information after business hours, call 1-800-327-6552.

U.S. CITIZENSHIP REQUIRED.
SBI MAY BE REQUIRED.

SOFTWARE ENGINEERS

UNIX*, C, PDP11, M68000

Opportunities in Rochester, New York and Reston, Virginia

Computer Consoles Inc. designs, develops, manufactures, markets, and services a variety of minicomputer-based fault-tolerant information systems. Headquartered in Rochester, New York, we have all the cultural and educational advantages of a large metropolitan area as well as the ambience and scenic beauty of a small, relaxed town. Our new Office Systems Group is located in lovely northern Virginian Fairfax County just minutes away from our nation's capitol.

CCI currently has immediate opportunities for:

GROUP LEADERS/SOFTWARE ENGINEERS

You'll be responsible for the design and implementation of data base applications and utilities, or fault-tolerant operating system development including development of a multiprocessor UNIX-compatible transaction processing system.

We prefer a technical degree plus a minimum of 2 years' experience. Knowledge of C, UNIX, and data structures plus experience with data bases in a minicomputer Real Time or on-line environment and/or OS internals are also desired. U.S. citizenship or permanent residence is a must.

**UNIX is a trademark of Bell Labs*

We offer opportunities for growth plus attractive compensation and benefits including relocation.

For immediate confidential consideration, please forward your resume including salary history to the location of interest to you.

SYSTEMS PROGRAMMERS

Outstanding career opportunities are now available with the Philadelphia area's most prestigious teaching hospital which enjoys a national reputation for its innovative, trend setting medical research and treatment. These openings are specifically involved with our Radiology Department which has figured prominently in state-of-the-art technological applications.

In one position qualified candidates will work on our development radiology research computer system, including real time systems, programming, networking, image acquisition and display systems. A Bachelor's Degree in Engineering or Computer Science and a minimum of 2 years in systems programming (assembly language) with DEC computer systems is necessary.

The other position requires working on development of new systems and applications and modifying and maintaining the data base system for radiology. A BS in Computer Science, 2 years systems and applications programming on DEC, 1 year VAX, VMS, data base management is required and experience in RATFIE, Basic-Plus and MUMPS is preferred.

In both positions hospital experience is a plus, but not required. If you have the qualifications we seek and want to join a medical leader located in one of the most desirable areas of the eastern United States, receive an extremely competitive salary, and enjoy a benefits package which includes tuition reimbursement, forward your resume without delay to Leonard G. Helm, HUP Recruitment, 3400 Spruce St., Philadelphia, PA 19104.

HUP HOSPITAL OF THE UNIVERSITY OF PENNSYLVANIA

An Equal Opportunity Employer, M/F/H

Experienced Computer Sales & Marketing Representatives

Get off the sales rollercoaster with strong sales support, stability...and opportunity.

The HP Way.

If you're tired of the same old promises, consider Hewlett-Packard. We have outstanding opportunities for career-minded professionals with 2 or more years' specialized sales experience in the minicomputer field. With a degree in engineering, physics, math, computer science, business or the equivalent combination of education and experience, you could qualify for consideration.

1. Bellevue, WA
2. Santa Clara,CA
3. N. Hollywood, CA

15. Paramus, NJ
16. Valley Forge, PA
17. Rockville, MD

and other cities across the U.S.

Careers are yours for the making.

HP offers more than a job. You can reach the top of your field right across the nation. But you'll need to be creative, enthusiastic and have the business maturity and technical know-how to interface effectively with end user decision makers.

Two areas of opportunity for Experienced Field Sales Representatives -

Technical Computer Sales

These positions are responsible for selling HP's technical computer products to scientific, technical and manufacturing customers in your assigned territory. Besides degree or equivalent, 2 years' successful CAE/CAD/CAM or manufacturing minicomputer sales experience is desirable.

Commercial/Business Computer Sales

These positions are responsible for selling large-scale minicomputers, primarily to the manufacturing market. As well as managing the existing customer base in your assigned territory. Besides degree or equivalent, 2 years' successful business computer sales experience is desirable.

Invest in your future... long term.

We rank high among major computer companies in terms of sales growth, earnings, product innovations and employee retention. This means career stability... year in and year out. It starts with in-depth training for up to 10 months, covering every aspect of the business... from learning the HP product line to the most sophisticated sales techniques. You'll quickly gain hands-on experience working with senior HP people.

With HP you'll reap the benefit of rapid production, delivery and installation, plus strong pre-and post-sale technical support. Because our credo is "productivity - not promises."

Consider the HP advantages.

Besides excellent compensation and benefits, you'll find your career progression with us a lot smoother than what you've experienced in the past. For immediate consideration, please send your resume with salary history, indicating your preferred city.

Information Processing Manager

Fast-growing international company seeks innovative, dynamic leader for their "Information Factory." Responsibilities include system software, network control center, computer operations, production control, and quality assurance.

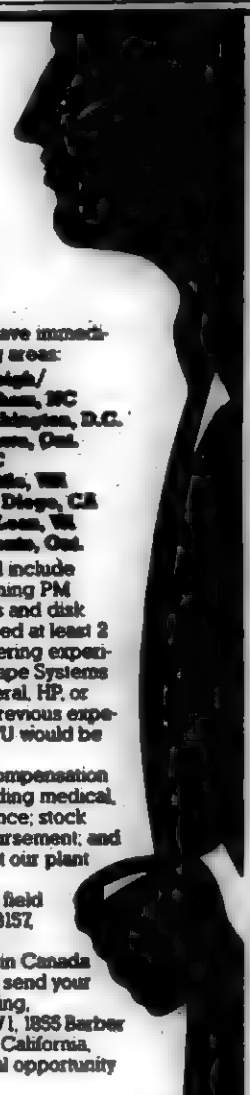
Qualified candidate will have a proven track record in the installation and management of a leading-edge IBM/PCM mainframe environment, as well as a complex distributed processing network. In-depth knowledge of IBM system software, networking, and a major data base management system a must. Experience in hardware evaluation and acquisition important. Emphasis on customer satisfaction and meeting operational service levels is major ingredient to success in the position.

This MIS team serves a premier Fortune 500 company which integrates technology in the day-to-day operation of the company. Environment is challenging and fast-paced. For outstanding personal growth as well as joining an "A Team", send your resume today for immediate consideration to CW-B4562, Computerworld, Box 880, Framingham, MA 01701

An equal opportunity employer.

POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS

We owe our success to great peripheral vision.



When System Industries first started, the data storage system was viewed as just a peripheral to the computer. Now, 14 years later, the data storage system is the heart of most computer applications. And System Industries has become the world's largest independent supplier of high performance DEC and Data General compatible disk and tape storage systems.

We still have exciting visions of what data storage can become. Our ever-expanding product line ranges from 80 to 675 megabytes. Our SIMACS system, upgradeable from a current controller, can handle eight CPU's on a single database. And we're developing a SINET system that will accommodate multiple vendors and CPU's. It's this ongoing technical vision that has found our products in use everywhere from the FDA to Harvard University.

Our high-performance disk storage products have met with such consistent success that we've grown an average of 50% annually for the last 12 years—installing over 30,000 storage systems worldwide. We're a good company to work with, and a good company to work for.

Field Service Engineer

We place such critical emphasis on field support, that many of our engineers have gone on to management positions with System Industries. We have immediate openings in the following areas:

Pittsburgh, PA	Raleigh/ Durham, NC
Columbus, OH	Washington, D.C.
Kansas City, MO	Ottawa, Ont.
Los Alamos, NM	NYC
Oklahoma City, OK	Seattle, WA
Vancouver, BC	San Diego, CA
New Jersey	McLean, VA
Boston, MA	Toronto, Ont.
Orlando, FL	

Your responsibilities will include troubleshooting and maintaining PM schedules on our CDC disks and disk storage equipment. You'll need at least 2 years' previous field engineering experience involved with Disk or Tape Systems installed on DEC, Data General, HP, or Prime Computer systems. Previous experience in maintenance of CPU would be a plus.

We offer an excellent compensation and benefits package, including medical, dental, vision and life insurance; stock purchase plan; travel reimbursement; and in-house company training at our plant in Milpitas, California.

To join our fast-growing field service group, call 800-538-8157, extension 960 (in California: 800-672-3470 extension 960, in Canada call collect 408-980-7160), or send your résumé to Professional Staffing, System Industries, Dept. CW1, 1855 Barber Lane, P.O. Box 789, Milpitas, California, U.S.A. 95035. We are an equal opportunity employer.

SYSTEM INDUSTRIES
Competent Commitment

A DIRECTION FOR THE 80's

FORWARD MOVING...that's the Greyhound direction. We're moving into some exciting areas that offer far-reaching career options for individuals also on the move. At Greyhound, you'll move further because there are more places to go. Move your career forward.

EDP AUDITOR

Participate in the start-up of a new department. Performs EDP audits within the diversified Greyhound Corporation and supports other auditors in their duties as they relate to data processing operations. If you are appropriately degreed with 2-3 years recent data processing experience and are currently working as an EDP Auditor, find out why Greyhound could be the most exciting career discovery you'll ever make.

Be part of our new directions for the 80's. We offer a very competitive salary and excellent fringe benefits, including medical, dental, and life insurance. To be considered, please send your resume and salary history in confidence to: **Director of Staffing, Greyhound Corporation, Greyhound Tower #982, Phoenix, AZ 85077.**

POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS | POSITION ANNOUNCEMENTS

It was obvious, when we first met him, that Willard was an intelligent, and energetic achiever. He was, at that time, a young Programmer with limited experience. Nevertheless, being an ambitious person, he had set high goals for himself and a rigid schedule for their achievement. His problem was that he didn't know specifically which companies offered the strongest potentialities for the promotions that would meet his needs.

We worked out a detailed, professional career advancement plan for him... one that would meet the time schedule he had in mind. A few days later we helped him find a position that proved to be a springboard to a bright new future. Now, only five years later, Willard is a Senior Systems Analyst well on his way to his ultimate objective.

Professional computer career planning is only one of the many excellent services offered by National Computer Associates... and no one does it better!

We can do the same thing for you as we have done for Willard Payne and many thousands of others. Come in. Call. Or mail your resume to the NCA firm nearest to you. Confidentiality is assured. Company clients assume our fees.

PROGRAMMERS SYSTEMS ANALYSTS

CIA... where your skills are as vital as we are

The Central Intelligence Agency offers experienced programmers and systems analysts the unique opportunity to contribute to our nation while advancing your career. To us, your skills are as vital as our mission.

The CIA is seeking a select group of highly skilled programmers, systems analysts, and knowledge engineers to participate as team leaders or team members in the development of software systems to support intelligence analysis. Your responsibilities will include:

- Performing overall software requirements definition, analysis, and design
- Analyzing new software requirements and developing system specifications
- Maintaining and expanding existing software
- Developing software documentation
- Serving as consultant in your area of specialization

All positions require extensive experience with large-scale IBM systems using the full facilities of VM/SP and MVS. Background knowledge and experience combining several of the following is highly desired: PL/1, COBOL, Pascal, FORTRAN, INTERLISP, SMALLTALK, fourth generation DBMS (particularly NOMAD2 or RAMIS-II), IBM JCL, and system utilities. Also desired is a degree in Computer Science, Mathematics, Statistics, Economics, Military Science or a related area. Familiarity with intelligence analysis a definite plus.

The CIA offers competitive salaries based on your experience and qualifications. You will enjoy working and living in the Washington, D.C. area, with its choice of athletic, cultural, and historic attractions. You also will appreciate the CIA environment . . . challenging, rewarding, intellectually stimulating.

To apply for a career with the CIA, send your resume to:

Personnel Representative

VAX SYSTEMS PROGRAMMER

GTE Laboratories, the central research and development facility of the entire Corporation of more than 50 communications, products, research and service subsidiaries in the U.S. and 19 countries around the world, is currently seeking a VAX Systems Programmer.

We seek an experienced individual to help guide our rapidly expanding VAX environment. You will be responsible for networked multiple VAX 11/780 CPUs in a research environment, maintaining systems at high levels of availability, assuring optimal system performance as well as specifying and installing new hardware and software. This position offers strong growth potential for the right individual who possesses supervisory skills.

Minimum requirements include a BS/MS in Computer Science or Electrical Engineering and several years experience with VMS, UNIX© and network communications (DEC NET, LAN) experience are also highly desirable. Strong knowledge of VMS systems internals, VMS Assembler, C and Pascal or Fortran is required.

GTE Laboratories offers an outstanding benefits package including a company-paid medical/life/dental insurance plan, a pension plan, paid holidays and vacation.

To apply, please send your resume to Cynthia Ferrer, GTE Laboratories, Inc., Dept. CW/220, 40 Sylvan Road, Waltham, MA 02254. An equal opportunity employer, M/F.

HIRING?

More computer people read Computerworld than any other newspaper in the United States - more than half a million computer people every week.

And, among our 529,650 readers at user organizations about half claim to look at recruitment ads at least every other week (only a small percentage say they never look at recruitment ads).

No wonder Computerworld carries more recruitment ads for computer people than any other publication.

To place your ad or to get a rate card with complete details on Computerworld Classifieds, call or write:

IMS and CICS experience is your ticket to the warmer areas of the U.S. (or to snow country if skiing is your thing). Our national reputation for representing top quality EDP professionals has brought us requests from large scale installations (3031 and up) all over the country for systems programmers, data base administrators, and applications professionals (Programmers through Systems Analysts). Our company clients make it easy...They pay interview costs, relocation, temporary living expenses (and, of course, US$). There is NO COST TO YOU. We select our company clients, too, choosing those with top state-of-the-art installations, good growth potential, liberal benefit programs, and--most important--strong "employee interest". This encompasses support for professional growth and intrinsic job satisfaction. Sample openings include:

Heavy MVS Sys Prog - FL	OPEN
IMS/DC Sys Prog - TX	to $42K
IMS DATABASE ADMIN - TX	to $36K
CICS (Macro Level) P/A - SC	to $33K
CICS/VS (Command) P/A - CA	to $36K

Send your resume in confidence or call collect.

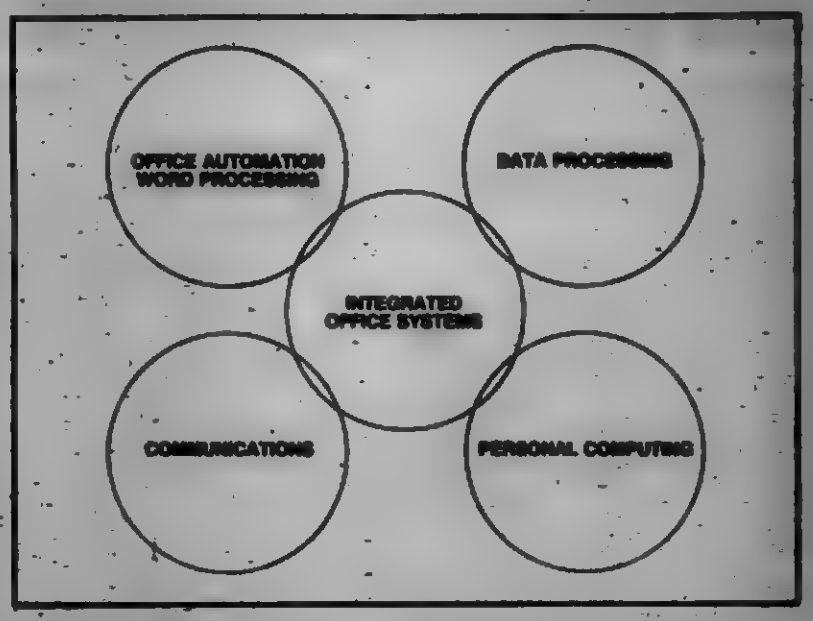
An Equal Opportunity Employer M/F

HP makes a number of office automation products. You can help make them number one.



The trend in office automation is toward fully integrated systems. Hewlett-Packard already produces some of the industry's finest data processing and personal computer equipment. Now you can help develop and manage our programs aimed at the emerging office system market.

Senior Market Managers

This is a rare career opportunity to develop and shape the business strategies of Hewlett-Packard. You'll be building on our well established presence in both office systems and individual components such as personal computers. As an important member of our newly organized Business Development Group for Office Automation, your ideas will help shape the future of HP's market strategy and product development in this area.

Requirements include significant office automation experience, with a thorough marketing background as a computer vendor or office automation specialist for a Fortune company. Personal computer or data processing experience is also required.

Hewlett-Packard offers competitive salaries, a comprehensive benefits package including profit sharing, stock purchase plan, life, medical, dental, and disability insurance and retirement plans in return for your expertise.

Qualified applicants are invited to submit a resume to Staffing Department OA-CW, Hewlett-Packard Company, 11000 Wolfe Road, MS 41Y, Cupertino, CA 95014.

Hewlett-Packard is an affirmative action employer that encourages women, members of minority groups, the disabled and veterans to apply.

Where performance is measured by results.

HEWLETT PACKARD

SECTION MANAGER, LANGUAGES

Will be responsible for technically managing the building of commercial languages for our client. This individual will manage 12 software engineers and ideally should have been responsible for the building of a significant compiler that is now in use.

CAD SOFTWARE - NEW HAMPSHIRE

Salaries: $40's - Mid. $50's

CAD Architect

Will be totally responsible for defining a new micro-based workstation product.

CAD Manager

Will be responsible for managing 35-40 software engineers through 3 section managers and for building a new microbased CAD workstation.

UNIX Software

Will serve as the resident UNIX expert responsible for providing technical direction to the product development team.

Senior Software Engineers . . . Advance with the Leader

Booz•Allen & Hamilton is one of the oldest and most respected names in management and technology consulting today. We earned this reputation by supplying solutions to complex technical problems with consistent excellence. We need the best and brightest professionals who are challenged by a diverse environment, and unlimited opportunity for professional growth.

Our Communications, Electronics and Intelligence Division is just such an environment. CEID is involved with the design, development and implementation of DOD Intelligence Data Handling Systems (IDHS). We have a requirement at our Fairview Heights (Scott AFB) location for an experienced individual who wants to apply his talents and expertise along with leadership capability in a key technical role.

The successful candidates must have a technical degree, minimum 5 years experience in an IBM and/or VAX environment. They must also possess excellent interpersonal skills and demonstrated experience in one or several of the following areas:

- Software Design & Implementation
- ADP Security
- Automated Message Handling
- Data Base Management Systems (Model 204)
- Computer Networking

If you want to advance your career with a leader, send your resume, in confidence, to: Mr. Michael D. Star, Booz•Allen & Hamilton, CEID, 4330 East West Highway, Bethesda, Maryland 20814.

DIRECTOR, OFFICE AUTOMATION SUPPORT GROUP

UNIVERSITY OF VIRGINIA

The University of Virginia seeks applications for the position of Director of Office Automation Support Group, reporting to the Assistant Vice President for Administrative Computing Services. The Office Automation Support Group is comprised of Data Center Programmer/Analysts, a Computer Systems Engineer, a Programmer, and an Information Processing Specialist. This work involves monitoring of the operations review and feasibility studies of office systems consulting and training, and providing related hardware and software. The Director plans and coordinates the activities of the Group and works with departmental heads and managers at all levels of University administration on office operations and office information needs. His experience with office systems and office automation is desirable. Candidates must be approved for employment by the Hiring Faculty of the University and must have good interpersonal skills and well-developed analytical and planning capabilities, primarily in the application of computer technology. Letters of application, including a statement of salary requirements should be sent by March 15, 1984 to: DOASG Search Committee, Administrative Computing Services, University of Virginia, Box 8795, Charlottesville, VA 22906-8795. The University of Virginia is an Equal Employment Opportunity/Affirmative Action Employer.

Manager Systems and Programming

The Computer Services Department located at Northern Arizona University is seeking a qualified individual to fill the position of Manager, Systems and Programming. This full time, permanent position involves directing the activities of the administrative systems function, including an operating and programming staff of 10 persons. Qualifications include: A bachelor's degree in computer science or related field, advanced degree desirable. Five years Systems Analyst experience in computing with 3 years in a supervisory/project management capacity. Knowledge of database programming, MIS packages, data base management systems, telecommunications, operating systems, networking and office automation. Salary commensurate with experience and education. Send resume to:

COMPUTER PROFESSIONALS ARE ACHIEVING NEW HEIGHTS IN RICHMOND... because VEPCO provides the setting for challenge and progress

For nearly a century, Virginia Electric and Power Company has successfully anticipated and met the changing needs of a dynamic area. Our proud record of achievement would be impossible without the dedication of our employees. We attract and retain the best because we both provide the state-of-the-art environment for progress and challenge, and offer salary, benefit and professional development programs for high-potential, rewarding careers. These added career options could be yours in one of the following areas:

SENIOR SYSTEMS ANALYST

Duties include conducting data security reviews of existing and proposed Vepco computer systems; assisting in the day-to-day administration and maintenance of Data Security policies, procedures and programs, and recommending policies or programs necessary to assure security of corporate computer systems. Candidates must be thoroughly experienced in large-scale IBM systems with both programming and systems analysis experience. Knowledge of CICS, JCL, EASYTRIEVE, Assembler, IMS, Data Security Systems and small computers advantageous.

PROGRAMMER/ ANALYSTS CICS/IMS

CICS and/or IMS proficiency required. Performs systems analyst or programming duties as needed. Interface with user departments and other information systems departments as necessary. To qualify, you will need a 4-year degree or equivalent and 2 years experience. Additional programming experience may be accepted in lieu of degree.

SYSTEMS PROGRAMMERS

A minimum of 2 years programming experience is required in MVS/SP, VTAM, CICS, TSO, NCP for the installation of MVS/XA and maintenance of computer system software, system software problem tracking and resolution, configuration analysis, and the writing of customized operating system user exits. Excellent opportunity to advance existing skills and work with state-of-the-art software and hardware.

MIS TRAINING SPECIALIST

Your responsibilities will include planning and developing curriculum, incorporating advancing techniques and technology changes - and conducting training classes. You will need 7 years related experience as well as teaching experience coupled with extensive knowledge of data processing facilities to conduct training in TSO, BAB, EASYTRIEVE, micro computers and other high level languages.

JOIN THE BEST - the professionals like yourself who are making progress for power - and for themselves. Please send your resume in confidence to:

Vepco

MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY

Sealed proposals will be received by the CDPA, 505 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services: Request for Proposal No. 697, due 3:30 p.m., Thursday, March 29, 1984. The State of Mississippi seeks to contract with a consulting firm to help the State Department of Public Welfare in the design of the Mississippi Application/Verification Eligibility Reporting and Information Control System (MAVERICS), an integrated eligibility system that includes the four programs cited below. The firm awarded the contract must provide the State with expertise in designing and implementing large scale data base systems using IMS preferably for two or more of the following Welfare programs: AFDC, Food Stamps, Social Services, and Child Support. Services are needed for three phases of the MAVERICS project: Completion of the Detail Design Phase; Development and Testing Phase; and Implementation Phase through certification by the Federal Funding Agencies. A mandatory bidders conference will be held at 515 East Amite Street in Jackson, Mississippi, on Thursday March 8, 1984, at 1:30 p.m.
Request for Proposal No. 696, due 3:30 p.m., Thursday, March 1, 1984, for the acquisition of a multiprogramming minicomputer system for administrative and instructional applications at Itawamba Junior College in Tupelo, MS.
Request for Proposal No. 695, due 3:30 p.m., Thursday, March 1, 1984, for the acquisition of a multiprogramming minicomputer system for administrative and instructional applications at Coahoma Junior College.
Detailed specifications may be obtained from the CDPA office. The CDPA reserves the right to reject any and all bids and proposals and to waive informalities.

HOW TO SAVE $30,000 PER MONTH ON A 3083 LEASE.

Lease the same 3083 that IBM leases for over $92,000 per month from Randolph—for less than $62,000 per month. That adds up to savings of $1,440,000 over a four-year lease period. If you're renting an older machine, Randolph may save you even more—and you'll get about four times the throughput in the bargain.

WHEN IS THE BEST TIME TO TALK TO RANDOLPH ABOUT LEASING A 3083?

Now—because Randolph has 3083's available for 4th quarter delivery. But it's never too late, even if you already have a machine installed. Whatever your situation, we can tailor a lease that will fit your exact needs and let you start saving money right away.

TALK TO RANDOLPH NOW.

We can solve problems like these, and more . . .
Stuck with a lease on your old machine?
We'll sublease it, and provide a new lease on a 3083.
Own a 3083 but need cash?
Sell your machine to Randolph, and we'll lease it back to you.
Machine installed on a rental basis?
We'll show you how to end the lease and install a new 3083. Any termination charges can be folded into your new Randolph 3083 lease.

LEASING COMPUTERS IS OUR ONLY BUSINESS.

At Randolph, our people have an average of 18 years in the DP industry . . . from 360's to 3081's. They know all about alternative financing to be sure, but they also know their way around a DP department and the hardware in it.

WE LEASE MORE THAN 3083's.

Whatever your needs, now is the time to talk to Randolph. We provide leases for IBM 303X, 4300 and 3081 systems and peripherals—disks, tapes—as well as 3083's.

UNIQUE FINANCIAL STABILITY.

We're an important part of one of the nation's oldest and leading financial institutions . . . The First National Bank of Boston. 19 years in computer leasing gives added assurance that Randolph will continue as the leader in the computer leasing industry . . . continue to live up to the terms and conditions of our agreements . . . provide upgrades . . . fulfill all of our commitments.

LET RANDOLPH HELP YOU SAVE $30,000 PER MONTH.

We can solve a lot of problems for you, and save you money, too. Talk to Randolph now . . . call Joseph S. Kelly, Jr., Executive Vice President, 800-243-5307.

VERTICAL MARKET SOFTWARE AUTHORS AND PUBLISHERS WANTED!

by

HARRIS DATA SERVICE, INC.

Why?

Because . . .
We'd like you to consider "packaging" our IBM System/34, 36 & 38 financial application packages (including G/L, A/P, P/R, F/A, A/R) with your specialized vertical market software . . . either as an integrated/interfaced offering or as an "Add-On" product offering.

Why?

Because . . .
Harris software is professionally written and packaged. Standardized programming and documentation development allows for practical package modification and interface to your vertical market software. Attractive product summaries, complete user oriented demos/documentation and an aggressive, nationwide advertising campaign are available as effective sales tools for you.

Because . . .
Harris software is user oriented, table driven and multi-company/facility oriented with all financial modules integrated.

Because . . .
Harris software products are presently installed at several thousand computer sites throughout the U.S. and Canada.

Because . . .
Where there's business . . . there's accounting!

Harris is ready to offer a most attractive financial arrangement and optional install/support services to interested vertical market software vendors/publishers.

CAN WE TALK?

How to load your 38 for top MRP performance.

Harness the firepower of IMS/38 manufacturing software. IMS/38 for the IBM/38 provides the total control of a closed-loop MRP II system that allows direct user access to all stored information. Its sophisticated query facility lets you generate user reports. And advanced data base architecture makes expansion simple and economical. IMS/38 even offers a PC link that lets you transfer information to your IBM Personal Computer for interaction with popular micro products.

Only IMS/38 has 15 powerful applications to provide you with total management control over manufacturing, distribution and finances. Contact PCR, Professional Computer Resources, 2021 Midwest Road, Oak Brook, IL 60521 (near Chicago). Also in New York, San Francisco and Los Angeles.

SECURITY

Protect sensitive information with *Ven-Tel's 212 SECURITY PLUS.* Password restrict any terminal to calling only the destinations and applications you authorize. Telephone numbers, passwords, account numbers, and log-in codes are concealed to prevent unauthorized disclosure or use.

Ven-Tel security is not limited to password protection. You are secure in the confidence that your Ven-Tel modem is the most reliable and dependable in the world.

Security is the assurance that Ven-Tel has committed the investment in research, development and production facilities necessary to continued industry leadership and provide off-the-shelf delivery.

Security is knowing that the modem you buy from Ven-Tel is the most modern, technologically advanced product available on the market today. It is knowing that when you need help, a Ven-Tel technical support specialist is as close as a telephone call. It is the confidence that Ven-Tel will be there with service and support for your equipment as long as you own it.

THE COMPLETE NETWORKING COMPANY.

1-800-821-7700 EXT 874

Mom files best.

Introducing PC/COM.™ Truly, the fastest, easiest way to manage information today.

When MOM™ says she has a software system that can manage information faster than anything else on the market, believe it.

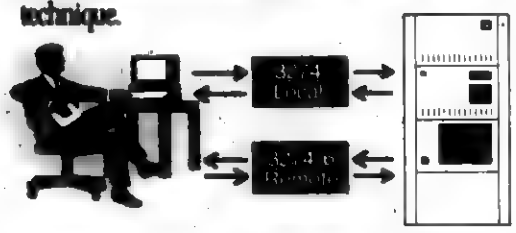
It's called PC/COM. A revolutionary automatic file transfer and management system that opens up a whole new realm of opportunities to PCs and PC-users.

Your mainframe works faster with PC/COM. Your PC gets more file management features.

If you are a mainframe user of TSO, CMS, or CICS, PC/COM will prove invaluable.

MOM says any job worth doing is worth doing fast.

MOM's PC/COM manages information at an incredible speed. And PC/COM will handle just about any file type with its unique binary transfer technique.

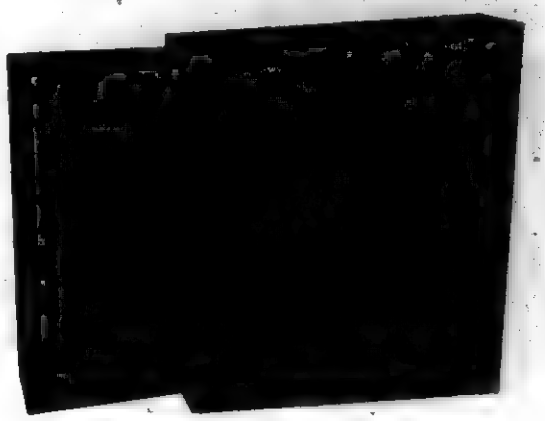


You can even back-up your hard disk on the mainframe. Leave it parked there until you need it. All it takes is the press of a key to get it moving again.

PC/COM is bi-directional, to save time getting information out of the mainframe onto your desk. And vice versa.

Security conscious, private and flexible — that's MOM.

The PC/COM has file access control and security built right in. So only those parts of the mainframe that should be accessed, are.



PC/COM is user-friendly and menu-driven so it's easy to understand. And simple to operate. All the features (and believe you, MOM, there are plenty) are initiated by a single function key.

Call MOM. 1-800-241-1170.

Talk to MOM. Tell her what you have and what you need. Ask her any questions about PC/COM and get good, clear answers.

MOM wants you to understand what you're getting into with PC/COM — and how much you can get out of owning the best, and fastest, file transfer and management system on the market.

The revolutionary PC/COM. Of course, from MOM. Phone 1-800-241-1170 or 404-351-2902.

The Great American Telecommunications Puzzle...

Today, there's a telecommunications puzzle facing datacomm users: how to obtain end-to-end network integrity from one source. Divestiture has eliminated AT&T as a single source, but GDC now solves this puzzle with a full range of datacomm products and NETCON-6 network management systems to tie your network together.

GDC has the products to derive the network with a full range of multiplexers and concentrators — FDM, TDM, STDM; to access the network with data sets — analog, digital and local area; and to manage the total network with NETCON-6.

Total system capability — that's what GDC gives you — from network planning, consulting, system engineering and installation to coast-to-coast service.

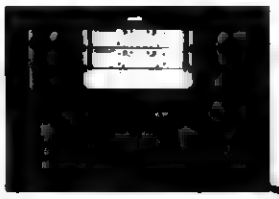
GDC takes the work out of networking.

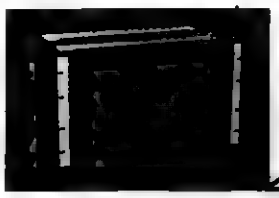
General DataComm Can Tie All the Pieces Back Together For You

MEGAMUX
Super powerful data/voice multiplexer transmits voice and data to 2 Megabits with non-interfering automatic system reconfiguration.

NETCON 6 NMS
The most sophisticated, automated network management system available. NETCON-6 adapts to all networks: analog, digital and local area. It wraps around any datacomm hardware, offering centralized supervision, diagnostics, control, restoral and reporting — insuring true network integrity.

MULTIPLEXERS
Widest range of Frequency Division, Time Division, Statistical and Polling Multiplexers for the simplest to most complex networks.





DATACOMM MODEMS
For analog, digital, local area networks all in common shelf enclosures—DataCommonality.

GEN•NET™
Statistical Network Concentrator, expandable, up to 96 channels, 4 composites to 168 Kbps.

GDC, The Networking Company

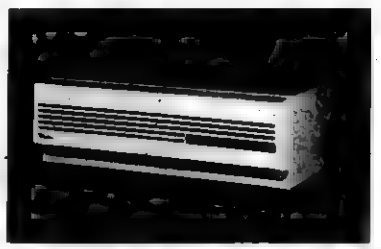
What's a 7-letter word for a data switching system that lets you expand your network as far and as fast as you like?

Xplexer. It's Tellabs' modular, expandable, high-performance data switch that's versatile enough to answer your present network needs and flexible enough to face a future filled with change. You can add terminals at any time because the Xplexer's terminal interface capacity is virtually unlimited. Should the need to interface only a few remote terminals arise, the Xplexer's integral line-driver option is your answer. Or, for very affordable communication with larger groups of remote terminals over a single link, pair up your Xplexer with Tellabs Dataplexers, our high-speed statistical multiplexers. If you decide to interconnect several local networks, the Xplexer can handle that, too. It can join as many as 256 switching nodes. And it supports multiple composite links at speeds up to 76,800bps.

Menu-driven configuration and statistics control, switched or permanent virtual circuits, channel-speed conversion, alternate routing, nonvolatile memory: the Xplexer



has all the answers. It's the perfect solution to your port selection, extended network, and distributed network puzzles.

Computerworld Buyer's Guide is a member of the CW Communications/Inc. group, the world's largest publisher of computer-related information. The group publishes 44 computer publications in 18 major countries. Nine million people read one or more of the group's publications each month. Members of the group include: Argentina's *Computerworld/Argentina*; Australia's *Australasian Computerworld* and *Micro Computer Magazine*; Brazil's *DataNews* and *MicroMundo*; China's *China Computerworld*; Denmark's *Computerworld/Danmark* and *MikroData*; France's *Le Monde Informatique*; Germany's *Computerwoche*, *Microcomputerwelt* and *PC Welt*; Italy's *Computerworld Italia*; Japan's *Computerworld Japan* and *PC Japan*; Mexico's *Computerworld/Mexico*; Norway's *Computerworld Norge* and *MikroData*; Saudi Arabia's *Saudi Computerworld*; Spain's *Computerworld/Espana* and *MicroSistemas*; Sweden's *ComputerSweden*, *MikroDatorn* and *Min Hemdator*; the UK's *Computer Management* and *Computer Business Europe*; the U.S.' *Computerworld*, *Desktop Computing*, *Hot CoCo*, *InCider*, *InfoWorld*, *Micro Marketworld*, *Microcomputing*, *PC World Blue* and *80-Micro*.

About the Guide

The *Computerworld Buyer's Guide to Communications* is a reference manual containing concise descriptions of communications hardware, software and transmission services and short profiles of the vendors offering those products.

The guide contains three major product sections, each preceded by a fold-out tab divider identifying the products listed within that section. The three tab dividers are: Modems and Multiplexers (Section A); Converters/Emulators, Communications Processors and Switching Equipment (Section B); and Local-Area Networks, Communications Software, Facsimile Devices and Transmission Services Vendors (Section C).

In cases where several different types of products are contained within one tab section, a gray-colored page with a product classification identifier is inserted in front of the listings for that particular product grouping.

Preceding the product listings is a vendor profile unit (Section V).

The front of the guide features a special magazine containing articles concerning the state of the industry, technology overviews of specific products and issues pertaining to communications.

Also featured in the guide are separate indices which provide a method for quickly locating the diverse products listed in the guide.

PRODUCT LISTINGS

The product listings contain pertinent technical specifications for the products listed in the guide. Technical data includes information on transmission characteristics, interfaces, protocols and compatability with other vendor's products, among others.

In general the listings are arranged in alphabetical order by vendor, with product descriptions following in alphabetical order by device name and/or model number. In some cases, all listings for one type of product — such as short-haul modems — are listed under the entry for a particular vendor, followed by listings for other classifications — long-haul modems — offered by the same vendor within the same general product classification .

All product listings include information on purchase terms, pricing, installation statistics and monthly maintenance fees when vendors supplied such data.

An example of a typical product listing is shown at right.

Note: Due to problems related to divestiture, AT&T Information Systems, Inc. was unable to provide us with information regarding their modem and multiplexer products. However, they are listed in the vendor section of the guide.

CONCORD DATA SYSTEMS, INC.
CDS 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $700
Number Installed to Date: Under 100
Date First Installed: November 1981
(See Vendor Profile Page V-7)

About the Guide

COMPANY PROFILES The company profile section of the *Computerworld Buyer's Guide to Communications* contains each vendor's address and telephone number as well as a listing of key management, marketing and technical personnel within the firm. In addition, the profile includes the company's target markets and revenues, among other details.

An example of a typical entry is shown at right.

NOAKES DATA COMMUNICATIONS, INC.
3330 Stovall
Irving, TX 75061
(214) 988-1151
Major Market: Component, Computer and Communications Equipment Manufacturing; Dealer/Distributor
Target Applications: Data Communications; Network Control; Data Collection
Net Sales: $1 Million - $5 Million (1981)
Contacts:
Head of Marketing: Kenneth Brown
Geographic Coverage: National
Year Established: 1966
Number of Employees: 30

INDEXING SYSTEM Each product category (except transmission services) contains an index, which is located prior to the complete product listings for a particular product type. The introduction to each index provides a definition of the product category. It also explains the method used to sort the products for indexing as well as a description (when necessary) of the order the listings appear in the section.

The indices are designed to provide an overview of the products contained in that section and to make it easier to locate a specific product.

An example of an index is shown below.

Fiber-Optic Multiplexers

VENDOR	MODEL	PRICE	PAGE
Belden Corp.	BIT-DRIVER 222-006	$1,950	A-69
Canoga Data Systems	CMX-320	$2,500	A-70
	CMX-808	$1,200	A-70
	CMX-816	$2,750	A-70

THE ENTERPRISE FILE The Enterprise File is a data base containing information on thousands of companies that produce or provide computer-related products and services. It is the source of listing information in the *Computerworld Buyer's Guide to Communications.*

The project was started in April, 1982 and is a complement to the International Data Corp. (IDC) Data File, a well-known data base of end-user facilities.

Information is gathered and regularly updated by IDC through printed questionnaires and telephone surveys. To date the Enterprise File has records on more than 12,000 companies and 30,000 products.

Note: Vendors were offered the option of placing their company name in a larger typeface than the standard listing size. Vendors were also offered the option of adding a boxed insert at the end of their listing. These options were paid for by the vendor and should in no way be construed as an endorsement of these companies and products by the publisher of the *Computerworld Buyer's Guide to Communications.*

Editor's Note

If you find uncertainty exciting then you'll love today's communications environment.

By now, most information processing managers have experienced the joys of mainframe mips watching, debated distributed processing ad nauseam and defended themselves against the encroachment of micros and their accompanying handmaiden — office automation.

And just when they thought it was safe to come out of the computer room, the communications dilemma lumbered onto the scene. And unfortunately, the dilemma is here to stay for the foreseeable future.

In some ways, the communications environment can be compared to the office automation scene at the time when information processing managers were confronted by administrative managers who wanted a say in automating the office. Generally, the person who was in charge of buying the new electric typewriter — and later the stand-alone word processor — wanted a hand in orchestrating the proliferation of personal computers for professionals. By then, the information processing manager began realizing the personal computer was in fact end-user computing, a much-talked about but rarely implemented concept. But as data and the access to data, rather than clerical work, became issues, the information processing manager became more highly visible in the direction of the personal computer in the organization.

Likewise, the communications function was often left in the hands of the telecommunications manager, a person largely responsible for operating and purchasing the equipment for the voice communications side of the house. But when data transmission was at stake, the information processing manager had to take a more forceful role in determining what the burgeoning network would look like.

In these two instances, there have been organizational problems as information processing managers have had to assert themselves in the office automation and communications disciplines.

In addition to often becoming embroiled in organizational politics, information processing managers have had to begin selecting products for these disciplines, giving form to what once dwelled in the realm of nebulous concepts.

Making decisions on what the communications structure of the organization will look like is difficult because it requires tying together the myriad of automated equipment already in place. The investment is expensive — it is not just a matter of which personal computer to select. With technology changing like New England's weather and many products not yet on the market, the risk of making an inappropriate choice is high.

Moreover, standards — not highly relevant to other forms of information processing — are critical to the communications arena. Yet few standards have been promulgated. Also, there has been little product and market direction yet, as illustrated by the fact that the two industry leaders, AT&T and IBM, have barely dipped their toes in the communications ocean.

Despite this environment, information processing managers are being pressured to come up with a workable networking scheme. In selecting products and systems to create the networks, information processing managers are often approaching the task as they did when other products were in their early life cycle — paying a lot of attention to technology rather than applications.

On the conference circuit, participants eager to find out more about local-area networks are bombarded by information about topologies and access methods. These are certainly important considerations, but they are essentially technological issues and do not take the place of advice on how to proceed with such a network.

From reports circulating around the user community, it appears that some of those who are implementing advanced communications networks are taking what's available and piecing it together into a workable solution — perhaps not ideal, but workable. While this approach may not be ideal, it may be time for more managers to take the great leap forward.

Users resist data encryption because they often think these devices are too expensive or difficult to install. But is the loss of data an acceptable alternative?

40
Mixing It Up With Muxes
By James J. Michaels
Multiplexers are quickly becoming a type of front-end processor. Specialized features such as multiple data links and switching are helping expand the range of these devices.

45
Controlling The Network
By Rudolf Strobl
Do you know the value of the network function in your hardware and software installation? In the not-too-distant future the network management component may approach 30% of the cost of your total system.

vices connected by a continuous medium.

- Limited in geographic scope (within a distance not greater than 50 miles), with devices physically separated but not mobile.
- Able, at least potentially, to establish communications among any and all attached devices.
- High-speed, with data rates ranging from 500K to 50M bit/sec.
- Commercially available.

Only the simplest local-area networks are true turnkey products. Most require a great deal of on-site engineering to ensure the efficient location of stations, ease of reconfiguration and expansion, accessibility for testing and repair and compliance with building and fire codes. Some vendors provide "soup-to-nuts" configuration and installation services, while others require that the user purchase and contract for the installation of all but the intelligent components of the network.

When choosing a local-area network, the potential user faces four basic tehnical issues — the network's physical medium and transmission technique; its topology; its access method; and any higher level services it offers. Today's market offers three basic media, three topologies and three access methods. The issue of higher level services is more complex, since a vendor can offer such services above any practical combination of the other three factors. Right now, the availability of high-level services depends heavily on specific applications.

The three transmission media currently practical for local-area networking are twisted copper wire (twisted-pair), coaxial cable and fiber optics. Twisted-pair is the least costly of the three and the easiest to install, but it places severe limitations on the maximum distance spanned by the network and on the maximum data rate the network can support. Coaxial cable is the most versatile medium; it comes in two types that support different transmission techniques.

Baseband coaxial cable supports single-channel digital transmission. Only one signal can travel over baseband cable at a time. Broadband coaxial cable supports multichannel, radio-frequency (RF), analog transmission. Up to 30 different signals, each at a different frequency, can travel over a broadband cable at the same time. Baseband cable is slightly more expensive than broadband cable, and baseband networks are limited in length to a few thousand feet while broadband networks can span a few tens of miles. However, baseband cable is easy to install and requires almost no maintenance, while a broadband network requires physical design, and frequent professional maintenance.

There has been much controversy over the choice between baseband and broadband transmission, but actually the two techniques serve quite different applications. Baseband cable is most useful in small- to medium-size automated offices and in existing buildings where full-scale rewiring would be a problem. Broadband cable is best for large installations, especially campuses and industrial plants, which generate heavy data traffic and require a high level of immunity from electrical noise. A broadband data network can share a single cable with a cable video network or even with another broadband data network.

Optical fiber is the newest and currently the most expensive medium for local-area networking, however, its cost is expected to drop dramatically. Its chief advantages are security from tapping and total immunity to electrical noise. The difficulty of tapping a fiber-optic cable creates a problem in a local-area network environment, because the user requires a medium that is relatively easy to tap into in order to add stations to the network.

A network's topology is the physical and logical arrangement of its stations in relation to one another. There are three topologies in current use for local-area networks: the bus, or tree, in which the stations are arranged in a straight and open-ended path along the main channel; the ring, in which the transmission path forms a closed circle through the stations with each station connecting directly to its two adjacent stations; and the star, in which each station connects directly to a central switching element over a point-to-point link.

Users who shop blindly will find local-area networking an inadequate, even restrictive, solution and will become tomorrow's dissatisfied customers.

The bus is the most popular topology in the United States. The most common bus architectures are the Ethernet, developed by Xerox Corp. and supported by a large number of vendors; the Arcnet, a tree network developed by Datapoint Corp., and used under license by a growing number of vendors; and the broadband tree, used in all broadband cable networks. Ring networks are popular in Europe, since much early ring development occurred at European universities. Star networks, currently out of fashion for high-speed local-area communications, are beginning to make a come back. The hierarchical star, with a number of star-shaped subnetworks connected in a larger star configuration to a central switch, is being discussed in a growing number of research reports, and might become the mainstay of the next generation of local-area networks.

A network's access method is the technique by which the network distributes the right to transmit among its participating stations. On most local-area networks, all signals are broadcast on the main channel; only one signal can occupy the channel at a time, and no two stations can transmit simultaneously. The access

method is the network's way of controlling traffic.

In general, access control can be either central or distributed. Most bus, tree and ring local networks use distributed access methods in which each station participates in the control of the network. There are two classes of distributed access methods: random (or contention) and deterministic. In a random-access method, any station can transmit at any time. In a deterministic access method, each station must wait its turn to transmit. Random-access methods work best under sporadic, quick-burst traffic and in situations in which some stations transmit much more data than others. Deterministic access methods work best under a steady, heavy traffic load.

The most common random-access method is carrier-sense multiple access (CSMA), a technique in which each station can sense when the channel is busy, and can refrain from transmitting until the channel is clear. In "pure" CSMA, two stations can sense a clear channel simultaneously and transmit signals that will interfere with one another. This is called a "collision." In a refinement of CSMA, CSMA with collision detection (CSMA/CD), stations can detect such collisions and have a way to arbitrate the use of the channel after a collision has occurred.

The most common deterministic access method is token passing, a form of distributed polling in which the stations circulate a special bit pattern, the "token," which confers permission to transmit on the station that receives it. The stations are arranged in a logical order and each station polls the next station by passing the token to it. Collisions are impossible, but each station, once it has passed the token, must wait to transmit until the token has circulated among all other stations on the network. Token passing is used most frequently in ring topologies, but it also works well in some bus and tree configurations.

Most star networks use either a central polling technique or telephone-style circuit switching. Some of the experimental hierarchical stars use variations of CSMA and token passing, while others use new, traffic-sensitive, hybrid access methods.

Higher level services are only beginning to become available for local-area networks. The service offered most frequently is protocol conversion, especially from asynchronous devices into one of the IBM synchronous protocols, Binary Synchronous Control (BSC) or Synchronous Data Link Control (SDLC). Some networks offer data encryption and many offer network management features such as statistical traffic reporting and error logging. Local-area networks marketed especially for personal computers can often convert disk files among formats for the most popular machines.

The number of technologies available, and the number of practical combinations of those technologies create both opportunity and confusion. The opportunity comes to the sophisticated purchaser who can pick carefully from the range of options to create a specific network for specific needs, and to the high-tech entrepreneur who can design and market an unorthodox but demonstrably better way to solve the problems of networking. The confusion comes from the lack of compatibility among different commercial networks, both with one another and with the end-user equipment that must communicate over the network.

The local-area network industry has seen two major efforts to establish standards: one by industry organizations attempting to legislate standards, and one by vendors attempting to establish standards in the marketplace. Committee 802 of the Institute of Electrical and Electronics Engineers (IEEE) has led the legislative effort, while Xerox and the other Ethernet vendors have spearheaded the most successful market effort. Datapoint and its licensed chip manufacturer, Standard Microsystems, Inc., have also succeeded somewhat in establishing a de facto standard. Should IBM announce its much-rumored local-area network, it would likely become another market standard.

Although the IEEE 802 committee has not established a single standard, it has published draft specifications for at least two, a CSMA/CD architecture similar to Ethernet and a token-passing bus. The committee intends to issue at least one more draft standard, for a token-passing ring network, and a number of vendors are petitioning the committee to standardize their architectures for specific applications. Apparently local-area networking is a technology too young for standards.

Right now, the local-area network market contains three major segments: baseband networks, broadband networks and networks especially for personal computers. Among the baseband vendors, the Ethernet community — vendors such as Xerox, Digital Equipment Corp., Ungermann-Bass, Inc. and Interlan, Inc. — still leads the pack. However, Datapoint's installed base of Arcnet token-passing networks is still growing. Other non-Ethernet baseband architectures are beginning to disappear. Zilog, Inc., for example, has dropped its Z-Net II product in favor of Ethernet compatibility.

The broadband market remains a three-way race among Interactive Systems/3M, Sytek, Inc. and Ungermann-Bass, each of which have approximately the same market share. Wang Laboratories, Inc.'s Wangnet is beginning to compete with the market leaders, but potential customers still see it as a network only for Wang systems. Other notable broadband vendors are

Contel Information Systems, Inc. and Concord Data Systems, Inc.

The market for personal computer-based local-area networks is the fastest growing segment of the industry. Corvus Systems, Inc.'s Omninet and Nestar Systems, Inc.'s Plan networks lead the field now, although the potential market is so broad that any of a dozen competitors could catch up quickly. In the submarket that specializes in networking for the IBM Personal Computer, Orchid Technologies, Inc.'s PC-Net is an early leader.

With all the current activity in both the technology and the marketplace, some constants remain. The user must decide among a large and often confusing array of products both within the local-area network market and among alternative technologies. Users who examine the market with open eyes and detailed and careful assessments of their needs will acquire a powerful tool for the integration of a wide range of automated functions. Users who shop blindly will find local-area networking an inadequate, even restrictive solution and will become tomorrow's dissatisfied customers.

Alongside the many applications for which local-area networks can provide beneficial, cost-saving solutions are some applications for which local-area networks are either too costly or too unsophisticated technically. In other words, for some applications that might lend themselves to local-area networking, other technologies can do the job better.

For simple port selection or port contention among one or more computers and a network of terminals, a local-area network is simple overkill. Users in such situations usually wish only to gain access to host-resident applications: the host computers handle requests for storage and peripheral services. The terminals are usually unintelligent, asynchronous devices that cannot share software either with the host or with one another and that need to communicate with only one computer at a time.

For port selection among a small number of computers of sim-

ilar make and with similar operating systems, one or more shared front-end processors can do the job more efficiently than a local-area network. For port selection among mutually incompatible computers, a port selection switch (also called a data PBX) is the best choice. Both front-end processors and data switches have been on the scene for years; they offer all the benefits of proven technologies: stable interfaces, time-tested maintenance and control procedures and a history of satisfied customers. Users should not take risks with an infant technology for simple applications when a less risky alternative is available.

At the other end of the spectrum lies the large-scale, fully integrated voice and data network. The local-area network has not been built that can handle a full load of voice telephone traffic along with a full load of data. Local-area networks are a creation of the data processing industry, and their technology has bypassed, not solved, the problems of voice communications that the telephone industry has been handling for decades.

From the telephone industry comes the voice/data PBX, a circuit switch built on a digital matrix and designed to handle both voice and data traffic. For data handling, these switches represent an even younger technology than local-area networking, and their data transmission capabilities are currently quite narrow. They use twisted-pair wiring, usually the same wiring as the building's telephone system, and are limited to a 56K or 64K bit/sec data rate. They are useful only in large installations, with a minimum of a few hundred lines. Their switching algorithms are designed for voice traffic (for a large number of short calls), rather than for the long sessions common with data traffic.

Still, they offer a number of advantages for large offices in which management would like to place a terminal on every desk. Any large office must have a telephone network, and the cost savings from having data applications share the voice network rather than using a separate cable plant can more than make up for the high initial cost of a voice/data PBX. The big switches' present limitations for data handling are not a long-term issue; their makers will probably have ironed the bugs out of data switching long before current local-area network vendors have taught their products to switch voice calls.

Current leaders in the voice/data PBX market are Rolm Corp., now partly owned by IBM; Northern Telecom, Inc., long a supplier to the Canadian telephone system; AT&T Information Systems, Inc., the former American Bell, Inc.; InteCom, Inc., whose IBX systems include an Ethernet interface; and Nippon Electric Corp. New vendors expected to do well are Ztel and CXC, both of whose switches incorporate local-area network technology.□

Lombardo is an associate editor of Datapro Reports On Data Communications *at Datapro Research Corp. in Delran, New Jersey.*

lation of a broadband local-area network.

The network ties together four buildings in midtown New York and a fifth building approximately one mile away. Eventually, the local network will encompass one of the bank's Long Island offices some 15 miles away, probably through microwave transmission. The local-area network itself will connect 60 to 90 floors in nine buildings in the next few years.

With further expansion, the local network will tie into the bank's private packet-switched network for national and international access to the bank's 90-plus data centers. According to Harvey S. Hershkowitz, a vice-president in the operations department, who helped usher the network into existence, "People wanted one terminal that could access any host."

Deciding on what type of network to use is perhaps the biggest deterrent to most companies suffering from "analysis paralysis," but Chase was given a virtually risk-free opportunity to decide on the type of network it would use.

"We were Wang's [Laboratories, Inc.] second largest commercial customer," Hershkowitz explained. So, in late 1981, Chase agreed to become a beta test site for the newly developed Wangnet local-area network. "If it didn't work, we wouldn't buy the equipment," he said.

What is somewhat surprising about Chase's early entrance into local-area networking is the bank's size. It is the third largest commercial bank in the U.S. controlling more than $80 billion in assets. With more than 300 branches, it employs 36,000 people and extends its financial services to 100 locations worldwide. Despite what could have been a bureaucratic maze of committees in smaller organizations, Chase moved decisively into networking.

In fact, Chase was so certain that it needed some type of local network that it began laying broadband cables before Wangnet was selected. The bank knew that no matter what type of network it chose, the cable under the New York streets could be used. "We thought we should get as much bandwidth as possible for expansion, so we went with broadband cable," Hershkowitz said.

Wangnet (renamed Chase Cablenet internally) is a broadband local-area network using carrier-sense multiple access with collision detect (CSMA/CD). Its wide bandwidth ensured Chase easy expansion into voice, image and video, Hershkowitz said, and transmits data at 10M bit/sec.

How did Chase know it was time for a local-area network? To start with, there was a growth rate of 500 terminals per year just for Wang equipment and a total of more than 5,000 terminals already installed throughout the company. There already were multiple overlapping networks in place and Chase was spending approximately two million dollars each year just to install and move terminals within its buildings.

While no feasibility study was performed for Wangnet specifically, studies on networking already had been done which concluded that a single network was needed to replace the existing "spaghetti" network and support high-capacity transmission for a variety of traffic types. Because reducing the amount of cable in use was also a goal, the bank spent a considerable amount of time (as much as 60% to 70% of the total job) preparing space for cable runs.

Because Chase was a beta test site, "there were fewer meetings and fewer people involved than there normally would be in this case," explained Hershkowitz. "It would have taken longer if we had sent out a request for bids. It could have taken six months to a year." While being a test site had its advantages, there were unforeseeable problems with Wang in delivering the equipment throughout much of 1982. "The equipment came in very slowly," Hershkowitz said. "It took Wang longer than it should have."

With a plethora of terminals, networks and cables involved, "this had to be approved by senior management," according to another vice-president in operations and corporate systems, Ronald E. West. "We're due to report back to senior management in six months. Before we can expand to other buildings, we have to show that we're serving the bank's business needs and not our own interests in technology."

After senior management approval for a local network was secured, cable laid and a network selected, Chase began the job of implementation on a limited basis. "People were doing file transfer, inquiry and other applications," Hershkowitz said.

By the time the local network became operational last year, technocrats such as Hershkowitz and West had primed users with what they called "a marketing job."

"We asked people to volunteer to participate in the beta test. We looked for technical people who could handle it. Programmers were used at first and it spread to the end users," according to Hershkowitz. By the end of June, Chase had installed a dual broadband facility into its first four buildings, connecting riser cables to the trunking system in three of the buildings.

Chase Cablenet offers four service categories: private and dial-up line-equivalent services, Wangband, a peripheral band and a utility band.

- The private and dial-up equivalent offers up to 9,600 bit/sec transmission over point-to-point or multipoint, half-duplex or full-duplex, asynchronous or synchronous media through an RS-232, V.24 interface. With an RS-449 or V.25 interface, up to 64K bit/sec transmission speeds are achieved.
- Wangband offers a 10M bit/sec contention service for nine Wang VS, OIS and Alliance minicomputers. Two IBM 4300's and a handful of Wang and IBM personal computers also reside on Wangband.

● The peripheral band offers a multiplexing scheme which allows some 33 Wang products to be coupled to a host instead of hardwired.

● The utility band offers up to seven video channels for teleconferencing or text and news dissemination, but teleconferencing is still in the testing phases with two rooms in use.

While the local area network is up and running, Hershkowitz warns that a network is not the answer to all communications problems. "The . . . [local-area network] does one thing for you," he said, "it allows IBM, DEC [Digital Equipment Corp.] and other equipment to connect but you still have to program the machines to talk to each other. Otherwise, it's like calling France on your telephone — you have a connection but you still can't speak the language."

The networking cost so far is estimated at a reasonable $500,000 by West, who expects several million dollars will be spent for future development. "We have a five-year goal of recovering all money," West said. It will include a charge-back system to all users.

Maintenance costs will also be cut as Chase lessens its reliability on Wang for service by using in-house personnel.

With one of the first local-area networks in place, does Chase feel any buyer's remorse? After all, some industry pundits are touting the next generation of nonblocking private branch exchanges (PBX) as the preferred means of data networking and integrating voice and data.

"We have no regrets because we have a system that's up and running, and that's more than most people can say," Hershkowitz said. "We're looking at a new PBX, but it will coexist with Wangnet. Wangnet traffic is 10 megabits [per second] — no PBX can equal that speed."

West agreed. "We have a hybrid approach — we're not discounting PBX's," he explained. "We have vendors coming in with PBXs now." Chase scruntinizes a vendor's technology, its ability to support Chase Cablenet and voice and data integration. "When a vendor tries to sell only its own hardware, we tell then we want a system solution to our business problems," West said.

Chase is now using a AT&T's Centrex and with the January 1 divestiture of the phone company, "we'll be looking very closely at PBXs with the introduction of the new access charge," Hershkowitz said. Divestiture and voice/data integration have tossed monkey wrenches into many voice departments that were often running smoother than the data processing departments. "The voice people are a little worried about losing their customers to the data people," Hershkowitz said.

As West said, "We're forced to talk to the voice people now. There's always wars between voice and data."

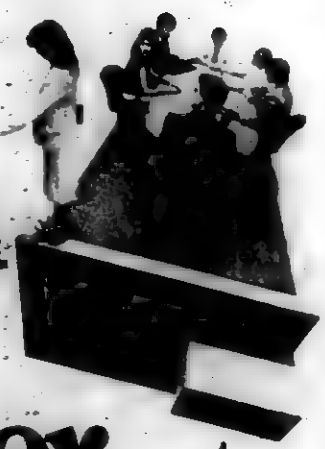
But despite the wars, West anticipates electronic and voice mail capabilities on a PBX by 1985 or 1987. "We will certainly have downtown wired up," he said. "We want to come off the PBX and broadband cable and gateway to packet switching." It will be through advanced gateways that Chase will most likely provide its national and international networks to its 90 plus data centers.

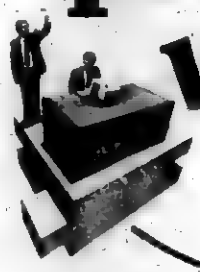
For medium-range voice and data communications, Hershkowitz expressed an interest in microwave links, but West said, "we're looking at other types of bypass technologies also."

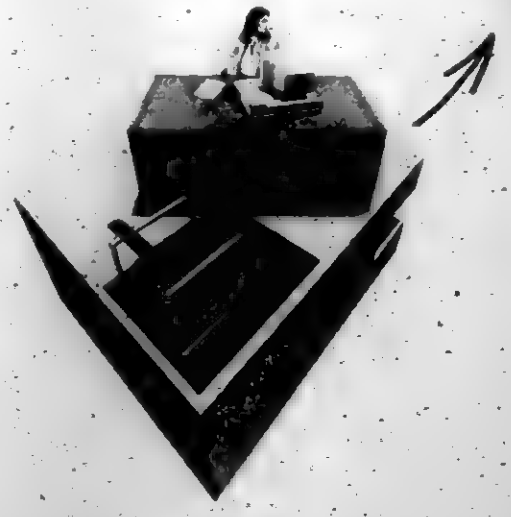
So what actually began as a strategic telecommunications plan for Chase in 1979 has developed into a fully functional local-area network and the start of an integrated voice/data network that most users and vendors only talk about. "We've decided the local-area network works," Hershkowitz said. "We're into the expansion phase now."□

Jim Bartimo is senior writer for Infoworld, *a newsweekly based in Menlo Park, Calif.*

We bring everything in your office closer together. That's what puts Wang way ahead.







Let's face it. Making things work together is where most computer companies fall apart.

They talk about compatibility, while they deliver a family of products that relate to each other in name alone.

Quite simply, that's what separates Wang from everyone else. Because unlike everyone else, Wang has a family of products that is truly compatible. From personal computers. To word processors. To office information systems. To large computers.

And it stands to reason that when everything in your office works better together, everyone in your office does too.

As more people manage information and communicate it in more ways than ever before – in words, images, numbers and voice – it just makes sense to choose Wang.

Because Wang offers you total solutions that bring everything, and everyone, in your office closer together.

That's what puts Wang way ahead.

For a presentation on Wang office automation computers, call 1-800-225-9264. Or write to Wang Laboratories, Inc., Business Executive Center, One Industrial Avenue, Lowell, MA 01851.

Large systems hardware is not an impulse buy.

Now there's a guide coming to you that will help with your homework.

The Computerworld Buyer's Guide to Large System Hardware is designed to give you a valuable, one-stop information source for large systems hardware and peripherals. Take a look at all the tools it will give you to help you make the right large systems choice:

- Large systems product listings, including mainframes, superminis, minis and small business systems and the terminals and peripherals designed to work with them. You'll get listings of printers, memory products, teleprinters, controllers, magnetic media and supplies, plotters, digitizers and much, much more.
- Vendor profiles that include company name, address, contact information, and primary markets served.
- An industry-specific editorial section that's designed to keep you right up to speed on the trends in large systems hardware. We'll give you news of the latest developments in mainframes, superminis and minis and their changing roles. You'll get information on the latest management techniques used in running data centers; planning for cost effectiveness and the new technologies in fifth generation computing.
- In addition to its comprehensive listings and editorial, the *Computerworld Buyer's Guide* will give you pages of detailed ads for large systems hardware products and peripherals that you can refer to all year long.

Each issue of the *Buyer's Guide* is updated before publication, and contains hundreds of listings that are accurate, complete and easy to use. This *Buyer's Guide to Large System Hardware* is distributed to *Computerworld's* 114,000 subscribers in the U.S. — it's one more of the additional benefits you get as part of your *Computerworld* subscription. Look for it this April 18th.

And if you market your products to buyers of large systems hardware and peripherals, this *Buyer's Guide* will reach them with your product message just when they're researching products and vendors. Reserve space in this *Buyer's Guide* by March 2nd by calling one of the sales offices listed below, or call Ed Marecki, National Sales Director or Kevin McPherson, Product Manager, at (617) 879-0700.

looking for a means of controlling access to data bases and ways to perform file management.

Viewing a local-area network as a tool for connecting diverse communciations equipment, rather than as a separate product, helps to put technological issues into perspective. Taking a top-down, applications-oriented approach can resolve the technological choices required in selecting the appropriate local network. From this stance, the technical choices are driven by the usage objectives. If, for example, the bulk of the usage is high-speed file transfers between two different hosts, then a point-to-point baseband system would be a good choice. Conversely, if the objective is to share expensive resources throughout a widely dispersed geographical area, point-to-point technology plainly will not work because the installation becomes a wiring zoo.

Users should also consider the usage needed when selecting the medium. If video is not necessary, then broadband technology is not necessary, or if geographic scope is necessary, then a baseband system will not be appropriate.

Because of the relative newness of local-area networks, the technological mire is really an issue of more concern to the vendor than it is to the user. Like other products on the market, users must begin to approach vendors of local-area networks with solutions in mind. Most local-area network vendors have different approaches to a network and by taking the solution approach, the user narrows the choices considerably. It is necessary for the vendor to describe what the local-area network will do for the organization.

Organizational considerations play a key role in determining user objectives. The study revealed distinct differences in personality, age, experience and systems-orientation among proponents of different technologies. These differences significantly impacted the network selection process.

Younger managers tend to be systems-oriented. They take a broad view in approaching the local network; therefore broadband-based systems appear to be more popular with these managers. On the other hand, older managers in industrial environments are not comfortable with a systems orientation and tend to select baseband systems. The selection process then seems to be significantly conditioned by managers' attitudes.

For example, several sites with a strong systems orientation did not even consider alternative technologies (thought to be less than state-of-the-art), although there was no immediate requirement for the more sophisticated approach.

Connection philosophies also were found to reflect organizational issues. Three distinct connection approaches were isolated:

- A classic integrated approach to local networks is one in which all devices are interfaced directly to a totally wired building. This would be preferred by users in Fortune 500 companies, high-technology companies, government or education-related endeavors.
- A limited hierarchical approach is one in which the building wiring is used only for connections between a central host and intermediate devices controlling groups of terminals and related equipment. An example is a factory-type setting.
- A piecemeal approach, similar to the classic PBX, consists of a trunk or utility system linking major buildings or concentrations of DP activity with equipment connected primarily through twisted-pair wire. Transaction-oriented systems are found in banking and insurance firms which have not yet integrated the technology into the total organization.

An organization that wants to incorporate a local-area network must further assess the usage the network will receive. In one case, a bank performed a traffic analysis for its proposed network. Once installed the bank experienced considerable degradation in its broadband network because there were 3,000 personal computers in the organization that had not been figured in the usage scheme. This was because the bank allowed micros to be purchased as office rather than computer equipment.

This problem is endemic in the industry. As soon as a local-area network is installed, equipment to hook into it comes out of the woodwork. Any user who does not figure on there being 30% more equipment than originally planned for is making a big mistake.

The decision to consider implementing a local-area network in an organization was often triggered by changes in the organization. Some of these changes included additions (such as an energy-management system or the installation of a new computer), construction of or a move into a new facility or anticipated expansions in programmable controllers or terminals. The initial consideration of the local-area network was emotional and not a product of careful planning and analysis. While the final decision to incorporate the local network is based on economics, the evaluation process tends to be emotional and confusing.

The archetypal decision-maker in this process was a manager confronted with the problems of supporting a large, growing installed base of devices, a number of host computers and frequent movement of devices with a need to avoid using masses of twisted-pair wire. And, if the manager who decides whether the organization will have a local-area network and what it will look like also initiates contact with the vendor, he is not generally a management information systems (MIS) manager. MIS is only starting to become involved with the issue of proliferating computer power. MIS generally figures heavily in the implementation process, but is often not the initiator.

Users found that local-area networks were a good means of alleviating the physical problems brought on by moves or additions to the installation. Recognizing the importance of planning for future

TELEVIDEO'S 970: GET IN ON THE ANSI BOOM.

The TeleVideo 970 Terminal. The computer professionals' most powerful way to utilize the advantages of ANSI X3.64 code structure.

The 970's 16 non-volatile function keys (shiftable to 32) literally automate ANSI code command entry. Other features include VT-100 compatibility, block mode operation, 32 non-embedded visual attributes and a reconfigurable keyboard. An RS232 printer port with built-in buffer is standard.

For operator comfort, the 970 keyboard offers a naturally contoured palm rest and sculpted keys, and non-glare 14-inch tiltable screen. You can utilize either the 80 column format, with 3 pages of memory, or 132 columns with 2 pages.

The 970. A combination of power, ease of use and TeleVideo reliability at a time you need it most. The ANSI boom is here. Get in on it with the TeleVideo 970.

TYPICAL PER-USER BROADBAND LOCAL-AREA NETWORK COST ANALYSIS[1]

COST	BROADBAND	BASEBAND
I. HARD COSTS		
Wire, cable and taps	$ 233	$525
Computer port contention[2]	0	80
Modems	827	0
Interconnectivity[3]	0	200
TOTALS	$1,050	$805
II. SOFT COSTS		
User relocation[4]	$ 7	$ 25
Interhost message processing[5]	0	625
Additions[6]	86	200
Maintenance[7]	90	0
TOTALS	$183	$850
III. HARD PLUS SOFT COSTS		
Hard costs	$1,050	$ 850
Soft costs	183	850
TOTALS	$1,233	$1,655

Net annual savings using broadband over baseband: $422/user

FOOTNOTES:
[1] Costs based on figures supplied by three broadband and three baseband vendors for a hypothetical local-area network.
[2] 25%-50% reduction in required number of host ports.
[3] No patch panel or switch resources required.
[4] Assumes 25% of employees are relocated each year.
[5] 5% of host processing resources.
[6] 10% growth annually.
[7] Assumes spares kept on site.

Chart Courtesy of Strategic, Inc.

expansion and capabilities, most users surveyed opted for broadband, not baseband networks. Typical connection patterns included asynchronous terminals to asynchronous processors, bisynchronous remote-batch terminals to bisynchronous processors, various IBM 3270 configurations and high-speed host-to-host file transfers.

But the issue of cost justification has been a knotty problem for all users surveyed. Typically, local-area networks cannot be justified solely on the basis of hard-cost savings. Its cost-justification must be based on a combination of hard costs, soft costs (such as frequent movement of devices) and less easily quantified but very real considerations of user access to resources, enhanced productivity and lowered frustration levels. Local networks offer easy relocation of devices, high reliability, reduced media costs, flexibility, easy growth paths and additional services, which will be increasingly important in coming years.

Local-area networks provide for distributed processing, peer-to-peer communications, reduction of "information float" and, when the medium selected is broadband, video capabilities for conferences and training. The accompanying chart illustrates one technique for cost-justification of a broadband local-area network.

This analysis does not include further broadband local-area network savings derived from:

- Fewer expensive resources required.
- Labor savings from increased productivity.
- Savings due to extended computer life (postpones the necessity of upgrading to a larger host).
- Credit for ability to add video, security and alarms and additional applications. Because the payoff period is typically short, no return on investment computations have been included.

Vendor independence has emerged as a crucial concern. As is true with any innovation, the initial applications tend to be replacements for existing products and only after the new approach has been in use for awhile are its unique applications and advantages exploited, such as electronic filing. To commit to a proprietary technology for the local-area network this early in the communications explosion (before IBM and AT&T have even actively entered this market) locks the user into a supplier's network-attachable products. Until IBM and AT&T enter the fray, it is unlikely that any single vendor will be able to provide the optimal solution for cur-

rent and future applications that will be interconnected through a local-area network.

Other concerns expressed by survey respondents included video capability, vendor stability, maturity of the technology (a big plus for broadband, which is essentially cable television technology), ruggedness, ease of expansion and flexibility and capacity.

As mentioned previously, product evaluation was strongly influenced by organizational factors and the far-sighted concern for video capability even when there were no immediate or short-term plans for implementing video. Interestingly enough, among the more than 50 sites surveyed, virtually none included word processing applications in the planning or decision-making phases, frequently resulting in sites with dedicated WP local-area networks not coordinated with nor able to communicate with the DP-based local-area network. Among leading end users, this parochial picture is changing as the emphasis shifts from local-area networks as a product to local-area networks as a protocol for facilitating communications.

Technical considerations among the existing installed base reflected the prevailing technical philosophy at the time the local-area network was installed. Thus in early installations point-to-point systems were the rule since stable, effective multipoint systems did not appear on the scene in quantity until 1980 and 1981. Subsequently, the majority of newer installations surveyed rejected point-to-point product offerings as passe regardless of suitability, based on either preferences for newer technology or understanding of the need to plan for unforeseen future requirements. They tended to want the latest technology whether it was appropriate or not.

For users who adopted local networks early, standards were not an issue. Their needs were sufficiently pressing and they could not afford to wait for standards to be developed. As is now abundantly evident by the multiplicity of IEEE 802.X proposed standards, the industry is still at least a year away from having even viable subsets of a cohesive standard and five years from having real standards. Large users look to IBM to set the standard in the near future.

Security issues, largely a factor only among the government and military sector in the sites surveyed, are rapidly becoming a concern for leading end users as local-area network usage becomes widespread. Hard on the heels of security are the legal implications — such as how to prove that a document which only exists in paperless form has not been tampered with. Large users are now planning or implementing security devices external to the network and are not requiring the network to provide automatic security itself.

Product evaluation is being impacted by the shift in user perception. Now, not only are cost and technical merits major factors, but increasingly the expansionary and interface characteristics of products are examined to ensure present and future compatibility in multivendor environments. Those firms engaged in long-range planning are evaluating local-area network proposals with an eye toward future migration onto optical fiber and development of hierarchical structures. An example of this is a series of inexpensive, dedicated baseband networks serving individual domains tied to a broadband backbone network which is, in turn, connected to fiber-optic links for intercity transmission.

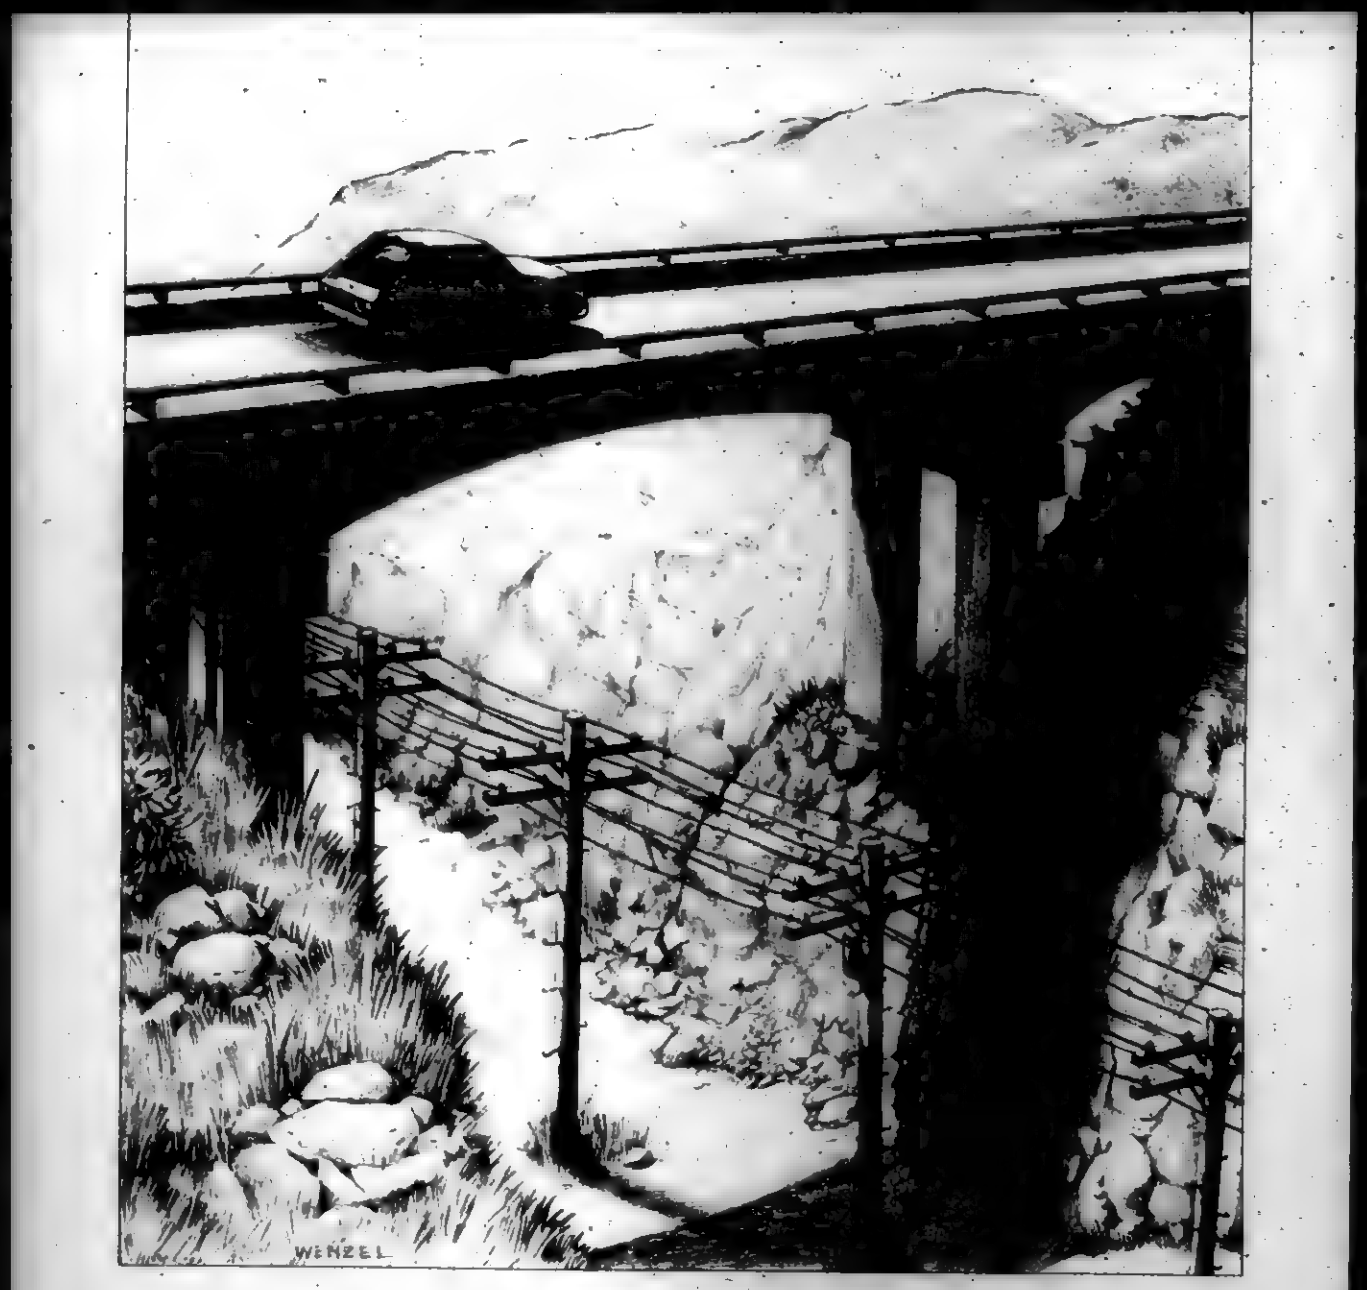
Technical innovations are occurring in the semiconductor field that will soon result in integral local-area network capability in the device itself rather than, as presently, in a stand-alone box between the device and the network. This change, combined with a trend toward totally wired buildings, will soon result in users plugging into the local-area network with any appropriate device in the same way as an appliance is plugged into household electricity when and where needed. The local-area network will be as transparent as electricity is now and network products will be portions of boards resident in the hosts, controllers and other devices.

In terms of trends in the world to come beyond 1990 the communications scenario can be viewed in terms of the size of the business. Small firms will have an inexpensive analog PBX and virtually no data networking, since their requirements are to share time, not resources. The market is sufficiently fragmented and the cost of individual sales calls is prohibitively high so large communications vendors cannot afford to pursue this market. Handing diskettes around is a physically viable and cost-effective alternative to communications networking.

Medium-size firms will have an analog PBX plus an inexpensive baseband local-area network or will have an integrated voice/data PBX to handle their data networking. Large firms will have integrated voice/data PBXs to handle voice requirements and some data applications plus a broadband local-area network for bulk data, video and intracity networking, such as connecting the metropolitan branches of a bank. These local network-PBX systems will coexist and be connected by gateways for maximum communications efficiency. Additionally, they may be augmented by wireless systems such as cellular radio, particularly for campus-type environments.

Local-area networks and PBXs are the "super glue" of today's local communications systems. By providing connectivity virtually without regard for device type, brand or application, local-area networks and PBXs facilitate and enhance effective, timely communications.□

Geddes is director of communication systems for Strategic, Inc., a San Jose, Calif.-based publishing, research and consulting firm specializing in high-technology industries.



On The Road With Bypass

By Walter Ulrich

The communication technologies which permit users to bypass traditional telephone company lines are emerging. Although many of these techniques are not yet commercially available or economical to use, they hold the promise of delivering a great deal of functionality at a reduced cost. Cellular mobile radio, digital termination systems (DTS) and cable television are some of the latest developments in the bypass arena.

This year will undoubtedly witness the most fundamental changes in communications since the telephone was invented in 1876. Activity in the communications marketplace and the regulatory environment and new technology innovations are converging and these changes will tremendously alter the flexibility and cost of communications services.

Fifteen years ago, you could buy communication services from any

ILLUSTRATION BY GREG WENZEL

company — as long as it was part of the Bell system. In 1969, the Federal Communications Commission (FCC) voted that a Texas businessman, named Carter, would be permitted to tap telephone lines using an accoustic coupler. On January 1 of this year AT&T gave up the Bell name and divested itself of its seven operating companies. Today, the FCC's efforts at deregulation are nearly complete.

In addition to marketplace and regulatory change, there have been great advances in communication technologies. The concept of digital termination systems (DTS) was introduced in 1978; today they are becoming a reality. Cable TV has successfully penetrated many households in the U.S., but vendors are only beginning to offer two-way cable to businesses. The first cellular mobile radio system went into full operation last October. As satellites become more powerful, satellite-to-office communications becomes more feasible.

Communication managers have long complained that it is easier to transmit data 3,000 miles across the country than it is to move it from their office to the long-haul facility. Furthermore, the restructuring of the communications industry will mandate an increase in the cost of traditional local-loop services. Alternative local-loop communications, commonly referred to as bypass techniques because they bypass traditional local exchanges, offer solutions to the connection and cost problems.

vices. Alternative local-loop communications, commonly referred to as bypass techniques because they bypass traditional local exchanges, offer solutions to the connection and cost problems.

The traditional telephone plant is just not capable of providing the speed, quantity and quality of communication services needed by today's information-heavy businesses. In some cities higher bandwidth communication services are either unavailable or have unacceptable lead times for installation. The reliability and quality of lines that are suitable for voice communications may be entirely unsatisfactory for handling data. In some cases, the time to repair older equipment and circuits can be a matter of weeks.

In past years almost no one could predict either their unit cost of communications or their total communications bill. Tariff charges from the Bell companies are not subject to negotiation and could not be predicted. The communications director, charged with managing corporate communication costs, could not control the most basic element of that cost — the price of communication services. Bypass ends that worry.

Alternate technologies allow communications managers to negotiate communication costs and establish prices for years to come. Furthermore, the communications department can make capital investments in some forms of communications technologies that will allow them to fix the costs of bypassing certain local exchange services. The ability to control communication costs for the first time may be the strongest single justification for making the move to bypass technology.

Controlling local-loop communication costs is becoming more important. The cost of traditional local-loop services is increasing. Prior to the breakup of AT&T, long-distance services helped support local-loop services. The price of local exchange services was therefore artificially lower. Now, with the divestiture of the operating companies, local and long-distance services must pay for themselves. Charges for local services will increase and charges for some long distance services will decrease. Prudent companies should be exploring alternatives for both local-loop and long-haul communications.

An introduction and description of some of the leading bypass technologies follows:

Microwave and Digital Termination Systems. Private microwave is probably the oldest of the bypass technologies and the forerunner to the current communications revolution. Over the years, private microwave has gone from an exclusively analog format to now over 50% digital transmission. Digital microwave is clearly preferred for distances under 200 miles. Because of crowding in the private microwave spectrum, the FCC has allocated additional slots in the 18-GHz region. Where spectrum space is available, private microwave still makes sense for companies that have a large volume of point-to-point communications.

One new kind of microwave communications that has attracted a lot of attention is called the digital termination system. In the late 1970s, Litton Industries applied to the FCC for allocation of the microwave spectrum in the 10.55- to 10.68-GHz range. Litton wanted this bandwidth assigned for microwave cooking ovens because of its superior qualities for browning meat. Xerox Corp. had a better idea, however — it petitioned the FCC to set aside those frequencies for data communication services.

Xerox called their new communication service Xten. Xerox envisioned an office of the future where large numbers of documents would have to be transmitted between company locations. Communications bandwidth would be necessary to support this view of the office of the future. Fortunately, the FCC agreed that data communications was more important than browned meat.

The full concept of Xten included communicating from the local common carrier directly to a long distance carrier. That full concept has come to be called digital electronic message services (Dems). The part of Xten that bypasses the local loop is called a digital termination system. The DTS carrier for a community would position a multidirectional antenna on the top of a tall building. The carrier would then be able to transmit, as well as receive, high-bandwidth communications between itself

and its subscribers.

In 1980, an experiment was performed to validate the service concept. San Francisco and Manhattan were picked as the local areas. Tymnet, Inc. and LDD (a subsidiary of M/A-COM, Inc.) provided the microwave communications between subscribers and a central facility and San Francisco. From an earth station at Embarcadero Center long-haul transmission via a Satellite Business Systems satellite was accomplished. The information was received in New York City where it was distributed by Manhattan Cable Vision to offices. San Francisco was deemed an ideal place to test DTS because of its hills and its fog.

The experiment was a great success. The error rate was always better than one bit error in every 10^8 bits and was often better than one bit error in every 10^{11} bits.

The FCC has established two kinds of communication carriers for DTS — extended carriers and limited carriers. An extended carrier must provide services in at least 30 cities and must commence offering services within 60 months of its approval. A bandwidth of 10 MHz, 5 MHz in each direction, is assigned in each community for subscriber communications. Spectrum allocation is available for seven extended carriers in any one city. Limited carriers need to provide communication services in only one city and to less than 30 cities. A limited carrier must commence providing services within 30 months of its approval by the FCC. There is sufficient bandwidth available so that six carriers may be offering limited services in any one location. Limited carriers can only offer 5 MHz transmission, 2.5 MHz in each direction, to their subscribers.

The FCC will only authorize carriers to operate in the DTS spectrum. Therefore, a company will not be permitted to use DTS to meet its internal needs exclusively. However, DTS carriers may seek to satisfy their internal communication requirements first, and then they must sell excess capacity to the public.

DTS services are line-of-sight services. To reach some locations in some cities, a single DTS transmitting location may be insufficient. A DTS repeater station or alternate communication technologies, like cable, may be used to reach locations that are otherwise blocked by high buildings or other obstacles.

DTS services are best suited for data communications and will compete with AT&T's Dataphone Digital Service. Even though DTS services are only now being implemented, their economies have been improving. Three years ago, it was universally agreed that the economics for DTS made it suitable only for data transmission. The cost of DTS has been declining and it appears that DTS may soon be suitable for voice communications. The capital cost for a DTS station has fallen by more than 50% in the last 12 months. DTS is an important bypass technology and it will help many companies to reduce the unit cost of their local communication transmissions.

Cable TV. Coaxial cable has broad applicability for communications for both the local-area network (within a facility) and the local loop (from a facility across town).

The typical cable TV franchise operates with the capacity of 56 to 108 full-motion video channels with bandwidths ranging from 330 to 440 MHz. Most of the original cable TV installations provide only one-way transmission from the cable carrier into the home.

Modern cable TV installation provides for two-way communications. Manhattan Cable Vision, in New York, is an example of what can be done using cable TV technology to support business. Its customers include Bankers Trust Co.; Citibank N.A.; Manufacturers Hanover Trust Co.; Shearson/American Express, Inc.; the city of New York; and Wang Laboratories, Inc. The service provides digital data circuits to their customers ranging from 4,800 bit/sec to 1.544M bit/sec (or T-1). Where coaxial cable runs past a building, it can be very economical for communications.

Cellular Mobile Radio. Traditionally, mobile telephone service was provided by a single high-power antenna in the heart of a city. Mobile telephone services have not been without their problems. A vehicle at the outskirts of a city or moving behind tall buildings would often experience interference. Mobile telephone service typically had only 12 or 24 channels and could reasonably support only 500 to 1000 subscribers. During peak times of the day, there would be a fifteen minute wait before the subscriber was able to place a call. To minimize those delays, new subscribers were put on waiting lists, with a several years' wait required in some cities.

Cellular mobile radio promises to correct these deficiencies. Each community is broken up into a number of cells and a low-power antenna is placed in each cell. When a driver goes from one cell to the next, the system automatically senses that the signal is becoming stronger in the adjacent cell. The system then switches the transmission from the first cell to the second one. This switch happens so effectively that a subscriber rarely notices it and gets a relatively uniform signal. There may be many cells within a city, and frequencies can be reused from cell to cell. This frequency reuse makes it possible to service many more subscribers, perhaps as many as 100,000 in some locations.

The cost to subscribe to a cellular mobile radio system is about $200 per month today. That cost includes the amortization of the hardware and the subscription fees. Many analysts expect that cost to be halved by 1985 and perhaps fall to as little as $25 to $50 per month some day. If that occurs, an argument can be made that cellular mobile radio may in fact replace the copper wiring that is go-

ing into homes today.

In the near future, cellular mobile radio will make much more telephone service available as well as at a lower price. This fortunate phenomenon will make it much more feasible to establish data communication services between vehicles and offices. Vehicle data communication schemes, based on the AlohaNet research, make very effective use of mobile radio bandwidth.

More New Communications

FM radio stations have a new, valuable data communication franchise because of changing technology and regulation. The FCC has approved FM radio stations to offer 200 KHz of subcarrier bandwidth for communications resale. These subcarrier communications make sense where companies have to broadcast specific information to a large number of locations. For example, some companies are transmitting stock information in this way to specialized portable terminals, so that businessmen can monitor the performance of their stocks. This is the communication technology that comes closest to making Dick Tracy's wrist radio a reality. A self-contained FM station may be able to install subcarrier equipment for as little as $5,000 to $7,000. That is a very modest investment to make 200 KHz of communications bandwidth available on a broadcast basis.

Satellites have been used to bypass long-haul terrestrial facilities for several years. Thanks to the space shuttle, it has become both easier and cheaper to launch satellites. As satellites become larger and more powerful, the need for large satellite earth stations decreases. As the diameter of a satellite receiver shrinks to approximately two feet, it then becomes feasible to not only bypass long-haul, but also local-loop facilities. The electronics are complicated, but very large-scale integrated circuits promise to bring down their costs. In addition, when earth stations become inexpensive enough, companies will broadcast directly from satellites to the receiving location. Finally, the FCC has recognized direct broadcast satellites (at least for home use) and has allocated the 12.2 to 12.7 GHz region for such satellites.

Infrared and even visible light offer communication alternatives over relatively short distances. For example, the cost to transmit data across a street may be prohibitive in some cities. If a line of sight can be established between two buildings across the street, then infrared or visible light may provide a communications solution.

Fiber optics is another technology that promises to transmit great bandwidth with great accuracy. Electrical interference is not a problem with fiber optics, so the accuracy of the transmission is excellent. Unfortunately, the techniques for splicing and tapping optical fibers have not been refined, which limits their effectiveness over short distances. Over longer distances, fiber optics makes sense and plays an important role in at least one of the new teleports.

Teleports are not a communication technology, but represent the bundling of communication technologies in a useful way. As its name implies, a teleport is a place where communications facilities are concentrated. A teleport might have several earth stations pointing to several different satellites. Then, bypass technologies would be used to distribute the long-haul communications to businesses within nearby communities.

The best known teleport is the joint venture between Merrill Lynch, Pierce, Fenner and Smith, Inc. and the Port Authority of New York and New Jersey. This group is building a satellite earth station complex on Staten Island, with earth stations directed toward many major satellites. From Staten Island, they are stringing fiber-optic cables through the Port Authority Trans Hudson (Path) tubes into the major centers in Manhattan. Selected cities will be served in New Jersey along the Path route as well, including Jersey City and Hoboken. A teleport, then, is a consortium of communication services designed to provide the local region with a variety of voice, data and video communications while bypassing traditional communication facilities. Teleports are springing up in a number of major cities.

Which bypass technology should the buyer select? Probably several of them. Smart companies will be mixing and matching their local and long-distance communication technologies to meet their particular communications profile. The bandwidth, flexibility and economics of various bypass technologies may well mandate that several different technologies will be used in any one city and that all the bypass technologies will be used in one place or another within the overall corporate network. Information is so essential to modern companies that their very survival may depend upon a sound communication strategy.

Communication costs are changing dramatically. If companies fail to take advantage of new communication technologies, their cost per unit of communications will increase — perhaps significantly. On the other hand, the new communication technologies hold out the promise of reducing the cost per unit of communications. Bypass and other new communication technologies will provide more communication power, new services, greater flexibility, and lower costs than every before. Companies must control their communication destiny. For the first time bypass technologies for the local loop are beginning to offer an economical, feasible communications pathways.□

Ulrich is president of Walter E. Ulrich Consulting, located in Houston, Texas. His consulting activities include the convergence of computers and communications. Ulrich is also chairman of Interconnections '84, the national conference of the Independent Computer Consultants Association.

LEONARD Kleinrock

By Marcia Blumenthal

Leonard Kleinrock is a one-man communications network. He is a professor in the computer science department at the University of California at Los Angeles. Almost constantly on the move, Kleinrock traverses the country conducting numerous data communications courses for information processing managers through Technology Transfer Institute, a conference management firm of which he is president. A lively speaker, Kleinrock is a well-known participant at major industry conferences.

His research interests focus on computer networks, packet switching and local-area networks.

INTERVIEW

How would you characterize today's data communications environment?

Right now it's a zoo. Many technological possibilities are being explored by scientists and the outlook for new products is enormous, but nothing has settled down yet.

There are four groups of players in this environment, each pushing its own goals. The scientists are constantly coming up with new ideas, each of which appears to dominate previous ideas. But these ideas are two or three years away from products. Then there are the vendors who want the scientists to make up their minds so they can transfer the idea onto silicon and sell it.

The users are sitting around waiting for delivery on all these lovely new products they've been promised. And the standards organizations are caving in to vendors and users who keep saying they need standards, but have no idea what they should be.

One opportunity is that we are finally seeing the convergence of data processing and communications, but it's taken more than a decade for that to occur.

What is causing this convergence?

Integrated chips. Data communications needs intelligence in its products and information processing needs communications for distributed systems. It's hard to separate them right now. We are becoming a world of interconnected computer networks.

Wide-area networks using packet-switching technology have been around since the early 1970s, but it took the telephone company [AT&T] 13 years before it started offering this service through its ACS/Net 1000.

What's on the horizon for the user?

All the technology is on the horizon — local-area, metropolitan and international networks, fiber optics, cellular radio and so forth, but except for long-haul networks the products are not here yet.

With all this uncertainty, what advice do you have for users wishing to install advanced data communications products, such as local-area networks?

Users who are looking at products such as local-area networks have to recognize that if they opt for a particular product now, in two or three years there will be a new set of standards and products which may not be compatible with what they select now. They may have to rip out what they put in today and replace it — not the wiring but the interfacing.

If I were a corporate executive making the decision today, I would ask whether the system would pay for itself in two or three years. If so, then there is no question about installing a local net, but if it won't pay for itself the decision becomes harder. It's an interesting calculation because corporations that delay adopting advanced communications techniques now may lose far more in lost opportunity than the cost of the investment.

Do you see more users making the move to install local networks?

Some are and some are not. Today, most organizations are not installing local networks on a production basis. They are installing them on a limited, experimental basis. Most are using the classic PBX as a switch because the machine is already in place.

But despite the user's current hesitation in installing local nets, anyone building a new facility should put in the appropriate duct work for whatever cabling comes along in the future — and that includes fiber optics.

Since this switching equipment is in place, does this mean the star configuration will prevail?

People are moving in this direction because they are familiar with it. The star, which transfers data at about 64K byte/sec, is fine for most needs, but not all. It won't handle teleconferencing and it's slow when moving files around. More than likely, terminals will be intelligent workstations with possibly a 10M-byte hard disk. And if the central switch fails, no one can talk to one another.

On the other hand, vendors of these branch exchanges have been very good about building highly reliable devices using modular redundancy. There are high up-front costs with these devices, but it is a competitive technology.

Incidentally, IBM is taking an interesting approach with its ring wiring concentrators. By running wires out to a terminal and back to its cabinet, IBM makes the network look like a star, but it is really a ring. All the maintenance and configuration changes can be done from the cabinet.

What is keeping people from installing local networks on a production basis?

It is the lack of stabilization. Standards are just beginning to be approved. Chip sets are beginning to appear now. People don't want to be guinea pigs, so they are willing to run experiments, but not commit a corporation's basic operation to any particular product.

Another question users have with local networks is whether they are committed to a particular vendor's office automation solution if they opt for that vendor's local net. In a lot of cases the answer is yes and organizations are not pleased with this prospect and are waiting for a universal local net.

What is the outlook for a universal network?

This standards business is going to be around for a long time. We will never get out of it completely or have complete standardization. There is enormous opportunity for conversion products.

A hot product area today is

"bridges and gateways." A gateway is a device that connects two networks which have different protocols while a bridge is a device that connects two networks that have similar characteristics. The user pays more for that device and loses some efficiency, but it's an interim solution and we'll be in this environment for some time to come.

Do you see any one system which is better than most?

The best system depends on the parameters of the applications. Parameters include the bandwidth you need, the length of cable, how many bits will be sent in a block, the number of devices to be attached and so forth.

Some vendors are offering products that will not grow well as bandwith expands and longer cables become available. For example, [Xerox Corp.'s] Ethernet using CSMA/CD [carrier-sense multiple access/collision detect] does not operate well as bandwidth goes up, yet it has its place in the applications spectrum where it works. So with an Ethernet-based system you may eventually need more than one network.

Hiring a consultant is a good way of assisting in the purchase decision. But not all consultants are prepared to carry out a complete performance evaluation which describes where the system will begin to fail or where its limits are. And some consultants are committed to one vendor's approach. Users should hire a consultant who can challenge vendors.

How close to commercial reality is fiber-optics transmission?

As I mentioned before, anyone planning a new facility should install the ducts for fiber optics. This technology is very fast for point-to-point transmission — you can send the entire Webster's unabridged dictionary in a few seconds. Fiber optics carries light better than copper wire carries electricity. It offers the potential for enormous bandwidth, low error rates and it is immune to electromagnetic interference, a feature the military and government find very attractive.

But we don't know how to tap into it without a lot of loss and expense. If 10 taps are put in along the line, the power coming out the end of the line is about 1/1,000 of what went in. The tapping will take about three to four years to solve.

For the user it's clearly an issue of economics. The organization doesn't care how exotic the medium is, but whether it is cost-effective for the bandwith as well as being expandable. It can be a string and a can as long as it does the right job. The question is how much these taps cost — do you need a few gigabytes per second or can you live with 50M byte/sec?

It seems like videoconferencing is not as promising a network feature as was predicted. Are there other features which were being touted in the past that may not be as necessary now as once thought?

Video is not an enormous need right now. It's important for certain applications, but not too many corporate applications.

Clearly textual transmission is needed and facsimile is useful. Voice and data are certainly something that is needed, but whether they should be integrated is another question. When speech understanding technology is perfected there will be a greater need to mix voice and data.

Certainly the user would prefer to use a single terminal to initiate communications, but whether all transmission must go over the same wire is still a question.

The user has to be sensitive to the possibility of overbuilding the communications plant.

What will the organization's communications network look like in the future?

It's my guess at the lowest level there will be a shared logic machine; like a supermicro, that will serve from four to 16 people in a local cluster, perhaps acting as a file server. There will be a collection of these devices on a floor, communicating through a cable to other floors, coming into a computerized branch exchange.

From here the information would move into a metropolitan network, with gateways to value-added networks and satellites. Unfortunately the metropolitan network is confusing and users will have to wait a number of years before vendors provide metropolitan networks. Cellular radio, for example, is in its infancy and it is not yet determined how it will serve communications.

Unfortunately, the communications issue can become a nightmare, much like what has happened with the personal computer.

How do you prevent this?

There have to be changes in the corporate organization which recognize the information resource manager as a high-level executive. This person would be well-versed in information processing and data communications, disciplines which in many instances are separate today. These two specialities must be melded.

Are there any other changes that have to be made?

Issues in communications, particularly local nets, are largely hardware and protocol-oriented, but systems software must be considered. There is an enormous installed base of Cobol-based programs, but building these applications is a slow process. With increased on-line transactions necessary and users connecting into local networks to access corporate data, the organization must embrace the new generation of applications development and data base products.

The most popular personal computer software products are very user friendly. Building user-friendly interfaces is probably the most difficult task necessary for solving this problem. This type of system is more than five years away.

ENCRYPTION: Securing The Fortress

By Laura Brown Schlafly

In 1977, personnel at the U.S. Federal Reserve Bank in Minneapolis verified by secret password an apparently legitimate request to transfer funds to a Georgia bank account, which they later learned belonged to a wire-fraud expert.

In 1982, Japan's Nippon Telephone and Telegraph Co. found its lines being tapped and its data stolen by a credit card forgery ring.

Last year, in Los Angeles, a 19-year-old University of California student used his

home computer to break into a Defense Department communications system.

And a few months ago in Fort Lauderdale, Fla., two computer technicians manipulated a personal computer and a push-button telephone to penetrate the computer files of IBM; Sears, Roebuck and Co.; Gould, Inc.; and *The Miami Herald*.

In these and in many other incidents of unauthorized computer access, information processing experts noted how easily the wrongdoers, especially the novices and hackers, gained entry into various data transfer networks. Speculation continues as never before on the numbers of such incidents both undetected or unreported as well as on the potential capabilities of a truly expert computer thief.

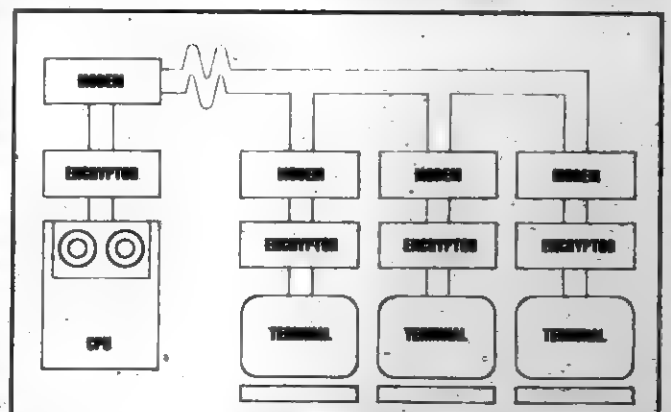

Figure 1

Chart Courtesy of Russell-Hilligs, Inc.

The reality of computer crime and accidental access to any data bank cannot be overstated today, particularly in light of the ever-increasing volumes of computer data gathered and stored not just for government and business purposes, but also for personal reasons. Current industry estimates of such losses range from $100 million to $3 billion annually. More than a few industry observers predict that computer crime will generate catastrophic losses for some financial and corporate organizations by mid-decade, regardless of precautions. To the extent computer security increases, so will the expertise of computer thieves. Although advanced security techniques may reduce the number of perpetrators and the crimes they commit, it may also vastly escalate the losses they create because only the true professional gambling for a high payoff will risk invasion of the system.

The best deterrents to computer crime today include site controls, personnel controls, password controls, file access controls and other controls, not the least of which is securing computer data during transmission. Each deterrent is far too extensive a subject to cover in depth here, and the discussion that follows will be confined to safeguarding computer data during transmission. A problem with computer data, either stored or in transit, is that it cannot be seen. Therefore its loss, intentional or otherwise, can be easily overlooked. Both the programs that perform the processing and the transmission of data are invisible to the human eye. At best they are magnetic spots on tape or disks, or electrical impulses being transmitted through a computer and over its data communications network. Understandably they receive less scrutiny than office paperwork or fixed assets.

In fact, of the five very general computer functions — input, programming, processing, output and data communications — the latter is said to be one of the most vulnerable to penetration and theft. Data communications systems of various magnitudes serve most government, commercial, industrial and financial organizations today.

Computer crime experts claim many data thefts, manipulations and inadvertent losses go unreported each year. The most frequently cited reason is publicity. Widespread knowledge of such incidents would cause great embarrassment in most cases, not to mention possible liabilities. Like cash, property, production techniques, personnel and goodwill, information is considered a major corporate and organizational asset. Its loss or alteration may prove just as serious, or more so, as the loss of any other asset. Personnel data, for example, must be safeguarded under the Privacy Act of 1974. Other confidential data concerning customers and clients, accounting, financial planning, marketing strategies, designs, research and development, production techniques and other operational areas are, in most cases, sufficiently important to be safeguarded; particularly if transmitted over data communications networks.

Most networks transmit a considerable amount of information of a sensitive or proprietary nature. Criminal access can be gained by accessing an organization's own terminals, by attaching foreign terminals or communications devices directly to the data communications phone lines or merely by dialing into a computer site having autoanswer equipment. Virtually any point in the communications links may be vulnerable through a dial-up port at an outside time-sharing house, at a point near the CPU facility or at an unattended communications facility. In addition, communications interception kits for data theft or manipulation can be assembled inexpensively. Powerful minicomputers, which can be leased, can also be programmed and used to dial into a system and masquerade as an authentic terminal, apparently conducting routine business transac-

tions with the computer.

The only adequate safeguard against the theft or inadvertent, unauthorized access of data being transmitted over various media is data encryption. This singular method renders data incomprehensible and useless if lost or intercepted. Some equipment also stores the data in encrypted form. Encryption proves highly effective in maintaining data security when data communications messages are mistakenly misrouted, in the protection of computer-readable ID card passwords and in offering the utility for digitally signing messages.

Unfortunately for many users the acceptance of data encryption has grown slowly. The failure to use encryption during data transmission may well be the result of users not understanding the need. The situation might be analogous to a time when increasing numbers of bank robberies and their attendant publicity created the need for armed guards and armored trucks. Or a time when commercial, industrial and institutional break-ins and burglaries created the need for better site controls and more sophisticated security staffs. The fact is that many organizations do not perceive proprietary data in transit as a high-risk factor.

Banks know better. In fact, the heaviest users of data encryption are banks and other financial institutions. Bank transactions in which depositors' personal identification numbers are transmitted must use encryption. And many members of the banking community agree that unless the integrity of data in other financial and business areas is similarly secured, encryption may one day be required — either by regulation or legislation. The reason being that a company's board of directors, for example, might well be held personally responsible for the loss of assets. Shareholder, customer and other affected interests might well seek legal remedy.

Another possible reason for the slow acceptance of data encryption is the misperceptions by users of its cost and usage. In a recent trade publication article, for example, an industry observer voiced concern over the low price of large-scale integrated chips used in the design of encryptors and the comparatively high price of the encryptors themselves. The same criticism might be made of the price for an automotive starter motor and the price of the automobile on a dealer's showroom floor. A great deal of design and engineering go into the finished product, as does manufacturing — plus personnel time and talents.

Few data encryption vendors, if any, would place themselves in a defensive position over pricing. A low to medium four-figure price for a highly advanced data encryption device can be justified to protect the enormous tangible and intangible value of proprietary and confidential data, just as the price of a computer can be justified to store and provide various uses of the data. That the price of an encryptor sometimes exceeds the price of the terminal device it supports is another invalid criticism.

The functions of the encryptor and the terminal cannot be compared. They are functionally and conceptually unrelated. To pay less in some instances for certain terminals than their encryption devices is perhaps no different than to pay less for the doors of one's home than for the surveillance or alarm systems that guard them. The decision to buy or not to buy must be based upon the value one places on the content of the data.

Figure 1, on page 36, and Figure 2, on the left, show two simplistic network situations that might help many users in considering encryption costs. In the configurations shown, the encryptors are the interface between modems and data terminal equipment. According to industry research data, the average per-unit price of an encryption device is $2,200 without options such as diagnostics or special encryption key management features. Central site, master units typically cost more than remote devices because they are designed to serve many remote units. A reasonable average price to expect in Figure 1 would be $2,500 per central unit and somewhat less for each remote, or just under $5,000 per link. A price of $2,500 for the master and $2,050 for each added remote would, in fact, be very competitive.

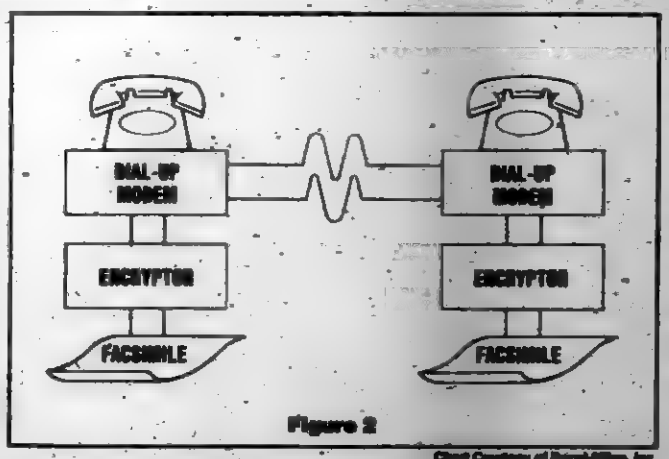

Figure 2

Chart Courtesy of Racal-Milgo, Inc.

Figure 2 shows a dial-up configuration, and while nearly all encryptors can be used on circuit-switched, dial-up networks, some are designed specifically for that purpose, as well as for other special purposes. The dial-ups, for example, may be designed to create and download new transmission session keys for each modem connection and, when the modems disconnect at the session's end, to erase the keys at each end of the link. Special designs will typically

raise the industry-average, per-unit prices — and also significantly increase the security of the data link. Quantity purchases of encryptors will, of course, lower the average per-unit prices cited above.

As to the actual usage of an encryption device, most competitive models are no more complicated to operate than hand-held calculators. User apprehensions about extensive and specialiazed personnel training is unfounded. Most vendors, in fact, provide the necessary operational training, which is minimal. Most also provide field service support.

More germane to usage concerns are considerations of the encryptor's size and operational integrity. Obviously the physical size of encryptors varies from vendor to vendor, as do special requirements for any given application. Because encryptors typically interface at modem locations the size factor must be taken into account during user evaluations. Moreover, encryption devices are yet another insertion in the communications medium and results in a data rate delay. This phenomenon heightens the importance of operational integrity.

While the actual use of encryption devices presents little or no difficulty, the way they operate involves many complexities. In order to make data unintelligible for transmission, encryptors break down data into the simplest possible form, which consists of a bit, that is, either a "1" or a "0." Encryptors then modify single bits or bytes, depending upon their design. The modification process follows the rule of an algorithm, which by definition is a fixed procedure for step-by-step problem solving, or in this case for step-by-step transformations and permutations of bits or bytes. An untried, unproven algorithm may obviously lack operational integrity and fall victim to cryptanalysis, which is the technique used to decipher messages, in this case for illegal or unauthorized purposes. Such algorithms as those found in certain scramblers, for example, are highly predictable in their mathematical transformation procedures and cannot withstand the best efforts of cryptanalysis. Today's most tested and proven algorithm for commercial and industrial use, as well as for nonclassified governmental use, is called the Data Encryption Standard (DES).

In 1977, the National Bureau of Standards agreed upon the DES algorithm for such uses. In the DES algorithm, the encryption of plain text into unintelligible cipher text for transmission is based upon a series of 72 quadrillion transformation combinations. The specific combination chosen for a given encryption process is called the key, which remains secret to the user. Some encryption experts estimate it would take hundreds of years for an eavesdropper to search out all the possible key combinations (72 quadrillion) made possible by the DES algorithm. And should that problem not seem sufficiently difficult, an encryption device user might then use the secret key once or a few times, then change it — or use the DES algorithm to encrypt data twice, which would extend the key possibilities from 72 quadrillion (2^{56}) to what might be called the semi-infinite (2^{112}).

Manufacturers that offer DES algorithm-based devices include Paradyne Corp., IBM, Analytics, Racal-Milgo, Inc. and others. Although the devices made by such companies are based upon different applications, techniques, and equipment arrangements, they display many similarities. Each uses the DES algorithm, as noted. Each requires the placement of encryptors (which encrypt and decrypt in the same sense modems modulate and demodulate) on the data flow between computers and terminals. In the DES algorithm of such devices, a 56-bit key is used to transform data before transmission and after reception. Because the 56-bit key must be in the possession of both sender and receiver, a significant problem is how to safely transmit that key from one to the other — and to change it frequently enough and retransmit it to keep the data secure.

Ordinarily the secret key must be set or loaded into the encryption devices at each end of the data link without anyone gaining knowledge of the key's value. And the key must always lend itself to modification by the user at both ends of the communication link. Therefore the security of data encryption devices depends almost exclusively upon key management, that is, upon the secrecy of the key and upon its physical distribution by courier or mail, which may prove perfectly adequate for some users' needs.

For other users, a more sophisticated key management scheme is desired. This can operate on what may be described as a two-level key hierarchy. In standard operation, the secret "working" key, or data encrypting key, is contained in both a central encryptor at the computer center and in the remote encryptors. This key encrypts and decrypts data using the DES algorithm. A "master" key, or key-encrypting key, is also used at each site, central and remote, to encrypt the working key as it is transmitted over a link. In this way the working keys can be randomly generated or downloaded. And with the master key they can be changed at any time. This brings up a potential problem: if the working key can be encrypted by the master key, what if the user wanted to change the master key itself? At this point, distribution of a new master key would again be necessary by mail or courier.

One way around the key management problem is public-key cryptography. For key management purposes, Racal-Milgo's encryption devices, called Datacryptors, use a cryptographic method called public-key cryptography. The public-key method is used to electronically distribute secure master keys to remote sites, which permits frequents changes of master keys. Very generally, this meth-

od uses two separate keys of its own, a private key and a public key, for the encryption and decryption of data — not main-channel data, but key management data. Only the private key can decrypt messages encrypted by the public key. Public key cryptography had been a theoretical subject confined to academic discussion for many years. The method is based upon the generation of extremely large and random prime numbers for use in the public key encryption and decryption processes. The hardware and other necessities to generate very rapidly such primes was designed and developed by Racal-Milgo in mid-1981.

Another feature for users to consider is whether the encryption device they select is protocol-sensitive or protocol-transparent. Transparency appears to be the more desirable method for flexibility and versatility. Transparent encryptors operate on a method called single-bit cipher feedback, in which single bits of data, as earlier described, rather than characters, are encrypted and decrypted. In this way the encryptor remains free of any hardware and software constraints. It can remain in place as computer networks expand or change, and it will require no retrofitting or reconfiguration. Such devices operate at data rates of up to 112K bit/sec, half- or full-duplex, and on either leased or dial-up telephone lines, or over microwave and satellite links.

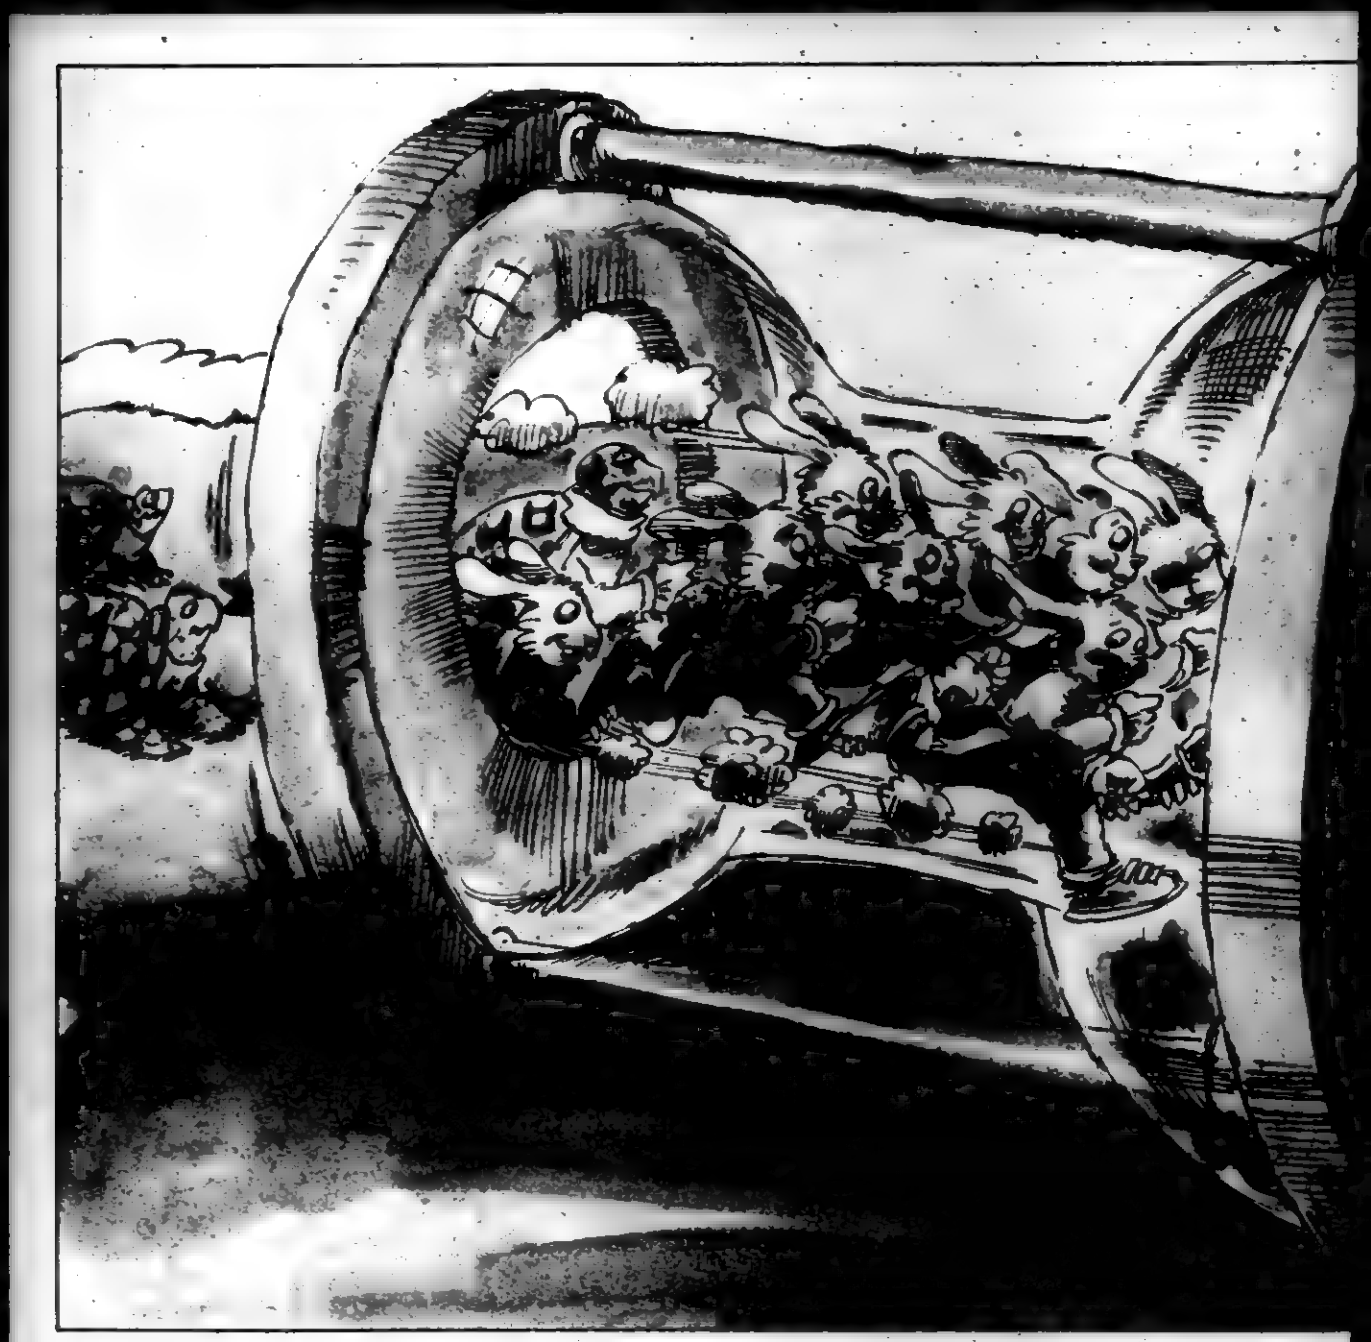
For all their complexity, encryption devices are merely installed in a user's network as a "black box" between sending and receiving ends of each communications link. They can be operated in what might be described as a push-button mode. Most units securely mount on either desktops or racks, and their removal or the opening in their front panels requires the use of dual controls. Their data encrypting key is typically erased automatically if unauthorized access is attempted. In addition to this, in the event of power failures or interruptions, the encrypting key is protected by battery backup and therefore retains its key values.

The need for many business organizations to protect their data by encryption methods is perhaps not as immediately acute as it is for banks or credit reporting organizations, which might obviously violate confidentiality. However, much of the data transferred by businesses are every bit as sensitive. For whatever reason and to what extent such data might be intercepted, and what that might cost the victims, are determinations that can only be made by the individual organizations concerned. Compounding these determinations, of course, is the tremendous growth of computers and data communications in virtually every area of business, as well as in the home.

The alternative to data encryption — even assuming that site controls, personnel controls, password controls, file access controls and similar measures have been evaluated and implemented — is simply accepting a high risk or loss. However, the likelihood of auditors and insurance companies accepting such high risks is minimal. In fact, in the not-too-distant future, auditors and insurance companies may demand senior management to take measures to decrease the probability of such losses. As higher levels of corporate management become more and more involved in protecting information assets, the data processing managers and data communications managers will not remain the decision makers for or against encryption.

The reason is not unlike the reason that banks require its use. As mentioned earlier, a company's board of directors may well be held responsible for the loss of assets, which include proprietary and confidential data. Such losses may be prevented if the data were secured during transmission. For the future, it should become evident that calculating the value of information assets, identifying how vulnerable they are to theft, and then protecting them will cost significantly less than rectifying such losses after the fact.□

Schlafly is marketing manager for digital products at Racal-Milgo in Miami, Fla.



MIXING IT UP WITH MUXES

By James J. Michaels

If transmission over phone lines was free, multiplexing techniques that share a facility or a line among many data or voice conversations would not be very popular. But rising line charges — and the value-added features of multiplexers — have made the multiplexer a cornerstone of communications networks.

Multiplexing techniques have

evolved from the earliest frequency-division multiplexers (FDM), to time-division multiplexers (TDM), to today's STDM, or statistical time-division multiplexers. A new generation of TDMs are, in turn, evolving into a new class of communications network processors.

A time-division multiplexer carries dedicated virtual circuits. The time on the communications line is divided into cycles of equal length and each device attached to the TDM "owns" a fixed interval of time in each cycle. Each device is assigned a constant bandwidth, whether it is transmitting or not. Therefore, the sum of the speeds of all input devices cannot exceed the speed of the composite link.

A statistical multiplexer dynamically allocates bandwidth to a device only when it has data to send. Statistically speaking, devices such as terminals are idle most of the time. So the sum of the inputs to a statistical multiplexer can be many times the speed of the line — four to eight times is typical.

Basically, all these devices — FDM, TDM, STDM — can be networking devices. The key question is how to create an easily man-

ILLUSTRATION BY JIM VENABLE

aged, practical and cost-efficient network using these components.

An ideal network would offer the user a number of advantages. It would provide universal compatibility, handle different types of transmission facilities, provide centralized management and diagnostics and be upwardly compatible. As the network grew, the system operator would be able to add more and varied network devices.

In such an ideal network, the network manager would have very efficient resource utilization. All users would have the ability to access any system resource on the network, such as distributed computers.

Ideal networks would be nice, but they do not exist. Most networking today is driven by computers. The problem with using computers for networking is that they use line bandwidth inefficiently. The computer is designed for crunching numbers and for manipulating data. Most computers get bogged down when they have to perform networking chores. And when they get bogged down, the system does not utilize the bandwidth in a cost-effective manner.

Most large computers drive a network with a fixed protocol, usually one designed for a particular type of data. If the user starts moving different types of data, efficiency can drop. Also, since computer systems are generally single-vendor devices, a mixed environment in which a number of different computers are joined in a network does not always work effectively or may not work at all.

This compatibility problem with computer-based networking demands devices (such as multiplexers) which remove data communications management from the computer.

The key word in designing any network, then, is flexibility. The network must be able to handle any kind of device the user may want to attach. The network should convert protocols, switch connections, change speeds and other tasks necessary to ensure compatibility and flexibility. The network must also anticipate increases in the speeds of transmission, growth in the numbers and kinds of devices that will be attached to it.

There are three basic principles that must be recognized in putting together a network:

- The network will not get smaller. Networks tend to grow. As more users come on-line and each workstation ends up having a terminal attached to it the network will keep growing.
- Networks will never become slower. Speed is addictive in data communications. Once users have had access to a 9,600 bit/sec terminal, they will never willingly go back to 1,200 bit/sec.
- The network will never stay the same. What is new today becomes old hat tomorrow. The system manager needs to purchase products that are upwardly and downwardly compatible so the system can grow.

Some data communications suppliers are responding with a systems approach that offers one-stop sourcing for an entire network. A single source ensures that components are compatible and will continue to be compatible with equipment introduced in the future.

Once a network has been built and hardware devices distributed throughout the system, centralized data network management and maintenance becomes vital. The network operator needs to monitor what is going on with the network at all times — how it is being utilized and what kind of problems users are experiencing.

From one point in the network, the operator requires total network management and diagnostic capabilities. When problems arise these diagnostics permit the operator to delve deeper into the network to determine the exact misfunctions.

Large mainframe computers can be used to manage a communications network directly, but using a very expensive CPU for error checking, protocol handling and diagnostics is an inefficient use of resources. Moreover, the CPU vendor then guides the future direction of the network's development. The trend is to offload communications management functions onto the network.

Front-end processors, specialized computers optimized for and dedicated to communications functions, relieve the mainframe of network management. But front-end processors are themselves expensive and sometimes dedicated to a few protocols or one vendor's products.

Traditional modem makers have incorporated diagnostics and control features into their products. But since modems are the most numerous devices in most networks, the cost of this added functionality can add enormous overhead to the network.

Multiplexer makers have been adding diagnostics and control features into their products as well. The advantage of multiplexers is that fewer are required and they are connected to a larger percentage of the network. Where a modem sees only one input and output line, a multiplexer can see six composite links and more than one hundred user ports.

New features being added to multiplexers — multiple data links, switching, among others — are driven by the need to manage the network. As it takes on more functionality, the multiplexer is evolving into a type of front-end processor.

Network Applications

As the capabilities of multiplexers have increased, they support exceedingly complex network topologies. No longer is each point-to-point line a separate entity, requiring separate attention. Networking multiplexers are tying everything together.

One of the basic methods multiplexers use to tie a network together is to have multiple composite data links. With multiple data links, a single phone line can route to more than one location. Al-

though not all multiplexers have the multiple-link feature, this is the direction products are moving and it is an important new development for networking.

Imagine a network joining Chicago, Atlanta and New York. With single-link multiplexers, there would usually be three phone lines, one between each city pair, and two multiplexers in each city. If the Chicago-Atlanta line was removed it would be necessary for their circuits to be connected between the ports of the two multiplexers in New York in order for those two cities to talk. Note that each Chicago-Atlanta channel requires four multiplexer ports and, in the event of rerouting, a manual patch change.

If one multiplexer supports two data links, then only one multiplexer is needed in each city. It doesn't make sense to have the Atlanta-Chicago circuits come out at one multiplexer port in New York and go back into another port on the same multiplexer.

A bypass feature in the multiplexer, which has been available for a number of years, eliminates the need for back-to-back multiplexers or in-and-out patching at intermediate points. Data is passed from one composite link to another directly. This means that there could be 24 channels between Atlanta and Chicago passing through a four-channel multiplexer in New York.

If three lines were maintained on the triangular network, multiple data link multiplexers can offer alternate routes in case of line or equipment failure. In a trinode setup, for example, stored tables permit the multiplexers to revert to a bypass situation when a link goes down. This means more overall reliability.

If the network requires a considerable amount of bandwidth between two nodes, the multiple lines on a statistical multiplexer can be used in parallel to increase the throughput. Each link carries its rated capacity independently. If there are two 9,600 bit/sec lines between a pair of statistical multiplexers, the connected terminals seem to be sharing a single 19,200 bit/sec line.

Dynamic load sharing, or traffic balancing, on dual data links means that the network operator gets to utilize all the bandwidth.

Information from a specific terminal can go through either data link, automatically going to the link with the lowest load factor. When one data link goes down, it is seen as full since nothing is going into it. All data then goes through the working link.

These automatic fallback and redundancy features are most effective if the two data links are diversely routed, by either coaxial cables or land lines.

Switching

If the network operator wants a terminal to access separate systems resources the most cost-effective solution is switching multiplexers, currently one of the fastest growing segments of the multiplexer market.

With full switching capabilities, essentially all the features of a data private branch exchange (PBX) or the dial-up telephone network are available. The user can access any node or any port in the network. Any terminal can connect to any resource. This gives multifunction capabilities to the terminals.

For example, one terminal can function as a word processor, a spreadsheet analyzer or an engineering design station — simply by connecting to the appropriate computer on the network. A single computer, going out through a switching multiplexer, can select the best printer for a specific job: dot matrix, flatbed plotter, laser and so forth.

To manage all these users and their access to multiple resources, newer switching multiplexers make it possible to define, for any terminal, precise access rights to each of the various resources spread around the network.

Closed user group options, a feature of switching multiplexers, allow the network manager to exercise more complete control over the usage of system resources by excluding any terminal not specifically admitted.

High Speed and T-1

Today's networking applications, which use traditional voice-grade data links, face speed restrictions. The coming generation of multiplexers will provide significantly higher speed capabilities and the network management tools to utilize this increased bandwidth for a variety of office automation applications.

T-1 rate links (1.544M bit/sec) provide an answer to the total speed problem. T-1 rate costs are plummeting, thus creating cheaper bandwidth.

New multiplexers make this ultrawide bandwidth practical by splitting it into more familiar "chunks," such as 9,600 bit/sec. The beauty of the latest T-1 multiplexers is convenience and their flexibility to tailor the "chunks" precisely to fit a user's need. To accomplish this, the data communications industry has taken a new look at TDM techniques.

Recall that TDM was defined previously in terms of dedicated virtual circuits and constant bandwidth. The implication was that TDMs were static, a statement which was true in the past.

Old technology TDMs were very hard to program; they had lots of straps, often physical straps as well as switches. The combinations of port speeds that could be programmed were usually limited, particularly when dealing with the random assortment of speeds and terminal parameters encountered in the average mixed system.

The older TDMs were also limited in diagnostics and offered limited or nonexistent statistics. Almost all were incapable of attaching to a unified network management system.

The new generation of TDMs are a great leap forward, particularly because of automatic reframing. This feature uses microprocessor

control to interpret relatively simple instructions from the operator and programs the "straps" in memory. The time intervals assigned to each port are shifted easily. Not only are these TDMs easier to program, but being designed for data (rather than being derived from voice channel banks), they are flexible enough to combine any type of digital information — data, compressed video, facsimile, digitized voice and so on — over one circuit.

Most large companies today operate multiple networks, running voice, data, facsimile equipment and video in parallel. Unifying these functions into one network not only cuts costs, but puts the entire communications network under a single management system. The T-1 facilities management systems in the new generation of TDMs provide a single system networking solution for all of a user's communications needs.

The argument is made that most users do not have megabit bandwidth requirements. True, not all computers can use the full 1.5M bit/sec capacity. But by combining voice, video and data, there is often more than enough bandwidth to justify T-1.

But aren't they fundamentally different kinds of information? Not at all. While compressing video signals from several megahertz analog to digital bit streams of less than 500K bit/sec is still the province of specialized coder/decoders (codecs), these television devices are available and produce a standard digital output. T-1 multiplexers themselves are adding integral voice digitization through special I/O cards. Using the latest techniques for voice coding, it is possible to convert a normal conversation to 32K bit/sec (half the Bell standard) and below.

What does it mean to a user to have a hotshot T-1 multiplexer with super-sophisticated automatic reframing? Let's look at one short scenario.

You have the T-1 bandwidth and have adapted your present facsimile machines to much higher speeds: a full page now takes two seconds. You have a standard video compression codec that requires less than 500K bit/sec. Both machines are installed in the boardroom, where the president is now holding a videoconference.

The chief engineer in another state comes to a point where he wants to hand the president a drawing. Instead, he puts it in the facsimile transmitter. With advanced bandwidth allocation, a T-1 multiplexer might have to interrupt the video signal for two seconds while the drawing is sent. The video picture would be frozen temporarily, but might not even be noticed by the people participating in the videoconference.

The new TDMs with T-1 rates will provide dynamic bandwidth contention that makes such feats possible. This is not allocation, nor statistical multiplexing, but contention among users attached to the network. Until a device bids for the bandwidth, no bandwidth is allocated to it. This gives the network operator a great deal of flexibility because the aggregate speed of attached devices can be more than the bandwidth of the data link.

If T-1 TDMs can do all that then some would suggest statistically multiplexing at T-1 rates. Unfortunately, for two main reasons, this technique does not work.

The first reason is due to delays. Statistical multiplexers buffer input data to prepare it for sharing the composite link. This takes time, and introduces a variable delay that means nothing to an interactive CRT terminal, but will be unacceptable in a voice conversation.

The second reason is transparency. A TDM is not sensitive to protocols — a statistical multiplexer is. Any form of data can be handled with a TDM.

In addition, the inputs to T-1 are usually high-duty cycle: voice, computer-to-computer links, remote job entry and so forth. Statistical multiplexing simply eliminates idle time — if there is no idle time, then the statistical multiplexer offers no advantage.

Another multiplexer feature becoming more important as networks grow is enhanced diagnostics. Of great importance is systemwide alarm reporting of any fault in the network to a single point. For the sake of the operator, single-point diagnostics are essential and are becoming more widely available.

In the near future the intelligence being brought into the new TDMs will make it possible to transfer this single control point to different locations. In this way control can follow the day shift from time zone to time zone, or be passed to anyone available after a disaster.

Part of this control is due to electronic patch features that provide total port and destination independence for the network. The next logical enhancement in TDMs will be an ability to work with future generation PBXs to deliver more integrated services.

Data multiplexers and the new generation of T-1 rate TDMs, with more advanced features and intelligence, are approaching the former functions of front-end processors. They provide powerful tools for solving networking requirements, and will become even more powerful in the near future.

Multiple T-1 links, with bypass and alternate routing, reduced bandwidth, digital voice and dynamic bandwidth contention are announced features that are being introduced by vendors today. Juggling of bandwidth and tricks with automatic reframing will take more time.□

Michaels is a member of the staff of the product planning department of Timeplex, Inc., located in Woodcliff Lake, N.J.

Keeping Networks Under Control

By Rudolf Strobl

The continuing evolution of multivendor environments, the explosive proliferation of personal computers and end-user computing and the divestiture of AT&T (giving users many more communications options) are catalyzing the growth and increased complexity of data communications networks. These developments have created a need for alternatives to routine functions such as monitoring, fault isolation and equipment restoration as well as automatic network reconfiguration.

At the same time, devices are being connected to networks at a pace that far exceeds the ability of the organization to maintain such devices.

Products that enhance network management will comprise 15% to 30% of total systems cost in the not-too-distant future.

The following article is based upon research done by the Yankee Group and published in a report titled Network Management and Diagnostics.

End users do not have the time or the inclination to worry about what is going on behind the communications port. To them the keyboard represents the net

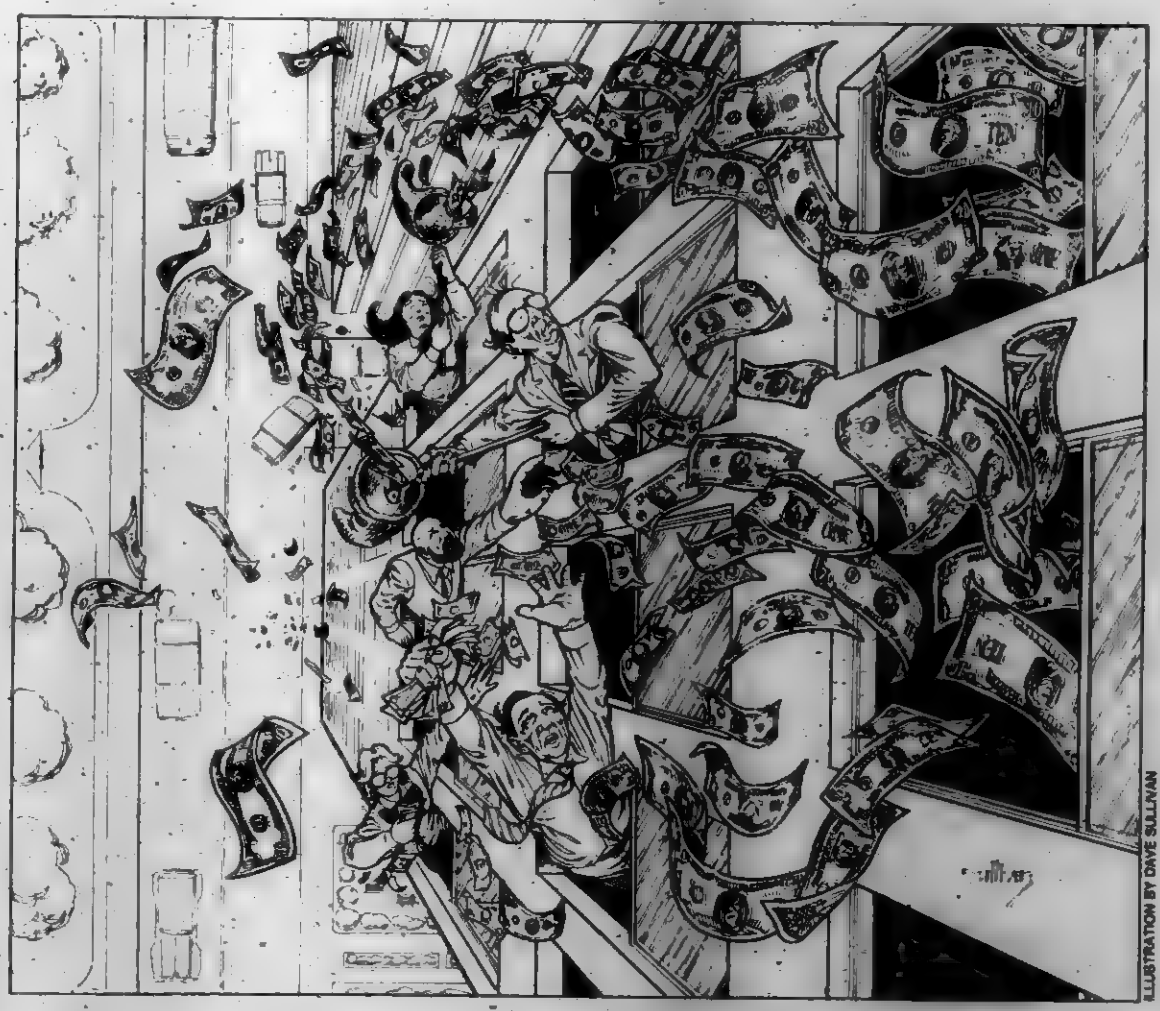


ILLUSTRATION BY DAVE SULLIVAN

work. Their primary concern is the ease of accessing information. The network and its functions must therefore appear completely transparent to users. Networking is becoming the key to information management among the diverse groups of users seeking access to corporate information resources. Thus, network management functions should support both hardware (computers, modems and front-end processors) and software (for applications and network control programs as well as access-method software in host CPUs). In other words, network management facilities should reside in all network components.

Although it is not a technical discipline, network management is a complex and far-encompassing discipline which covers every physical and logical object or component of the network, starting at the keyboard and extending to the applications programs. It encompasses both the communications element of the network and the data processing system (meaning terminals and central processors). It involves facilities that are needed in support of more complex functions such as network information and software management. These functions are necessary due to the fragmentation and dispersion of the "terminal/program/data" elements from single to multiple computer environments.

Some network information management software is available, but it is not available for all the components that have to be integrated in the network. IBM has incorporated all these concepts in its Systems Network Architecture (SNA) as well as some of the software that will control these processes. However, the functionality in terms of supporting certain types of applications such as file transfer are not yet fully developed. For example, SNA lacks an interactive file transfer capability.

Instead of the applications hardware and software controlling the network, the specific network software will control access to the applications and the types of applications. This is based on the presumption that at the moment a device is connected to the network it actually becomes a part of the network. Users should therefore evaluate all network components in terms of their ability to complement control and management functions.

The potential for the network information management market is very large and there are a great deal of opportunities to be exploited by independent data communications equipment systems vendors as well as by IBM. Yet the market has not been fully realized by vendors other than modem manufacturers and a few companies who have been and are currently dominating the opportunities for stand-alone line-diagnostic facilities.

Undoubtedly, the only realistic solution is centralized control supported by decentralized functions resident in every physical and logical network component, enabling a central problem-determination data base to be maintained and used for performance evaluation, capacity planning and other related activities. Characteristic of this approach is network management and control via a network architecture, with SNA coming closest to the optimal solution. The Yankee Group survey found that by the end of 1983, 60% of IBM's large-system users worldwide will have implemented some form of SNA.

Network management, from an architectural perspective, has an objective that goes beyond establishing and managing a communications link between two processors. True communication takes place only when the application process at either end of a connection are making meaningful exchanges of information.

Network and computer systems vendors, therefore, have had to implement their own architectural strategies to satisfy their users' current networking requirements — hence the creations of SNA, Digital Equipment Corp.'s Decnet, Data General Corp.'s Zodiac and Honeywell, Inc.'s Distributed System Architecture.

With the exception of IBM, most of these vendors have attempted to parallel what they perceive will be the direction of the open systems interconnect (OSI) model, but since only three of the seven layers of the OSI model have been fully specified, vendors are essentially flying in the dark, trying to match what they think will be the eventual standards.

Independent data communications equipment vendors of computer terminal and communications equipment need to follow different approaches to provide both solutions that can integrate the components into the SNA strategy, and imaginative products that can improve their capabilities over competitors.

Even if IBM's integrated approach is chosen by user organization — meaning Communications Network Management (CNM) with all its strategic structure of program products such as Network Communications Control Facility (NCCF), Network Problem Determination Application (NPDA), Network Program Analyzer (NPA) and so on — opportunities remain open for other vendors to promote their own network management solutions and products, which can be as or more sophisticated than currently available IBM offerings. In fact, the unique architecture and flavor of each distributed computer operating environment requires tailored, product-oriented network management support for remote maintenance; performance analysis and console management. Consequently, a good market exists for non-IBM vendors with good network management products.

To demonstrate the current value of the total communications network management market, an examination of IBM's line of network management facilities currently available for the various network components should be made. These include:

PERCENTAGE THAT CNM FUNCTIONS ABSORB IN NETWORK COMPONENTS

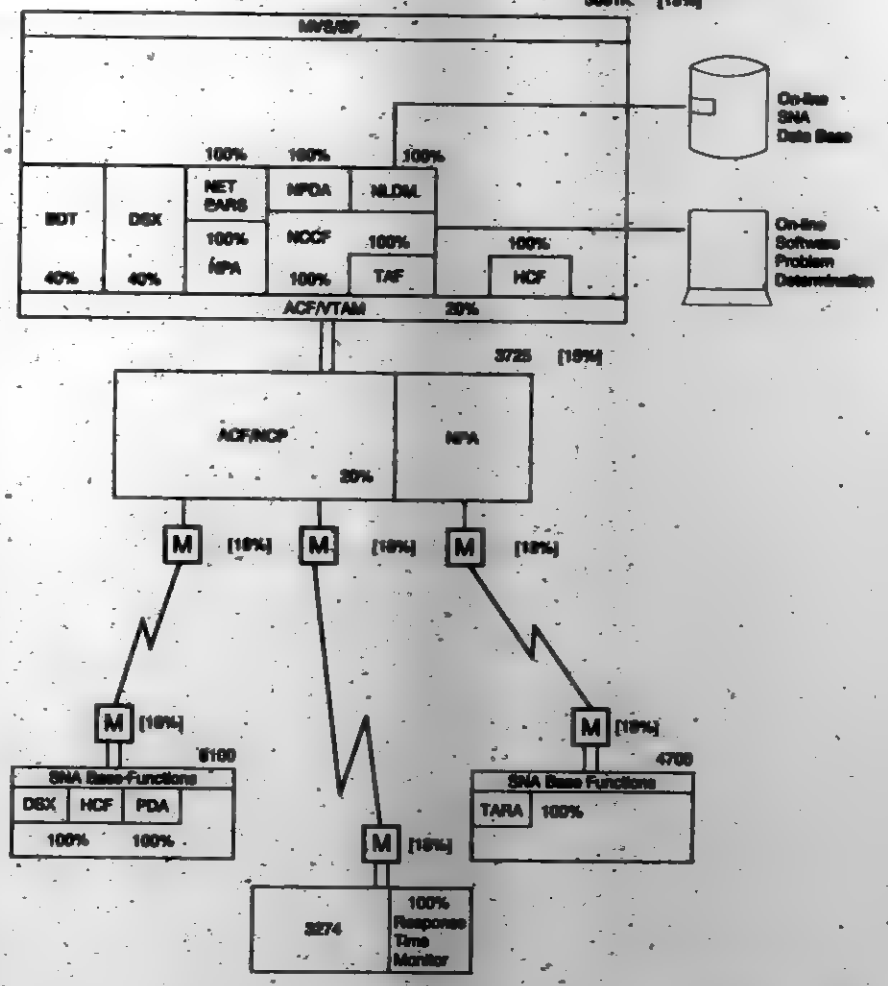

Figure 1

Chart Courtesy of The Yankee Group

- Host-based Communications Network Management products.
- Distributed systems based CNM products.
- Diagnostic facilities in modem equipment.
- Network management functions in the 3705 and 3725 communications controllers and other components.

Since dollar figures for the cost of network management are not officially available from vendors, it is not intended to claim total accuracy but to provide a sense of perspective for the sometimes hidden and often ignored cost of these increasingly critical network functions. Moreover, it includes only the cost of products, not technical support or even the dedicated personnel that are currently required in support of these activities. Users should factor in their own costs to arrive at the total cost of network management. In addition, many one-time charge programs, available to simplify network management functions, are not included in the following figures.

Figure 1, shown above, illustrates the percentages that CNM facilities absorb in network components — computers, program products and modems. For example, 20% of IBM's Virtual Telecommunications Access Method is allocated to network management because of all the support needed for NCCF. The percentage of diagnostic intelligence in modem equipment (18%) has been calculated from prices of equipment with and without diagnostic capabilities. There is a considerable amount of hardware logic in the 3725 controller to perform self-diagnostics and failure isolation, for

Computerworld presents the three most important factors in creating the #1 specialized business publication in the United States:

Factor 1

Great Editorial. When you ask $44 a year for a subscription — the editorial better be worth it. Ours is. Because we hire journalism skills first and computer industry background second. Our writers instinctively recognize the lead in a story. They can smell another story when they haven't even completed the one they're working on. They know how to interview; how to get the source to reveal facts that never were intended to be released.

Factor 2

Great Editorial. Our writers are pros at giving our readers what they need because they go where our readers are. They go to the same seminars, conferences, manufacturers' training programs and trade shows. And they don't just listen with our readers — they listen to them. So our readers get responsive editorial. And they regularly vote *Computerworld* "most useful publication" — both in our own studies and in those done by independent organizations.

Factor 3

Great Editorial. Because *Computerworld's* editorial department is supported by subscription revenue, our writers know who they're working for. They write the stories our readers need to see — independent from our advertising. And our advertisers appreciate our reputation for editorial integrity as much as our readers do.

Editorial. It's the most important factor in developing *Computerworld* as the #1 specialized business publication in the U.S. And you'll find that our sales people know as much about our readers and our marketplace as our writers do. They'll be happy to give you the facts, the numbers and a first-class overview of the marketplace. Just call Don Fagan, Vice President, Sales at 1-617-879-0700.

COMPUTERWORLD

THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

COMMUNICATIONS NETWORK MANAGEMENT CONFIGURATION — HARDWARE AND SOFTWARE FOR A HYPOTHETICAL BANKING ORGANIZATION

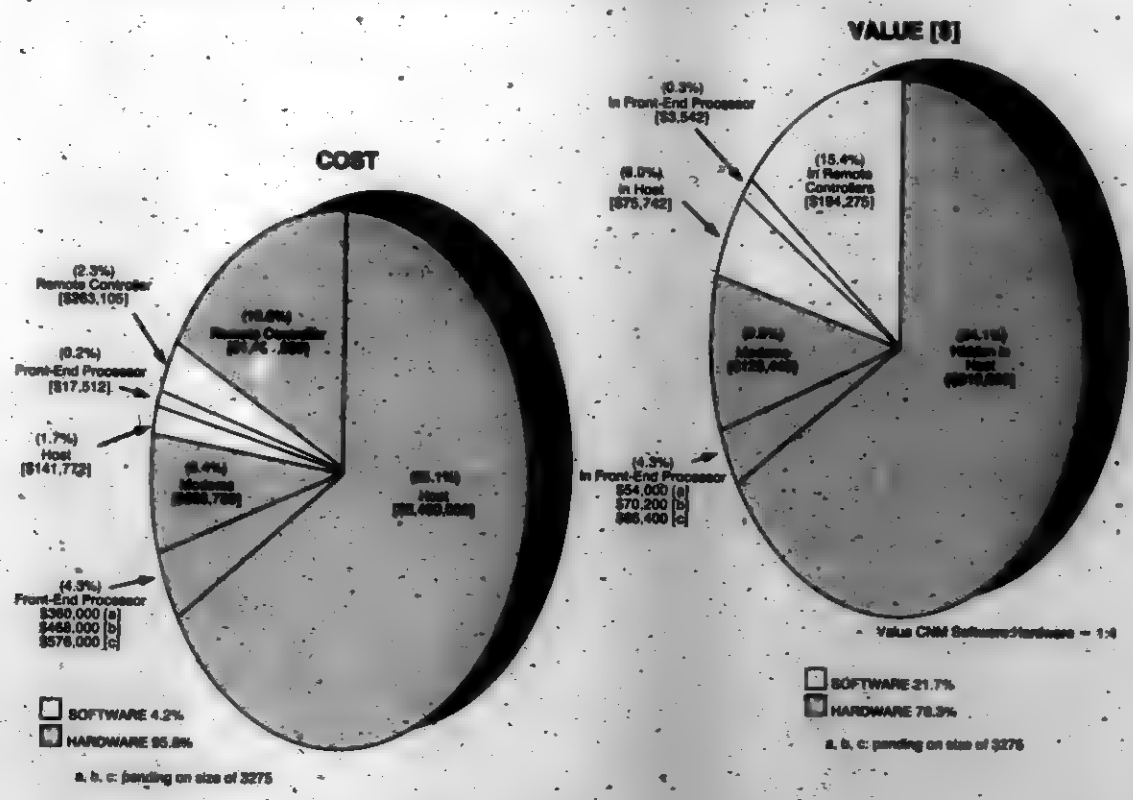

Figure 2

Chart Courtesy of The Yankee Group

both internally and externally attached devices; in addition, the 3725 has a dedicated console for network management functions. Host Command Facility (HCF), which is used in conjunction with Terminal Access Facility (TAF) and allows network operators to control multiple 8100 Distributed Processing Program Executive (DPPX) systems concurrently, as well as Distributed Systems Executive (DSX), which assists users in the managing distributed systems, are both hidden in the operating system of the 8100.

Moreover, in order to have a better grasp of the actual cost of network management facilities, let's create a hypothetical banking organization running one IBM 3081K host computer; two colocated 3725 Communications Controllers (to back up each other), with 70 physical nodes attached consisting of 10 8100 remote controllers, 25 4700 banking controllers, 35 3274 controllers connected through dedicated lines (with 3865 modems transmitting at 9,600 bits/sec).

The 8100 supports some desktop and personal computers, peripherals and so on; the 4700 supports up to 10 terminals and a number of printers; and the 3274 controllers support some display terminals.

Figure 2, shown above, depicts the both the value and the cost of CNM configuration hardware and software for the hypothetical banking organization, and shows that the proportion between the value of CNM software and hardware is 1:4.

The cost pie chart shows the actual cost of CNM configuration hardware and software for the hypothetical banking organization.

Comparison of dollars in the value of CNM configuration hardware and software with dollars in the actual cost of hardware and software configuration yields a percentage of 15.2% — meaning the value of network management hardware and software relative to the actual cost incurred by our banking organization. In other words, CNM facilities represent 15.2% of the actual cost of hardware and network management

program products.

What is the significance of these dollar values and percentages to both users and vendors?

The importance of network management facilities has dramatically increased throughout the last five years. As modem and other line component vendors capitalized on this market with expensive and sophisticated network control centers which only integrate a small percentage of the actual network components, IBM has concentrated and promoted the rather slow but powerful concept of a totally integrated Communications Network Management approach.

During this period of proving their concept, IBM prices remained fairly competitive. The dramatic advantage of a concept that is finally beginning to work will switch the tide toward IBM's integrated approach, but it will also cost users considerably more, even after economies from declining hardware costs have been factored into the total system cost.

While hardware costs will continue to decline relative to software costs, the cost of network management functions will dramatically increase throughout the next three years. In order to continue its annual growth of 15% to 20%, IBM will have to increase the volume of distributed-type hardware sales as well as increase the cost of existing and forthcoming network management systems software.

Projections reveal that total network management systems costs will increase from 15% to 30% or greater as part of total systems costs. This does not include costs of facilities or applications software — such as IMS, Cics, Time-Sharing Option and so forth — which would add an additional 10% to 20% to total system cost. This will bring users increased benefits in terms of network reliability, availability and maintainability and will certainly have an impact in the users' planning of their budgets for network management facilities and services.

For vendors that compete with IBM on a hardware basis, these price developments will provide clues as to how fast IBM can afford to lower its hardware prices. IBM's competitive advantage is partially to offset decreases in hardware prices through both price increases of existing network management software program packages and releases of new network control products. IBM's competitors have no comparative advantage unless they can:

- Provide better products in support of their network components within IBM CNM environments.
- Compete against CNM applications with user-friendly, easy-to-use CNM products, which can make use of existing CNM data generated by IBM products.
- Improve and expand the existing market of line-monitoring equipment.

In recent months, many of the traditional mainframe manufacturers granted SNA a wary approval. Although they continue to shun the notion of direct IBM-compatibility, each of the major mainframe companies, in addition to DEC, Wang Laboratories, Inc. and Hewlett-Packard Co., have formally announced both their intention to support SNA and products that demonstrate each vendor's aggressive program to offer high-level software and communication interconnectability with SNA.

For example, NCR Corp. and Sperry Corp. are developing strategies based on terminal- and cluster-controller-level software interconnection conforming to IBM's Physical Unit 2 (PU2) specification of SNA for peripheral nodes and are planning to adopt higher-level SNA specifications, known as the PU4 and PU5, for their products. These allow communications controllers and host interconnection respectively. The PU4 specification, which represents network control program (NCP) support, has been offered for some time in the NCR Comten product line of IBM-compatible front-end processors.

Similarly, most minicomputer vendors are planning to supply gateways for SNA by the mid-1980s (DEC already does), but the efficiency and ease-of-use of these communications products will depend heavily on cooperation from IBM in supplying interface information at the earliest possible date after the release of new product specifications, systems software and network control software.

Both IBM and other entrepreneurial vendors will also make different alternatives available that will extend the level of connectivity between computer-driven nodes in SNA networks. For this purpose, the major IBM competitors are developing SNA connectors. The primary function of these products is to provide logical connectability to host-based strategic IBM products, in addition to computer-to-computer functionality currently missing from IBM.

Network management is one of the businesses that have a secure, enormous market. The sheer size of communications networks and their indispensability in every business and government enterprise ensures that network management products will enjoy a dramatic and healthy growth throughout the decade.‡

Strobl is a senior analyst at the Yankee Group, a Boston-based strategic market planning service. He directs the company's Data Communications Planning Service.

UDS gives 212 users three ways to go!

212A—Today's most popular modem. UDS offers a fully Bell-compatible unit with complete local and remote test capability. Select 0–300 or 1200 bps for full-duplex asynchronous communication. The UDS 212A is FCC certified for direct connection to the dial-up telephone network, and available in multi-channel, rack-mounted configuration.

SINGLE UNIT PRICE $595

212 LP — Compatible with 212As at the 1200 bps, full-duplex asynchronous communication rate. No power supply or AC connection required; the 212 LP derives its operating power directly from the telephone line. Ideal for applications requiring 212A capability at 1200 bps only. The 212 LP is direct-connect certified.

SINGLE UNIT PRICE $445

212A/D — Identical to the 212A, with automatic dialing capability added! The unit stores and dials up to five 30-digit numbers. CRT menu prompting, single-stroke commands and automatic test capabilities are provided. The 212A/D is direct-connect certified.

SINGLE UNIT PRICE $645

Created by Daynard, Inc., Winter Park, Florida

UDS raises the speed limit for dial-up modems

At last there's a 9600 bps modem designed especially for the dial-up telephone network.

Our 9600 A/B is the ideal modem for projected system growth. Realize immediate line-charge savings by moving from 208 A/B to 9600 A/B now! Then, if your system demands dedicated lines, simple strap modifications will convert your modems. Nothing else changes!

A faster turnaround time than 208 A/B's further increases the 9600 A/B's efficiency. Multiple test modes are selectable from the front panel.

Contact Universal Data Systems, 5000 Bradford Drive, Huntsville, AL 35805. Telephone 205/837-8100; TWX 810-726-2100.

Modem Index by Class

The index to modems has been grouped according to device type — couplers, digital, fiber-optic, line driver, long-haul, modem eliminators, radio frequency and short-haul. The last section of the index includes all other modems which do not fit into any of the above categories. Within each section, products have been listed alphabetically by vendor and contain the unit price and the page number on which the listing can be found.

The modem product listings have been arranged alphabetically by vendor.

ANIRAM, CORP.
968 DSU
Modem Class: Digital (DSU)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 56,000 bps
Interface: RS-232C, CCITT V.24, V.35
Transmission Medium: DDS
Diagnostics: Yes; built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $645 to $745
Number Installed to Date: 100 - 500
Date First Installed: July 1983
(See Vendor Profile Page V-2)

ANIRAM, CORP.
962 LIMITED-DISTANCE DATA SET
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 56,000 bps, 64,000 bps; Asynchronous - 64,000 bps
Interface: RS-232C, CCITT V.24, Mil. 188C, V.35, Bell 301/303
Transmission Medium: Metallic 4-Wire
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $495 to $850
Number Installed to Date: 1,000 - 5,000
Date First Installed: July 1982

ANIRAM, CORP.
964 MULTIPORT LIMITED-DISTANCE DATA SET
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps; Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Metallic 4-Wire
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Multiport, Switchable Data Rates
Distribution Method: End user

ARDENDON PHOTONICS
TR2000
Modem Class: Fiber Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Distribution Method: OEM
Price: $99
Number Installed to Date: Under 500
(See Vendor Profile Page V-2)

ARGONOR AUTOMATION, INC.
MARK II SIGNALMAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data, Originate/Answer
Distribution Method: OEM, Third-party
Price: $99
Number Installed to Date: 10,000 - 50,000
Date First Installed: January 1982
(See Vendor Profile Page V-2)

ARGONOR AUTOMATION, INC.
MARK VI SIGNALMAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: IBM Bus
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: OEM, Third-party
Price: $239
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1983

ARGONOR AUTOMATION, INC.
MARK VII SIGNALMAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: OEM, Third-party
Price: $159
Number Installed to Date: 10,000 - 50,000
Date First Installed: June 1982

ARGONOR AUTOMATION, INC.
MARK X SIGNALMAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: OEM, Third-party
Price: $169
Number Installed to Date: 500 - 1,000
Date First Installed: November 1983

ARGONOR AUTOMATION, INC.
MARK XII SIGNALMAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $389
Date First Installed: September 1983

ARGONOR AUTOMATION, INC.
VOLKSMODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Originate/Answer
Distribution Method: OEM, Third-party
Price: $79
Number Installed to Date: 5,000 - 10,000
Date First Installed: September 1983

ARRENDON JAGGERSON, INC.
AJ 242A
Modem Class: Coupler
Transmission Technique: Asychronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1977
(See Vendor Profile Page V-2)

ARRENDON JAGGERSON, INC.
AJ 247
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Distribution Method: End user, Third-party
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1978

ARRENDON JAGGERSON, INC.
AJ 1232
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $635
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1981

ARRENDON JAGGERSON, INC.
AJ 4048
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, MIL 188C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Autoecho Cancel
Distribution Method: End user, Third-party
Price: $2,495 to $2,990
Number Installed to Date: 100 - 500
Date First Installed: May 1983

ARRENDON JAGGERSON, INC.
AJ 1212-AD1
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates

Modems

Distribution Method: End user, OEM, Third-party
Price: $595
Date First Installed: December 1983

ANDERSON JACOBSON, INC.
AJ 1212-AD2
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $695
Date First Installed: December 1983

ANDERSON JACOBSON, INC.
AJ 1212-3D1
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, IBM/PC BUS
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics
Distribution Method: End user, OEM, Third-party
Price: $425 to $495

ANDERSON JACOBSON, INC.
AJ 1212-ID01
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, TTL
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $495
Date First Installed: December 1983

ANDERSON JACOBSON, INC.
AJ 1212-SD1
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous -
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, TTL
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Integral Card
Distribution Method: OEM, Third-party
Price: $385

ANDERSON JACOBSON, INC.
AJ 1212-RM1
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoanswer, Diagnostics
Distribution Method: End user, OEM, Third-party
Price: $595

ANDERSON JACOBSON, INC.
AJ 1212-ST
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No -
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $495
Date First Installed: December 1983

ANDERSON JACOBSON, INC.
AJ 1259
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Diagnostics, Switchable Data Rates, Triple Modem
Distribution Method: End user, OEM, Third-party
Price: $595
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1981

ANDERSON JACOBSON, INC.
AJ 1259-AD
Modem Class: DDD
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Triple Modem
Distribution Method: End user, OEM, Third-party
Price: $775
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1982

APPLITEK CORP.
BROAD BAND MODEM
Modem Class: Radio Frequency (RF)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 10M bps
Transmission Medium: Wide-Band Lines, Fiber Optics
Diagnostics: No
Features: Frequency Select
Distribution Method: OEM
Number Installed to Date: 0 - 100
Date First Installed: October 1983
(See Vendor Profile Page V-2)

ARK ELECTRONIC PRODUCTS, INC.
LIMITED DISTANCE MODEM MODEL 6 (LDM-6)
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 14,400 bps, 19,200 bps, 56,000 bps; Synchronous 9,600 bps
Interface: RS-232C
Transmission Medium: Wide-Band Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM
Price: $195
Number Installed to Date: 500 - 1,000
Date First Installed: 1981
(See Vendor Profile Page V-3)

ARK ELECTRONIC PRODUCTS, INC.
MODEM ELIMINATOR MODEL 3 (ME-3)
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps
Interface: RS-232C
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $295
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1979

ARK ELECTRONIC PRODUCTS, INC.
LIMITED DISTANCE MODEM MODEL 1B (LDM-1B)
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps; Asynchronous/Synchronous - 3,600 bps, 7,200 bps
Interface: RS-232C
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $693
Number Installed to Date: 500 - 1,000
Date First Installed: 1978

ARK ELECTRONIC PRODUCTS, INC.
LIMITED DISTANCE MODEM MODEL 4 (LDM-4)
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Wide-Band Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM
Price: $92
Number Installed to Date: 500 - 1,000
Date First Installed: 1980

ARK ELECTRONIC PRODUCTS, INC.
LIMITED DISTANCE MODEM - MODEL 5 (LDM-5)
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Syechronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,800 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM
Price: $395
Number Installed to Date: 500 - 1,000

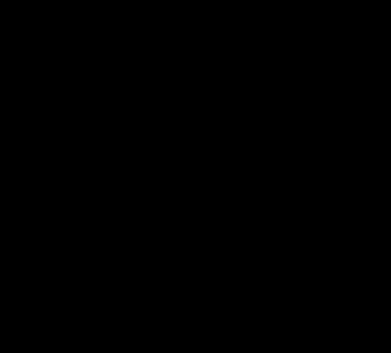
WE HAVE 2400 GOOD WAYS TO UPGRADE YOUR DIAL LINE DATA COMMUNICATIONS

If you're still transmitting data over telephone lines at 1200bps, we'll show you how to save time and money. Our 2400bps full duplex dial modems give you all the performance, versatility *and reliability* that you require, at half the transmission cost, and twice the speed.

All CDS dial line modems operate at 2400bps full duplex with automatic 1200bps fallback *in both* synchronous and asynchronous modes. With our modems you can communicate from or to any terminal, micro, mini, or mainframe computer (even your PC), with support of BSC, HDLC, SDLC, X.25 or *any other* full or half duplex protocol.

Double your data rate and cut transmission costs with complete reliability.

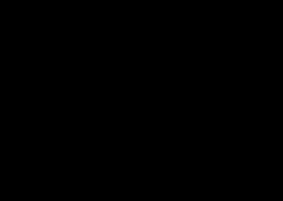
And with CDS 2400bps full duplex dial modems, you won't have to sacrifice one bit of data integrity. Our modems all use advanced signal processing techniques, and feature automatic adaptive equalization. Sophisticated modem diagnostics including analog and digital self-test and an internal test pattern generator rapidly isolate modem faults. With a CDS 2400bps modem, your data will come through smoothly and accurately, even on poor telephone lines.



Communicate with mainframes, minis or micros using any sync or async protocol.

CDS modems combine user-friendly engineering with next-generation technology. Our touch sensitive front panel allows you to select the telephone line configuration, operating mode and diagnostic tests you need. An optional front panel synch/asynch selector lets you switch from synchronous to asynchronous transmission swiftly and easily, without monkeying around with internal modem straps.

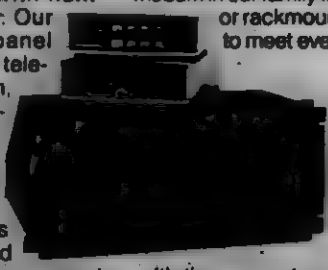
Our new 2400bps autodial modem eliminates extra telephone hardware and lets you leave your modem unattended...ready to communicate when telephone rates are lowest. It supports both touch-tone and rotary dialing systems and operates with "dumb" or intelligent terminals using keyboard or software controlled commands.



Send data at off-hour rates with 2400bps autodial.

We've built our reputation on products that give you advanced engineering at down to earth prices. Our 2400bps full duplex modems range from $995 to $1195 with attractive quantity discounts available.

There's a 2400bps full duplex dial modem in our family in either tabletop or rackmount configuration to meet every need.



Get the functions you want in the configuration you need from our full family of 2400bps modems.

It's time you got more data for your dollar. Call or write, Concord Data Systems, 303 Bear Hill Road, Waltham, Massachusetts 02154 (617) 890-1394, or contact the CDS representative nearest you.

Modems

ARK ELECTRONIC PRODUCTS, INC.
LIMITED DISTANCE MODEM MODEL 7 (LDM-7)
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps; Asynchronous/ Synchronous - 57,600 bps
Interface: RS-232C
Transmission Medium: Wide-Band Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM
Price: $425
Number Installed to Date: 100 - 500
Date First Installed: 1982

ASTROCOM CORP.
MODEM EMULATOR
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Distribution Method: Third-party
Price: $315
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1976
(See Vendor Profile Page V-3)

ASTROCOM CORP.
MC612
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Unload Twisted-Wire
Diagnostics: Yes; Built-in
Features: Diagnostics, Multiport, Switchable Data Rates
Distribution Method: Third-party
Price: $610
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1977

ASTROCOM CORP.
SH56S
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 56,000 bps, Asynchronous/ Synchronous - 28,000 bps
Interface: RS-232C, CCITT V.35
Transmission Medium: Unload - Twisted-Wire
Diagnostics: Yes; Built-in
Features: Diagnostics, Multiport, Switchable Data Rates
Distribution Method: Third-party
Price: $825

ASTROCOM CORP.
SH96/48
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Unload Twisted-Wire
Diagnostics: Yes; Built-in
Features: Diagnostics, Multiport
Distribution Method: Third-party
Price: $295
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1977

ASTROCOM CORP.
SH1928
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Unload Twisted-Wire
Features: Multiport, Switchable Data Rates
Distribution Method: Third-party
Price: $395
Number Installed to Date: 100 - 500
Date First Installed: January 1982

ATARI, INC.
ATARI 1030 DIRECT CONNECT MODEM
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial; Multiport
Distribution Method: Third-party
(See Vendor Profile Page V-3)

AVANTI COMMUNICATIONS CORP.
300
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $390
Number Installed to Date: 500 - 1,000
Date First Installed: September 1977
(See Vendor Profile Page V-3)

AVANTI COMMUNICATIONS CORP.
300H
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 56,000-bps; Asynchronous/ Synchronous - 224,000 bps
Interface: V.35
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $795
Number Installed to Date: 100 - 500
Date First Installed: September 1981

AVANTI COMMUNICATIONS CORP.
1800
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Loop Timing
Distribution Method: End user, OEM, Third-party
Price: $575
Number Installed to Date: 500 - 1,000
Date First Installed: 1982

AVANTI COMMUNICATIONS CORP.
1835
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 56,000 bps; Asynchronous/ Synchronous - 64,000 bps
Interface: V.35
Transmission Medium: Digital Links
Diagnostics: Yes; Built-in
Features: Autoequalizer, Loop Timing
Distribution Method: End user, OEM, Third-party
Price: $895
Number Installed to Date: 100 - 500
Date First Installed: 1982

AVANTI COMMUNICATIONS CORP.
1848
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 56,000 bps; Asynchronous/ Synchronous - 64,000 bps
Interface: RS-449
Transmission Medium: Digital Links
Features: Autoequalizer, Diagnostics, Loop Timing
Distribution Method: End user, OEM, Third-party
Price: $895
Number Installed to Date: 100 - 500
Date First Installed: 1982

AVANTI COMMUNICATIONS CORP.
2200
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 64,000 bps; Synchronous 19,200 bps, 56,000 bps
Interface: RS-232C, RS-449, CCITT V.24, V.35, MIL188-114
Transmission Medium: Digital Links
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Multidropping and Extention of DDS Circuit
Distribution Method: End user, OEM, Third-party
Price: $950
Number Installed to Date: 500 - 1,000
Date First Installed: 1977

AVANTI COMMUNICATIONS CORP.
2300H
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/ Synchronous - 2.5M bps
Interface: RS-449, RS-422, V.35, MIL188/114
Transmission Medium: Digital Links
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, DSX-1 Compatible
Distribution Method: End user, OEM, Third-party
Price: $1,975
Number Installed to Date: 100 - 500
Date First Installed: 1977

AVANTI COMMUNICATIONS CORP.
2300M
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex,

Full-Duplex, Simplex
Transmission Rate: Synchronous - 56000 bps; Asynchronous/ Synchronous - 480,800 bps
Interface: RS-422, V.35, Bell 301/303
Transmission Medium: Digital Links
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Loop Timing
Distribution Method: End user, OEM, Third-party
Price: $1,825
Number Installed to Date: 100 - 500
Date First Installed: 1977

AVANTI COMMUNICATIONS CORP.
2400
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Multiport, Dual Channel Format
Distribution Method: End user
Price: $1,100
Number Installed to Date: 100 - 500
Date First Installed: 1982

AVANTI COMMUNICATIONS CORP.
4800
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Multiport
Distribution Method: End user
Price: $1,950
Number Installed to Date: 100 - 500
Date First Installed: 1982

AVANTI COMMUNICATIONS CORP.
MODEL 696A
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Digital Links
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $285
Number Installed to Date: 500 - 1,000
Date First Installed: 1979

AVCOM, INC.
CS 30A
Modem Class: Direct Dial
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: TTL
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Switchable Data Rates
Distribution Method: OEM
Price: $109
Number Installed to Date: Under 100
Date First Installed: December 1982
(See Vendor Profile Page V-3)

AVCOM, INC.
PM 300
Modem Class: Direct Dial
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $189
Number Installed to Date: Under 100
Date First Installed: August 1983

BACKUS DATA SYSTEMS
AC 312 1200B
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Reverse Channel, Diagnostics
Distribution Method: End user, OEM
Price: $495
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1976
(See Vendor Profile Page V-5)

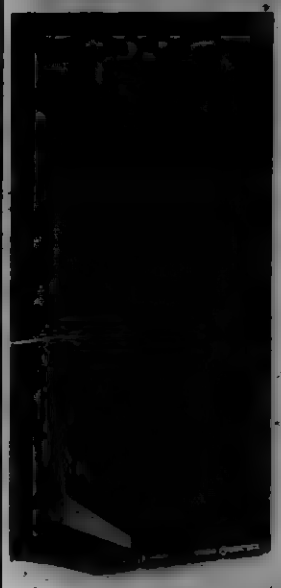
BACKUS DATA SYSTEMS
AC 312 300B
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Reverse Channel, Diagnostics
Distribution Method: End user, OEM
Price: $199
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1976

BELDEN CORP.
BT-DRIVER 23-005
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Distribution Method: Third-party
Price: $195
Number Installed to Date: Under 100
Date First Installed: June 1982
(See Vendor Profile Page V-4)

BELDEN CORP.
BT-DRIVER 222-004
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Loopback
Distribution Method: Third-party
Price: $225
Number Installed to Date: 100 - 500
Date First Installed: June 1982

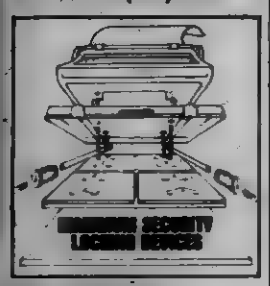
BELDEN CORP.
BT-DRIVER 222-034
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: BAL 2 Metallic Pairs
Diagnostics: No

Protect Your Business Machines From Unwanted Visitors With Anchor Pad.



ANCHOR PAD provides maximum security without damaging either furniture or equipment. It combines the stopping power of four separate locking and bonding devices to produce a gripping force of over 6,000 lbs. that stops thieves cold.

Find out why major business organizations have put ANCHOR PAD to work for them. Write for our free brochure, or call (800)235-7972



ANCHOR PAD
ANCHOR PAD INTERNATIONAL, INC.
3224 Thatcher Avenue, Marina Del Rey, California 90291

Modems

Features: Diagnostics, Loopback
Distribution Method: Third-party
Price: $195
Number Installed to Date: Under 100
Date First Installed: June 1982

[illegible]
BIT DRIVER 222-025
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: BAL 2 Metallic Pairs
Diagnostics: No
Distribution Method: Third-party
Price: $170
Number Installed to Date: 100 - 500
Date First Installed: June 1982

[illegible]
MODEL 1012
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $649
Date First Installed: January 1982
(See Vendor Profile Page V-4)

[illegible]
MODEL 1022
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Diagnostics, Fallback
Distribution Method: End user, Third-party
Price: $249
Date First Installed: January 1980

[illegible]
MODEL 1069
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Distribution Method: End user, Third-party
Price: $139
Date First Installed: January 1980

[illegible]
MODEL 2129
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RJ11
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $499
Number Installed to Date: 500 - 1,000
Date First Installed: June 1983

BLACK BOX CATALOG/EXPANDOR, INC.
BELL-COMPATIBLE MODEM 212
Modem Class: Line Driver
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoanswer, Switchable Data Rates
Distribution Method: End user
Price: $595
Date First Installed: July 1983
(See Vendor Profile Page V-4)

[illegible]
M-1A
Modem Class: LTD Distance
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Narrow-Band Lines
Distribution Method: End user
Price: $114 to $138
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1982
(See Vendor Profile Page V-4)

[illegible]
M-3
Modem Class: LTD Distance
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $49
Number Installed to Date: 500 - 1,000
Date First Installed: 1979

[illegible]
M-4
Modem Class: Limited Distance
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.26
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $440
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1982

BROADBAND SYSTEMS, INC.
BT DRIVER 222004
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 110 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Clock-Calendar
Distribution Method: Third-party
Price: $225
Number Installed to Date: 500 - 1,000
Date First Installed: April 1981
(See Vendor Profile Page V-4)

BROADBAND SYSTEMS, INC.
BT DRIVER 222005
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Features: Diagnostics, Clock Calendar, Loopback
Distribution Method: Third-party
Price: $195
Number Installed to Date: 500 - 1,000
Date First Installed: April 1981

BURROUGHS CORP.
CP 1004
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24
Features: Autoequalizer, Diagnostics, Fallback
Date First Installed: 1982
(See Vendor Profile Page V-4)

BURROUGHS CORP.
CP 1008
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24
Features: Autoequalizer, Diagnostics, Fallback
Date First Installed: 1982

BURROUGHS CORP.
CP 1008-R/T
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps, Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24
Features: Autoequalizer, Diagnostics, Fallback
Date First Installed: 1982

BURROUGHS CORP.
TA 1201
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Features: Autoequalizer, Diagnostics
Date First Installed: 1977

BURROUGHS CORP.
TA 1203
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Features: Autoequalizer, Autoanswer, Diagnostics
Date First Installed: 1977

BURROUGHS CORP.
TA 1801
Modem Class: Long-Haul
Transmission Technique: Asynchronous

Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics
Date First Installed: 1977

SYNCOM, INC.
212 AD
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $439
Number Installed to Date: 500 - 1,000
Date First Installed: March 1983
(See Vendor Profile Page V-4)

CABLEMAX SYSTEMS CORP.
MOD-1
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 2,400 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Reverse Channel, Switchable Data Rates
Distribution Method: End user
Price: $1,495
Number Installed to Date: Under 100
Date First Installed: 1981
(See Vendor Profile Page V-5)

CANOGA DATA SYSTEMS
CSA-100
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 14,400 bps, 115K bps
Interface: RS-232C, RS-422, V.35
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Clock Calender, Switchable Data Rates, Continual Monitoring
Distribution Method: End user
Price: $495
Number Installed to Date: Under 100
Date First Installed: October 1983
(See Vendor Profile Page V-5)

CANOGA DATA SYSTEMS
CSY-306-A-S
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous 2,400 bps; Asynchronous/ Synchronous 4,000 bps
Interface: RS-449, RS-422, V.35, TC
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Diagnostics, Continual Monitoring
Distribution Method: End user
Price: $1,500
Number Installed to Date: Under 100
Date First Installed: May 1983

CANOGA DATA SYSTEMS
CSY-306-S
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous 2,400 bps; Asynchronous/ Synchronous 4,000 bps
Interface: RS-449, RS-422, V.35
Bell-Compatible: 306
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Switchable Data Rates, Continual Monitoring
Distribution Method: End user
Price: $1,800
Number Installed to Date: 100 - 500
Date First Installed: May 1981

CANOGA DATA SYSTEMS
CSY-3063AX-R
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps, Synchronous - 4,000 bps
Interface: RS-422, RS-423, V.35, T-1, TTL
Bell-Compatible: 306A
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Clock Calender, Continual Monitoring
Distribution Method: End user
Price: $1,200
Number Installed to Date: 100 - 500
Date First Installed: May 1983

GATEL
DM 2100
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Coaxial Cable
Features: Reverse Channel, Diagnostics, Switchable Data Rates, Loopback
Distribution Method: Third-party
Price: $1,895
Number Installed to Date: Under 100
Date First Installed: June 1981
(See Vendor Profile Page V-5)

GENESYS MICROELECTRONICS
CH1760E/1760
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Tone Detection
Distribution Method: OEM
Price: $495
(See Vendor Profile Page V-5)

GENESYS MICROELECTRONICS
INFO-MATE 212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $595
Number Installed to Date: 100 - 500
Date First Installed: July 1983

GRUNER TELECOMMUNICATIONS
TURBO MUX
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Reverse Channel, Diagnostics
Distribution Method: Third-party
Price: $695
Date First Installed: July 1983
(See Vendor Profile Page V-5)

GRUNER TELECOMMUNICATIONS
TURBO 212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Multiport, Switchable Data Rates
Distribution Method: Third-party
Price: $695

CODENOLL TECHNOLOGY CORP.
CODELINK 10
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Rate: Synchronous - 10M bps
Interface: RS-232C, RS-449, RS-422, TTL
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Autoanswer, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $500
Number Installed to Date: Under 100
Date First Installed: January 1983
(See Vendor Profile Page V-5)

CODENOLL TECHNOLOGY CORP.
CODELINK 20
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Rate: Asynchronous - 20,000 bps
Interface: RS-232C, RS-449, RS-422, TTL
Transmission Medium: Fiber Optics
Features: Autoanswer, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $500
Number Installed to Date: Under 100
Date First Installed: January 1983

CODENOLL TECHNOLOGY CORP.
CODELINK 30
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Rate: Synchronous - 50M bps

Interface: RS-232C, RS-449, RS-422, TTL
Transmission Medium: Fiber Optics
Diagnostics: No
Distribution Method: End user, OEM, Third-party
Price: $500
Number Installed to Date: Under 100
Date First Installed: January 1983

CODENOLL TECHNOLOGY CORP.
CODELINK 100
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Rate: Synchronous - 150M bps
Interface: RS-232C, RS-449, RS-422, TTL
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Autorenewer, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $3,000
Number Installed to Date: Under 100
Date First Installed: January 1983

CODEX CORP.
224 DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, 2-Wire
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autorenewer, Fallback
Distribution Method: End user
Number Installed to Date: 5,000 - 10,000
(See Vendor Profile Page V-9)

CODEX CORP.
224/V.22 BIS DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.22, CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autorenewer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Date First Installed: March 1983

CODEX CORP.
5010R MULTIPLE MODEM ENCLOSURE
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 1,200 bps; Synchronous 2,400 bps
Interface: RS-232C, RS-366
Bell-Compatible: 103, 201, 202
Transmission Medium: Voice-Grade Lines
Features: Autodial
Distribution Method: End user

CODEX CORP.
5103/5113 DATA MODEMS
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autorenewer, Alternate Voice/Data, Local Loopback
Distribution Method: End user

CODEX CORP.
5201R DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 201
Features: Autodial, Autorenewer, Alternate Voice/Data, Diagnostics, Clock Calendar
Distribution Method: End user

CODEX CORP.
5202R V.23
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, 2 or 4-Wire
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autodial, Local/Remote Loopback
Distribution Method: End user

CODEX CORP.
5208R DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autorenewer, Diagnostics, Clock Calendar
Distribution Method: End user
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
5312/ACU
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous 300 bps, Asynchronous/ Synchronous 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Built-in Abort Timer

CODEX CORP.
5212R
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, 2-Wire
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Alternate Voice/Data, Switchable Data Rates, Automatic Speed Sensing
Distribution Method: End user

CODEX CORP.
5300 GSM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps, Asynchronous/ Synchronous - 48,000 bps, 50,000 bps, 64,000 bps
Interface: V.35
Bell-Compatible: 303
Transmission Medium: Wide-Band Lines
Features: Diagnostics, Clock Calendar
Distribution Method: End user

CODEX CORP.
CS 48FP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, RS-423
Transmission Medium: Voice-Grade Lines
Features: Diagnostics
Distribution Method: End user
Price: $4,175
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
CS 96FP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, RS-423
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics
Distribution Method: End user
Price: $7,475

CODEX CORP.
CS 4800
Modem Class: Long-Haul
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29, RS-423
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Alternate Voice/Data, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates, Integral Four-Channel Mux
Distribution Method: End user
Price: $4,675
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
CS 9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Alternate Voice/Data, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates, Integral Four-Channel Mux
Distribution Method: End user
Price: $7,975
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
LSI 24/24
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoequalizer, Autorenewer, Alternate Voice/Data,

Clock Calender, Local Loopback
Distribution Method: End user
Price: $2,850

CODEX CORP.
LSI 48FP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Clock Calender, Fallback
Distribution Method: End user
Price: $3,500
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
LSI 48I
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Clock Calender, Fallback, Local/Remote Loopback
Distribution Method: End user
Price: $3,500

CODEX CORP.
LSI 48/V.27 SR/TSR
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Clock Calender, Fallback, Local/Remote Loopback
Distribution Method: End user
Price: $3,500
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
LSI 96FP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, Asynchronous/ Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Alternate Voice/Data, Diagnostics, Clock Calender, Fallback
Distribution Method: End user
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
LSI 4800
Modem Class: Long-Haul
Transmission Technique: Synchrorious
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Alternate Voice/Data, Reverse Channel, Clock Calender, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $3,500
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
LSI 9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Alternate Voice/Data, Reverse Channel, Diagnostics, Clock Calender, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $6,800
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
LSI E96/V.29
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Clock Calender, Fallback
Distribution Method: End user
Price: $6,800
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
LSI E9600
Modem Class: Long-Haul
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, 4-Wire
Bell-Compatible: None
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Clock Calender, Fallback
Distribution Method: End user

CODEX CORP.
LSI E9604
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Clock Calender, Fallback
Distribution Method: End user
Number Installed to Date: 10,000 - 50,000

CODEX CORP.
MX 2400 DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps; Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.28, MIL 188C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Fallback
Distribution Method: End user
Number Installed to Date: 5,000 - 10,000

CODEX CORP.
SP 14.4
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 9,600 bps, 19,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Fallback
Number Installed to Date: 500 - 1,000

CODEX CORP.
9150 LD8U
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 19,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 43401
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer
Number Installed to Date: 500 - 1,000
Date First Installed: December 1992

CODEX CORP.
9250 LD8U
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Twisted Pair
Features: Autoequalizer
Number Installed to Date: 5,000 - 10,000
Date First Installed: March 1992

COMSTAT COMMUNICATIONS SYSTEMS CORP.
SPM-84A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Features: Diagnostics, Simulated - Voice/Data
Distribution Method: End user, OEM
Price: $500
Number Installed to Date: Under 100
Date First Installed: August 1983
(See Vendor Profile Page V-5)

COMSTAT COMMUNICATIONS SYSTEMS CORP.
LINEMATE 192
Modem Class: Short-Haul

Modems

Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 14,400 bps
Interface: RS-232C
Transmission Medium: 2-Wire Nonloaded
Diagnostics: No
Features: Diagnostics, Switchable Data Rates, Simulated Voice/Data
Distribution Method: End user, Third-party
Price: $450
Number Installed to Date: Under 100
Date First Installed: September 1983

COMI DATA
151A2-13
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Carrier Light
Distribution Method: End user
Price: $127
Date First Installed: January 1983
(See Vendor Profile Page V-5)

COMI DATA
360/362/364F3-72
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Metallic Circuit
Features: Diagnostics
Distribution Method: End user
Price: $117 to $296
Date First Installed: January 1981

COMI DATA
154E2-14
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $127
Date First Installed: January 1978

COMI DATA
208 A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $1,697
Date First Installed: January 1981

COMI DATA
212E2-32
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $377
Date First Installed: March 1983

COMI DATA
302A2-13
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Originate Mode Only
Distribution Method: End user
Price: $157
Date First Installed: January 1970

COMI DATA
302A2-33
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Originate/Answer
Distribution Method: End user
Price: $187
Date First Installed: January 1970

COMI DATA
302B2-13
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Distribution Method: End user
Price: $177
Date First Installed: January 1970

COMI DATA
302B2-33
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Originate/Answer
Distribution Method: End user
Price: $247
Date First Installed: January 1970

COMI DATA
302C2-13L
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $297
Date First Installed: January 1977

COMI DATA
306E2-12
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Originate Only
Distribution Method: End user
Price: $117
Date First Installed: January 1981

COMI DATA
312E2-42
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Digital/Analog Loopback
Distribution Method: End user
Price: $397
Date First Installed: January 1982

COMI DATA
312F2-22L
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Features: Digital/Analog Loopback
Distribution Method: End user
Price: $337
Date First Installed: January 1982

COMI DATA
330E2-12L
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Manual Answer
Distribution Method: End user
Price: $137
Date First Installed: January 1978

COMI DATA
330E2-42L
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: End user
Price: $197
Date First Installed: January 1978

COMI DATA
332E2-12L
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $187
Date First Installed: January 1978

COMI DATA
332E2-42L
Modem Class: Long-Haul
Transmission Technique: Asynchronous

Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: End user
Price: $247
Date First Installed: January 1978

COM DATA
332F7/332F8
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data, Switchable Data Rates, Point to Point
Distribution Method: End user
Price: $561
Date First Installed: January 1981

COM DATA
334E2-12L
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Busy Out
Distribution Method: End user
Price: $537
Date First Installed: January 1981

COM DATA
334E2-42L
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Busy Out
Distribution Method: End user
Price: $567
Date First Installed: January 1981

COM DATA
370E2-12 PHONE
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data, Manual Answering
Distribution Method: End user
Price: $227
Date First Installed: January 1981

COM DATA
370E2-42
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, One Number Dialer
Distribution Method: End user
Price: $277
Date First Installed: January 1981

COM DATA
P 212 A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $495 to $595
Date First Installed: January 1981

COM DATA
ME-2D
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Cables
Distribution Method: End user
Price: $510
Date First Installed: January 1982

COMSTREAM, INC.
TM-1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Switchable Data Rates, Abort Timer
Distribution Method: End user, Third-party
Price: $750
Number Installed to Date: Under 100
Date First Installed: April 1983
(See Vendor Profile Page V-6)

COMSTREAM, INC.
TM-2400
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201B
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Clock Calendar
Distribution Method: Third-party
Price: $750
Number Installed to Date: Under 100
Date First Installed: January 1983

COMSTREAM, INC.
TM-4800
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 208, 208B
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Clock Calendar
Distribution Method: End user, Third-party
Price: $1,750
Number Installed to Date: Under 100
Date First Installed: February 1983

COMSTREAM, INC.
TM-9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Clock Calendar, Fallback
Distribution Method: End user, Third-party
Price: $2,750
Number Installed to Date: Under 100
Date First Installed: February 1983

COMTECH DATA MACHINES, INC.
C-1600 AUTOMATIC MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel
Distribution Method: End user, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: August 1983
(See Vendor Profile Page V-6)

COMTECH DATA MACHINES, INC.
C-1800
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Features: Reverse Channel, Switchable Data Rates
Date First Installed: May 1983

COMMUNICATION RESEARCH CORP.
100
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, AC Power Line
Transmission Medium: AC Power Line
Features: Multiport
Distribution Method: Third-party
Price: $315
Number Installed to Date: 500 - 1,000
Date First Installed: July 1982
(See Vendor Profile Page V-6)

COMMUNICATION RESEARCH CORP.
400
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, AC Power Line
Transmission Medium: AC Power Line
Features: Multiport

Modems

Distribution Method: Third-party
Price: $475
Number Installed to Date: 100 - 500
Date First Installed: February 1983

COMPLEX SYSTEMS, INC.
LS 56K
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: CCITT V.35
Transmission Medium: Voice-Grade Lines, Digital Links
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: Third-party
Price: $650
Number Installed to Date: Under 100
Date First Installed: December 1983
(See Vendor Profile Page V-6)

COMPLEX SYSTEMS, INC.
LVS 76.8
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C, CCITT V.35
Transmission Medium: Voice-Grade Lines, Digital Links
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $650
Number Installed to Date: Under 100
Date First Installed: November 1983

COMPRE COMMUNICATIONS, INC.
LH56
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 600 bps; Asynchronous/ Synchronous - 7,200 bps
Interface: RS-232C
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $2,650
Number Installed to Date: Under 100
Date First Installed: May 1981
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
AUDIO MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Clock Calendar, Switchable Data Rates
Distribution Method: End user
Price: $4,895
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-6)

COMPUTER DEVELOPMENT, INC.
ET SERIES INTELLIGENT MODEMS
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C, CCITT V.23
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $495 to $695
Number Installed to Date: Under 100
Date First Installed: November 1983
(See Vendor Profile Page V-6)

COMPUTER DEVELOPMENT, INC.
ETC-EXECUTIVE TELECOMMUNICATIONS COMPUTER
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous 1,200 bps
Interface: RS-232C, CCITT V.23
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Clock Calendar, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $1,095 to $1,295
Date First Installed: August 1983

COMPUTER DEVELOPMENT, INC.
EXECUTIVE TELECOM COMPUTER (MULTI-USER)
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Multiport, Clock Calendar, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $1,595

COMPUTROL
30-0078
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 2,000 bps
Interface: TTL
Transmission Medium: Coaxial Cable
Distribution Method: End user, OEM
Price: $150 to $200
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1979
(See Vendor Profile Page V-7)

COMPUTROL
30-0080
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous
Interface: TTL
Distribution Method: End user, OEM
Price: $150 to $200

COMREX INTERNATIONAL
CR-103 COMMUNICATOR
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial
Price: $159
Date First Installed: November 1983
(See Vendor Profile Page V-7)

COMSPEC, INC.
DATATALKER 9,600C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Radio Links
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Autocall Forward
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: September 1983
(See Vendor Profile Page V-7)

COMTECH DATA CORP.
CB 56
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: CCITT V.35, V.28
Bell-Compatible: 309C
Transmission Medium: Group Spectrums
Features: Diagnostics
Distribution Method: End user
Price: $8,000
Number Installed to Date: 100 - 500
Date First Installed: 1979
(See Vendor Profile Page V-7)

COMTECH DATA CORP.
CB 168
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 168,000 bps
Interface: RS-449, CCITT V.35
Bell-Compatible: 309C
Transmission Medium: Group Spectrums
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $17,500
Number Installed to Date: Under 100
Date First Installed: December 1983

COMTECH DATA CORP.
M700
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 56,000 bps
Interface: RS-449, CCITT V.35, TTL
Transmission Medium: Microwave Systems
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user, OEM
Price: $4,650
Number Installed to Date: Under 100
Date First Installed: March 1981

COMTECH DATA CORP.
SM200A
Modem Class: Long-Haul
Transmission Technique: Synchronous

Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: RS-449, CCITT V.35, TTL
Transmission Medium: Satellite
Diagnostics: Yes; Add-on
Features: Autoequalizer, Fallback
Distribution Method: End user
Price: $14,300
Number Installed to Date: 500 - 1,000
Date First Installed: January 1980

COMTECH DATA CORP.
MR16
Modem Class: Short-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2M bps
Interface: RS-449, CCITT V.35
Transmission Medium: Twisted-Pair
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $2,000
Number Installed to Date: Under 100
Date First Installed: March 1983

COMTECH DATA CORP.
MF 96
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: RS-449, CCITT V.35, V.36
Transmission Medium: Coaxial Cables
Diagnostics: No
Features: Autoequalizer, Diagnostics
Distribution Method: End user, OEM
Price: $4,650
Number Installed to Date: 100 - 500
Date First Installed: January 1981

COM/TECH SYSTEMS, INC.
MODEMULATOR 402A
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 14,400 bps
Interface: RS-232C
Transmission Medium: RS-232 Cable
Diagnostics: No
Features: Diagnostics, Switchable Data Rates, Loopback
Distribution Method: End user
Price: $390
Number Installed to Date: Under 100
Date First Installed: February 1983

CONCORD DATA SYSTEMS, INC.
CDS 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $700
Number Installed to Date: Under 100
Date First Installed: November 1981
(See Vendor Profile Page V-7)

CONCORD DATA SYSTEMS, INC.
CDS 224
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $995 to $1,195
Number Installed to Date: 500 - 1,000
Date First Installed: November 1982

CONCORD DATA SYSTEMS, INC.
CDS 224 TM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $995
Number Installed to Date: 500 - 1,000
Date First Installed: March 1983

CONCORD DATA SYSTEMS, INC.
CDS 224 TM AUTODIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $1,195
Number Installed to Date: Under 100
Date First Installed: January 1983

CONCORD DATA SYSTEMS, INC.
CDS V.22
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps
Interface: CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $950
Number Installed to Date: 5,000 - 10,000
Date First Installed: November 1981

CONCORD DATA SYSTEMS, INC.
CDS V.22 BIS
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $995
Number Installed to Date: 500 - 1,000
Date First Installed: April 1983

CONCORD DATA SYSTEMS, INC.
CDS V.22 BIS AUTODIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: CCITT V.24, V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $1,195
Number Installed to Date: Under 100
Date First Installed: August 1983

CONCORDCO, INC.
MDM-12000
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Diagnostics
Distribution Method: OEM, Third-party
Price: $1,495
Date First Installed: 1983
(See Vendor Profile Page V-8)

DATA CONTROL SYSTEMS
CCM COAXIAL CABLE MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 1,800 bps, 4,800 bps, 9,600 bps, 14,400 bps; Synchronous - 2,400 bps
Interface: RS-232C, RS-422
Transmission Medium: Coaxial, Triaxial Cables
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $165 to $875
Number Installed to Date: 500 - 1,000
Date First Installed: 1978
(See Vendor Profile Page V-9)

DATA CONTROL SYSTEMS
SR102
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, RS-422
Transmission Medium: Metallic Circuit
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $165 to $875
Number Installed to Date: 500 - 1,000
Date First Installed: 1978

DATA CONTROL SYSTEMS
SR120
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, RS-422
Transmission Medium: Metallic Circuit
Diagnostics: Yes; Built-in
Features: Reverse Channel,

Modems

Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $165 to $975
Number Installed to Date: Under 100
Date First Installed: 1983

DATA CONTROL SYSTEMS SR202
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, RS-422
Transmission Medium: Metallic Circuit
Diagnostics: Yes; Built-In
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $165 to $975
Number Installed to Date: 500 - 1,000
Date First Installed: 1978

DATA CONTROL SYSTEMS SR208
Modem Class: Power Line Carrier
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, RS-422
Transmission Medium: Power Line Carrier
Diagnostics: Yes; Built-In
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $165 to $975
Number Installed to Date: 500 - 1,000
Date First Installed: 1978

DATASCAN CORP. D 2400
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 4,800 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $995
(See Vendor Profile Page V-9)

DATASCAN CORP. D 4800
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, V.27
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Fallback, Switchable Data Rates
Distribution Method: End user, Third Party
Price: $1,695
Date First Installed: March 1984

DATASCAN CORP. D 9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $2,250

DATAPOINT CORP. 9478/9479
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $995
Date First Installed: January 1978
(See Vendor Profile Page V-9)

DATAPROBE, INC. MDR 103
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop, 60 MA Current Loop
Transmission Medium: Voice-Grade Lines, Wide-Band Lines
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $450
Number Installed to Date: Under 100
Date First Installed: November 1983
(See Vendor Profile Page V-9)

DATAPRODUCTS CORP. DDU-1
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps; Asynchronous/ Synchronous - 7,200 bps
Interface: RS-232C, MIL 188C, MIL 188/114
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Polling/Multipoint
Distribution Method: End user
Price: $700
Number Installed to Date: 100 - 500
Date First Installed: June 1980
(See Vendor Profile Page V-9)

DATAPRODUCTS NEW ENGLAND, INC. DDU-1
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps, 7,200 bps; Synchronous - 1,800 bps, 4,800 bps, 9,600 bps, 14,400 bps
Transmission Medium: Unconditioned Cable
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $795
Number Installed to Date: 500 - 1,000
Date First Installed: 1987
(See Vendor Profile Page V-9)

DATATEL, INC. DCP 3000
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $200
Number Installed to Date: 500 - 1,000
Date First Installed: 1980
(See Vendor Profile Page V-10)

DATATEL, INC. DCP 3010
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: Burroughs
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $260
Number Installed to Date: Under 100
Date First Installed: June 1990

DATATEL, INC. DCP 3020
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics, Simulated Dial Control Sign
Distribution Method: End user
Price: $250
Number Installed to Date: Under 100
Date First Installed: January 1991

DATATEL, INC. DCP 3030
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/ Synchronous - 3,600 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $420
Number Installed to Date: 500 - 1,000
Date First Installed: January 1991

DATATEL, INC. DCP 3055
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates, Auto Speed Detection
Distribution Method: End user
Price: $550
Number Installed to Date: Under 100
Date First Installed: October 1992

DATATEL, INC. DCP 3057
Modem Class: Short-Haul
Transmission Technique: Synchronous

Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 56,000 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $550
Number Installed to Date: Under 100
Date First Installed: January 1983

DATATEL, INC.
DCP 3060
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 56,000 bps, Asynchronous/ Synchronous - 48,000 bps, 72,000 bps
Interface: RS-232C, RS-422, V.35
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics, Automatic Speed Detection
Distribution Method: End user
Price: $950
Number Installed to Date: Under 100
Date First Installed: December 1983

DATATEL, INC.
DCP 3070
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 56,000 bps, Asynchronous/ Synchronous - 48,000 bps, 2M bps
Interface: RS-232C, RS-422, V.35
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics, Automatic Speed Detection
Distribution Method: End user
Price: $1,400
Date First Installed: January 1984

DATATEL, INC.
DCP 3180
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/ Synchronous - 3,600 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: End user
Price: $420
Number Installed to Date: 500 - 1,000
Date First Installed: January 1981

DATATEL, INC.
DCP 3155
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair
Features: Diagnostics, Switchable Data Rates, Automatic Speed Detection
Distribution Method: End user
Price: $550
Number Installed to Date: Under 100
Date First Installed: October 1982

DATEC, INC.
33
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 108, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $195 to $599
Number Installed to Date: 500 - 1,000
Date First Installed: 1981
(See Vendor Profile Page V-10)

DATEC, INC.
212
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $195 to $599
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1980

DATEC, INC.
PAL 103
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $195 to $599
Date First Installed: 1984

DATEC, INC.
PAL 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $195 to $599
Date First Installed: 1983

DATEC, INC.
PAL PLUS
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Multiport, Switchable Data Rates
Distribution Method: Third-party
Price: $195 to $599
Date First Installed: 1983

DCI-TELEPRODUCTS, INC.
ADT-3
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Unload Metallic Pairs
Diagnostics: No
Features: Diagnostics, Switchable Data Rates, Extended Ring Option
Distribution Method: End user
Price: $225
Number Installed to Date: 10,000
Date First Installed: July 1978
(See Vendor Profile Page V-10)

DCI-TELEPRODUCTS, INC.
2000
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 56,000 bps; Asynchronous/ Synchronous - 64K bps
Interface: CCITT V.35
Transmission Medium: Voice-Grade Lines, Unload Metallic Pairs
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $689
Number Installed to Date: 200
Date First Installed: August 1983

DCI-TELEPRODUCTS, INC.
ASR-3
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Unload Metallic Pairs
Diagnostics: No
Features: Diagnostics, Switchable Data Rates, Extended Ring Option
Distribution Method: End user
Price: $445
Number Installed to Date: 5,000
Date First Installed: 1979

DCI-TELEPRODUCTS, INC.
SLD-1
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Unload Metallic Pairs
Diagnostics: No
Features: Diagnostics
Distribution Method: End user, Third-party
Price: $175
Number Installed to Date: 500 - 1,000
Date First Installed: January 1981

DEVELCON ELECTRONICS, INC.
710 ACOUSTIC COUPLER
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data
Distribution Method: End user, OEM, Third-party

Modems

Price: $195
Number Installed to Date: 5,000 - 10,000
Date First Installed: September 1978
(See Vendor Profile Page V-10)

DEVELCON ELECTRONICS, INC.
2X212 MODEMPLEXER
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Multiport, Switchable Data Rates, Stored Directory
Distribution Method: End user, OEM, Third-party
Price: $995
Number Installed to Date: Under 100
Date First Installed: August 1983

DEVELCON ELECTRONICS, INC.
5212 SMART MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates, Stored Directory
Distribution Method: End user, OEM, Third-party
Price: $495
Number Installed to Date: Under 100
Date First Installed: January 1984

DEVELCON ELECTRONICS, INC.
7212 MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $575
Number Installed to Date: 100 - 500
Date First Installed: July 1982

DEVELCON ELECTRONICS, INC.
9212 SMART MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates, Stored Directory
Distribution Method: End user, OEM, Third-party
Price: $650
Number Installed to Date: 500 - 1,000
Date First Installed: November 1982

DEVELCON ELECTRONICS, INC.
9123 MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, OEM, Third-party
Price: $195
Number Installed to Date: 100 - 500
Date First Installed: 1982

DEVELCON ELECTRONICS, INC.
9202 MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Diagnostics
Distribution Method: End user, OEM, Third-party
Price: $671
Number Installed to Date: 1,000 - 5,000
Date First Installed: September 1978

DIGITAL EQUIPMENT CORP.
DF01-A ACOUSTIC COUPLER
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Transmission Medium: Voice-Grade Lines
Price: $345
Date First Installed: 1978
(See Vendor Profile Page V-10)

DIGITAL EQUIPMENT CORP.
DF03-AA/AC
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Price: $450 to $650
Date First Installed: 1980

DIGITAL EQUIPMENT CORP.
DF03-AA/AC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Price: $895 to $1,095
Date First Installed: 1980

DIGITAL EQUIPMENT CORP.
DF03-RA/RC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, RS432-A
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics
Price: $750 to $950
Date First Installed: 1983

DURACOM CORP.
ECS-10
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Solid Copper Wire Pair
Diagnostics: No
Features: High Noise Immunity
Distribution Method: End user
Price: $99 to $104
Number Installed to Date: 3,000
Date First Installed: 1977
(See Vendor Profile Page V-11)

DYNATECH DATA SYSTEMS
ME-1
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Digital Links
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $440
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-11)

DYNATECH DATA SYSTEMS
LDM 12
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Metallic Twisted Pairs
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user, Third-party
Price: $275
Number Installed to Date: 500 - 1,000
Date First Installed: 1980

DYNATECH DATA SYSTEMS
LDM 22
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Metallic Twisted Pair
Features: Switchable Data Rates
Distribution Method: End user, Third-party
Price: $440
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1982

DYNATECH DATA SYSTEMS
LDM 32
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex

Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Two Untoad Twisted-Pair
Diagnostics: No
Features: Switchable Data Rates, Remote Digital Loopback
Distribution Method: End user, Third-party
Price: $590
Number Installed to Date: Under 100
Date First Installed: 1982

CONTROL SYSTEMS, INC.
LYNX 103-0AA
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer
Distribution Method: Third-party
Price: $299
(See Vendor Profile Page V-11)

CONTROL SYSTEMS, INC.
LYNX 103-0AA (APPLE LYNX)
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer
Distribution Method: Third-party
Price: $299

DIVAX CORP.
ACOUSTIC COUPLER N78
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Distribution Method: Third-party
Price: $195 to $225
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1979
(See Vendor Profile Page V-11)

DIVAX CORP.
103-1
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: OEM
Price: $175 to $485
Date First Installed: 1979

DIVAX CORP.
103-2
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: OEM
Price: $175 to $485
Date First Installed: 1979

DIVAX CORP.
103-3
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: OEM
Price: $175 to $485
Date First Installed: 1979

DIVAX CORP.
103-5
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: OEM
Price: $175 to $485
Date First Installed: 1979

ERICSON PRODMATIC, INC.
ZAT 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 600 bps, 1,200 bps
Interface: CCITT V.22
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $950
Number Installed to Date: Under 100
Date First Installed: January 1980
(See Vendor Profile Page V-11)

ERICSON PRODMATIC, INC.
ZAT 2400
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps
Interface: CCITT V.22
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Fallback, Switchable Data Rates, Point to Point and Multidropping
Distribution Method: End user
Price: $925
Number Installed to Date: Under 100
Date First Installed: January 1980

ERICSON PRODMATIC, INC.
ZAT 4800
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps
Interface: CCITT V.27
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates, Dial Backup
Distribution Method: End user
Price: $1,895
Number Installed to Date: Under 100
Date First Installed: January 1980

ERICSON PRODMATIC, INC.
ZAT 9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates, Multiplexer Option
Distribution Method: End user
Price: $2,195
Number Installed to Date: Under 100
Date First Installed: January 1980

FIBRONICS INTERNATIONAL, INC.
FM 001
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 4,800 bps; Synchronous - 14,400 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Reverse Channel, Diagnostics, Clock Calendar, Switchable Data Rates
Distribution Method: End user
(See Vendor Profile Page V-12)

FIBRONICS INTERNATIONAL, INC.
FM 002
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 256K bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Reverse Channel, Diagnostics, Clock Calendar, Switchable Data Rates
Distribution Method: End user

FRIEDMAN ASSOCIATES
MEC 201
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Distribution Method: End user
Price: $620
Date First Installed: January 1981
(See Vendor Profile Page V-12)

FRIEDMAN ASSOCIATES
MEC 201 CR
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps

Modems

Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial
Distribution Method: End user
Price: $845
Date First Installed: June 1981

FRIEDMAN ASSOCIATES
NEC 202T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Reverse Channel, Diagnostics
Distribution Method: End user
Price: $305
Date First Installed: June 1981

FRIEDMAN ASSOCIATES
NEC 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial
Distribution Method: End user
Price: $500
Date First Installed: January 1981

FRIEDMAN ASSOCIATES
NEC 212 AR
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer
Distribution Method: End user
Price: $500
Date First Installed: June 1982

FRIEDMAN ASSOCIATES
NEC 212 BR
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial
Distribution Method: End user
Price: $675
Date First Installed: January 1982

FRIEDMAN ASSOCIATES
NEC DSP 4800-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Fallback
Distribution Method: End user
Price: $950
Date First Installed: January 1982

FRIEDMAN ASSOCIATES
NEC DSP 9600-U
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 4,800 bps, 7,200 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer
Distribution Method: End user
Price: $1,500
Date First Installed: January 1982

FRIEDMAN ASSOCIATES
NEC VOICE DIGITIZER
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Price: $7,000
Date First Installed: January 1984

FUJITSU AMERICA, INC.
F-1916L
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Unconditional Voice-Grade
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $1,795
Number Installed to Date: 100 - 500
Date First Installed: November 1983
(See Vendor Profile Page V-12)

FUJITSU AMERICA, INC.
F-1921L
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $2,450
Number Installed to Date: 100 - 500
Date First Installed: November 1983

FUJITSU AMERICA, INC.
F-1925L
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Interface: RS-232C
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $6,000
Number Installed to Date: 100 - 500
Date First Installed: November 1983

FUJITSU AMERICA, INC.
M-1915CM06
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: TTL
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Add-on
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $395
Number Installed to Date: 5,000
Date First Installed: November 1983

FUJITSU AMERICA, INC.
M-1921CM06
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: TTL
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Add-on
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $595
Number Installed to Date: 100 - 500
Date First Installed: November 1983

FUJITSU AMERICA, INC.
M-1925CM02
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Interface: TTL
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Add-on
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $1,200
Number Installed to Date: 100 - 500
Date First Installed: November 1983

FUJITSU AMERICA, INC.
M-1925CM03
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Interface: TTL
Transmission Medium: Unconditional Voice-Grade
Diagnostics: Yes; Add-on
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Software Strapping
Distribution Method: OEM
Price: $1,500
Number Installed to Date: 100 - 500
Date First Installed: November 1983

GAMBALF DATA, INC.
FA1
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 100K bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $500
(See Vendor Profile Page V-12)

GAMBALF DATA, INC.
FS1
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - Up to 252,000 bps
Interface: RS-232C, CCITT V.24, V.28
Transmission Medium: Fiber Optics

Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $600
Number Installed to Date: Under 100

GANDALF DATA, INC.
LDS 160C
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $225
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1974

GANDALF DATA, INC.
LDS 161
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $400
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1974

GANDALF DATA, INC.
SAM 201
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Date First Installed: 1982

GANDALF DATA, INC.
SAM 212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $618

GANDALF DATA, INC.
SM 3600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Multiport, Manual Dial Backup
Distribution Method/End user
Price: $2,800
Date First Installed: 1981

GANDALF DATA, INC.
ME 2D
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Synchronous - 316,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Distribution Method: End user
Price: $400
Date First Installed: 1978

GANDALF DATA, INC.
ME 922
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 38.4K bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $450
Date First Installed: 1978

GANDALF DATA, INC.
RADIO MODEM
Modem Class: Radio Frequency (RF)
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Radio Links
Diagnostics: No
Price: $1,595
Date First Installed: 1983

GANDALF DATA, INC.
LDS 120; RM 3120
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Features: Digital Loopback
Distribution Method: End user
Price: $300
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1973

GANDALF DATA, INC.
LDS 121
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user

GANDALF DATA, INC.
LDS 140; RM 3140
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Distribution Method: End user
Price: $450
Number Installed to Date: 500 - 1,000
Date First Installed: 1977

GANDALF DATA, INC.
LDS 200
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps; Asynchronous/ Synchronous - 50K bps
Interface: RS-232C, RS-422, CCITT V.24, CCITT V.28, MIL 188C, V.35
Transmission Medium: Narrow-Band Lines
Price: $786 to $985
Date First Installed: 1982

GANDALF DATA, INC.
LDS 300; RM 3300
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Features: Multiport, Analog Loopback
Distribution Method: End user
Price: $450
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1974

GANDALF DATA, INC.
LDS 319; RM 3119
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Features: Switchable Data Rates
Distribution Method: End user
Price: $735
Number Installed to Date: 500 - 1,000
Date First Installed: 1978

GANDALF DATA, INC.
LDS 329; RM 3329
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $450
Number Installed to Date: 500 - 1,000
Date First Installed: 1979

GANDALF DATA, INC.
SM LDS 349
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Interface: RS-232C, CCITT V.24
Transmission Medium: Twisted-pair
Features: Autoequalizer
Distribution Method: End user
Price: $295
Number Installed to Date: Under 500
Date First Installed: January 1984

GANDALF DATA, INC.
LINE MIXER
Modem Class: Short-Haul

Modems

Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines, Narrow-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $295 to $305
Date First Installed: 1982

GANDALF DATA, INC.
LDM 122
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: No
Features: Autoequalizer
Distribution Method: End user

GANDALF DATA, INC.
LDM 404; RM 3404
Modem Class: Medium Distance
Transmission Technique: Syhchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Multiport, Split Channel
Distribution Method: End user
Price: $875 to $975
Number Installed to Date: 500 - 1,000
Date First Installed: 1977

GANDALF DATA, INC.
LDM 409
Modem Class: Medium Distance
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines, Narrow-Band Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics
Distribution Method: End user
Date First Installed: 1983

GANDALF DATA, INC.
LDM 414; RM 3414
Modem Class: Medium Distance
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Multiport
Price: $975 to $1,050
Number Installed to Date: 500 - 1,000

GANDALF DATA, INC.
LDM 444; RM 3444
Modem Class: Medium Distance
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: Yes; Built-in
Features: 8.5 msec Fast Pull
Distribution Method: End user
Price: $1,350
Date First Installed: 1982

GANDALF DATA, INC.
LDM 464; RM 3464
Modem Class: Medium Distance
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Narrow-Band Lines
Diagnostics: Yes; Built-in
Distribution Method: End user
Price: $1,495
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
GDC 56DA/56K
Modem Class: Digital (DSU)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: CCITT V.35
Transmission Medium: Digital Links
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $995
Number Installed to Date: 200
Date First Installed: 1983
(See Vendor Profile Page V-12)

GENERAL DATACOMM INDUSTRIES, INC.
GDC GSU-56DA
Modem Class: Digital (DSU)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Digital Links
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $695
Number Installed to Date: 200
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
GSU-56DB
Modem Class: Digital (DSU)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Digital Links
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party

GENERAL DATACOMM INDUSTRIES, INC.
DC 103J
Modem Class: Long-Haul
Transmission Technique: Asyrichronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
DC 108-3M
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 108
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Diagnostics
Distribution Method: End user
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
DC 201-7
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.26, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Diagnostics, Fallback, Switchable Data Rates, Remote Diagnostics
Distribution Method: End user
Price: $675
Number Installed to Date: 5,000
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
DC 201C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT-V.24, CCITT V.26, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Date First Installed: 1980

GENERAL DATACOMM INDUSTRIES, INC.
DC 201C-K
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,800 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.26, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Serial Autodial
Distribution Method: End user
Price: $750
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 2028/T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $405
Number Installed to Date: 2,500
Date First Installed: 1980

GENERAL DATACOMM INDUSTRIES, INC.
DC 208B/A
Modem Class: Long-Haul
Transmission Technique: Synchronous

Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $1,595
Number Installed to Date: 4,000
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
DC 212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $940
Number Installed to Date: 980
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 2400ASM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Diagnostics, Fallback, Switchable Data Rates, Point to Point
Distribution Method: End user, Third-party
Price: $795
Number Installed to Date: 3,000
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
DC 4800
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps; Asynchronous/Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Remote Diagnostics
Distribution Method: End user, Third-party
Price: $1,475
Number Installed to Date: 2,000
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 4800B
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps; Asynchronous/Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Serial Autodial
Distribution Method: End user, Third-party
Price: $1,445
Number Installed to Date: 500
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
DC 4827
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 600 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates, Remote Diagnostics
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates, Point to Point
Date First Installed: 1980

GENERAL DATACOMM INDUSTRIES, INC.
DC 9600 EP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates, Point to Point
Distribution Method: End user, Third-party
Price: $2,730
Number Installed to Date: 500
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
DC 9600 OP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Fallback
Distribution Method: End user, Third-party
Price: $2,995
Number Installed to Date: 1,500
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 9600 OPB
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates, Multipoint
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
GDC 103J-M
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $240
Date First Installed: 1981

GENERAL DATACOMM INDUSTRIES, INC.
GDC 212 ED
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $535
Number Installed to Date: 200
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
GDC 21288
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $435
Number Installed to Date: 200
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
GDC 21288
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user
Date First Installed: 1984

Modems

GENERAL DATACOMM INDUSTRIES, INC.
GDC 2400 ED
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Serial Autodial
Distribution Method: End user
Date First Installed: 1984

GENERAL DATACOMM INDUSTRIES, INC.
GDC 9604 WITH 4 CHANNEL MULTIPLEXER
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Tail-End Controls
Distribution Method: End user, Third-party
Price: $3,195
Number Installed to Date: 2,500
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DME-3
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: 232 Cable
Features: Switchable Data Rates, Master Timing Source

GENERAL DATACOMM INDUSTRIES, INC.
DC 2030
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 7,200 bps
Transmission Medium: Nonload Twisted Wire
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Multidrop, Point to Point
Distribution Method: End user, Third-party
Price: $660
Number Installed to Date: 1,000
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
DC 2030
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 56,000 bps; Asynchronous/Synchronous - 64,000 bps
Interface: CCITT V.35
Transmission Medium: Nonload Twisted Wire
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Multidrop and Point to Point
Distribution Method: End user, Third-party
Price: $805
Number Installed to Date: 1,000
Date First Installed: 1983

GENERAL DATACOMM INDUSTRIES, INC.
GDC LCM 1010/1020
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Transmission Medium: Nonload Wire Line
Features: Autoequalizer, Diagnostics, Multidrop and Point to Point
Distribution Method: End user, Third-party
Price: $295 to $325
Number Installed to Date: 1,500
Date First Installed: 1982

GENERAL DATACOMM INDUSTRIES, INC.
NMS-2020
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C
Transmission Medium: Twisted-Pair Wire Line
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates, Supports Netcon
Distribution Method: End user

GENERAL DATACOMM INDUSTRIES, INC.
CSU-550A
Modem Class: Channel Service Unit
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 56,000 bps
Interface: DSU/CSU
Transmission Medium: Digital Links
Diagnostics: No
Features: Switchable Data Rates, Terminated DDS Service
Distribution Method: End user, Third-party

GLENAYRE ELECTRONICS
GL 1102 HF PULSE COMPRESSION
Modem Class: Radio Frequency (RF)
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 300 bps
Interface: RS-232C
Transmission Medium: Radio Links
Diagnostics: Yes; Built-in
Features: Autodial, Alternate Voice/Data, Diagnostics, Fallback
Distribution Method: End user, OEM, Third-party
Price: $6,000 to $8,000
Number Installed to Date: Under 100
Date First Installed: October 1983
(See Vendor Profile Page V-13)

GLENAYRE ELECTRONICS
GL 1142 HF MESSAGE TERMINAL
Modem Class: Radio Frequency
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 100 bps
Interface: RS-232C
Transmission Medium: Radio Links
Diagnostics: Yes; Built-in
Features: Autodial, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Message Format
Distribution Method: End user, OEM, Third-party
Price: $6,000 to $8,000
Number Installed to Date: 500 - 1,000
Date First Installed: September 1983

GTECH CORP.
CM 7201A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Standard Lease Lines
Diagnostics: No
Distribution Method: End user
Price: $280
Number Installed to Date: Under 100
Date First Installed: September 1983
(See Vendor Profile Page V-13)

GTECH CORP.
GSC 202
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps
Interface: TTL
Bell-Compatible: 202
Transmission Medium: Standard Lease Lines
Diagnostics: Yes; Built-in
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: May 1982

HAYES MICROCOMPUTER PRODUCTS, INC.
MICROMODEM IIE
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: Internal Apple Bus
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Switchable Data Rates
Distribution Method: Third-party
Price: $329
Date First Installed: October 1983
(See Vendor Profile Page V-14)

HAYES MICROCOMPUTER PRODUCTS, INC.
MICROMODEM 100
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchrynous - 110 bps, 300 bps
Interface: S100 Bus
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Switchable Data Rates, Pulse/Line Dial Only
Distribution Method: Third-party
Price: $399
Date First Installed: 1977

HAYES MICROCOMPUTER PRODUCTS, INC.
SMARTMODEM 300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Feature: Autodial, Switchable Data Rates

Distribution Method: Third-party
Price: $269
Date First Installed: July 1981

HAYES MICROCOMPUTER PRODUCTS, INC.
SMARTMODEM 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Switchable Data Rates
Distribution Method: Third-party
Price: $599
Date First Installed: September 1982

HAYES MICROCOMPUTER PRODUCTS, INC.
SMARTMODEM 1200B
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: IBM PC Bus
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial
Distribution Method: Third-party
Price: $599
Date First Installed: May 1983

HONEYWELL, INC.
DCD6710
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, 20 MA Current Loop
Transmission Medium: Nonload Metallic Pairs
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $295
(See Vendor Profile Page V-14)

HONEYWELL, INC.
DCD6720
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Transmission Medium: Nonload Metallic Pairs
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $595

HONEYWELL, INC.
DCD2021
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $495

HONEYWELL, INC.
DCD2011
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; built-in
Features: Alternate Voice/Data, Automatic Answering, Diagnostics
Distribution Method: End user, Third-party
Price: $995

HONEYWELL, INC.
DCD2012
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; built-in
Features: Alternate Voice/Data, Automatic Answering, Diagnostics
Distribution Method: End user, Third-party
Price: $995

HONEYWELL, INC.
DCD2021
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Rate: Asynchronous - 1,800 bps
Bell-Compatible: 202
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; built-in
Features: Automatic Answering, Diagnostics
Distribution Method: End user, Third-party
Price: $495

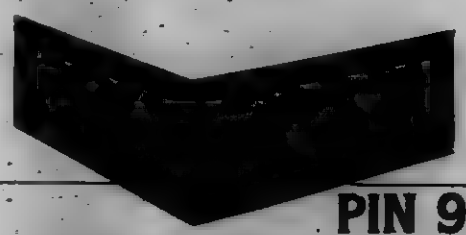
HONEYWELL, INC.
DCD2021
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Bell-Compatible: 103, 212
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; built-in
Features: Diagnostics
Distribution Method: End user, Third-party
Price: $995

HONEYWELL, INC.
DCD2121
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-grade Lines
Diagnostics: Yes; built-in
Features: Alternate Voice/Data, Autoanswer, Diagnostics
Distribution Method: End user, Third-party
Price: $800

IBM
MODEL 3863-1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Switchable Data Rates
Distribution Method: End user
Price: $2,685
Date First Installed: March 1980
(See Vendor Profile Page V-14)

IBM
MODEL 3863-2
Modem Class: Long-Haul
Transmission Technique: Synchronous

New error correcting Stat Mux for the asynchronous world



PIN 9106

- ☐ Provides error correction and line savings for distributed async minicomputer networks
- ☐ Two async channels up to 9600 bps or four at up to 4800 bps
- ☐ Sync or async composite runs up to 9600 bps
- ☐ Answer control compatible with 212 modems
- ☐ Menu driven parameter selection
- ☐ Hardware and software flow control
- ☐ Down-line loading of parameters and echoplex
- ☐ ALL AT TREMENDOUS SAVINGS

Call 312-541-6060 for details today.

gandalf™

Gandalf Data, Inc./1019 S. Noel Ave./Wheeling, IL 60090/TWX: 910-651-4951

Modems

Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $2,935
Date First Installed: March 1980

IBM
MODEL 3864-1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Antistreaming
Distribution Method: End user
Price: $3,715
Date First Installed: March 1980

IBM
MODEL 3864-2
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $3,925
Date First Installed: March 1980

IBM
MODEL 3865 MODEL 1&2
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $5,885
Date First Installed: June 1980

IBM
RACK-MOUNTED MODEM 3865 MODEL 1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $2,550 to $5,000

IBM
RACK-MOUNTED MODEM 3865 MODEL 2
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $2,550 to $5,000

IBM
RACK-MOUNTED MODEM 3865 MODEL 3
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $2,550 to $5,000

IBM
RACK-MOUNTED MODEM 3865-MODEL 4
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Switchable Data Rates, Antistreaming
Distribution Method: End user
Price: $2,550 to $5,000

Distribution Method: End user
Price: $2,550 to $5,000

IDE ASSOCIATES, INC.
IDEACOMM 1,200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $545
Number Installed to Date: 100 - 500
Date First Installed: September 1983
(See Vendor Profile Page V-69)

INFINET, INC.
NCM 14.4
Modem Class: Long-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, 19,200 bps; Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Dial Backup
Distribution Method: End user
(See Vendor Profile Page V-17)

INFINET, INC.
NCM 1200
Modem Class: Long-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Reverse Channel, Diagnostics
Distribution Method: End user
Price: $1,200
Number Installed to Date: 1,000 - 5,000

INFINET, INC.
NCM 2400
Modem Class: Long-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps; Asynchronous/ Synchronous - 2,400 bps
Interface: CCITT V.26
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $1,400
Number Installed to Date: 5,000 - 10,000

INFINET, INC.
NCM 4800
Modem Class: Long-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps; Asynchronous/ Synchronous - 4,800 bps
Interface: CCITT V.27
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $2,400
Number Installed to Date: 1,000 - 5,000

INTERTEL, INC.
NCM 9600
Modem Class: Long-Haul
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7200
Interface: CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Reverse Channel, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $4,300
Number Installed to Date: 1,000 - 5,000

INTRONIX SYSTEMS CORP.
LD 210/AS
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 43401
Transmission Medium: Unload Metallic Pairs
Features: A/D Loopback
Price: $210
Date First Installed: September 1981
(See Vendor Profile Page V-18)

INTRONIX SYSTEMS CORP.
LD 210/SA
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 43401
Transmission Medium: Unload Metallic Pairs
Price: $350
Date First Installed: September 1981

INTRONIX SYSTEMS CORP.
DL 96/V.29
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex

Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Alternate Voice/Data
Price: $4,500
Date First Installed: 1981

SPOTRON SYSTEMS CORP.
DL 201C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Features: Loopback
Price: $950
Date First Installed: 1982

SPOTRON SYSTEMS CORP.
DL 9600/V.29 DSM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asychronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.29
Transmission Medium: Voice-Grade Lines
Price: $5,500

SPOTRON SYSTEMS CORP.
DSM 201C
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Price: $925

SPOTRON SYSTEMS CORP.
DSM 212B
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Price: $750

INTEGRATED DESIGN ENGINEERING, INC.
IDE-300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: NCR DM5 Bus
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $500
Number Installed to Date: Under 500
Date First Installed: September 1983
(See Vendor Profile Page V-16)

INTERACTIVE SYSTEMS/3M
MODEL 520 AUDIO MODEM
Modem Class: Radio Frequency
Transmission Mode: Full-Duplex
Interface: BELL 3002
Transmission Medium: CATV 75 OHM Cable
Diagnostics: No
Distribution Method: End user
Price: $870
Number Installed to Date: Under 100
Date First Installed: 1977
(See Vendor Profile Page V-16)

INTERACTIVE SYSTEMS/3M
MODEL 720 DATA & CONTROL MODEM
Modem Class: Radio Frequency
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: 10 Bit Analog Data
Transmission Medium: CATV 75 Ohm Cable
Diagnostics: Yes; Built-in
Features: Analog Loopback
Distribution Method: End user
Price: $1,390 to $1,490
Number Installed to Date: 100 - 500
Date First Installed: 1982

INTERACTIVE SYSTEMS/3M
MODEL 920 DATA MODEM
Modem Class: Radio Frequency (RF)
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,800 bps, 10,000 bps; Asynchronous/Synchronous - 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, F Connector
Transmission Medium: CATV 75 Ohm Cable
Features: Analog Loopback
Distribution Method: End user
Price: $890
Number Installed to Date: 500 - 1,000
Date First Installed: 1979

INTERACTIVE SYSTEMS/3M
MODEL 925 DATA MODEM
Modem Class: Radio Frequency
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, F Connector
Transmission Medium: CATV 75 Ohm Cable
Diagnostics: Yes; Built-in
Features: Analog Loopback
Distribution Method: End user
Price: $590
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1982

INTERACTIVE SYSTEMS/3M
MODEL 960 DATA MODEM
Modem Class: Radio Frequency
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,800 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 76,800 bps
Interface: RS-232C
Transmission Medium: CATV 75 Ohm Cable
Diagnostics: Yes; Built-in
Features: Analog Loopback
Distribution Method: End user
Price: $980
Number Installed to Date: 100 - 500
Date First Installed: 1978

INTERACTIVE SYSTEMS/3M
MODEL 966 DATA MODEM
Modem Class: Radio Frequency (RF)
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,800 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 76,800 bps
Interface: CCITT V.35
Transmission Medium: CATV 75 Ohm Cable
Diagnostics: Yes; Built-in
Features: Analog Loopback
Distribution Method: End user
Price: $1,190
Number Installed to Date: 100 - 500
Date First Installed: 1982

INTERBUSINESS CORP.
212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial
Distribution Method: Third-party
Price: $585
Number Installed to Date: 1,000 - 5,000
Date First Installed: December 1980
(See Vendor Profile Page V-16)

INTERBUSINESS CORP.
A1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $499
Number Installed to Date: 500 - 1,000
Date First Installed: August 1981

INTERBUSINESS CORP.
AC 300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $169
Number Installed to Date: 1,000 - 5,000
Date First Installed: October 1980

INTERBUSINESS CORP.
AUTO DIAL 212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $599
Number Installed to Date: 1,000 - 5,000
Date First Installed: October 1981

INTERBUSINESS CORP.
M1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous

Modems

Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Switchable Data Rates
Distribution Method: Third-party
Price: $449
Number Installed to Date: 1,000 - 5,000
Date First Installed: August 1981

INTERBUSINESS CORP.
OEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Fallback
Distribution Method: Third-party
Number Installed to Date: 1,000 - 5,000
Date First Installed: May 1983

INTERBUSINESS CORP.
S-100
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Fallback
Distribution Method: Third-party
Price: $449
Number Installed to Date: 100 - 500
Date First Installed: May 1983

INTERBUSINESS CORP.
STARCOM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Fallback
Distribution Method: Third-party
Price: $449
Number Installed to Date: 5,000 - 10,000
Date First Installed: October 1981

INTERBUSINESS CORP.
100 RA
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Multiport
Distribution Method: Third-party
Price: $235
Number Installed to Date: 500 - 1,000
Date First Installed: January 1982

INTERBUSINESS CORP.
200
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Bell-Compatible: 43401
Features: Multiport
Distribution Method: Third-party
Price: $495
Number Installed to Date: 100 - 500
Date First Installed: December 1983

INTER-LINK
CLUSTER MODEM EMULATORS
CME-1R
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Diagnostics: No
Features: Switchable Data Rates,
Distribution Method: Third-party
Price: $875
Number Installed to Date: Under 100
Date First Installed: February 1983
(See Vendor Profile Page V-16)

INTER-LINK
ME-1R
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates, RTS to CTS Delays
Distribution Method: Third-party
Price: $250
Number Installed to Date: 100 - 500
Date First Installed: 1982

INTER-LINK
LDM-1R
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous, Isochronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates, RTS and CTS Delays
Distribution Method: Third-party
Price: $245
Number Installed to Date: 100 - 500
Date First Installed: 1982

INTER-LINK
LDM-1V
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous, Isochronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps, 56,000 bps; Asynchronous/ Synchronous - Up to 250K bps
Interface: CCITT V.35
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates, RTS and CTS Delays
Distribution Method: Third-party
Price: $600
Number Installed to Date: Under 100
Date First Installed: November 1983

INTERNATIONAL DATA SCIENCES, INC.
PHONE LINK ACOUSTIC MODEM
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 113
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Self-Test Function
Distribution Method: End user
Price: $189
Number Installed to Date: Under 100
Date First Installed: 1983
(See Vendor Profile Page V-16)

INTERNATIONAL DATA SCIENCES, INC.
AUTO LINK 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Switchable Data Rates, Analog Loopback
Distribution Method: End user
Price: $549
Number Installed to Date: Under 100
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
AUTO LINK 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Analog Loopback
Distribution Method: End user
Price: $499
Number Installed to Date: Under 100
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
AUTODIAL 212
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Switchable Data Rates, Analog Loopback
Distribution Method: End user
Price: $599
Number Installed to Date: Under 100
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
MICRO LINK 300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines

Diagnostics: No
Features: Autoanswer, Alternate Voice/Data, Analog Loopback
Distribution Method: End user
Price: $239
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
MICRO LINK 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data, Analog Loopback
Distribution Method: End user
Price: $449
Number Installed to Date: Under 100
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
PASSWORD AUTODIAL 212A MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Switchable Data Rates
Distribution Method: End user
Price: $449
Number Installed to Date: Under 100
Date First Installed: 1983

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6110
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 7,200 bps; Synchronous - 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C
Transmission Medium: Low-Capacity Cable
Distribution Method: End user
Price: $370
Number Installed to Date: 100 - 500
Date First Installed: 1980

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6000H
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted-Pair Conductor
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates, Analog Loopback
Distribution Method: End user
Price: $750
Number Installed to Date: 100 - 500
Date First Installed: 1980

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6000L
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Twisted Pair
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates, Analog Loopback
Distribution Method: End user
Price: $750
Number Installed to Date: 100 - 500
Date First Installed: 1980

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6200
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, TTY Current Loop
Transmission Medium: Metallic Twisted Pair
Features: Analog Loopback
Distribution Method: End user
Price: $250
Number Installed to Date: 100 - 500
Date First Installed: 1980

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6220
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, TTY Current Loop
Bell-Compatible: 43401
Transmission Medium: Metallic Twisted Pair
Diagnostics: Yes; Built-in
Features: Analog Loopback
Distribution Method: End user
Price: $300
Number Installed to Date: 100 - 500
Date First Installed: 1980

INTERNATIONAL DATA SCIENCES, INC.
MODEL 6240
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, TTY Current Loop
Bell-Compatible: 43401
Transmission Medium: Twisted Pair Conductor
Diagnostics: Yes; Built-in
Features: Diagnostics, Analog Loopback
Distribution Method: End user
Price: $400

INTERNATIONAL MODEM EXCHANGE (TIMEDOR)
THE OPERATOR
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Switchable Data Rates, Autodisconnect
Distribution Method: End user
Price: $159
Date First Installed: May 1983
(See Vendor Profile Page V-17)

ITT TELECOMM PRODUCTS, INC.
828-646-666-66X
Modem Class: Digital
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56K bps
Interface: RS-232C, RS-449, CCITT V.35
Transmission Medium: Four-Wire Circuit
Diagnostics: Yes; Built-in
Features: Switchable Data Rates, Autoequalizer, Diagnostics
Distribution Method: End user
Price: $775 - $1,200
Number Installed to Date: 1,000 - 5,000
(See Vendor Profile Page V-17)

J B I ELECTRONICS
MODEM SAVER
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Digital Links
Diagnostics: No
Distribution Method: Third party
Price: $265
Number Installed to Date: 1,000 - 5,000
Date First Installed: September 1978
(See Vendor Profile Page V-00)

J B I ELECTRONICS
ASYNCHRONOUS/SYNCHRONOUS LINE DRIVER
Modem Class: Line Driver
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: Third-Party
Price: $135 - $225
Number Installed to Date: 1,000 - 5,000
Date First Installed: September 1980

KAPUR LABORATORIES
DT 19.2 DATA TRANSCEIVER
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Metallic Circuit
Diagnostics: No
Distribution Method: End user
Price: $1,190
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-17)

KANFMAN RESEARCH MANUFACTURING, INC.
401 MODEM/PORT CONTENTION UNIT
Modem Class: Modem Eliminator
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switchable Data Rates, Enable/Disable Switch
Distribution Method: End user, Third-party
Price: $985
Number Installed to Date: 100 - 500

Modems

Date First Installed: 1979
(See Vendor Profile Page V-17)

KINEX CORP.
SAB-2X4
Modem Class: Line Driver
Transmission Technique: Asynchronous, Synchronous, Isochronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/Synchronous - 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Metallic Conductor
Features: Diagnostics, Fallback, Switchable Data Rates, Strappable Equalizer
Distribution Method: Third-party
Price: $545
Number Installed to Date: 500 - 1,000
Date First Installed: 1981
(See Vendor Profile Page V-17)

KINEX CORP.
2400/FDX
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Echo Canceling
Distribution Method: Third-party

KINEX CORP.
4800/208/AB
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208A/B
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $1,725
Number Installed to Date: 500 - 1,000
Date First Installed: May 1981

KINEX CORP.
4800/27
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: V.27 BIS
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,225
Date First Installed: 1981

KINEX CORP.
9600/29
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,750
Number Installed to Date: 100 - 500
Date First Installed: 1982

KINEX CORP.
9600/DCM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps, 19,200 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates, Data Compression Capabilities
Distribution Method: Third-party
Price: $3,650
Number Installed to Date: Under 100
Date First Installed: 1983

KINEX CORP.
9600/FP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates, Simulated Control Carrier
Distribution Method: Third-party
Price: $3,650
Number Installed to Date: Under 100
Date First Installed: 1983

KINEX CORP.
4-WIRE BASEBAND
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous, Isochronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/Synchronous - 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Metallic Conductor
Diagnostics: Yes; Built-in
Features: Diagnostics, Fallback, Switchable Data Rates, Strappable Equalizer
Distribution Method: Third-party

KINEX CORP.
2400/201C
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 201C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party

LEE SYSTEMS, INC.
401
Modem Class: Infrared
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps; Asynchronous/Synchronous - 100,000 bps
Interface: RS-232C, RS-449, RS-422, CCITT V.22, CCITT V.24, CCITT V.26, CCITT V.27, CCITT V.28, CCITT V.29, 20 MA Current Loop, 60 MA Current Loop, Mil. 188C
Transmission Medium: Infrared Light
Features: Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $8,950
Number Installed to Date: Under 100
Date First Installed: September 1980
(See Vendor Profile Page V-16)

LEE SYSTEMS, INC.
4DT1/7DT1
Modem Class: Infrared
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - T-1
Interface: RS-449, V.35
Bell-Compatible: 551A
Transmission Medium: Infrared Light
Features: Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $8,450 to $12,550
Number Installed to Date: Under 100
Date First Installed: September 1982

LEXICON CORP. OF MIAMI
LEX-11
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: Third-party
Price: $145
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1983
(See Vendor Profile Page V-16)

LEXICON CORP. OF MIAMI
LEX-11 CCI II
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C

Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: Third-party
Price: $176
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1983

LEXICON CORP. OF MIAMI
LEX-11 CCI 88
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: Third-party
Price: $215
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1983

LEXICON CORP. OF MIAMI
LEX-11B
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: Third-party
Price: $185
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1983

LEXICON CORP. OF MIAMI
LEX-12
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Switch to Handset
Distribution Method: Third-party
Price: $165
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1981

LEXICON CORP. OF MIAMI
LEX-12B
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switch to Handset
Distribution Method: Third-party
Price: $205
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1981

LEXICON CORP. OF MIAMI
LEX-15
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switchable Data Rates, Switch to Handset
Distribution Method: Third-party
Price: $325
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1982

LEXICON CORP. OF MIAMI
LEX-15B
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Switchable Data Rates, Switch to Handset
Distribution Method: Third-party
Price: $395
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1982

LEXICON CORP. OF MIAMI
LEX-10
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: Third-party
Price: $119
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1980

LEXICON CORP. OF MIAMI
LEX-10B
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: Third-party
Price: $159
Number Installed to Date: 10,000 - 50,000
Date First Installed: 1980

SIVA-GNB LINKABIT, INC.
LM 48
Modem Class: Satellite
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 6,000 bps
Interface: CCITT V.35, T-1, DSI, TTL
Transmission Medium: Digital Links
Diagnostics: Yes, Built-In
Features: Diagnostics
Distribution Method: End user
Price: $223 - $256
Number Installed to Date: Under 500
Date First Installed: 1979
(See Vendor Profile Page V-16)

MARZAR CORP.
Z9600
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Features: Reverse Channel, Diagnostics, Fallback, Automatic Data Rates
Distribution Method: End user
Price: $167
Number Installed to Date: 500 - 1,000
Date First Installed: March 1980
(See Vendor Profile Page V-16)

MANAGE, INC.
FOM-232A
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Distribution Method: End user, OEM
Price: $475
Number Installed to Date: Under 100
Date First Installed: September 1980
(See Vendor Profile Page V-16)

MANAGE, INC.
FOM-1232
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Distribution Method: End user, OEM
Price: $325
Number Installed to Date: Under 100

MATH ASSOCIATES, INC.
XR-1000
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - Up to 100K bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Diagnostics
Distribution Method: End user, OEM, Third-party
Price: $950
Number Installed to Date: Under 100
Date First Installed: October 1981
(See Vendor Profile Page V-16)

MATH ASSOCIATES, INC.
XR-1100
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - Up to 100K bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: No
Distribution Method: End user, OEM
Price: $410
Number Installed to Date: 100 - 500
Date First Installed: August 1979

MATH ASSOCIATES, INC.
XR-1100/55
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - Up to 100K bps
Interface: RS-232C, RS-422
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Direct Plug-In Module
Distribution Method: End user, OEM, Third-party
Price: $349
Number Installed to Date: 100 - 500
Date First Installed: February 1983

MFJ ENTERPRISES
MFJ 1233
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex

Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, TTL
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party
Price: $129
Date First Installed: January 1982
(See Vendor Profile Page V-19)

MICOM SYSTEMS, INC.
M4000P
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Customer Owned Cable
Diagnostics: No
Features: Diagnostics
Distribution Method: Third-party
Price: $220
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1983
(See Vendor Profile Page V-19)

MICOM SYSTEMS, INC.
M4000SP
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: RS-232C, CCITT V.28
Transmission Medium: Customer Owned Cable
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $320
Number Installed to Date: 500 - 1,000
Date First Installed: September 1982

MICOM SYSTEMS, INC.
M430
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines, Customer-Owned Cable
Diagnostics: No
Features: Powered by Interface
Distribution Method: Third-party
Price: $85
Number Installed to Date: 500 - 1,000
Date First Installed: September 1983

MICOM SYSTEMS, INC.
M4024, M4024/ASYNC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.26, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics, Fallback
Distribution Method: Third-party
Price: $795 to $825
Number Installed to Date: 500 - 1,000
Date First Installed: June 1981

MICOM SYSTEMS, INC.
M4048/DB+
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $3,295
Number Installed to Date: Under 100
Date First Installed: December 1983

MICOM SYSTEMS, INC.
M4048/V.27+
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.26, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,595
Number Installed to Date: 100 - 500
Date First Installed: February 1983

MICOM SYSTEMS, INC.
M4048/V.27-NF
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.26, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $1,750
Number Installed to Date: 100 - 500
Date First Installed: February 1983

MICOM SYSTEMS, INC.
M4096/4+
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $3,695
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
M4096/DB+
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $3,795
Number Installed to Date: Under 100
Date First Installed: December 1983

MICOM SYSTEMS, INC.
M4096-NF
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Fallback
Distribution Method: Third-party
Price: $2,695
Number Installed to Date: 500 - 1,000
Date First Installed: June 1982

MICOM SYSTEMS, INC.
M4096/V.29+
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $3,095
Number Installed to Date: 100 - 500
Date First Installed: February 1983

MICOM SYSTEMS, INC.
M401
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics
Distribution Method: Third-party
Price: $250
Number Installed to Date: 500 - 1,000
Date First Installed: January 1982

MICOM SYSTEMS, INC.
M402
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics
Distribution Method: Third-party
Price: $330
Number Installed to Date: 500 - 1,000
Date First Installed: September 1981

MICOM SYSTEMS, INC.
M421
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $370
Number Installed to Date: 500 - 1,000

Microcomputers for Managements
We don't want to get involved with more than a
protocol and more incompatibilities
Fiber optic cable endorsed by experts as
necessary to install
We are not ready to pull down networks that
we already own, good detail of data processing
Division Group DP Managers want control over
their own local datacomm
Leased Gateways
Packet switched phone network
Packet Data Networks
Digital local networks
WE NEED IT FAST
We don't want to spend a cent and

Modems

Date First Installed: November 1981

MICOM SYSTEMS, INC.
8431
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Powered By Interface
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: September 1983

MICRO-BAUD SYSTEMS, INC.
96612
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 300 bps, Asynchronous - 1,200 bps
Interface: RS-232C, RS-449
Bell-Compatible: 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $550
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1982
(See Vendor Profile Page V-19)

MICRO-BAUD SYSTEMS, INC.
96614
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Diagnostics, Switchable Data Rates, Stores 5 Phone Numbers
Distribution Method: Third-party
Price: $595
Number Installed to Date: 500 - 1,000
Date First Installed: February 1983

MICROCOM, INC.
ERA 2 FOR APPLE IIE
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $429
Date First Installed: January 1984
(See Vendor Profile Page V-19)

MICROCOM, INC.
ERA 2 FOR IBM PC
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoequalizer, Autoanswer, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $429
Date First Installed: January 1984

MICROCOM, INC.
ERA 2 FOR IBM PC JR
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $429
Date First Installed: January 1984

MICROCOM, INC.
PCS FLASH 2000 NETWORKING MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $995
Date First Installed: November 1983

MICROCOM, INC.
RX FLASH 1000 NETWORKING MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $895
Date First Installed: November 1983

THE MICROPERIPHERAL CORP.
AUTOPRINT MICROCONNECTION
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: Third-party
Price: $149
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1979
(See Vendor Profile Page V-18)

THE MICROPERIPHERAL CORP.
RS232
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: Third-party
Price: $159 to $199
Number Installed to Date: 1,000 - 5,000

THE MICROPERIPHERAL CORP.
SUBMINATURE OEM MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer
Distribution Method: OEM
Price: $80
Number Installed to Date: 1,000 - 5,000

THE MICROPERIPHERAL CORP.
TRS 80 MODEL 1
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data
Distribution Method: Third-party
Price: $209 to $259
Number Installed to Date: 1,000 - 5,000

MODULAR INTEGRATION, INC.
MIM-600
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Date First Installed: September 1980
(See Vendor Profile Page V-20)

MUNRHEAD, INC.
H63 GROUP DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex, Simplex
Transmission Rate: Asynchronous/Synchronous - 48,000 to 172,000 bps
Interface: RS-422, CCITT V.35
Transmission Medium: Group Band Circuits
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Simultaneous Voice/Data
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: 1973
(See Vendor Profile Page V-20)

MULTI — TECH SYSTEMS, INC.
MT 103J
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $250
Date First Installed: July 1979
(See Vendor Profile Page V-20)

MULTI — TECH SYSTEMS, INC.
MT 2018
Modem Class: Long-Haul

Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics
Distribution Method: End user
Price: $685
Date First Installed: September 1982

MULTI — TECH SYSTEMS, INC.
MT 202T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics
Distribution Method: End user
Price: $345
Date First Installed: March 1978

MULTI — TECH SYSTEMS, INC.
MT 212AD
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $695
Date First Installed: May 1983

MULTI — TECH SYSTEMS, INC.
MT 212AH
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $549
Date First Installed: September 1983

MULTI — TECH SYSTEMS, INC.
MT 212C
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user
Price: $550
Date First Installed: February 1983

MULTI — TECH SYSTEMS, INC.
MT 212PC
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: IBM Expansion Slot
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Software
Distribution Method: End user

For a choice instead of a line,

Call GLASGAL

Manufacturer's reps or salesmen usually push only one product line. When Glasgal sales engineers or subdistributors speak, they have over 55 sources of data communication equipment to choose from to make sure that what they recommend is the best technically, at the lowest possible cost, with prompt delivery and hassle free service.

The Glasgal catalog and winter '84 supplement have over 175 pages of system diagrams, charts, brand name product listings and prices. Call for your free copy today.

212's - *from AJ, Cermetek, Concord Data, Datec, GDC, Microcom, Penril, Prentice, Racal Vadic, Rixon (Hayes Compatible), UDS, Ven-Tel.*

Multiplexers - *from Ark, Astrocom, Cermetek, Complexx, Datec, Develcon, GDC, Micom, Network Products, Prentice, Racal Vadic, Rixon, Tellabs, Western Datacom.*

LAN's/Port Selectors - *from Complexx, Develcon, Micom, Network Products, Tellabs.*

Short-Haul Data Sets - *from Ark, Avanti, CRC, Develcon, GDC, Micom, Prentice, RAD, Remark, Rixon, Ven-Tel.*

Protocol Converters - *from Halcyon, Icot, Micom, Microcom, Western Datacom, 3R Computers.*

Full Selection - *switches, cables, cabinets, tools, cable parts, test equipment, transient protectors, patch panels, tie wraps, bridges, dial back-up units, ACU's, DSU's, DAA's, CSU's, error correctors, interface converters, encryption and security devices, network control systems, V.35 equipment, and much more from Amdahl, CD Communications, Com/Tech, Dataprobe, Digilog, Electrodata, Electronic Enclosures, ESL, ITS, Hadax, IMM, Lion, Microframe, Switchcraft, Transtector and VIR, etc.*

Free monthly seminars, 5:30 to 8:00 P.M., middle Wednesday of each month at our building in Northvale. Video tapes of seminars are available. **"Techniques in Data Communications"** by Ralph Glasgal, 209 pages, 2nd edition 9/83, Artech House, now in stock.

Modems

Price: $549
Date First Installed: November 1983

MULTITRONICS
CATV MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Coaxial
Features: Reverse Channel, Switchable Data Rates
Distribution Method: End user
Price: $2,000
(See Vendor Profile Page V-20)

NCR COMTEN, INC.
NCR COMTEN 7163 0100
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates, NCCF/NPDA Compatible
Distribution Method: End user
(See Vendor Profile Page V-21)

NCR COMTEN, INC.
NCR COMTEN 7163 0200
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates, NCCF/NPDA Compatible
Distribution Method: End user

NCR COMTEN, INC.
NCR COMTEN 7164 0100
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates, NCCF/NPDA Compatible
Distribution Method: End user
Price: $3,700
Number Installed to Date: 200
Date First Installed: 1983

NCR COMTEN, INC.
NCR COMTEN 7165 0100
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates, NCCF/NPDA Compatible
Distribution Method: End user
Price: $5,800
Number Installed to Date: Under 100
Date First Installed: September 1983

NEC TELEPHONE, INC.
B103JR
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Standard Diagnostics
Distribution Method: Third-party
Price: $460
Number Installed to Date: 750
Date First Installed: October 1982
(See Vendor Profile Page V-21)

NEC TELEPHONE, INC.
DSP 208
Modem Class: Long-Haul
Transmission Technique: Synchronous
